- Error: 3060 SQLSTATE: HY000 (ER_ALTER_OPERATION_NOT_SUPPORTED_REASON_GIS)

Message: Do not support online operation on table with GIS index

- Error: 3061 SQLSTATE: 42000 (ER_ILLEGAL_USER_VAR)

Message: User variable name '%s' is illegal

- Error: 3062 SQLSTATE: HY000 (ER_GTID_MODE_OFF)

Message: Cannot %s when GTID_MODE = OFF.

- Error: 3064 SQLSTATE: HY000 (ER_INCORRECT_TYPE)

Message: Incorrect type for argument %s in function %s.

- Error: 3065 SQLSTATE: HY000 (ER_FIELD_IN_ORDER_NOT_SELECT)

Message: Expression #%u of ORDER BY clause is not in SELECT list, references column '%s' which is not in SELECT list; this is incompatible with %s

- Error: 3066 SQLSTATE: HY000 (ER_AGGREGATE_IN_ORDER_NOT_SELECT)

Message: Expression #%u of ORDER BY clause is not in SELECT list, contains aggregate function; this is incompatible with %s

- Error: 3067 SQLSTATE: HY000 (ER_INVALID_RPL_WILD_TABLE_FILTER_PATTERN)

Message: Supplied filter list contains a value which is not in the required format
'db_pattern.table_pattern'

- Error: 3068 SQLSTATE: 08S01 (ER_NET_OK_PACKET_TOO_LARGE)

Message: OK packet too large

- Error: 3069 SQLSTATE: HY000 (ER_INVALID_JSON_DATA)

Message: Invalid JSON data provided to function %s: %s

- Error: 3070 SQLSTATE: HY000 (ER_INVALID_GEOJSON_MISSING_MEMBER)

Message: Invalid GeoJSON data provided to function %s: Missing required member '%s'

- Error: 3071 SQLSTATE: HY000 (ER_INVALID_GEOJSON_WRONG_TYPE)

Message: Invalid GeoJSON data provided to function %s: Member '%s' must be of type '%s'

- Error: 3072 SQLSTATE: HY000 (ER_INVALID_GEOJSON_UNSPECIFIED)

Message: Invalid GeoJSON data provided to function %s

- Error: 3073 SQLSTATE: HY000 (ER_DIMENSION_UNSUPPORTED)

Message: Unsupported number of coordinate dimensions in function %s: Found %u, expected %u

- Error: 3074 SQLSTATE: HY000 (ER_SLAVE_CHANNEL_DOES_NOT_EXIST)

Message: Slave channel '%s' does not exist.

- Error: 3076 SQLSTATE: HY000 (ER_SLAVE_CHANNEL_NAME_INVALID_OR_TOO_LONG)

Message: Couldn't create channel: Channel name is either invalid or too long.

- Error: 3077 SQLSTATE: HY000 (ER_SLAVE_NEW_CHANNEL_WRONG_REPOSITORY)

Message: To have multiple channels, repository cannot be of type FILE; Please check the repository configuration and convert them to TABLE.

- Error: 3079 SQLSTATE: HY000 (ER_SLAVE_MULTIPLE_CHANNELS_CMD)

Message: Multiple channels exist on the slave. Please provide channel name as an argument.

- Error: 3080 SQLSTATE: HY000 (ER_SLAVE_MAX_CHANNELS_EXCEEDED)

Message: Maximum number of replication channels allowed exceeded.

- Error: 3081 SQLSTATE: HY000 (ER_SLAVE_CHANNEL_MUST_STOP)

Message: This operation cannot be performed with running replication threads; run STOP SLAVE FOR CHANNEL '%s' first

- Error: 3082 SQLSTATE: HY000 (ER_SLAVE_CHANNEL_NOT_RUNNING)

Message: This operation requires running replication threads; configure slave and run START SLAVE FOR CHANNEL '%s'

- Error: 3083 SQLSTATE: HY000 (ER_SLAVE_CHANNEL_WAS_RUNNING)

Message: Replication thread(s) for channel '%s' are already running.

- Error: 3084 SQLSTATE: HY000 (ER_SLAVE_CHANNEL_WAS_NOT_RUNNING)

Message: Replication thread(s) for channel '%s' are already stopped.

- Error: 3085 SQLSTATE: HY000 (ER_SLAVE_CHANNEL_SQL_THREAD_MUST_STOP)

Message: This operation cannot be performed with a running slave sql thread; run STOP SLAVE SQL_THREAD FOR CHANNEL '%s' first.

- Error: 3086 SQLSTATE: HY000 (ER_SLAVE_CHANNEL_SQL_SKIP_COUNTER)

Message: When sql_slave_skip_counter > 0, it is not allowed to start more than one SQL thread by using 'START SLAVE [SQL_THREAD]'. Value of sql_slave_skip_counter can only be used by one SQL thread at a time. Please use 'START SLAVE [SQL_THREAD] FOR CHANNEL' to start the SQL thread which will use the value of sql_slave_skip_counter.

- Error: 3087 SQLSTATE: HY000 (ER_WRONG_FIELD_WITH_GROUP_V2)

Message: Expression #%u of %s is not in GROUP BY clause and contains nonaggregated column '%s' which is not functionally dependent on columns in GROUP BY clause; this is incompatible with sql_mode=only_full_group_by

- Error: 3088 SQLSTATE: HY000 (ER_MIX_OF_GROUP_FUNC_AND_FIELDS_V2)

Message: In aggregated query without GROUP BY, expression #%u of %s contains nonaggregated column '%s'; this is incompatible with sql_mode=only_full_group_by

- Error: 3089 SQLSTATE: HY000 (ER_WARN_DEPRECATED_SYSVAR_UPDATE)

Message: Updating '%s' is deprecated. It will be made read-only in a future release.

- Error: 3090 SQLSTATE: HY000 (ER_WARN_DEPRECATED_SQLMODE)

Message: Changing sql mode '%s' is deprecated. It will be removed in a future release.

- Error: 3091 SQLSTATE: HY000 (ER_CANNOT_LOG_PARTIAL_DROP_DATABASE_WITH_GTID)

Message: DROP DATABASE failed; some tables may have been dropped but the database directory remains. The GTID has not been added to GTID_EXECUTED and the statement was not written

to the binary log. Fix this as follows: (1) remove all files from the database directory %s; (2) SET GTID_NEXT='%s'; (3) DROP DATABASE `%s`.

- Error: 3092 SQLSTATE: HY000 (ER_GROUP_REPLICATION_CONFIGURATION)

Message: The server is not configured properly to be an active member of the group. Please see more details on error log.

- Error: 3093 SQLSTATE: HY000 (ER_GROUP_REPLICATION_RUNNING)

Message: The START GROUP_REPLICATION command failed since the group is already running.

- Error: 3094 SQLSTATE: HY000 (ER_GROUP_REPLICATION_APPLIER_INIT_ERROR)

Message: The START GROUP_REPLICATION command failed as the applier module failed to start.

- Error: 3095 SQLSTATE: HY000 (ER_GROUP_REPLICATION_STOP_APPLIER_THREAD_TIMEOUT)

Message: The STOP GROUP_REPLICATION command execution is incomplete: The applier thread got the stop signal while it was busy. The applier thread will stop once the current task is complete.

- Error: 3096 SQLSTATE: HY000 (ER_GROUP_REPLICATION_COMMUNICATION_LAYER_SESSION_ERROR)

Message: The START GROUP_REPLICATION command failed as there was an error when initializing the group communication layer.

- Error: 3097 SQLSTATE: HY000 (ER_GROUP_REPLICATION_COMMUNICATION_LAYER_JOIN_ERROR)

Message: The START GROUP_REPLICATION command failed as there was an error when joining the communication group.

- Error: 3098 SQLSTATE: HY000 (ER_BEFORE_DML_VALIDATION_ERROR)

Message: The table does not comply with the requirements by an external plugin.

- Error: 3099 SQLSTATE: HY000 (ER_PREVENTS_VARIABLE_WITHOUT_RBR)

Message: Cannot change the value of variable %s without binary log format as ROW.

`transaction_write_set_extraction` option value is set and `binlog_format` is not ROW.

- Error: 3100 SQLSTATE: HY000 (ER_RUN_HOOK_ERROR)

Message: Error on observer while running replication hook '%s'.

- Error: 3101 SQLSTATE: 40000 (ER_TRANSACTION_ROLLBACK_DURING_COMMIT)

Message: Plugin instructed the server to rollback the current transaction.

When using Group Replication, this means that a transaction failed the group certification process, due to one or more members detecting a potential conflict, and was thus rolled back. See [Chapter 18, Group Replication](#).

- Error: 3102 SQLSTATE: HY000 (ER_GENERATED_COLUMN_FUNCTION_IS_NOT_ALLOWED)

Message: Expression of generated column '%s' contains a disallowed function.

- Error: 3103 SQLSTATE: HY000 (ER_UNSUPPORTED_ALTER_INPLACE_ON_VIRTUAL_COLUMN)

Message: INPLACE ADD or DROP of virtual columns cannot be combined with other ALTER TABLE actions

- Error: 3104 SQLSTATE: HY000 (ER_WRONG_FK_OPTION_FOR_GENERATED_COLUMN)

Message: Cannot define foreign key with %s clause on a generated column.

- Error: 3105 SQLSTATE: HY000 (ER_NON_DEFAULT_VALUE_FOR_GENERATED_COLUMN)

Message: The value specified for generated column '%s' in table '%s' is not allowed.

- Error: 3106 SQLSTATE: HY000 (ER_UNSUPPORTED_ACTION_ON_GENERATED_COLUMN)

Message: '%s' is not supported for generated columns.

- Error: 3107 SQLSTATE: HY000 (ER_GENERATED_COLUMN_NON_PRIOR)

Message: Generated column can refer only to generated columns defined prior to it.

To address this issue, change the table definition to define each generated column later than any generated columns to which it refers.

- Error: 3108 SQLSTATE: HY000 (ER_DEPENDENT_BY_GENERATED_COLUMN)

Message: Column '%s' has a generated column dependency.

You cannot drop or rename a generated column if another column refers to it. You must either drop those columns as well, or redefine them not to refer to the generated column.

- Error: 3109 SQLSTATE: HY000 (ER_GENERATED_COLUMN_REF_AUTO_INC)

Message: Generated column '%s' cannot refer to auto-increment column.

- Error: 3110 SQLSTATE: HY000 (ER_FEATURE_NOT_AVAILABLE)

Message: The '%s' feature is not available; you need to remove '%s' or use MySQL built with '%s'

- Error: 3111 SQLSTATE: HY000 (ER_CANT_SET_GTID_MODE)

Message: SET @@GLOBAL.GTID_MODE = %s is not allowed because %s.

- Error: 3112 SQLSTATE: HY000 (ER_CANT_USE_AUTO_POSITION_WITH_GTID_MODE_OFF)

Message: The replication receiver thread%s cannot start in AUTO_POSITION mode: this server uses @@GLOBAL.GTID_MODE = OFF.

- Error: 3116 SQLSTATE: HY000 (ER_CANT_ENFORCE_GTID_CONSISTENCY_WITH_ONGOING_GTID_VIOLATING_TX)

Message: Cannot set ENFORCE_GTID_CONSISTENCY = ON because there are ongoing transactions that violate GTID consistency.

ER_CANT_SET_ENFORCE_GTID_CONSISTENCY_ON_WITH_ONGOING_GTID_VIOLATING_TRANSACTIONS was renamed to ER_CANT_ENFORCE_GTID_CONSISTENCY_WITH_ONGOING_GTID_VIOLATING_TX.

- Error: 3117 SQLSTATE: HY000 (ER_ENFORCE_GTID_CONSISTENCY_WARN_WITH_ONGOING_GTID_VIOLATING_TX)

Message: There are ongoing transactions that violate GTID consistency.

`ER_SET_ENFORCE_GTID_CONSISTENCY_WARN_WITH_ONGOING_GTID_VIOLATING_TRANSACTIONS` was renamed to `ER_ENFORCE_GTID_CONSISTENCY_WARN_WITH_ONGOING_GTID_VIOLATING_TX`.

- Error: 3118 SQLSTATE: HY000 (`ER_ACCOUNT_HAS_BEEN_LOCKED`)

Message: Access denied for user '%s'@'%s'. Account is locked.

The account was locked with `CREATE USER ... ACCOUNT LOCK` or `ALTER USER ... ACCOUNT LOCK`. An administrator can unlock it with `ALTER USER ... ACCOUNT UNLOCK`.

- Error: 3119 SQLSTATE: 42000 (`ER_WRONG_TABLESPACE_NAME`)

Message: Incorrect tablespace name '%s'

- Error: 3120 SQLSTATE: HY000 (`ER_TABLESPACE_IS_NOT_EMPTY`)

Message: Tablespace '%s' is not empty.

- Error: 3121 SQLSTATE: HY000 (`ER_WRONG_FILE_NAME`)

Message: Incorrect File Name '%s'.

- Error: 3122 SQLSTATE: HY000 (`ER_BOOST_GEOMETRY_INCONSISTENT_TURNS_EXCEPTION`)

Message: Inconsistent intersection points.

- Error: 3123 SQLSTATE: HY000 (`ER_WARN_OPTIMIZER_HINT_SYNTAX_ERROR`)

Message: Optimizer hint syntax error

- Error: 3124 SQLSTATE: HY000 (`ER_WARN_BAD_MAX_EXECUTION_TIME`)

Message: Unsupported MAX_EXECUTION_TIME

- Error: 3125 SQLSTATE: HY000 (`ER_WARN_UNSUPPORTED_MAX_EXECUTION_TIME`)

Message: MAX_EXECUTION_TIME hint is supported by top-level standalone SELECT statements only

The `MAX_EXECUTION_TIME` optimizer hint is supported only for `SELECT` statements.

- Error: 3126 SQLSTATE: HY000 (`ER_WARN_CONFLICTING_HINT`)

Message: Hint %s is ignored as conflicting/duplicated

- Error: 3127 SQLSTATE: HY000 (`ER_WARN_UNKNOWN_QB_NAME`)

Message: Query block name %s is not found for %s hint

- Error: 3128 SQLSTATE: HY000 (`ER_UNRESOLVED_HINT_NAME`)

Message: Unresolved name %s for %s hint

- Error: 3129 SQLSTATE: HY000 (`ER_WARN_ON_MODIFYING_GTID_EXECUTED_TABLE`)

Message: Please do not modify the %s table. This is a mysql internal system table to store GTIDs for committed transactions. Modifying it can lead to an inconsistent GTID state.

- Error: 3130 SQLSTATE: HY000 (`ER_PLUGGABLE_PROTOCOL_COMMAND_NOT_SUPPORTED`)

Message: Command not supported by pluggable protocols

- Error: 3131 SQLSTATE: 42000 ([ER_LOCKING_SERVICE_WRONG_NAME](#))

Message: Incorrect locking service lock name '%s'.

A locking service name was specified as [NULL](#), the empty string, or a string longer than 64 characters. Namespace and lock names must be non-[NULL](#), nonempty, and no more than 64 characters long.

- Error: 3132 SQLSTATE: HY000 ([ER_LOCKING_SERVICE_DEADLOCK](#))

Message: Deadlock found when trying to get locking service lock; try releasing locks and restarting lock acquisition.

- Error: 3133 SQLSTATE: HY000 ([ER_LOCKING_SERVICE_TIMEOUT](#))

Message: Service lock wait timeout exceeded.

- Error: 3134 SQLSTATE: HY000 ([ER_GIS_MAX_POINTS_IN_GEOMETRY_OVERFLOWED](#))

Message: Parameter %s exceeds the maximum number of points in a geometry (%lu) in function %s.

- Error: 3135 SQLSTATE: HY000 ([ER_SQL_MODE_MERGED](#))

Message: 'NO_ZERO_DATE', 'NO_ZERO_IN_DATE' and 'ERROR_FOR_DIVISION_BY_ZERO' sql modes should be used with strict mode. They will be merged with strict mode in a future release.

- Error: 3136 SQLSTATE: HY000 ([ER_VTOKEN_PLUGIN_TOKEN_MISMATCH](#))

Message: Version token mismatch for %.*s. Correct value %.*s

The client has set its [version_tokens_session](#) system variable to the list of tokens it requires the server to match, but the server token list has at least one matching token name that has a value different from what the client requires. See [Section 5.6.5, “Version Tokens”](#).

- Error: 3137 SQLSTATE: HY000 ([ER_VTOKEN_PLUGIN_TOKEN_NOT_FOUND](#))

Message: Version token %.*s not found.

The client has set its [version_tokens_session](#) system variable to the list of tokens it requires the server to match, but the server token list is missing at least one of those tokens. See [Section 5.6.5, “Version Tokens”](#).

- Error: 3138 SQLSTATE: HY000 ([ER_CANT_SET_VARIABLE_WHEN_OWNING_GTID](#))

Message: Variable %s cannot be changed by a client that owns a GTID. The client owns %s. Ownership is released on COMMIT or ROLLBACK.

- Error: 3139 SQLSTATE: HY000 ([ER_SLAVE_CHANNEL_OPERATION_NOT_ALLOWED](#))

Message: %s cannot be performed on channel '%s'.

- Error: 3140 SQLSTATE: 22032 ([ER_INVALID_JSON_TEXT](#))

Message: Invalid JSON text: "%s" at position %u in value for column '%s'.

- Error: 3141 SQLSTATE: 22032 ([ER_INVALID_JSON_TEXT_IN_PARAM](#))

Message: Invalid JSON text in argument %u to function %s: "%s" at position %u.%s

- Error: 3142 SQLSTATE: HY000 (ER_INVALID_JSON_BINARY_DATA)
Message: The JSON binary value contains invalid data.
- Error: 3143 SQLSTATE: 42000 (ER_INVALID_JSON_PATH)
Message: Invalid JSON path expression. The error is around character position %u.%s
- Error: 3144 SQLSTATE: 22032 (ER_INVALID_JSON_CHARSET)
Message: Cannot create a JSON value from a string with CHARACTER SET '%s'.
- Error: 3145 SQLSTATE: 22032 (ER_INVALID_JSON_CHARSET_IN_FUNCTION)
Message: Invalid JSON character data provided to function %s: '%s'; utf8 is required.
- Error: 3146 SQLSTATE: 22032 (ER_INVALID_TYPE_FOR_JSON)
Message: Invalid data type for JSON data in argument %u to function %s; a JSON string or JSON type is required.
- Error: 3147 SQLSTATE: 22032 (ER_INVALID_CAST_TO_JSON)
Message: Cannot CAST value to JSON.
- Error: 3148 SQLSTATE: 42000 (ER_INVALID_JSON_PATH_CHARSET)
Message: A path expression must be encoded in the utf8 character set. The path expression '%s' is encoded in character set '%s'.
- Error: 3149 SQLSTATE: 42000 (ER_INVALID_JSON_PATH_WILDCARD)
Message: In this situation, path expressions may not contain the * and ** tokens or an array range.
- Error: 3150 SQLSTATE: 22032 (ER_JSON_VALUE_TOO_BIG)
Message: The JSON value is too big to be stored in a JSON column.
- Error: 3151 SQLSTATE: 22032 (ER_JSON_KEY_TOO_BIG)
Message: The JSON object contains a key name that is too long.
- Error: 3152 SQLSTATE: 42000 (ER_JSON_USED_AS_KEY)
Message: JSON column '%s' supports indexing only via generated columns on a specified JSON path.
- Error: 3153 SQLSTATE: 42000 (ER_JSON_VACUOUS_PATH)
Message: The path expression '\$' is not allowed in this context.
- Error: 3154 SQLSTATE: 42000 (ER_JSON_BAD_ONE_OR_ALL_ARG)
Message: The oneOrAll argument to %s may take these values: 'one' or 'all'.
- Error: 3155 SQLSTATE: 22003 (ER_NUMERIC_JSON_VALUE_OUT_OF_RANGE)
Message: Out of range JSON value for CAST to %s%s from column %s at row %ld
- Error: 3156 SQLSTATE: 22018 (ER_INVALID_JSON_VALUE_FOR_CAST)

Message: Invalid JSON value for CAST to %s%s from column %s at row %ld

- Error: 3157 SQLSTATE: 22032 ([ER_JSON_DOCUMENT_TOO_DEEP](#))

Message: The JSON document exceeds the maximum depth.

- Error: 3158 SQLSTATE: 22032 ([ER_JSON_DOCUMENT_NULL_KEY](#))

Message: JSON documents may not contain NULL member names.

- Error: 3159 SQLSTATE: HY000 ([ER_SECURE_TRANSPORT_REQUIRED](#))

Message: Connections using insecure transport are prohibited while --require_secure_transport=ON.

With the [require_secure_transport](#) system variable, clients can connect only using secure transports. Qualifying connections are those using SSL, a Unix socket file, or shared memory.

- Error: 3160 SQLSTATE: HY000 ([ER_NO_SECURE_TRANSPORTS_CONFIGURED](#))

Message: No secure transports (SSL or Shared Memory) are configured, unable to set --require_secure_transport=ON.

The [require_secure_transport](#) system variable cannot be enabled if the server does not support at least one secure transport. Configure the server with the required SSL keys/certificates to enable SSL connections, or enable the [shared_memory](#) system variable to enable shared-memory connections.

- Error: 3161 SQLSTATE: HY000 ([ER_DISABLED_STORAGE_ENGINE](#))

Message: Storage engine %s is disabled (Table creation is disallowed).

An attempt was made to create a table or tablespace using a storage engine listed in the value of the [disabled_storage_engines](#) system variable, or to change an existing table or tablespace to such an engine. Choose a different storage engine.

- Error: 3162 SQLSTATE: HY000 ([ER_USER_DOES_NOT_EXIST](#))

Message: Authorization ID %s does not exist.

- Error: 3163 SQLSTATE: HY000 ([ER_USER_ALREADY_EXISTS](#))

Message: Authorization ID %s already exists.

- Error: 3164 SQLSTATE: HY000 ([ER_AUDIT_API_ABORT](#))

Message: Aborted by Audit API ('%s';%d).

This error indicates that an audit plugin terminated execution of an event. The message typically indicates the event subclass name and a numeric status value.

- Error: 3165 SQLSTATE: 42000 ([ER_INVALID_JSON_PATH_ARRAY_CELL](#))

Message: A path expression is not a path to a cell in an array.

- Error: 3166 SQLSTATE: HY000 ([ER_BUFPOOL_RESIZE_INPROGRESS](#))

Message: Another buffer pool resize is already in progress.

- Error: 3167 SQLSTATE: HY000 ([ER_FEATURE_DISABLED_SEE_DOC](#))

Message: The '%s' feature is disabled; see the documentation for '%s'

- Error: 3168 SQLSTATE: HY000 (ER_SERVER_ISNT_AVAILABLE)

Message: Server isn't available

- Error: 3169 SQLSTATE: HY000 (ER_SESSION_WAS_KILLED)

Message: Session was killed

- Error: 3170 SQLSTATE: HY000 (ER_CAPACITY_EXCEEDED)

Message: Memory capacity of %llu bytes for '%s' exceeded. %s

- Error: 3171 SQLSTATE: HY000 (ER_CAPACITY_EXCEEDED_IN_RANGE_OPTIMIZER)

Message: Range optimization was not done for this query.

- Error: 3173 SQLSTATE: HY000
(ER_CANT_WAIT_FOR_EXECUTED_GTID_SET_WHILE_OWNING_A_GTID)

Message: The client holds ownership of the GTID %s. Therefore, WAIT_FOR_EXECUTED_GTID_SET cannot wait for this GTID.

- Error: 3174 SQLSTATE: HY000 (ER_CANNOT_ADD_FOREIGN_BASE_COL_VIRTUAL)

Message: Cannot add foreign key on the base column of indexed virtual column.

- Error: 3175 SQLSTATE: HY000 (ER_CANNOT_CREATE_VIRTUAL_INDEX_CONSTRAINT)

Message: Cannot create index on virtual column whose base column has foreign constraint.

- Error: 3176 SQLSTATE: HY000 (ER_ERROR_ON_MODIFYING_GTID_EXECUTED_TABLE)

Message: Please do not modify the %s table with an XA transaction. This is an internal system table used to store GTIDs for committed transactions. Although modifying it can lead to an inconsistent GTID state, if necessary you can modify it with a non-XA transaction.

- Error: 3177 SQLSTATE: HY000 (ER_LOCK_REFUSED_BY_ENGINE)

Message: Lock acquisition refused by storage engine.

- Error: 3178 SQLSTATE: HY000 (ER_UNSUPPORTED_ALTER_ONLINE_ON_VIRTUAL_COLUMN)

Message: ADD COLUMN col...VIRTUAL, ADD INDEX(col)

- Error: 3179 SQLSTATE: HY000 (ER_MASTER_KEY_ROTATION_NOT_SUPPORTED_BY_SE)

Message: Master key rotation is not supported by storage engine.

- Error: 3181 SQLSTATE: HY000 (ER_MASTER_KEY_ROTATION_BINLOG_FAILED)

Message: Write to binlog failed. However, master key rotation has been completed successfully.

- Error: 3182 SQLSTATE: HY000 (ER_MASTER_KEY_ROTATION_SE_UNAVAILABLE)

Message: Storage engine is not available.

- Error: 3183 SQLSTATE: HY000 (ER_TABLESPACE_CANNOT_ENCRYPT)

Message: This tablespace can't be encrypted.

- Error: 3184 SQLSTATE: HY000 ([ER_INVALID_ENCRYPTION_OPTION](#))

Message: Invalid encryption option.

- Error: 3185 SQLSTATE: HY000 ([ER_CANNOT_FIND_KEY_IN_KEYRING](#))

Message: Can't find master key from keyring, please check in the server log if a keyring plugin is loaded and initialized successfully.

- Error: 3186 SQLSTATE: HY000 ([ER_CAPACITY_EXCEEDED_IN_PARSER](#))

Message: Parser bailed out for this query.

- Error: 3187 SQLSTATE: HY000 ([ER_UNSUPPORTED_ALTER_ENCRYPTION_INPLACE](#))

Message: Cannot alter encryption attribute by inplace algorithm.

- Error: 3188 SQLSTATE: HY000 ([ER_KEYRING_UDF_KEYRING_SERVICE_ERROR](#))

Message: Function '%s' failed because underlying keyring service returned an error. Please check if a keyring plugin is installed and that provided arguments are valid for the keyring you are using.

- Error: 3189 SQLSTATE: HY000 ([ER_USER_COLUMN_OLD_LENGTH](#))

Message: It seems that your db schema is old. The %s column is 77 characters long and should be 93 characters long. Please run mysql_upgrade.

- Error: 3190 SQLSTATE: HY000 ([ER_CANT_RESET_MASTER](#))

Message: RESET MASTER is not allowed because %s.

- Error: 3191 SQLSTATE: HY000 ([ER_GROUP_REPLICATION_MAX_GROUP_SIZE](#))

Message: The START GROUP_REPLICATION command failed since the group already has 9 members.

- Error: 3192 SQLSTATE: HY000 ([ER_CANNOT_ADD_FOREIGN_BASE_COL_STORED](#))

Message: Cannot add foreign key on the base column of stored column.

- Error: 3193 SQLSTATE: HY000 ([ER_TABLE_REFERENCED](#))

Message: Cannot complete the operation because table is referenced by another connection.

- Error: 3197 SQLSTATE: HY000 ([ER_XA_RETRY](#))

Message: The resource manager is not able to commit the transaction branch at this time. Please retry later.

[ER_XA_RETRY](#) was added in 8.0.2.

- Error: 3198 SQLSTATE: HY000 ([ER_KEYRING_AWS_UDF_AWS_KMS_ERROR](#))

Message: Function %s failed due to: %s.

[ER_KEYRING_AWS_UDF_AWS_KMS_ERROR](#) was added in 8.0.2.

- Error: 3199 SQLSTATE: HY000 (ER_BINLOG_UNSAFE_XA)
Message: Statement is unsafe because it is being used inside a XA transaction. Concurrent XA transactions may deadlock on slaves when replicated using statements.
[ER_BINLOG_UNSAFE_XA](#) was added in 8.0.2.
- Error: 3200 SQLSTATE: HY000 (ER_UDF_ERROR)
Message: %s UDF failed; %s
[ER_UDF_ERROR](#) was added in 8.0.4.
- Error: 3201 SQLSTATE: HY000 (ER_KEYRING_MIGRATION_FAILURE)
Message: Can not perform keyring migration : %s
[ER_KEYRING_MIGRATION_FAILURE](#) was added in 8.0.11.
- Error: 3202 SQLSTATE: 42000 (ER_KEYRING_ACCESS_DENIED_ERROR)
Message: Access denied; you need %s privileges for this operation
[ER_KEYRING_ACCESS_DENIED_ERROR](#) was added in 8.0.11.
- Error: 3203 SQLSTATE: HY000 (ER_KEYRING_MIGRATION_STATUS)
Message: Keyring migration %s.
[ER_KEYRING_MIGRATION_STATUS](#) was added in 8.0.11.
- Error: 3212 SQLSTATE: HY000 (ER_AUDIT_LOG_SUPER_PRIVILEGE_REQUIRED)
Message: SUPER privilege required for '%s'@'%s' user.
[ER_AUDIT_LOG_SUPER_PRIVILEGE_REQUIRED](#) was added in 8.0.11.
- Error: 3214 SQLSTATE: HY000 (ER_AUDIT_LOG_UDF_INVALID_ARGUMENT_TYPE)
Message: Invalid argument type
[ER_AUDIT_LOG_UDF_INVALID_ARGUMENT_TYPE](#) was added in 8.0.11.
- Error: 3215 SQLSTATE: HY000 (ER_AUDIT_LOG_UDF_INVALID_ARGUMENT_COUNT)
Message: Invalid argument count
[ER_AUDIT_LOG_UDF_INVALID_ARGUMENT_COUNT](#) was added in 8.0.11.
- Error: 3216 SQLSTATE: HY000 (ER_AUDIT_LOG_HAS_NOT_BEEN_INSTALLED)
Message: audit_log plugin has not been installed using INSTALL PLUGIN syntax.
[ER_AUDIT_LOG_HAS_NOT_BEEN_INSTALLED](#) was added in 8.0.11.
- Error: 3217 SQLSTATE: HY000
([ER_AUDIT_LOG_UDF_READ_INVALID_MAX_ARRAY_LENGTH_ARG_TYPE](#))
Message: Invalid "max_array_length" argument type.

[ER_AUDIT_LOG_UDF_READ_INVALID_MAX_ARRAY_LENGTH_ARG_TYPE](#) was added in 8.0.11.

- Error: 3218 SQLSTATE: HY000 ([ER_AUDIT_LOG_UDF_READ_INVALID_MAX_ARRAY_LENGTH_ARG_VALUE](#))

Message: Invalid "max_array_length" argument value.

[ER_AUDIT_LOG_UDF_READ_INVALID_MAX_ARRAY_LENGTH_ARG_VALUE](#) was added in 8.0.11.

- Error: 3625 SQLSTATE: HY000 ([ER_UNABLE_TO_UPDATE_COLUMN_STATISTICS](#))

Message: Unable to update column statistics for column '%s' in table '%s'. '%s'

[ER_UNABLE_TO_UPDATE_COLUMN_STATISTICS](#) was added in 8.0.2.

- Error: 3626 SQLSTATE: HY000 ([ER_UNABLE_TO_DROP_COLUMN_STATISTICS](#))

Message: Unable to remove column statistics for column '%s' in table '%s'. '%s'

[ER_UNABLE_TO_DROP_COLUMN_STATISTICS](#) was added in 8.0.2.

- Error: 3627 SQLSTATE: HY000 ([ER_UNABLE_TO_BUILD_HISTOGRAM](#))

Message: Unable to build histogram statistics for column '%s' in table '%s'. '%s'

[ER_UNABLE_TO_BUILD_HISTOGRAM](#) was added in 8.0.2.

- Error: 3628 SQLSTATE: HY000 ([ER_MANDATORY_ROLE](#))

Message: The role %s is a mandatory role and can't be revoked or dropped. The restriction can be lifted by excluding the role identifier from the global variable mandatory_roles.

[ER_MANDATORY_ROLE](#) was added in 8.0.2.

- Error: 3629 SQLSTATE: HY000 ([ER_MISSING_TABLESPACE_FILE](#))

Message: Tablespace '%s' does not have a file named '%s'

[ER_MISSING_TABLESPACE_FILE](#) was added in 8.0.3.

- Error: 3630 SQLSTATE: 42000 ([ER_PERSIST_ONLY_ACCESS_DENIED_ERROR](#))

Message: Access denied; you need %s privileges for this operation

[ER_PERSIST_ONLY_ACCESS_DENIED_ERROR](#) was added in 8.0.3.

- Error: 3631 SQLSTATE: HY000 ([ER_CMD_NEED_SUPER](#))
Message: You need the SUPER privilege for command '%s'
[ER_CMD_NEED_SUPER](#) was added in 8.0.3.
- Error: 3632 SQLSTATE: HY000 ([ER_PATH_IN_DATADIR](#))
Message: Path is within the current data directory '%s'
[ER_PATH_IN_DATADIR](#) was added in 8.0.3.
- Error: 3633 SQLSTATE: HY000 ([ER_DDL_IN_PROGRESS](#))
Message: Concurrent DDL is performed during the operation. Please try again.
[ER_DDL_IN_PROGRESS](#) was added in 8.0.3.
- Error: 3634 SQLSTATE: HY000 ([ER_TOO_MANY_CONCURRENT_CLONES](#))
Message: Too many concurrent clone operations. Maximum allowed - %d.
[ER_TOO_MANY_CONCURRENT_CLONES](#) was added in 8.0.3.
- Error: 3635 SQLSTATE: HY000 ([ER_APPLIER_LOG_EVENT_VALIDATION_ERROR](#))
Message: The table in transaction %s does not comply with the requirements by an external plugin.
[ER_APPLIER_LOG_EVENT_VALIDATION_ERROR](#) was added in 8.0.3.
- Error: 3636 SQLSTATE: HY000 ([ER_CTE_MAX_RECURSION_DEPTH](#))
Message: Recursive query aborted after %u iterations. Try increasing @@cte_max_recursion_depth to a larger value.
[ER_CTE_MAX_RECURSION_DEPTH](#) was added in 8.0.3.
- Error: 3637 SQLSTATE: HY000 ([ER_NOT_HINT_UPDATABLE_VARIABLE](#))
Message: Variable %s cannot be set using SET_VAR hint.
[ER_NOT_HINT_UPDATABLE_VARIABLE](#) was added in 8.0.3.
- Error: 3638 SQLSTATE: HY000 ([ER_CREDENTIALS_CONTRADICT_TO_HISTORY](#))
Message: Cannot use these credentials for '%.*s@%.*s' because they contradict the password history policy
[ER_CREDENTIALS_CONTRADICT_TO_HISTORY](#) was added in 8.0.3.
- Error: 3639 SQLSTATE: HY000 ([ER_WARNING_PASSWORD_HISTORY_CLAUSES_VOID](#))
Message: Non-zero password history clauses ignored for user '%s'@'%s' as its authentication plugin %s does not support password history
[ER_WARNING_PASSWORD_HISTORY_CLAUSES_VOID](#) was added in 8.0.3.
- Error: 3640 SQLSTATE: HY000 ([ER_CLIENT_DOES_NOT_SUPPORT](#))
Message: The client doesn't support %s

`ER_CLIENT_DOES_NOT_SUPPORT` was added in 8.0.3.

- Error: 3641 SQLSTATE: HY000 (`ER_I_S_SKIPPED_TABLESPACE`)

Message: Tablespace '%s' was skipped since its definition is being modified by concurrent DDL statement

`ER_I_S_SKIPPED_TABLESPACE` was added in 8.0.3.

- Error: 3642 SQLSTATE: HY000 (`ER_TABLESPACE_ENGINE_MISMATCH`)

Message: Engine '%s' does not match stored engine '%s' for tablespace '%s'

`ER_TABLESPACE_ENGINE_MISMATCH` was added in 8.0.3.

- Error: 3643 SQLSTATE: HY000 (`ER_WRONG_SRID_FOR_COLUMN`)

Message: The SRID of the geometry does not match the SRID of the column '%s'. The SRID of the geometry is %lu, but the SRID of the column is %lu. Consider changing the SRID of the geometry or the SRID property of the column.

`ER_WRONG_SRID_FOR_COLUMN` was added in 8.0.3.

- Error: 3644 SQLSTATE: HY000 (`ER_CANNOT_ALTER_SRID_DUE_TO_INDEX`)

Message: The SRID specification on the column '%s' cannot be changed because there is a spatial index on the column. Please remove the spatial index before altering the SRID specification.

`ER_CANNOT_ALTER_SRID_DUE_TO_INDEX` was added in 8.0.3.

- Error: 3645 SQLSTATE: HY000 (`ER_WARN_BINLOG_PARTIAL_UPDATES_DISABLED`)

Message: When %s, the option `binlog_row_value_options=%s` will be ignored and updates will be written in full format to binary log.

`ER_WARN_BINLOG_PARTIAL_UPDATES_DISABLED` was added in 8.0.3.

- Error: 3646 SQLSTATE: HY000 (`ER_WARN_BINLOG_V1_ROW_EVENTS_DISABLED`)

Message: When %s, the option `log_bin_use_v1_row_events=1` will be ignored and row events will be written in new format to binary log.

`ER_WARN_BINLOG_V1_ROW_EVENTS_DISABLED` was added in 8.0.3.

- Error: 3647 SQLSTATE: HY000
(`ER_WARN_BINLOG_PARTIAL_UPDATES_SUGGESTS_PARTIAL_IMAGES`)

Message: When %s, the option `binlog_row_value_options=%s` will be used only for the after-image. Full values will be written in the before-image, so the saving in disk space due to `binlog_row_value_options` is limited to less than 50%%.

`ER_WARN_BINLOG_PARTIAL_UPDATES_SUGGESTS_PARTIAL_IMAGES` was added in 8.0.3.

- Error: 3648 SQLSTATE: HY000 (`ER_COULD_NOT_APPLY_JSON_DIFF`)

Message: Could not apply JSON diff in table %.*s, column %s.

`ER_COULD_NOT_APPLY_JSON_DIFF` was added in 8.0.3.

- Error: 3649 SQLSTATE: HY000 ([ER_CORRUPTED_JSON_DIFF](#))
Message: Corrupted JSON diff for table %.*s, column %s.
[ER_CORRUPTED_JSON_DIFF](#) was added in 8.0.3.
- Error: 3650 SQLSTATE: HY000 ([ER_RESOURCE_GROUP_EXISTS](#))
Message: Resource Group '%s' exists
[ER_RESOURCE_GROUP_EXISTS](#) was added in 8.0.3.
- Error: 3651 SQLSTATE: HY000 ([ER_RESOURCE_GROUP_NOT_EXISTS](#))
Message: Resource Group '%s' does not exist.
[ER_RESOURCE_GROUP_NOT_EXISTS](#) was added in 8.0.3.
- Error: 3652 SQLSTATE: HY000 ([ER_INVALID_VCPU_ID](#))
Message: Invalid cpu id %u
[ER_INVALID_VCPU_ID](#) was added in 8.0.3.
- Error: 3653 SQLSTATE: HY000 ([ER_INVALID_VCPU_RANGE](#))
Message: Invalid VCPU range %u-%u
[ER_INVALID_VCPU_RANGE](#) was added in 8.0.3.
- Error: 3654 SQLSTATE: HY000 ([ER_INVALID_THREAD_PRIORITY](#))
Message: Invalid thread priority value %d for %s resource group %s. Allowed range is [%d, %d].
[ER_INVALID_THREAD_PRIORITY](#) was added in 8.0.3.
- Error: 3655 SQLSTATE: HY000 ([ER_DISALLOWED_OPERATION](#))
Message: %s operation is disallowed on %s
[ER_DISALLOWED_OPERATION](#) was added in 8.0.3.
- Error: 3656 SQLSTATE: HY000 ([ER_RESOURCE_GROUP_BUSY](#))
Message: Resource group %s is busy.
[ER_RESOURCE_GROUP_BUSY](#) was added in 8.0.3.
- Error: 3657 SQLSTATE: HY000 ([ER_RESOURCE_GROUP_DISABLED](#))
Message: Resource group %s is disabled.
[ER_RESOURCE_GROUP_DISABLED](#) was added in 8.0.3.
- Error: 3658 SQLSTATE: HY000 ([ER_FEATURE_UNSUPPORTED](#))
Message: Feature %s is unsupported (%s).
[ER_FEATURE_UNSUPPORTED](#) was added in 8.0.3.

- Error: 3659 SQLSTATE: HY000 (ER_ATTRIBUTE_IGNORED)
Message: Attribute %s is ignored (%s).
ER_ATTRIBUTE_IGNORED was added in 8.0.3.
- Error: 3660 SQLSTATE: HY000 (ER_INVALID_THREAD_ID)
Message: Invalid thread id (%llu).
ER_INVALID_THREAD_ID was added in 8.0.3.
- Error: 3661 SQLSTATE: HY000 (ER_RESOURCE_GROUP_BIND_FAILED)
Message: Unable to bind resource group %s with thread id (%llu).(%)s).
ER_RESOURCE_GROUP_BIND_FAILED was added in 8.0.3.
- Error: 3662 SQLSTATE: HY000 (ER_INVALID_USE_OF_FORCE_OPTION)
Message: Option FORCE invalid as DISABLE option is not specified.
ER_INVALID_USE_OF_FORCE_OPTION was added in 8.0.3.
- Error: 3663 SQLSTATE: HY000 (ER_GROUP_REPLICATION_COMMAND_FAILURE)
Message: The %s command encountered a failure. %s
ER_GROUP_REPLICATION_COMMAND_FAILURE was added in 8.0.4.
- Error: 3664 SQLSTATE: HY000 (ER_SDI_OPERATION_FAILED)
Message: Failed to %s SDI '%s.%s' in tablespace '%s'.
ER_SDI_OPERATION_FAILED was added in 8.0.3.
- Error: 3665 SQLSTATE: 22035 (ER_MISSING_JSON_TABLE_VALUE)
Message: Missing value for JSON_TABLE column '%s'
ER_MISSING_JSON_TABLE_VALUE was added in 8.0.4.
- Error: 3666 SQLSTATE: 2203F (ER_WRONG_JSON_TABLE_VALUE)
Message: Can't store an array or an object in the scalar JSON_TABLE column '%s'
ER_WRONG_JSON_TABLE_VALUE was added in 8.0.4.
- Error: 3667 SQLSTATE: 42000 (ER_TF_MUST_HAVE_ALIAS)
Message: Every table function must have an alias
ER_TF_MUST_HAVE_ALIAS was added in 8.0.4.
- Error: 3668 SQLSTATE: HY000 (ER_TF_FORBIDDEN_JOIN_TYPE)
Message: INNER or LEFT JOIN must be used for LATERAL references made by '%s'
ER_TF_FORBIDDEN_JOIN_TYPE was added in 8.0.4.

- Error: 3669 SQLSTATE: 22003 ([ER_JT_VALUE_OUT_OF_RANGE](#))
Message: Value is out of range for JSON_TABLE's column '%s'
[ER_JT_VALUE_OUT_OF_RANGE](#) was added in 8.0.4.
- Error: 3670 SQLSTATE: 42000 ([ER_JT_MAX_NESTED_PATH](#))
Message: More than supported %u NESTED PATHs were found in JSON_TABLE '%s'
[ER_JT_MAX_NESTED_PATH](#) was added in 8.0.4.
- Error: 3671 SQLSTATE: HY000 ([ER_PASSWORD_EXPIRATION_NOT_SUPPORTED_BY_AUTH_METHOD](#))
Message: The selected authentication method %.*s does not support password expiration
[ER_PASSWORD_EXPIRATION_NOT_SUPPORTED_BY_AUTH_METHOD](#) was added in 8.0.4.
- Error: 3672 SQLSTATE: HY000 ([ER_INVALID_GEOJSON_CRS_NOT_TOP_LEVEL](#))
Message: Invalid GeoJSON data provided to function %s: Member 'crs' must be specified in the top level object.
[ER_INVALID_GEOJSON_CRS_NOT_TOP_LEVEL](#) was added in 8.0.4.
- Error: 3673 SQLSTATE: 23000 ([ER_BAD_NULL_ERROR_NOT_IGNORED](#))
Message: Column '%s' cannot be null
[ER_BAD_NULL_ERROR_NOT_IGNORED](#) was added in 8.0.4.
- Error: 3674 SQLSTATE: HY000 ([WARN_USELESS_SPATIAL_INDEX](#))
Message: The spatial index on column '%s' will not be used by the query optimizer since the column does not have an SRID attribute. Consider adding an SRID attribute to the column.
[WARN_USELESS_SPATIAL_INDEX](#) was added in 8.0.11.
- Error: 3675 SQLSTATE: HY000 ([ER_DISK_FULL_NOWAIT](#))
Message: Create table/tablespace '%s' failed, as disk is full
[ER_DISK_FULL_NOWAIT](#) was added in 8.0.11.
- Error: 3676 SQLSTATE: HY000 ([ER_PARSE_ERROR_IN_DIGEST_FN](#))
Message: Could not parse argument to digest function: "%s".
[ER_PARSE_ERROR_IN_DIGEST_FN](#) was added in 8.0.11.
- Error: 3677 SQLSTATE: HY000 ([ER_UNDISCLOSED_PARSE_ERROR_IN_DIGEST_FN](#))
Message: Could not parse argument to digest function.
[ER_UNDISCLOSED_PARSE_ERROR_IN_DIGEST_FN](#) was added in 8.0.11.
- Error: 3678 SQLSTATE: HY000 ([ER_SCHEMA_DIR_EXISTS](#))
Message: Schema directory '%s' already exists. This must be resolved manually (e.g. by moving the schema directory to another location).

[ER_SCHEMA_DIR_EXISTS](#) was added in 8.0.11.

- Error: 3679 SQLSTATE: HY000 ([ER_SCHEMA_DIR_MISSING](#))

Message: Schema directory '%s' does not exist

[ER_SCHEMA_DIR_MISSING](#) was added in 8.0.11.

- Error: 3680 SQLSTATE: HY000 ([ER_SCHEMA_DIR_CREATE_FAILED](#))

Message: Failed to create schema directory '%s' (errno: %d - %s)

[ER_SCHEMA_DIR_CREATE_FAILED](#) was added in 8.0.11.

- Error: 3681 SQLSTATE: HY000 ([ER_SCHEMA_DIR_UNKNOWN](#))

Message: Schema '%s' does not exist, but schema directory '%s' was found. This must be resolved manually (e.g. by moving the schema directory to another location).

[ER_SCHEMA_DIR_UNKNOWN](#) was added in 8.0.11.

- Error: 3682 SQLSTATE: 22S00 ([ER_ONLY_IMPLEMENTED_FOR_SRID_0_AND_4326](#))

Message: Function %s is only defined for SRID 0 and SRID 4326.

[ER_ONLY_IMPLEMENTED_FOR_SRID_0_AND_4326](#) was added in 8.0.11.

- Error: 3683 SQLSTATE: HY000 ([ER_BINLOG_EXPIRE_LOG_DAYS_AND_SECS_USED_TOGETHER](#))

Message: The option expire_logs_days and binlog_expire_logs_seconds cannot be used together. Please use binlog_expire_logs_seconds to set the expire time (expire_logs_days is deprecated)

[ER_BINLOG_EXPIRE_LOG_DAYS_AND_SECS_USED_TOGETHER](#) was added in 8.0.11.

- Error: 3684 SQLSTATE: HY000 ([ER_REGEX_BUFFER_OVERFLOW](#))

Message: The result string is larger than the result buffer.

[ER_REGEX_BUFFER_OVERFLOW](#) was added in 8.0.11.

- Error: 3685 SQLSTATE: HY000 ([ER_REGEX_ILLEGAL_ARGUMENT](#))

Message: Illegal argument to a regular expression.

[ER_REGEX_ILLEGAL_ARGUMENT](#) was added in 8.0.11.

- Error: 3686 SQLSTATE: HY000 ([ER_REGEX_INDEX_OUTOFBOUNDS_ERROR](#))

Message: Index out of bounds in regular expression search.

[ER_REGEX_INDEX_OUTOFBOUNDS_ERROR](#) was added in 8.0.11.

- Error: 3687 SQLSTATE: HY000 ([ER_REGEX_INTERNAL_ERROR](#))

Message: Internal error in the regular expression library.

[ER_REGEX_INTERNAL_ERROR](#) was added in 8.0.11.

- Error: 3688 SQLSTATE: HY000 ([ER_REGEX_RULE_SYNTAX](#))

Message: Syntax error in regular expression on line %u, character %u.

[ER_REGEX_RULE_SYNTAX](#) was added in 8.0.11.

- Error: 3689 SQLSTATE: HY000 ([ER_REGEX_BAD_ESCAPE_SEQUENCE](#))

Message: Unrecognized escape sequence in regular expression.

[ER_REGEX_BAD_ESCAPE_SEQUENCE](#) was added in 8.0.11.

- Error: 3690 SQLSTATE: HY000 ([ER_REGEX_UNIMPLEMENTED](#))

Message: The regular expression contains a feature that is not implemented in this library version.

[ER_REGEX_UNIMPLEMENTED](#) was added in 8.0.11.

- Error: 3691 SQLSTATE: HY000 ([ER_REGEX_MISMATCHED_PAREN](#))

Message: Mismatched parenthesis in regular expression.

[ER_REGEX_MISMATCHED_PAREN](#) was added in 8.0.11.

- Error: 3692 SQLSTATE: HY000 ([ER_REGEX_BAD_INTERVAL](#))

Message: Incorrect description of a {min,max} interval.

[ER_REGEX_BAD_INTERVAL](#) was added in 8.0.11.

- Error: 3693 SQLSTATE: HY000 ([ER_REGEX_MAX_LT_MIN](#))

Message: The maximum is less than the minimum in a {min,max} interval.

[ER_REGEX_MAX_LT_MIN](#) was added in 8.0.11.

- Error: 3694 SQLSTATE: HY000 ([ER_REGEX_INVALID_BACK_REF](#))

Message: Invalid back-reference in regular expression.

[ER_REGEX_INVALID_BACK_REF](#) was added in 8.0.11.

- Error: 3695 SQLSTATE: HY000 ([ER_REGEX_LOOK_BEHIND_LIMIT](#))

Message: The look-behind assertion exceeds the limit in regular expression.

[ER_REGEX_LOOK_BEHIND_LIMIT](#) was added in 8.0.11.

- Error: 3696 SQLSTATE: HY000 ([ER_REGEX_MISSING_CLOSE_BRACKET](#))

Message: The regular expression contains an unclosed bracket expression.

[ER_REGEX_MISSING_CLOSE_BRACKET](#) was added in 8.0.11.

- Error: 3697 SQLSTATE: HY000 ([ER_REGEX_INVALID_RANGE](#))

Message: The regular expression contains an [x-y] character range where x comes after y.

[ER_REGEX_INVALID_RANGE](#) was added in 8.0.11.

- Error: 3698 SQLSTATE: HY000 ([ER_REGEX_STACK_OVERFLOW](#))

Message: Overflow in the regular expression backtrack stack.

[ER_REGEX_STACK_OVERFLOW](#) was added in 8.0.11.

- Error: 3699 SQLSTATE: HY000 ([ER_REGEX_TIME_OUT](#))

Message: Timeout exceeded in regular expression match.

[ER_REGEX_TIME_OUT](#) was added in 8.0.11.

- Error: 3700 SQLSTATE: HY000 ([ER_REGEX_PATTERN_TOO_BIG](#))

Message: The regular expression pattern exceeds limits on size or complexity.

[ER_REGEX_PATTERN_TOO_BIG](#) was added in 8.0.11.

- Error: 3701 SQLSTATE: HY000 ([ER_CANT_SET_ERROR_LOG_SERVICE](#))

Message: Value for %s got confusing at or around "%s". Syntax may be wrong, component may not be INSTALLED, or a component that does not support instances may be listed more than once.

[ER_CANT_SET_ERROR_LOG_SERVICE](#) was added in 8.0.11.

- Error: 3702 SQLSTATE: HY000 ([ER_EMPTY_PIPELINE_FOR_ERROR_LOG_SERVICE](#))

Message: Setting an empty %s pipeline disables error logging!

[ER_EMPTY_PIPELINE_FOR_ERROR_LOG_SERVICE](#) was added in 8.0.11.

- Error: 3703 SQLSTATE: HY000 ([ER_COMPONENT_FILTER_DIAGNOSTICS](#))

Message: filter %s: %s

[ER_COMPONENT_FILTER_DIAGNOSTICS](#) was added in 8.0.11.

- Error: 3704 SQLSTATE: HY000 ([ER_INNODB_CANNOT_BE_IGNORED](#))

Message: ignore-builtin-innodb is ignored and will be removed in future releases.

[ER_INNODB_CANNOT_BE_IGNORED](#) was added in 8.0.2, removed after 8.0.2.

- Error: 3704 SQLSTATE: 22S00 ([ER_NOT_IMPLEMENTED_FOR_CARTESIAN_SRS](#))

Message: %s(%s) has not been implemented for Cartesian spatial reference systems.

[ER_NOT_IMPLEMENTED_FOR_CARTESIAN_SRS](#) was added in 8.0.11.

- Error: 3705 SQLSTATE: 22S00 ([ER_NOT_IMPLEMENTED_FOR_PROJECTED_SRS](#))

Message: %s(%s) has not been implemented for projected spatial reference systems.

[ER_NOT_IMPLEMENTED_FOR_PROJECTED_SRS](#) was added in 8.0.11.

- Error: 3706 SQLSTATE: 22003 ([ER_NONPOSITIVE_RADIUS](#))

Message: Invalid radius provided to function %s: Radius must be greater than zero.

[ER_NONPOSITIVE_RADIUS](#) was added in 8.0.11.

- Error: 3707 SQLSTATE: HY000 ([ER_RESTART_SERVER_FAILED](#))
Message: Restart server failed (%s).
[ER_RESTART_SERVER_FAILED](#) was added in 8.0.11.
- Error: 3708 SQLSTATE: SR006 ([ER_SRS_MISSING_MANDATORY_ATTRIBUTE](#))
Message: Missing mandatory attribute %s.
[ER_SRS_MISSING_MANDATORY_ATTRIBUTE](#) was added in 8.0.11.
- Error: 3709 SQLSTATE: SR006 ([ER_SRS_MULTIPLE_ATTRIBUTE_DEFINITIONS](#))
Message: Multiple definitions of attribute %s.
[ER_SRS_MULTIPLE_ATTRIBUTE_DEFINITIONS](#) was added in 8.0.11.
- Error: 3710 SQLSTATE: SR006 ([ER_SRS_NAME_CANT_BE_EMPTY_OR_WHITESPACE](#))
Message: The spatial reference system name can't be an empty string or start or end with whitespace.
[ER_SRS_NAME_CANT_BE_EMPTY_OR_WHITESPACE](#) was added in 8.0.11.
- Error: 3711 SQLSTATE: SR006 ([ER_SRS_ORGANIZATION_CANT_BE_EMPTY_OR_WHITESPACE](#))
Message: The organization name can't be an empty string or start or end with whitespace.
[ER_SRS_ORGANIZATION_CANT_BE_EMPTY_OR_WHITESPACE](#) was added in 8.0.11.
- Error: 3712 SQLSTATE: SR004 ([ER_SRS_ID_ALREADY_EXISTS](#))
Message: There is already a spatial reference system with SRID %u.
[ER_SRS_ID_ALREADY_EXISTS](#) was added in 8.0.11.
- Error: 3713 SQLSTATE: 01S00 ([ER_WARN_SRS_ID_ALREADY_EXISTS](#))
Message: There is already a spatial reference system with SRID %u.
[ER_WARN_SRS_ID_ALREADY_EXISTS](#) was added in 8.0.11.
- Error: 3714 SQLSTATE: SR000 ([ER_CANT_MODIFY_SRID_0](#))
Message: SRID 0 is not modifiable.
[ER_CANT_MODIFY_SRID_0](#) was added in 8.0.11.
- Error: 3715 SQLSTATE: 01S01 ([ER_WARN_RESERVED_SRID_RANGE](#))
Message: The SRID range [%u, %u] has been reserved for system use. SRSs in this range may be added, modified or removed without warning during upgrade.
[ER_WARN_RESERVED_SRID_RANGE](#) was added in 8.0.11.
- Error: 3716 SQLSTATE: SR005 ([ER_CANT_MODIFY_SRS_USED_BY_COLUMN](#))
Message: Can't modify SRID %u. There is at least one column depending on it.
[ER_CANT_MODIFY_SRS_USED_BY_COLUMN](#) was added in 8.0.11.

- Error: 3717 SQLSTATE: SR006 (ER_SRS_INVALID_CHARACTER_IN_ATTRIBUTE)

Message: Invalid character in attribute %s.

ER_SRS_INVALID_CHARACTER_IN_ATTRIBUTE was added in 8.0.11.

- Error: 3718 SQLSTATE: SR006 (ER_SRS_ATTRIBUTE_STRING_TOO_LONG)

Message: Attribute %s is too long. The maximum length is %u characters.

ER_SRS_ATTRIBUTE_STRING_TOO_LONG was added in 8.0.11.

- Error: 3719 SQLSTATE: HY000 (ER_DEPRECATED_UTF8_ALIAS)

Message: 'utf8' is currently an alias for the character set UTF8MB3, but will be an alias for UTF8MB4 in a future release. Please consider using UTF8MB4 in order to be unambiguous.

ER_DEPRECATED_UTF8_ALIAS was added in 8.0.11.

- Error: 3720 SQLSTATE: HY000 (ER_DEPRECATED_NATIONAL)

Message: NATIONAL/NCHAR/NVARCHAR implies the character set UTF8MB3, which will be replaced by UTF8MB4 in a future release. Please consider using CHAR(x) CHARACTER SET UTF8MB4 in order to be unambiguous.

ER_DEPRECATED_NATIONAL was added in 8.0.11.

- Error: 3721 SQLSTATE: HY000 (ER_INVALID_DEFAULT_UTF8MB4_COLLATION)

Message: Invalid default collation %s: utf8mb4_0900_ai_ci or utf8mb4_general_ci expected

ER_INVALID_DEFAULT_UTF8MB4_COLLATION was added in 8.0.11.

- Error: 3722 SQLSTATE: HY000 (ER_UNABLE_TO_COLLECT_INSTANCE_LOG_STATUS)

Message: Unable to collect information for column '%s': %s.

ER_UNABLE_TO_COLLECT_INSTANCE_LOG_STATUS was added in 8.0.11, removed after 8.0.11.

- Error: 3722 SQLSTATE: HY000 (ER_UNABLE_TO_COLLECT_LOG_STATUS)

Message: Unable to collect information for column '%s': %s.

ER_UNABLE_TO_COLLECT_LOG_STATUS was added in 8.0.12.

- Error: 3723 SQLSTATE: HY000 (ER_RESERVED_TABLESPACE_NAME)

Message: The table '%s' may not be created in the reserved tablespace '%s'.

ER_RESERVED_TABLESPACE_NAME was added in 8.0.11.

- Error: 3724 SQLSTATE: HY000 (ER_UNABLE_TO_SET_OPTION)

Message: This option cannot be set %s.

ER_UNABLE_TO_SET_OPTION was added in 8.0.11.

- Error: 3725 SQLSTATE: HY000 (ER_SLAVE_POSSIBLY_DIVERGED_AFTER_DDL)

Message: A commit for an atomic DDL statement was unsuccessful on the master and the slave. The slave supports atomic DDL statements but the master does not, so the action taken by the slave and master might differ. Check that their states have not diverged before proceeding.

[ER_SLAVE_POSSIBLY_DIVERGED_AFTER_DDL](#) was added in 8.0.11.

- Error: 3726 SQLSTATE: 22S00 ([ER_SRS_NOT_GEOGRAPHIC](#))

Message: Function %s is only defined for geographic spatial reference systems, but one of its arguments is in SRID %u, which is not geographic.

[ER_SRS_NOT_GEOGRAPHIC](#) was added in 8.0.12.

- Error: 3727 SQLSTATE: 22023 ([ER_POLYGON_TOO_LARGE](#))

Message: Function %s encountered a polygon that was too large. Polygons must cover less than half the planet.

[ER_POLYGON_TOO_LARGE](#) was added in 8.0.12.

- Error: 3728 SQLSTATE: HY000 ([ER_SPATIAL_UNIQUE_INDEX](#))

Message: Spatial indexes can't be primary or unique indexes.

[ER_SPATIAL_UNIQUE_INDEX](#) was added in 8.0.12.

- Error: 3729 SQLSTATE: HY000 ([ER_INDEX_TYPE_NOT_SUPPORTED_FOR_SPATIAL_INDEX](#))

Message: The index type %s is not supported for spatial indexes.

[ER_INDEX_TYPE_NOT_SUPPORTED_FOR_SPATIAL_INDEX](#) was added in 8.0.12.

Message: Dictionary cache not empty at shutdown.
[ER_DD_CACHE_NOT_EMPTY_AT_SHUTDOWN](#) was added in 8.0.2.

- Error: 10026 SQLSTATE: HY000 ([ER_DD_OBJECT_REMAINS](#))
Message: Dictionary objects used but not released.
[ER_DD_OBJECT_REMAINS](#) was added in 8.0.2.
- Error: 10027 SQLSTATE: HY000 ([ER_DD_OBJECT_REMAINS_IN_RELEASER](#))
Message: Dictionary objects left in default releaser.
[ER_DD_OBJECT_REMAINS_IN_RELEASER](#) was added in 8.0.2.
- Error: 10028 SQLSTATE: HY000 ([ER_DD_OBJECT_RELEASER_REMAINS](#))
Message: Dictionary object auto releaser not deleted
[ER_DD_OBJECT_RELEASER_REMAINS](#) was added in 8.0.2.
- Error: 10029 SQLSTATE: HY000 ([ER_DD_CANT_GET_OBJECT_KEY](#))
Message: Error: Unable to create primary object key
[ER_DD_CANT_GET_OBJECT_KEY](#) was added in 8.0.2.
- Error: 10030 SQLSTATE: HY000 ([ER_DD_CANT_CREATE_OBJECT_KEY](#))
Message: Error: Unable to create object key
[ER_DD_CANT_CREATE_OBJECT_KEY](#) was added in 8.0.2.
- Error: 10031 SQLSTATE: HY000 ([ER_CANT_CREATE_HANDLE_MGR_THREAD](#))
Message: Can't create handle_manager thread (errno= %d)
[ER_CANT_CREATE_HANDLE_MGR_THREAD](#) was added in 8.0.2.
- Error: 10032 SQLSTATE: HY000 ([ER_RPL_REPO_HAS_GAPS](#))
Message: It is not possible to change the type of the relay log's repository because there are workers' repositories with gaps. Please, fix the gaps first before doing such change.
[ER_RPL_REPO_HAS_GAPS](#) was added in 8.0.2.
- Error: 10033 SQLSTATE: HY000 ([ER_INVALID_VALUE_FOR_ENFORCE_GTID_CONSISTENCY](#))
Message: option 'enforce-gtid-consistency': value '%s' was not recognized. Setting enforce-gtid-consistency to OFF.
[ER_INVALID_VALUE_FOR_ENFORCE_GTID_CONSISTENCY](#) was added in 8.0.2.
- Error: 10034 SQLSTATE: HY000 ([ER_CHANGED_ENFORCE_GTID_CONSISTENCY](#))
Message: Changed ENFORCE_GTID_CONSISTENCY from %s to %s.
[ER_CHANGED_ENFORCE_GTID_CONSISTENCY](#) was added in 8.0.2.
- Error: 10035 SQLSTATE: HY000 ([ER_CHANGED_GTID_MODE](#))
Message: Changed GTID_MODE from %s to %s.

`ER_CHANGED_GTID_MODE` was added in 8.0.2.

- Error: 10036 SQLSTATE: HY000 (`ER_DISABLED_STORAGE_ENGINE_AS_DEFAULT`)

Message: %s is set to a disabled storage engine %s.

`ER_DISABLED_STORAGE_ENGINE_AS_DEFAULT` was added in 8.0.2.

- Error: 10037 SQLSTATE: HY000 (`ER_DEBUG_SYNC_HIT`)

Message: Debug sync points hit: %s

`ER_DEBUG_SYNC_HIT` was added in 8.0.2.

- Error: 10038 SQLSTATE: HY000 (`ER_DEBUG_SYNC_EXECUTED`)

Message: Debug sync points executed: %s

`ER_DEBUG_SYNC_EXECUTED` was added in 8.0.2.

- Error: 10039 SQLSTATE: HY000 (`ER_DEBUG_SYNC_THREAD_MAX`)

Message: Debug sync points max active per thread: %s

`ER_DEBUG_SYNC_THREAD_MAX` was added in 8.0.2.

- Error: 10040 SQLSTATE: HY000 (`ER_DEBUG_SYNC_OOM`)

Message: Debug Sync Facility disabled due to lack of memory.

`ER_DEBUG_SYNC_OOM` was added in 8.0.2.

- Error: 10041 SQLSTATE: HY000 (`ER_CANT_INIT_TC_LOG`)

Message: Can't init tc log

`ER_CANT_INIT_TC_LOG` was added in 8.0.2.

- Error: 10042 SQLSTATE: HY000 (`ER_EVENT_CANT_INIT_QUEUE`)

Message: Event Scheduler: Can't initialize the execution queue

`ER_EVENT_CANT_INIT_QUEUE` was added in 8.0.2.

- Error: 10043 SQLSTATE: HY000 (`ER_EVENT_PURGING_QUEUE`)

Message: Event Scheduler: Purging the queue. %u events

`ER_EVENT_PURGING_QUEUE` was added in 8.0.2.

- Error: 10044 SQLSTATE: HY000 (`ER_EVENT_LAST_EXECUTION`)

Message: Event Scheduler: Last execution of %s.%s. %s

`ER_EVENT_LAST_EXECUTION` was added in 8.0.2.

- Error: 10045 SQLSTATE: HY000 (`ER_EVENT_MESSAGE_STACK`)

Message: %*s

`ER_EVENT_MESSAGE_STACK` was added in 8.0.2.

- Error: 10046 SQLSTATE: HY000 (`ER_EVENT_EXECUTION_FAILED`)

Message: Event Scheduler: [%s].[%s.%s] event execution failed.

`ER_EVENT_EXECUTION_FAILED` was added in 8.0.2.

- Error: 10047 SQLSTATE: HY000 (`ER_CANT_INIT_SCHEDULER_THREAD`)

Message: Event Scheduler: Cannot initialize the scheduler thread

`ER_CANT_INIT_SCHEDULER_THREAD` was added in 8.0.2.

- Error: 10048 SQLSTATE: HY000 (`ER_SCHEDULER_STOPPED`)

Message: Event Scheduler: Stopped

`ER_SCHEDULER_STOPPED` was added in 8.0.2.

- Error: 10049 SQLSTATE: HY000 (`ER_CANT_CREATE_SCHEDULER_THREAD`)

Message: Event scheduler: Failed to start scheduler, Can not create thread for event scheduler (errno=%d)

`ER_CANT_CREATE_SCHEDULER_THREAD` was added in 8.0.2.

- Error: 10050 SQLSTATE: HY000 (`ER_SCHEDULER_WAITING`)

Message: Event Scheduler: Waiting for the scheduler thread to reply

`ER_SCHEDULER_WAITING` was added in 8.0.2.

- Error: 10051 SQLSTATE: HY000 (`ER_SCHEDULER_STARTED`)

Message: Event Scheduler: scheduler thread started with id %u

`ER_SCHEDULER_STARTED` was added in 8.0.2.

- Error: 10052 SQLSTATE: HY000 (`ER_SCHEDULER_STOPPING_FAILED_TO_GET_EVENT`)

Message: Event Scheduler: Serious error during getting next event to execute. Stopping

`ER_SCHEDULER_STOPPING_FAILED_TO_GET_EVENT` was added in 8.0.2.

- Error: 10053 SQLSTATE: HY000 (`ER_SCHEDULER_STOPPING_FAILED_TO_CREATE_WORKER`)

Message: Event_scheduler::execute_top: Can not create event worker thread (errno=%d). Stopping event scheduler

`ER_SCHEDULER_STOPPING_FAILED_TO_CREATE_WORKER` was added in 8.0.2.

- Error: 10054 SQLSTATE: HY000 (`ER_SCHEDULER_KILLING`)

Message: Event Scheduler: Killing the scheduler thread, thread id %u

`ER_SCHEDULER_KILLING` was added in 8.0.2.

- Error: 10055 SQLSTATE: HY000 (`ER_UNABLE_TO_RESOLVE_IP`)

Message: IP address '%s' could not be resolved: %s

[ER_UNABLE_TO_RESOLVE_IP](#) was added in 8.0.2.

- Error: 10056 SQLSTATE: HY000 ([ER_UNABLE_TO_RESOLVE_HOSTNAME](#))

Message: Host name '%s' could not be resolved: %s

[ER_UNABLE_TO_RESOLVE_HOSTNAME](#) was added in 8.0.2.

- Error: 10057 SQLSTATE: HY000 ([ER_HOSTNAME_RESEMBLES_IPV4](#))

Message: IP address '%s' has been resolved to the host name '%s', which resembles IPv4-address itself.

[ER_HOSTNAME_RESEMBLES_IPV4](#) was added in 8.0.2.

- Error: 10058 SQLSTATE: HY000 ([ER_HOSTNAME_DOESNT_RESOLVE_TO](#))

Message: Hostname '%s' does not resolve to '%s'.

[ER_HOSTNAME_DOESNT_RESOLVE_TO](#) was added in 8.0.2.

- Error: 10059 SQLSTATE: HY000 ([ER_ADDRESSES_FOR_HOSTNAME_HEADER](#))

Message: Hostname '%s' has the following IP addresses:

[ER_ADDRESSES_FOR_HOSTNAME_HEADER](#) was added in 8.0.2.

- Error: 10060 SQLSTATE: HY000 ([ER_ADDRESSES_FOR_HOSTNAME_LIST_ITEM](#))

Message: - %s

[ER_ADDRESSES_FOR_HOSTNAME_LIST_ITEM](#) was added in 8.0.2.

- Error: 10061 SQLSTATE: HY000 ([ER_TRG_WITHOUT_DEFINER](#))

Message: Definer clause is missing in Trigger of Table %s. Rebuild Trigger to fix definer.

[ER_TRG_WITHOUT_DEFINER](#) was added in 8.0.2.

- Error: 10062 SQLSTATE: HY000 ([ER_TRG_NO_CLIENT_CHARSET](#))

Message: Client character set is missing for trigger of table %s. Using default character set.

[ER_TRG_NO_CLIENT_CHARSET](#) was added in 8.0.2.

- Error: 10063 SQLSTATE: HY000 ([ER_PARSING_VIEW](#))

Message: Error in parsing view %s.%s

[ER_PARSING_VIEW](#) was added in 8.0.2.

- Error: 10064 SQLSTATE: HY000 ([ER_COMPONENTS_INFRASTRUCTURE_BOOTSTRAP](#))

Message: Failed to bootstrap components infrastructure.

[ER_COMPONENTS_INFRASTRUCTURE_BOOTSTRAP](#) was added in 8.0.2.

- Error: 10065 SQLSTATE: HY000 ([ER_COMPONENTS_INFRASTRUCTURE_SHUTDOWN](#))
Message: Failed to shutdown components infrastructure.
[ER_COMPONENTS_INFRASTRUCTURE_SHUTDOWN](#) was added in 8.0.2.
- Error: 10066 SQLSTATE: HY000 ([ER_COMPONENTS_PERSIST_LOADER_BOOTSTRAP](#))
Message: Failed to bootstrap persistent components loader.
[ER_COMPONENTS_PERSIST_LOADER_BOOTSTRAP](#) was added in 8.0.2.
- Error: 10067 SQLSTATE: HY000 ([ER_DEPART_WITH_GRACE](#))
Message: Giving %d client threads a chance to die gracefully
[ER_DEPART_WITH_GRACE](#) was added in 8.0.2.
- Error: 10068 SQLSTATE: HY000 ([ER_CA_SELF_SIGNED](#))
Message: CA certificate %s is self signed.
[ER_CA_SELF_SIGNED](#) was added in 8.0.2.
- Error: 10069 SQLSTATE: HY000 ([ER_SSL_LIBRARY_ERROR](#))
Message: Failed to set up SSL because of the following SSL library error: %s
[ER_SSL_LIBRARY_ERROR](#) was added in 8.0.2.
- Error: 10070 SQLSTATE: HY000 ([ER_NO_THD_NO_UUID](#))
Message: Failed to generate a server UUID because it is failed to allocate the THD.
[ER_NO_THD_NO_UUID](#) was added in 8.0.2.
- Error: 10071 SQLSTATE: HY000 ([ER_UUID_SALT](#))
Message: Salting uuid generator variables, current_pid: %lu, server_start_time: %lu, bytes_sent: %llu,
[ER_UUID_SALT](#) was added in 8.0.2.
- Error: 10072 SQLSTATE: HY000 ([ER_UUID_IS](#))
Message: Generated uuid: '%s', server_start_time: %lu, bytes_sent: %llu
[ER_UUID_IS](#) was added in 8.0.2.
- Error: 10073 SQLSTATE: HY000 ([ER_UUID_INVALID](#))
Message: The server_uuid stored in auto.cnf file is not a valid UUID.
[ER_UUID_INVALID](#) was added in 8.0.2.
- Error: 10074 SQLSTATE: HY000 ([ER_UUID_SCRUB](#))
Message: Garbage characters found at the end of the server_uuid value in auto.cnf file. It should be of length '%d' (UUID_LENGTH). Clear it and restart the server.
[ER_UUID_SCRUB](#) was added in 8.0.2.

- Error: 10075 SQLSTATE: HY000 (ER_CREATING_NEW_UUID)

Message: No existing UUID has been found, so we assume that this is the first time that this server has been started. Generating a new UUID: %s.

ER_CREATING_NEW_UUID was added in 8.0.2.

- Error: 10076 SQLSTATE: HY000 (ER_CANT_CREATE_UUID)

Message: Initialization of the server's UUID failed because it could not be read from the auto.cnf file. If this is a new server, the initialization failed because it was not possible to generate a new UUID.

ER_CANT_CREATE_UUID was added in 8.0.2.

- Error: 10077 SQLSTATE: HY000 (ER_UNKNOWN_UNSUPPORTED_STORAGE_ENGINE)

Message: Unknown/unsupported storage engine: %s

ER_UNKNOWN_UNSUPPORTED_STORAGE_ENGINE was added in 8.0.2.

- Error: 10078 SQLSTATE: HY000 (ER_SECURE_AUTH_VALUE_UNSUPPORTED)

Message: Unsupported value 0 for secure-auth

ER_SECURE_AUTH_VALUE_UNSUPPORTED was added in 8.0.2.

- Error: 10079 SQLSTATE: HY000 (ER_INVALID_INSTRUMENT)

Message: Invalid instrument name or value for performance_schema_instrument '%s'

ER_INVALID_INSTRUMENT was added in 8.0.2.

- Error: 10080 SQLSTATE: HY000 (ER_INNO_DB_MANDATORY)

Message: The use of InnoDB is mandatory since MySQL 5.7. The former options like '--innodb=0/1/OFF/ON' or '--skip-innodb' are ignored.

ER_INNO_DB_MANDATORY was added in 8.0.2.

- Error: 10082 SQLSTATE: HY000 (ER_OLD_PASSWORDS_NO_MIDDLE_GROUND)

Message: Invalid old_passwords mode: 1. Valid values are 2 and 0

ER_OLD_PASSWORDS_NO_MIDDLE_GROUND was added in 8.0.2.

- Error: 10083 SQLSTATE: HY000 (ER_VERBOSE_REQUIRES_HELP)

Message: --verbose is for use with --help; did you mean --log-error-verbosity?

ER_VERBOSE_REQUIRES_HELP was added in 8.0.2.

- Error: 10084 SQLSTATE: HY000 (ER_POINTLESS_WITHOUT_SLOWLOG)

Message: options --log-slow-admin-statements, --log-queries-not-using-indexes and --log-slow-slave-statements have no effect if --slow-query-log is not set

ER_POINTLESS_WITHOUT_SLOWLOG was added in 8.0.2.

- Error: 10085 SQLSTATE: HY000 (ER_WASTEFUL_NET_BUFFER_SIZE)

Message: net_buffer_length (%lu) is set to be larger than max_allowed_packet (%lu). Please rectify.

[ER_WASTEFUL_NET_BUFFER_SIZE](#) was added in 8.0.2.

- Error: 10086 SQLSTATE: HY000 ([ER_DEPRECATED_TIMESTAMP_IMPLICIT_DEFAULTS](#))

Message: TIMESTAMP with implicit DEFAULT value is deprecated. Please use --explicit_defaults_for_timestamp server option (see documentation for more details).

[ER_DEPRECATED_TIMESTAMP_IMPLICIT_DEFAULTS](#) was added in 8.0.2.

- Error: 10087 SQLSTATE: HY000 ([ER_FT_BOOL_SYNTAX_INVALID](#))

Message: Invalid ft-boolean-syntax string: %s

[ER_FT_BOOL_SYNTAX_INVALID](#) was added in 8.0.2.

- Error: 10088 SQLSTATE: HY000 ([ER_CREDENTIALLESS_AUTO_USER_BAD](#))

Message: 'NO_AUTO_CREATE_USER' sql mode was not set.

[ER_CREDENTIALLESS_AUTO_USER_BAD](#) was added in 8.0.2.

- Error: 10089 SQLSTATE: HY000 ([ER_CONNECTION_HANDLING_OOM](#))

Message: Could not allocate memory for connection handling

[ER_CONNECTION_HANDLING_OOM](#) was added in 8.0.2.

- Error: 10090 SQLSTATE: HY000 ([ER_THREAD_HANDLING_OOM](#))

Message: Could not allocate memory for thread handling

[ER_THREAD_HANDLING_OOM](#) was added in 8.0.2.

- Error: 10091 SQLSTATE: HY000 ([ER_CANT_CREATE_TEST_FILE](#))

Message: Can't create test file %s

[ER_CANT_CREATE_TEST_FILE](#) was added in 8.0.2.

- Error: 10092 SQLSTATE: HY000 ([ER_CANT_CREATE_PID_FILE](#))

Message: Can't start server: can't create PID file: %s

[ER_CANT_CREATE_PID_FILE](#) was added in 8.0.2.

- Error: 10093 SQLSTATE: HY000 ([ER_CANT_REMOVE_PID_FILE](#))

Message: Unable to delete pid file: %s

[ER_CANT_REMOVE_PID_FILE](#) was added in 8.0.2.

- Error: 10094 SQLSTATE: HY000 ([ER_CANT_CREATE_SHUTDOWN_THREAD](#))

Message: Can't create thread to handle shutdown requests (errno= %d)

[ER_CANT_CREATE_SHUTDOWN_THREAD](#) was added in 8.0.2.

- Error: 10095 SQLSTATE: HY000 (ER_SEC_FILE_PRIV_CANT_ACCESS_DIR)
Message: Failed to access directory for --secure-file-priv. Please make sure that directory exists and is accessible by MySQL Server. Supplied value : %s
ER_SEC_FILE_PRIV_CANT_ACCESS_DIR was added in 8.0.2.
- Error: 10096 SQLSTATE: HY000 (ER_SEC_FILE_PRIV_IGNORED)
Message: Ignoring --secure-file-priv value as server is running with --initialize(-insecure).
ER_SEC_FILE_PRIV_IGNORED was added in 8.0.2.
- Error: 10097 SQLSTATE: HY000 (ER_SEC_FILE_PRIV_EMPTY)
Message: Insecure configuration for --secure-file-priv: Current value does not restrict location of generated files. Consider setting it to a valid, non-empty path.
ER_SEC_FILE_PRIV_EMPTY was added in 8.0.2.
- Error: 10098 SQLSTATE: HY000 (ER_SEC_FILE_PRIV_NULL)
Message: --secure-file-priv is set to NULL. Operations related to importing and exporting data are disabled
ER_SEC_FILE_PRIV_NULL was added in 8.0.2.
- Error: 10099 SQLSTATE: HY000 (ER_SEC_FILE_PRIV_DIRECTORY_INSECURE)
Message: Insecure configuration for --secure-file-priv: %s is accessible through --secure-file-priv. Consider choosing a different directory.
ER_SEC_FILE_PRIV_DIRECTORY_INSECURE was added in 8.0.2.
- Error: 10100 SQLSTATE: HY000 (ER_SEC_FILE_PRIV_CANT_STAT)
Message: Failed to get stat for directory pointed out by --secure-file-priv
ER_SEC_FILE_PRIV_CANT_STAT was added in 8.0.2.
- Error: 10101 SQLSTATE: HY000 (ER_SEC_FILE_PRIV_DIRECTORY_PERMISSIONS)
Message: Insecure configuration for --secure-file-priv: Location is accessible to all OS users. Consider choosing a different directory.
ER_SEC_FILE_PRIV_DIRECTORY_PERMISSIONS was added in 8.0.2.
- Error: 10102 SQLSTATE: HY000 (ER_SEC_FILE_PRIV_ARGUMENT_TOO_LONG)
Message: Value for --secure-file-priv is longer than maximum limit of %d
ER_SEC_FILE_PRIV_ARGUMENT_TOO_LONG was added in 8.0.2.
- Error: 10103 SQLSTATE: HY000 (ER_CANT_CREATE_NAMED_PIPES_THREAD)
Message: Can't create thread to handle named pipes (errno= %d)
ER_CANT_CREATE_NAMED_PIPES_THREAD was added in 8.0.2.
- Error: 10104 SQLSTATE: HY000 (ER_CANT_CREATE_TCPIP_THREAD)

Message: Can't create thread to handle TCP/IP (errno= %d)

[ER_CANT_CREATE_TCPIP_THREAD](#) was added in 8.0.2.

- Error: 10105 SQLSTATE: HY000 ([ER_CANT_CREATE_SHM_THREAD](#))

Message: Can't create thread to handle shared memory (errno= %d)

[ER_CANT_CREATE_SHM_THREAD](#) was added in 8.0.2.

- Error: 10106 SQLSTATE: HY000 ([ER_CANT_CREATE_INTERRUPT_THREAD](#))

Message: Can't create interrupt-thread (error %d, errno: %d)

[ER_CANT_CREATE_INTERRUPT_THREAD](#) was added in 8.0.2.

- Error: 10107 SQLSTATE: HY000 ([ER_WRITABLE_CONFIG_REMOVED](#))

Message: World-writable config file '%s' has been removed.

[ER_WRITABLE_CONFIG_REMOVED](#) was added in 8.0.2.

- Error: 10108 SQLSTATE: HY000 ([ER_CORE_VALUES](#))

Message: setrlimit could not change the size of core files to 'infinity'; We may not be able to generate a core file on signals

[ER_CORE_VALUES](#) was added in 8.0.2.

- Error: 10109 SQLSTATE: HY000 ([ER_WRONG_DATETIME_SPEC](#))

Message: Wrong date/time format specifier: %s

[ER_WRONG_DATETIME_SPEC](#) was added in 8.0.2.

- Error: 10110 SQLSTATE: HY000 ([ER_RPL_BINLOG_FILTERS_OOM](#))

Message: Could not allocate replication and binlog filters: %s

[ER_RPL_BINLOG_FILTERS_OOM](#) was added in 8.0.2.

- Error: 10111 SQLSTATE: HY000 ([ER_KEYCACHE_OOM](#))

Message: Cannot allocate the keycache

[ER_KEYCACHE_OOM](#) was added in 8.0.2.

- Error: 10112 SQLSTATE: HY000 ([ER_CONFIRMING_THE_FUTURE](#))

Message: Current time has got past year 2038. Validating current time with %d iterations before initiating the normal server shutdown process.

[ER_CONFIRMING_THE_FUTURE](#) was added in 8.0.2.

- Error: 10113 SQLSTATE: HY000 ([ER_BACK_IN_TIME](#))

Message: Iteration %d: Obtained valid current time from system

[ER_BACK_IN_TIME](#) was added in 8.0.2.

- Error: 10114 SQLSTATE: HY000 (ER_FUTURE_DATE)
Message: Iteration %d: Current time obtained from system is greater than 2038
ER_FUTURE_DATE was added in 8.0.2.
- Error: 10115 SQLSTATE: HY000 (ER_UNSUPPORTED_DATE)
Message: This MySQL server doesn't support dates later than 2038
ER_UNSUPPORTED_DATE was added in 8.0.2.
- Error: 10116 SQLSTATE: HY000 (ER_STARTING_AS)
Message: %s (mysqld %s) starting as process %lu
ER_STARTING_AS was added in 8.0.2.
- Error: 10117 SQLSTATE: HY000 (ER_SHUTTING_DOWN_SLAVE_THREADS)
Message: Shutting down slave threads
ER_SHUTTING_DOWN_SLAVE_THREADS was added in 8.0.2.
- Error: 10118 SQLSTATE: HY000 (ER_DISCONNECTING_REMAINING_CLIENTS)
Message: Forcefully disconnecting %d remaining clients
ER_DISCONNECTING_REMAINING_CLIENTS was added in 8.0.2.
- Error: 10119 SQLSTATE: HY000 (ER_ABORTING)
Message: Aborting
ER_ABORTING was added in 8.0.2.
- Error: 10120 SQLSTATE: HY000 (ER_BINLOG_END)
Message: Binlog end
ER_BINLOG_END was added in 8.0.2.
- Error: 10121 SQLSTATE: HY000 (ER_CALL_ME_LOCALHOST)
Message: gethostname failed, using '%s' as hostname
ER_CALL_ME_LOCALHOST was added in 8.0.2.
- Error: 10122 SQLSTATE: HY000 (ER_USER_REQUIRES_ROOT)
Message: One can only use the --user switch if running as root
ER_USER_REQUIRES_ROOT was added in 8.0.2.
- Error: 10123 SQLSTATE: HY000 (ER REALLY RUN AS ROOT)
Message: Fatal error: Please read "Security" section of the manual to find out how to run mysqld as root!
ER REALLY RUN AS ROOT was added in 8.0.2.

- Error: 10124 SQLSTATE: HY000 ([ER_USER_WHAT_USER](#))
Message: Fatal error: Can't change to run as user '%s' ; Please check that the user exists!
[ER_USER_WHAT_USER](#) was added in 8.0.2.
- Error: 10125 SQLSTATE: HY000 ([ER_TRANSPORTS_WHAT_TRANSPORTS](#))
Message: Server is started with --require-secure-transport=ON but no secure transports (SSL or Shared Memory) are configured.
[ER_TRANSPORTS_WHAT_TRANSPORTS](#) was added in 8.0.2.
- Error: 10126 SQLSTATE: HY000 ([ER_FAIL_SETGID](#))
Message: setgid: %s
[ER_FAIL_SETGID](#) was added in 8.0.2.
- Error: 10127 SQLSTATE: HY000 ([ER_FAIL_SETUID](#))
Message: setuid: %s
[ER_FAIL_SETUID](#) was added in 8.0.2.
- Error: 10128 SQLSTATE: HY000 ([ER_FAIL_SETREGID](#))
Message: setregid: %s
[ER_FAIL_SETREGID](#) was added in 8.0.2.
- Error: 10129 SQLSTATE: HY000 ([ER_FAIL_SETREUID](#))
Message: setreuid: %s
[ER_FAIL_SETREUID](#) was added in 8.0.2.
- Error: 10130 SQLSTATE: HY000 ([ER_FAIL_CHROOT](#))
Message: chroot: %s
[ER_FAIL_CHROOT](#) was added in 8.0.2.
- Error: 10131 SQLSTATE: HY000 ([ER_WIN_LISTEN_BUT_HOW](#))
Message: TCP/IP, --shared-memory, or --named-pipe should be configured on NT OS
[ER_WIN_LISTEN_BUT_HOW](#) was added in 8.0.2.
- Error: 10132 SQLSTATE: HY000 ([ER_NOT_RIGHT_NOW](#))
Message: CTRL-C ignored during startup
[ER_NOT_RIGHT_NOW](#) was added in 8.0.2.
- Error: 10133 SQLSTATE: HY000 ([ER_FIXING_CLIENT_CHARSET](#))
Message: '%s' can not be used as client character set. '%s' will be used as default client character set.
[ER_FIXING_CLIENT_CHARSET](#) was added in 8.0.2.

- Error: 10134 SQLSTATE: HY000 (ER_OOM)
Message: Out of memory
[ER_OOM](#) was added in 8.0.2.
- Error: 10135 SQLSTATE: HY000 (ER_FAILED_TO_LOCK_MEM)
Message: Failed to lock memory. Errno: %d
[ER_FAILED_TO_LOCK_MEM](#) was added in 8.0.2.
- Error: 10136 SQLSTATE: HY000 (ER_MYINIT_FAILED)
Message: my_init() failed.
[ER_MYINIT_FAILED](#) was added in 8.0.2.
- Error: 10137 SQLSTATE: HY000 (ER_BEG_INITFILE)
Message: Execution of init_file '%s' started.
[ER_BEG_INITFILE](#) was added in 8.0.2.
- Error: 10138 SQLSTATE: HY000 (ER_END_INITFILE)
Message: Execution of init_file '%s' ended.
[ER_END_INITFILE](#) was added in 8.0.2.
- Error: 10139 SQLSTATE: HY000 (ER_CHANGED_MAX_OPEN_FILES)
Message: Changed limits: max_open_files: %lu (requested %lu)
[ER_CHANGED_MAX_OPEN_FILES](#) was added in 8.0.2.
- Error: 10140 SQLSTATE: HY000 (ER_CANT_INCREASE_MAX_OPEN_FILES)
Message: Could not increase number of max_open_files to more than %lu (request: %lu)
[ER_CANT_INCREASE_MAX_OPEN_FILES](#) was added in 8.0.2.
- Error: 10141 SQLSTATE: HY000 (ER_CHANGED_MAX_CONNECTIONS)
Message: Changed limits: max_connections: %lu (requested %lu)
[ER_CHANGED_MAX_CONNECTIONS](#) was added in 8.0.2.
- Error: 10142 SQLSTATE: HY000 (ER_CHANGED_TABLE_OPEN_CACHE)
Message: Changed limits: table_open_cache: %lu (requested %lu)
[ER_CHANGED_TABLE_OPEN_CACHE](#) was added in 8.0.2.
- Error: 10143 SQLSTATE: HY000 (ER_THE_USER_ABIDES)
Message: Ignoring user change to '%s' because the user was set to '%s' earlier on the command line
[ER_THE_USER_ABIDES](#) was added in 8.0.2.

- Error: 10144 SQLSTATE: HY000 ([ER_RPL_CANT_ADD_DO_TABLE](#))
Message: Could not add do table rule '%s'!
[ER_RPL_CANT_ADD_DO_TABLE](#) was added in 8.0.2.
- Error: 10145 SQLSTATE: HY000 ([ER_RPL_CANT_ADD_IGNORE_TABLE](#))
Message: Could not add ignore table rule '%s'!
[ER_RPL_CANT_ADD_IGNORE_TABLE](#) was added in 8.0.2.
- Error: 10146 SQLSTATE: HY000 ([ER_TRACK_VARIABLES_BOGUS](#))
Message: The variable session_track_system_variables either has duplicate values or invalid values.
[ER_TRACK_VARIABLES_BOGUS](#) was added in 8.0.2.
- Error: 10147 SQLSTATE: HY000 ([ER_EXCESS_ARGUMENTS](#))
Message: Too many arguments (first extra is '%s').
[ER_EXCESS_ARGUMENTS](#) was added in 8.0.2.

Message: Bad syntax in replicate-rewrite-db - empty TO db!
ER_RPL_REWRITEDB_EMPTY_TO was added in 8.0.2.
- Error: 10156 SQLSTATE: HY000 (ER_LOG_FILES_GIVEN_LOG_OUTPUT_IS_TABLE)
Message: Although a path was specified for the %s, log tables are used. To enable logging to files use the --log-output=file option.
ER_LOG_FILES_GIVEN_LOG_OUTPUT_IS_TABLE was added in 8.0.2.
- Error: 10157 SQLSTATE: HY000 (ER_LOG_FILE_INVALID)
Message: Invalid value for %s: %s
ER_LOG_FILE_INVALID was added in 8.0.2.
- Error: 10158 SQLSTATE: HY000
(ER_LOWER_CASE_TABLE_NAMES_CS_DD_ON_CI_FS_UNSUPPORTED)
Message: The server option 'lower_case_table_names' is configured to use case sensitive table names but the data directory is on a case-insensitive file system which is an unsupported combination. Please consider either using a case sensitive file system for your data directory or switching to a case-insensitive table name mode.
ER_LOWER_CASE_TABLE_NAMES_CS_DD_ON_CI_FS_UNSUPPORTED was added in 8.0.2.
- Error: 10159 SQLSTATE: HY000 (ER_LOWER_CASE_TABLE_NAMES_USING_2)
Message: Setting lower_case_table_names=2 because file system for %s is case insensitive
ER_LOWER_CASE_TABLE_NAMES_USING_2 was added in 8.0.2.
- Error: 10160 SQLSTATE: HY000 (ER_LOWER_CASE_TABLE_NAMES_USING_0)
Message: lower_case_table_names was set to 2, even though your the file system '%s' is case sensitive. Now setting lower_case_table_names to 0 to avoid future problems.
ER_LOWER_CASE_TABLE_NAMES_USING_0 was added in 8.0.2.
- Error: 10161 SQLSTATE: HY000 (ER_NEED_LOG_BIN)
Message: You need to use --log-bin to make %s work.
ER_NEED_LOG_BIN was added in 8.0.2.
- Error: 10162 SQLSTATE: HY000 (ER_NEED_FILE_INSTEAD_OF_DIR)
Message: Path '%s' is a directory name, please specify a file name for %s option
ER_NEED_FILE_INSTEAD_OF_DIR was added in 8.0.2.

- Error: 10163 SQLSTATE: HY000 ([ER_LOG_BIN_BETTER_WITH_NAME](#))

Message: No argument was provided to --log-bin, and --log-bin-index was not used; so replication may break when this MySQL server acts as a master and has his hostname changed!! Please use '--log-bin=%s' to avoid this problem.

[ER_LOG_BIN_BETTER_WITH_NAME](#) was added in 8.0.2.

- Error: 10164 SQLSTATE: HY000 ([ER_BINLOG_NEEDS_SERVERID](#))

Message: You have enabled the binary log, but you haven't provided the mandatory server-id. Please refer to the proper server start-up parameters documentation

[ER_BINLOG_NEEDS_SERVERID](#) was added in 8.0.2.

- Error: 10165 SQLSTATE: HY000 ([ER_RPL_CANT_MAKE_PATHS](#))

Message: Unable to create replication path names: out of memory or path names too long (path name exceeds %d or file name exceeds %d).

[ER_RPL_CANT_MAKE_PATHS](#) was added in 8.0.2.

- Error: 10166 SQLSTATE: HY000 ([ER_CANT_INITIALIZE_GTID](#))

Message: Failed to initialize GTID structures.

[ER_CANT_INITIALIZE_GTID](#) was added in 8.0.2.

- Error: 10167 SQLSTATE: HY000 ([ER_CANT_INITIALIZE_EARLY_PLUGINS](#))

Message: Failed to initialize early plugins.

[ER_CANT_INITIALIZE_EARLY_PLUGINS](#) was added in 8.0.2.

- Error: 10168 SQLSTATE: HY000 ([ER_CANT_INITIALIZE_BUILTIN_PLUGINS](#))

Message: Failed to initialize builtin plugins.

[ER_CANT_INITIALIZE_BUILTIN_PLUGINS](#) was added in 8.0.2.

- Error: 10169 SQLSTATE: HY000 ([ER_CANT_INITIALIZE_DYNAMIC_PLUGINS](#))

Message: Failed to initialize dynamic plugins.

[ER_CANT_INITIALIZE_DYNAMIC_PLUGINS](#) was added in 8.0.2.

- Error: 10170 SQLSTATE: HY000 ([ER_PERFSCHEMA_INIT_FAILED](#))

Message: Performance schema disabled (reason: init failed).

[ER_PERFSCHEMA_INIT_FAILED](#) was added in 8.0.2.

- Error: 10171 SQLSTATE: HY000 ([ER_STACKSIZE_UNEXPECTED](#))

Message: Asked for %lu thread stack, but got %ld

[ER_STACKSIZE_UNEXPECTED](#) was added in 8.0.2.

- Error: 10172 SQLSTATE: HY000 ([ER_CANT_SET_DATADIR](#))

Message: failed to set datadir to %s

[ER_CANT_SET_DATADIR](#) was added in 8.0.2, removed after 8.0.13.

- Error: 10173 SQLSTATE: HY000 ([ER_CANT_STAT_DATADIR](#))

Message: Can't read data directory's stats (%d): %s. Assuming that it's not owned by the same user/group

[ER_CANT_STAT_DATADIR](#) was added in 8.0.2.

- Error: 10174 SQLSTATE: HY000 ([ER_CANT_CHOWN_DATADIR](#))

Message: Can't change data directory owner to %s

[ER_CANT_CHOWN_DATADIR](#) was added in 8.0.2.

- Error: 10175 SQLSTATE: HY000 ([ER_CANT_SET_UP_PERSISTED_VALUES](#))

Message: Setting persistent options failed.

[ER_CANT_SET_UP_PERSISTED_VALUES](#) was added in 8.0.2.

- Error: 10176 SQLSTATE: HY000 ([ER_CANT_SAVE_GTIDS](#))

Message: Failed to save the set of Global Transaction Identifiers of the last binary log into the mysql.gtid_executed table while the server was shutting down. The next server restart will make another attempt to save Global Transaction Identifiers into the table.

[ER_CANT_SAVE_GTIDS](#) was added in 8.0.2.

- Error: 10177 SQLSTATE: HY000 ([ER_AUTH_CANT_SET_DEFAULT_PLUGIN](#))

Message: Can't start server: Invalid value for --default-authentication-plugin

[ER_AUTH_CANT_SET_DEFAULT_PLUGIN](#) was added in 8.0.2.

- Error: 10178 SQLSTATE: HY000 ([ER_CANT_JOIN_SHUTDOWN_THREAD](#))

Message: Could not join %sthread. error:%d

[ER_CANT_JOIN_SHUTDOWN_THREAD](#) was added in 8.0.2.

- Error: 10179 SQLSTATE: HY000 ([ER_CANT_HASH_DO_AND_IGNORE_RULES](#))

Message: An error occurred while building do_table and ignore_table rules to hashes for global replication filter.

[ER_CANT_HASH_DO_AND_IGNORE_RULES](#) was added in 8.0.2.

- Error: 10180 SQLSTATE: HY000 ([ER_CANT_OPEN_CA](#))

Message: Error opening CA certificate file

[ER_CANT_OPEN_CA](#) was added in 8.0.2.

- Error: 10181 SQLSTATE: HY000 ([ER_CANT_ACCESS_CAPATH](#))

Message: Error accessing directory pointed by --ssl-capath

[ER_CANT_ACCESS_CAPATH](#) was added in 8.0.2.

- Error: 10182 SQLSTATE: HY000 ([ER_SSL_TRYING_DATADIR_DEFAULTS](#))

Message: Found %s, %s and %s in data directory. Trying to enable SSL support using them.

[ER_SSL_TRYING_DATADIR_DEFAULTS](#) was added in 8.0.2.

- Error: 10183 SQLSTATE: HY000 ([ER_AUTO_OPTIONS_FAILED](#))

Message: Failed to create %s(file: '%s', errno %d)

[ER_AUTO_OPTIONS_FAILED](#) was added in 8.0.2.

- Error: 10184 SQLSTATE: HY000 ([ER_CANT_INIT_TIMER](#))

Message: Failed to initialize timer component (errno %d).

[ER_CANT_INIT_TIMER](#) was added in 8.0.2.

- Error: 10185 SQLSTATE: HY000 ([ER_SERVERID_TOO_LARGE](#))

Message: server-id configured is too large to represent with server-id-bits configured.

[ER_SERVERID_TOO_LARGE](#) was added in 8.0.2.

- Error: 10186 SQLSTATE: HY000 ([ER_DEFAULT_SE_UNAVAILABLE](#))

Message: Default%s storage engine (%s) is not available

[ER_DEFAULT_SE_UNAVAILABLE](#) was added in 8.0.2.

- Error: 10187 SQLSTATE: HY000 ([ER_CANT_OPEN_ERROR_LOG](#))

Message: Could not open file '%s' for error logging%s%s

[ER_CANT_OPEN_ERROR_LOG](#) was added in 8.0.2.

- Error: 10188 SQLSTATE: HY000 ([ER_INVALID_ERROR_LOG_NAME](#))

Message: Invalid log file name after expanding symlinks: '%s'

[ER_INVALID_ERROR_LOG_NAME](#) was added in 8.0.2.

- Error: 10189 SQLSTATE: HY000 ([ER_RPL_INFINITY_DENIED](#))

Message: using --replicate-same-server-id in conjunction with --log-slave-updates is impossible, it would lead to infinite loops in this server.

[ER_RPL_INFINITY_DENIED](#) was added in 8.0.2.

- Error: 10190 SQLSTATE: HY000 ([ER_RPL_INFINITY_IGNORED](#))

Message: using --replicate-same-server-id in conjunction with --log-slave-updates would lead to infinite loops in this server. However this will be ignored as the --log-bin option is not defined.

[ER_RPL_INFINITY_IGNORED](#) was added in 8.0.2.

- Error: 10191 SQLSTATE: HY000 ([ER_NDB_TABLES_NOT_READY](#))

Message: NDB : Tables not available after %lu seconds. Consider increasing --ndb-wait-setup value

[ER_NDB_TABLES_NOT_READY](#) was added in 8.0.2, removed after 8.0.13.

- Error: 10192 SQLSTATE: HY000 ([ER_TABLE_CHECK_INTACT](#))

Message: %s

[ER_TABLE_CHECK_INTACT](#) was added in 8.0.2.

- Error: 10193 SQLSTATE: HY000 ([ER_DD_TABLESPACE_NOT_FOUND](#))

Message: Unable to start server. The data dictionary tablespace '%s' does not exist.

[ER_DD_TABLESPACE_NOT_FOUND](#) was added in 8.0.2.

- Error: 10194 SQLSTATE: HY000 ([ER_DD_TRG_CONNECTION_COLLATION_MISSING](#))

Message: Connection collation is missing for trigger of table %s. Using default connection collation.

[ER_DD_TRG_CONNECTION_COLLATION_MISSING](#) was added in 8.0.2.

- Error: 10195 SQLSTATE: HY000 ([ER_DD_TRG_DB_COLLATION_MISSING](#))

Message: Database collation is missing for trigger of table %s. Using Default character set.

[ER_DD_TRG_DB_COLLATION_MISSING](#) was added in 8.0.2.

- Error: 10196 SQLSTATE: HY000 ([ER_DD_TRG_DEFINER_OOM](#))

Message: Error in Memory allocation for Definer %s for Trigger.

[ER_DD_TRG_DEFINER_OOM](#) was added in 8.0.2.

- Error: 10197 SQLSTATE: HY000 ([ER_DD_TRG_FILE_UNREADABLE](#))

Message: Error in reading %s.TRG file.

[ER_DD_TRG_FILE_UNREADABLE](#) was added in 8.0.2.

- Error: 10198 SQLSTATE: HY000 ([ER_TRG_CANT_PARSE](#))

Message: Error in parsing Triggers from %s.TRG file.

[ER_TRG_CANT_PARSE](#) was added in 8.0.2.

- Error: 10199 SQLSTATE: HY000 ([ER_DD_TRG_CANT_ADD](#))

Message: Error in creating DD entry for Trigger %s.%s

[ER_DD_TRG_CANT_ADD](#) was added in 8.0.2.

- Error: 10200 SQLSTATE: HY000 ([ER_DD_CANT_RESOLVE_VIEW](#))

Message: Resolving dependency for the view '%s.%s' failed. View is no more valid to use

[ER_DD_CANT_RESOLVE_VIEW](#) was added in 8.0.2.

- Error: 10201 SQLSTATE: HY000 ([ER_DD_VIEW_WITHOUT_DEFINER](#))

Message: %s.%s has no definer (as per an old view format). Current user is used as definer. Please recreate the view.

[ER_DD_VIEW_WITHOUT_DEFINER](#) was added in 8.0.2.

- Error: 10202 SQLSTATE: HY000 ([ER_PLUGIN_INIT_FAILED](#))

Message: Plugin '%s' init function returned error.

[ER_PLUGIN_INIT_FAILED](#) was added in 8.0.2.

- Error: 10203 SQLSTATE: HY000 ([ER_RPL_TRX_DELEGATES_INIT_FAILED](#))

Message: Initialization of transaction delegates failed. Please report a bug.

[ER_RPL_TRX_DELEGATES_INIT_FAILED](#) was added in 8.0.2.

Message: Can't start server: cannot resolve hostname!
[ER_CONN_TCP_CANT_RESOLVE_HOSTNAME](#) was added in 8.0.2.
- Error: 10257 SQLSTATE: HY000 (ER_CONN_TCP_IS_THERE_ANOTHER_USING_PORT)
Message: Do you already have another mysqld server running on port: %d ?
[ER_CONN_TCP_IS_THERE_ANOTHER_USING_PORT](#) was added in 8.0.2.
- Error: 10258 SQLSTATE: HY000 (ER_CONN_UNIX_IS_THERE_ANOTHER_USING_SOCKET)
Message: Do you already have another mysqld server running on socket: %s ?
[ER_CONN_UNIX_IS_THERE_ANOTHER_USING_SOCKET](#) was added in 8.0.2.
- Error: 10259 SQLSTATE: HY000 (ER_CONN_UNIX_PID_CLAIMED_SOCKET_FILE)
Message: Another process with pid %d is using unix socket file.
[ER_CONN_UNIX_PID_CLAIMED_SOCKET_FILE](#) was added in 8.0.2.

- Error: 10260 SQLSTATE: HY000 ([ER_CONN_TCP_CANT_RESET_V6ONLY](#))
Message: Failed to reset IPV6_V6ONLY flag (error: %d). The server will listen to IPv6 addresses only.
[ER_CONN_TCP_CANT_RESET_V6ONLY](#) was added in 8.0.2.
- Error: 10261 SQLSTATE: HY000 ([ER_CONN_TCP_BIND_RETRY](#))
Message: Retrying bind on TCP/IP port %u
[ER_CONN_TCP_BIND_RETRY](#) was added in 8.0.2.
- Error: 10262 SQLSTATE: HY000 ([ER_CONN_TPC_BIND_FAIL](#))
Message: Can't start server: Bind on TCP/IP port: %s
[ER_CONN_TPC_BIND_FAIL](#) was added in 8.0.2, removed after 8.0.11.
- Error: 10262 SQLSTATE: HY000 ([ER_CONN_TCP_BIND_FAIL](#))
Message: Can't start server: Bind on TCP/IP port: %s
[ER_CONN_TCP_BIND_FAIL](#) was added in 8.0.12.
- Error: 10263 SQLSTATE: HY000 ([ER_CONN_TCP_IP_NOT_LOGGED](#))
Message: Fails to print out IP-address.
[ER_CONN_TCP_IP_NOT_LOGGED](#) was added in 8.0.2.
- Error: 10264 SQLSTATE: HY000 ([ER_CONN_TCP_RESOLVE_INFO](#))
Message: - '%s' resolves to '%s';
[ER_CONN_TCP_RESOLVE_INFO](#) was added in 8.0.2.
- Error: 10265 SQLSTATE: HY000 ([ER_CONN_TCP_START_FAIL](#))
Message: Can't start server: listen() on TCP/IP port: %s
[ER_CONN_TCP_START_FAIL](#) was added in 8.0.2.
- Error: 10266 SQLSTATE: HY000 ([ER_CONN_TCP_LISTEN_FAIL](#))
Message: listen() on TCP/IP failed with error %d
[ER_CONN_TCP_LISTEN_FAIL](#) was added in 8.0.2.
- Error: 10267 SQLSTATE: HY000 ([ER_CONN_UNIX_PATH_TOO_LONG](#))
Message: The socket file path is too long (> %u): %s
[ER_CONN_UNIX_PATH_TOO_LONG](#) was added in 8.0.2.
- Error: 10268 SQLSTATE: HY000 ([ER_CONN_UNIX_LOCK_FILE_FAIL](#))
Message: Unable to setup unix socket lock file.
[ER_CONN_UNIX_LOCK_FILE_FAIL](#) was added in 8.0.2.

- Error: 10269 SQLSTATE: HY000 (ER_CONN_UNIX_NO_FD)
Message: Can't start server: UNIX Socket : %s
[ER_CONN_UNIX_NO_FD](#) was added in 8.0.2.
- Error: 10270 SQLSTATE: HY000 (ER_CONN_UNIX_NO_BIND_NO_START)
Message: Can't start server : Bind on unix socket: %s
[ER_CONN_UNIX_NO_BIND_NO_START](#) was added in 8.0.2.
- Error: 10271 SQLSTATE: HY000 (ER_CONN_UNIX_LISTEN_FAILED)
Message: listen() on Unix socket failed with error %d
[ER_CONN_UNIX_LISTEN_FAILED](#) was added in 8.0.2.
- Error: 10272 SQLSTATE: HY000 (ER_CONN_UNIX_LOCK_FILE_GIVING_UP)
Message: Unable to create unix socket lock file %s after retries.
[ER_CONN_UNIX_LOCK_FILE_GIVING_UP](#) was added in 8.0.2.
- Error: 10273 SQLSTATE: HY000 (ER_CONN_UNIX_LOCK_FILE_CANT_CREATE)
Message: Could not create unix socket lock file %s.
[ER_CONN_UNIX_LOCK_FILE_CANT_CREATE](#) was added in 8.0.2.
- Error: 10274 SQLSTATE: HY000 (ER_CONN_UNIX_LOCK_FILE_CANT_OPEN)
Message: Could not open unix socket lock file %s.
[ER_CONN_UNIX_LOCK_FILE_CANT_OPEN](#) was added in 8.0.2.
- Error: 10275 SQLSTATE: HY000 (ER_CONN_UNIX_LOCK_FILE_CANT_READ)
Message: Could not read unix socket lock file %s.
[ER_CONN_UNIX_LOCK_FILE_CANT_READ](#) was added in 8.0.2.
- Error: 10276 SQLSTATE: HY000 (ER_CONN_UNIX_LOCK_FILE_EMPTY)
Message: Unix socket lock file is empty %s.
[ER_CONN_UNIX_LOCK_FILE_EMPTY](#) was added in 8.0.2.
- Error: 10277 SQLSTATE: HY000 (ER_CONN_UNIX_LOCK_FILE_PIDLESS)
Message: Invalid pid in unix socket lock file %s.
[ER_CONN_UNIX_LOCK_FILE_PIDLESS](#) was added in 8.0.2.
- Error: 10278 SQLSTATE: HY000 (ER_CONN_UNIX_LOCK_FILE_CANT_WRITE)
Message: Could not write unix socket lock file %s errno %d.
[ER_CONN_UNIX_LOCK_FILE_CANT_WRITE](#) was added in 8.0.2.

- Error: 10279 SQLSTATE: HY000 ([ER_CONN_UNIX_LOCK_FILE_CANT_DELETE](#))
Message: Could not remove unix socket lock file %s errno %d.
[ER_CONN_UNIX_LOCK_FILE_CANT_DELETE](#) was added in 8.0.2.
- Error: 10280 SQLSTATE: HY000 ([ER_CONN_UNIX_LOCK_FILE_CANT_SYNC](#))
Message: Could not sync unix socket lock file %s errno %d.
[ER_CONN_UNIX_LOCK_FILE_CANT_SYNC](#) was added in 8.0.2.
- Error: 10281 SQLSTATE: HY000 ([ER_CONN_UNIX_LOCK_FILE_CANT_CLOSE](#))
Message: Could not close unix socket lock file %s errno %d.
[ER_CONN_UNIX_LOCK_FILE_CANT_CLOSE](#) was added in 8.0.2.
- Error: 10282 SQLSTATE: HY000 ([ER_CONN_SOCKET_SELECT_FAILED](#))
Message: mysqld: Got error %d from select
[ER_CONN_SOCKET_SELECT_FAILED](#) was added in 8.0.2.
- Error: 10283 SQLSTATE: HY000 ([ER_CONN_SOCKET_ACCEPT_FAILED](#))
Message: Error in accept: %s
[ER_CONN_SOCKET_ACCEPT_FAILED](#) was added in 8.0.2.
- Error: 10284 SQLSTATE: HY000 ([ER_AUTH_RSA_CANT_FIND](#))
Message: RSA %s key file not found: %s. Some authentication plugins will not work.
[ER_AUTH_RSA_CANT_FIND](#) was added in 8.0.2.
- Error: 10285 SQLSTATE: HY000 ([ER_AUTH_RSA_CANT_PARSE](#))
Message: Failure to parse RSA %s key (file exists): %s: %s
[ER_AUTH_RSA_CANT_PARSE](#) was added in 8.0.2.
- Error: 10286 SQLSTATE: HY000 ([ER_AUTH_RSA_CANT_READ](#))
Message: Failure to read key file: %s
[ER_AUTH_RSA_CANT_READ](#) was added in 8.0.2.
- Error: 10287 SQLSTATE: HY000 ([ER_AUTH_RSA_FILES_NOT_FOUND](#))
Message: RSA key files not found. Some authentication plugins will not work.
[ER_AUTH_RSA_FILES_NOT_FOUND](#) was added in 8.0.2.
- Error: 10288 SQLSTATE: HY000 ([ER_CONN_ATTR_TRUNCATED](#))
Message: Connection attributes of length %lu were truncated (%d bytes lost) for connection %llu, user %s@%s (as %s), auth: %s
[ER_CONN_ATTR_TRUNCATED](#) was added in 8.0.2.

- Error: 10289 SQLSTATE: HY000 (ER_X509_CIPHERS_MISMATCH)
Message: X.509 ciphers mismatch: should be '%s' but is '%s'
ER_X509_CIPHERS_MISMATCH was added in 8.0.2.
- Error: 10290 SQLSTATE: HY000 (ER_X509_ISSUER_MISMATCH)
Message: X.509 issuer mismatch: should be '%s' but is '%s'
ER_X509_ISSUER_MISMATCH was added in 8.0.2.
- Error: 10291 SQLSTATE: HY000 (ER_X509_SUBJECT_MISMATCH)
Message: X.509 subject mismatch: should be '%s' but is '%s'
ER_X509_SUBJECT_MISMATCH was added in 8.0.2.
- Error: 10292 SQLSTATE: HY000 (ER_AUTH_CANT_ACTIVATE_ROLE)
Message: Failed to activate default role %s for %s
ER_AUTH_CANT_ACTIVATE_ROLE was added in 8.0.2.
- Error: 10293 SQLSTATE: HY000 (ER_X509_NEEDS_RSA_PRIVKEY)
Message: Could not generate RSA private key required for X.509 certificate.
ER_X509_NEEDS_RSA_PRIVKEY was added in 8.0.2.
- Error: 10294 SQLSTATE: HY000 (ER_X509_CANT_WRITE_KEY)
Message: Could not write key file: %s
ER_X509_CANT_WRITE_KEY was added in 8.0.2.
- Error: 10295 SQLSTATE: HY000 (ER_X509_CANT_CHMOD_KEY)
Message: Could not set file permission for %s
ER_X509_CANT_CHMOD_KEY was added in 8.0.2.
- Error: 10296 SQLSTATE: HY000 (ER_X509_CANT_READ_CA_KEY)
Message: Could not read CA key file: %s
ER_X509_CANT_READ_CA_KEY was added in 8.0.2.
- Error: 10297 SQLSTATE: HY000 (ER_X509_CANT_READ_CA_CERT)
Message: Could not read CA certificate file: %s
ER_X509_CANT_READ_CA_CERT was added in 8.0.2.
- Error: 10298 SQLSTATE: HY000 (ER_X509_CANT_CREATE_CERT)
Message: Could not generate X.509 certificate.
ER_X509_CANT_CREATE_CERT was added in 8.0.2.

- Error: 10299 SQLSTATE: HY000 ([ER_X509_CANT_WRITE_CERT](#))
Message: Could not write certificate file: %s
[ER_X509_CANT_WRITE_CERT](#) was added in 8.0.2.
- Error: 10300 SQLSTATE: HY000 ([ER_AUTH_CANT_CREATE_RSA_PAIR](#))
Message: Could not generate RSA Private/Public key pair
[ER_AUTH_CANT_CREATE_RSA_PAIR](#) was added in 8.0.2.
- Error: 10301 SQLSTATE: HY000 ([ER_AUTH_CANT_WRITE_PRIVKEY](#))
Message: Could not write private key file: %s
[ER_AUTH_CANT_WRITE_PRIVKEY](#) was added in 8.0.2.
- Error: 10302 SQLSTATE: HY000 ([ER_AUTH_CANT_WRITE_PUBKEY](#))
Message: Could not write public key file: %s
[ER_AUTH_CANT_WRITE_PUBKEY](#) was added in 8.0.2.
- Error: 10303 SQLSTATE: HY000 ([ER_AUTH_SSL_CONF_PREVENTS_CERT_GENERATION](#))
Message: Skipping generation of SSL certificates as options related to SSL are specified.
[ER_AUTH_SSL_CONF_PREVENTS_CERT_GENERATION](#) was added in 8.0.2.
- Error: 10304 SQLSTATE: HY000 ([ER_AUTH_USING_EXISTING_CERTS](#))
Message: Skipping generation of SSL certificates as certificate files are present in data directory.
[ER_AUTH_USING_EXISTING_CERTS](#) was added in 8.0.2.
- Error: 10305 SQLSTATE: HY000 ([ER_AUTH_CERTS_SAVED_TO_DATADIR](#))
Message: Auto generated SSL certificates are placed in data directory.
[ER_AUTH_CERTS_SAVED_TO_DATADIR](#) was added in 8.0.2.
- Error: 10306 SQLSTATE: HY000 ([ER_AUTH_CERT_GENERATION_DISABLED](#))
Message: Skipping generation of SSL certificates as --auto_generate_certs is set to OFF.
[ER_AUTH_CERT_GENERATION_DISABLED](#) was added in 8.0.2.
- Error: 10307 SQLSTATE: HY000 ([ER_AUTH_RSA_CONF_PREVENTS_KEY_GENERATION](#))
Message: Skipping generation of RSA key pair through %s as options related to RSA keys are specified.
[ER_AUTH_RSA_CONF_PREVENTS_KEY_GENERATION](#) was added in 8.0.2.
- Error: 10308 SQLSTATE: HY000 ([ER_AUTH_KEY_GENERATION_SKIPPED_PAIR_PRESENT](#))
Message: Skipping generation of RSA key pair through %s as key files are present in data directory.
[ER_AUTH_KEY_GENERATION_SKIPPED_PAIR_PRESENT](#) was added in 8.0.2.

- Error: 10309 SQLSTATE: HY000 (ER_AUTH_KEYS_SAVED_TO_DATADIR)
Message: Auto generated RSA key files through %s are placed in data directory.
[ER_AUTH_KEYS_SAVED_TO_DATADIR](#) was added in 8.0.2.
- Error: 10310 SQLSTATE: HY000 (ER_AUTH_KEY_GENERATION_DISABLED)
Message: Skipping generation of RSA key pair as %s is set to OFF.
[ER_AUTH_KEY_GENERATION_DISABLED](#) was added in 8.0.2.
- Error: 10311 SQLSTATE: HY000 (ER_AUTHCACHE_PROXIES_PRIV_SKIPPED_NEEDS_RESOLVE)
Message: 'proxies_priv' entry '%s@%s %s@%s' ignored in --skip-name-resolve mode.
[ER_AUTHCACHE_PROXIES_PRIV_SKIPPED_NEEDS_RESOLVE](#) was added in 8.0.2.
- Error: 10312 SQLSTATE: HY000 (ER_AUTHCACHE_PLUGIN_MISSING)
Message: The plugin '%.*s' used to authenticate user '%s'@'%.*s' is not loaded. Nobody can currently login using this account.
[ER_AUTHCACHE_PLUGIN_MISSING](#) was added in 8.0.2.
- Error: 10313 SQLSTATE: HY000 (ER_AUTHCACHE_PLUGIN_CONFIG)
Message: The plugin '%s' is used to authenticate user '%s'@'%.*s', %s configured. Nobody can currently login using this account.
[ER_AUTHCACHE_PLUGIN_CONFIG](#) was added in 8.0.2.
- Error: 10315 SQLSTATE: HY000 (ER_AUTHCACHE_USER_SKIPPED_NEEDS_RESOLVE)
Message: 'user' entry '%s@%s' ignored in --skip-name-resolve mode.
[ER_AUTHCACHE_USER_SKIPPED_NEEDS_RESOLVE](#) was added in 8.0.2.
- Error: 10316 SQLSTATE: HY000 (ER_AUTHCACHE_USER_TABLE_DODGY)
Message: Fatal error: mysql.user table is damaged. Please run mysql_upgrade.
[ER_AUTHCACHE_USER_TABLE_DODGY](#) was added in 8.0.2.
- Error: 10317 SQLSTATE: HY000 (ER_AUTHCACHE_USER_IGNORED_DEPRECATED_PASSWORD)
Message: User entry '%s'@'%s' has a deprecated pre-4.1 password. The user will be ignored and no one can login with this user anymore.
[ER_AUTHCACHE_USER_IGNORED_DEPRECATED_PASSWORD](#) was added in 8.0.2.
- Error: 10318 SQLSTATE: HY000 (ER_AUTHCACHE_USER_IGNORED_NEEDS_PLUGIN)
Message: User entry '%s'@'%s' has an empty plugin value. The user will be ignored and no one can login with this user anymore.
[ER_AUTHCACHE_USER_IGNORED_NEEDS_PLUGIN](#) was added in 8.0.2.
- Error: 10319 SQLSTATE: HY000 (ER_AUTHCACHE_USER_IGNORED_INVALID_PASSWORD)

Message: Found invalid password for user: '%s@%s'; Ignoring user

[ER_AUTHCACHE_USER_IGNORED_INVALID_PASSWORD](#) was added in 8.0.2.

- Error: 10320 SQLSTATE: HY000 ([ER_AUTHCACHE_EXPIRED_PASSWORD_UNSUPPORTED](#))

Message: 'user' entry '%s@%s' has the password ignore flag raised, but its authentication plugin doesn't support password expiration. The user id will be ignored.

[ER_AUTHCACHE_EXPIRED_PASSWORD_UNSUPPORTED](#) was added in 8.0.2.

- Error: 10321 SQLSTATE: HY000 ([ER_NO_SUPER_WITHOUT_USER_PLUGIN](#))

Message: Some of the user accounts with SUPER privileges were disabled because of empty mysql.user.plugin value. If you are upgrading from MySQL 5.6 to MySQL 5.7 it means we were not able to substitute for empty plugin column. Probably because of pre 4.1 password hash. If your account is disabled you will need to: 1. Stop the server and restart it with --skip-grant-tables. 2. Run mysql_upgrade. 3. Restart the server with the parameters you normally use. For complete instructions on how to upgrade MySQL to a new version please see the 'Upgrading MySQL' section from the MySQL manual

[ER_NO_SUPER_WITHOUT_USER_PLUGIN](#) was added in 8.0.2.

- Error: 10322 SQLSTATE: HY000 ([ER_AUTHCACHE_DB_IGNORED_EMPTY_NAME](#))

Message: Found an entry in the 'db' table with empty database name; Skipped

[ER_AUTHCACHE_DB_IGNORED_EMPTY_NAME](#) was added in 8.0.2.

- Error: 10323 SQLSTATE: HY000 ([ER_AUTHCACHE_DB_SKIPPED_NEEDS_RESOLVE](#))

Message: 'db' entry '%s %s@%s' ignored in --skip-name-resolve mode.

[ER_AUTHCACHE_DB_SKIPPED_NEEDS_RESOLVE](#) was added in 8.0.2.

- Error: 10324 SQLSTATE: HY000 ([ER_AUTHCACHE_DB_ENTRY_LOWERCASED_REVOKE_WILL_FAIL](#))

Message: 'db' entry '%s %s@%s' had database in mixed case that has been forced to lowercase because lower_case_table_names is set. It will not be possible to remove this privilege using REVOKE.

[ER_AUTHCACHE_DB_ENTRY_LOWERCASED_REVOKE_WILL_FAIL](#) was added in 8.0.2.

- Error: 10325 SQLSTATE: HY000 ([ER_AUTHCACHE_TABLE_PROXIES_PRIV_MISSING](#))

Message: Missing system table mysql.proxies_priv; please run mysql_upgrade to create it

[ER_AUTHCACHE_TABLE_PROXIES_PRIV_MISSING](#) was added in 8.0.2.

- Error: 10326 SQLSTATE: HY000 ([ER_AUTHCACHE_CANT_OPEN_AND_LOCK_PRIVILEGE_TABLES](#))

Message: Fatal error: Can't open and lock privilege tables: %s

[ER_AUTHCACHE_CANT_OPEN_AND_LOCK_PRIVILEGE_TABLES](#) was added in 8.0.2.

Message: Detected misconfiguration: replication channel '%s' was configured with `AUTO_POSITION = 1`, but the server was started with `--gtid-mode=off`. Either reconfigure replication using `CHANGE MASTER TO MASTER_AUTO_POSITION = 0 FOR CHANNEL '%s'`, or change `GTID_MODE` to some value other than `OFF`, before starting the slave receiver thread.

`ER_RPL_SLAVE_AUTO_POSITION_IS_1_AND_GTID_MODE_IS_OFF` was added in 8.0.2.

- Error: 10531 SQLSTATE: HY000 (`ER_RPL_SLAVE_CANT_START_SLAVE_FOR_CHANNEL`)

Message: Slave: Could not start slave for channel '%s'. operation discontinued

[ER_RPL_SLAVE_CANT_START_SLAVE_FOR_CHANNEL](#) was added in 8.0.2.

- Error: 10532 SQLSTATE: HY000 ([ER_RPL_SLAVE_CANT_STOP_SLAVE_FOR_CHANNEL](#))

Message: Slave: Could not stop slave for channel '%s' operation discontinued

[ER_RPL_SLAVE_CANT_STOP_SLAVE_FOR_CHANNEL](#) was added in 8.0.2.

- Error: 10533 SQLSTATE: HY000 ([ER_RPL_RECOVERY_NO_ROTATE_EVENT_FROM_MASTER](#))

Message: Error during --relay-log-recovery: Could not locate rotate event from the master.

[ER_RPL_RECOVERY_NO_ROTATE_EVENT_FROM_MASTER](#) was added in 8.0.2.

- Error: 10534 SQLSTATE: HY000 ([ER_RPL_RECOVERY_ERROR_READ_RELAY_LOG](#))

Message: Error during --relay-log-recovery: Error reading events from relay log: %d

[ER_RPL_RECOVERY_ERROR_READ_RELAY_LOG](#) was added in 8.0.2.

- Error: 10535 SQLSTATE: HY000 ([ER_RPL_RECOVERY_ERROR_FREEING_IO_CACHE](#))

Message: Error during --relay-log-recovery: Error while freeing IO_CACHE object

[ER_RPL_RECOVERY_ERROR_FREEING_IO_CACHE](#) was added in 8.0.2, removed after 8.0.12.

- Error: 10536 SQLSTATE: HY000 ([ER_RPL_RECOVERY_SKIPPED_GROUP_REPLICATION_CHANNEL](#))

Message: Relay log recovery skipped for group replication channel.

[ER_RPL_RECOVERY_SKIPPED_GROUP_REPLICATION_CHANNEL](#) was added in 8.0.2.

- Error: 10537 SQLSTATE: HY000 ([ER_RPL_RECOVERY_ERROR](#))

Message: Error during --relay-log-recovery: %s

[ER_RPL_RECOVERY_ERROR](#) was added in 8.0.2.

- Error: 10538 SQLSTATE: HY000 ([ER_RPL_RECOVERY_IO_ERROR_READING_RELAY_LOG_INDEX](#))

Message: Error during --relay-log-recovery: Could not read relay log index file due to an IO error.

[ER_RPL_RECOVERY_IO_ERROR_READING_RELAY_LOG_INDEX](#) was added in 8.0.2.

- Error: 10539 SQLSTATE: HY000 ([ER_RPL_RECOVERY_FILE_MASTER_POS_INFO](#))

Message: Recovery from master pos %ld and file %s%. Previous relay log pos and relay log file had been set to %lld, %s respectively.

[ER_RPL_RECOVERY_FILE_MASTER_POS_INFO](#) was added in 8.0.2.

- Error: 10540 SQLSTATE: HY000 ([ER_RPL_RECOVERY_REPLICATE_SAME_SERVER_ID_REQUIRES_POSITION](#))

Message: Error during --relay-log-recovery: replicate_same_server_id is in use and sql thread's positions are not initialized, hence relay log recovery cannot happen.

`ER_RPL_RECOVERY_REPLICATE_SAME_SERVER_ID_REQUIRES_POSITION` was added in 8.0.2.

- Error: 10541 SQLSTATE: HY000 (`ER_RPL_MTS_RECOVERY_STARTING_COORDINATOR`)

Message: MTS recovery: starting coordinator thread to fill MTS gaps.

`ER_RPL_MTS_RECOVERY_STARTING_COORDINATOR` was added in 8.0.2.

- Error: 10542 SQLSTATE: HY000 (`ER_RPL_MTS_RECOVERY_FAILED_TO_START_COORDINATOR`)

Message: MTS recovery: failed to start the coordinator thread. Check the error log for additional details.

`ER_RPL_MTS_RECOVERY_FAILED_TO_START_COORDINATOR` was added in 8.0.2.

- Error: 10543 SQLSTATE: HY000 (`ER_RPL_MTS_AUTOMATIC_RECOVERY_FAILED`)

Message: MTS recovery: automatic recovery failed. Either the slave server had stopped due to an error during an earlier session or relay logs are corrupted. Fix the cause of the slave side error and restart the slave server or consider using RESET SLAVE.

`ER_RPL_MTS_AUTOMATIC_RECOVERY_FAILED` was added in 8.0.2.

- Error: 10544 SQLSTATE: HY000 (`ER_RPL_MTS_RECOVERY_CANT_OPEN_RELAY_LOG`)

Message: Failed to open the relay log '%s' (relay_log_pos %s).

`ER_RPL_MTS_RECOVERY_CANT_OPEN_RELAY_LOG` was added in 8.0.2.

- Error: 10545 SQLSTATE: HY000 (`ER_RPL_MTS_RECOVERY_SUCCESSFUL`)

Message: MTS recovery: completed successfully.

`ER_RPL_MTS_RECOVERY_SUCCESSFUL` was added in 8.0.2.

- Error: 10546 SQLSTATE: HY000 (`ER_RPL_SERVER_ID_MISSING`)

Message: Server id not set, will not start slave%s

`ER_RPL_SERVER_ID_MISSING` was added in 8.0.2.

- Error: 10547 SQLSTATE: HY000 (`ER_RPL_CANT_CREATE_SLAVE_THREAD`)

Message: Can't create slave thread%s.

`ER_RPL_CANT_CREATE_SLAVE_THREAD` was added in 8.0.2.

- Error: 10548 SQLSTATE: HY000 (`ER_RPL_SLAVE_IO_THREAD_WAS_KILLED`)

Message: The slave IO thread%s was killed while executing initialization query '%s'

`ER_RPL_SLAVE_IO_THREAD_WAS_KILLED` was added in 8.0.2.

- Error: 10549 SQLSTATE: HY000 (`ER_RPL_SLAVE_MASTER_UUID_HAS_CHANGED`)

Message: The master's UUID has changed, although this should not happen unless you have changed it manually. The old UUID was %s.

`ER_RPL_SLAVE_MASTER_UUID_HAS_CHANGED` was added in 8.0.2.

- Error: 10550 SQLSTATE: HY000 (ER_RPL_SLAVE_USES_CHECKSUM_AND_MASTER_PRE_50)

Message: Found a master with MySQL server version older than 5.0. With checksums enabled on the slave, replication might not work correctly. To ensure correct replication, restart the slave server with --slave_sql_verify_checksum=0.

ER_RPL_SLAVE_USES_CHECKSUM_AND_MASTER_PRE_50 was added in 8.0.2.
- Error: 10551 SQLSTATE: HY000 (ER_RPL_SLAVE_SECONDS_BEHIND_MASTER_DUBIOUS)

Message: "SELECT UNIX_TIMESTAMP()" failed on master, do not trust column Seconds_Behind_Master of SHOW SLAVE STATUS. Error: %s (%d)

ER_RPL_SLAVE_SECONDS_BEHIND_MASTER_DUBIOUS was added in 8.0.2.
- Error: 10552 SQLSTATE: HY000 (ER_RPL_SLAVE_CANT_FLUSH_MASTER_INFO_FILE)

Message: Failed to flush master info file.

ER_RPL_SLAVE_CANT_FLUSH_MASTER_INFO_FILE was added in 8.0.2.
- Error: 10553 SQLSTATE: HY000 (ER_RPL_SLAVE_REPORT_HOST_TOO_LONG)

Message: The length of report_host is %zu. It is larger than the max length(%d), so this slave cannot be registered to the master%s.

ER_RPL_SLAVE_REPORT_HOST_TOO_LONG was added in 8.0.2.
- Error: 10554 SQLSTATE: HY000 (ER_RPL_SLAVE_REPORT_USER_TOO_LONG)

Message: The length of report_user is %zu. It is larger than the max length(%d), so this slave cannot be registered to the master%s.

ER_RPL_SLAVE_REPORT_USER_TOO_LONG was added in 8.0.2.
- Error: 10555 SQLSTATE: HY000 (ER_RPL_SLAVE_REPORT_PASSWORD_TOO_LONG)

Message: The length of report_password is %zu. It is larger than the max length(%d), so this slave cannot be registered to the master%s.

ER_RPL_SLAVE_REPORT_PASSWORD_TOO_LONG was added in 8.0.2.
- Error: 10556 SQLSTATE: HY000 (ER_RPL_SLAVE_ERROR_RETRYING)

Message: Error on %s: %d %s, will retry in %d secs

ER_RPL_SLAVE_ERROR_RETRYING was added in 8.0.2.
- Error: 10557 SQLSTATE: HY000 (ER_RPL_SLAVE_ERROR_READING_FROM_SERVER)

Message: Error reading packet from server%s: %s (server_errno=%d)

ER_RPL_SLAVE_ERROR_READING_FROM_SERVER was added in 8.0.2.
- Error: 10558 SQLSTATE: HY000 (ER_RPL_SLAVE_DUMP_THREAD_KILLED_BY_MASTER)

Message: Slave%s: received end packet from server due to dump thread being killed on master. Dump threads are killed for example during master shutdown, explicitly by a user, or when the master receives a binlog send request from a duplicate server UUID <%s> : Error %s

`ER_RPL_SLAVE_DUMP_THREAD_KILLED_BY_MASTER` was added in 8.0.2.

- Error: 10559 SQLSTATE: HY000 (`ER_RPL_MTS_STATISTICS`)

Message: Multi-threaded slave statistics%s: seconds elapsed = %lu; events assigned = %llu; worker queues filled over overrun level = %lu; waited due a Worker queue full = %lu; waited due the total size = %lu; waited at clock conflicts = %llu waited (count) when Workers occupied = %lu waited when Workers occupied = %llu

`ER_RPL_MTS_STATISTICS` was added in 8.0.2.

- Error: 10560 SQLSTATE: HY000 (`ER_RPL_MTS_RECOVERY_COMPLETE`)

Message: Slave%s: MTS Recovery has completed at relay log %s, position %llu master log %s, position %llu.

`ER_RPL_MTS_RECOVERY_COMPLETE` was added in 8.0.2.

- Error: 10561 SQLSTATE: HY000 (`ER_RPL_SLAVE_CANT_INIT_RELAY_LOG_POSITION`)

Message: Error initializing relay log position%s: %s

`ER_RPL_SLAVE_CANT_INIT_RELAY_LOG_POSITION` was added in 8.0.2.

- Error: 10562 SQLSTATE: HY000
(`ER_RPL_SLAVE_CONNECTED_TO_MASTER_REPLICATION_STARTED`)

Message: Slave I/O thread%s: connected to master '%s@%s:%d', replication started in log '%s' at position %s

`ER_RPL_SLAVE_CONNECTED_TO_MASTER_REPLICATION_STARTED` was added in 8.0.2.

- Error: 10563 SQLSTATE: HY000 (`ER_RPL_SLAVE_IO_THREAD_KILLED`)

Message: Slave I/O thread%s killed while connecting to master

`ER_RPL_SLAVE_IO_THREAD_KILLED` was added in 8.0.2.

- Error: 10564 SQLSTATE: HY000 (`ER_RPL_SLAVE_IO_THREAD_CANT_REGISTER_ON_MASTER`)

Message: Slave I/O thread couldn't register on master

`ER_RPL_SLAVE_IO_THREAD_CANT_REGISTER_ON_MASTER` was added in 8.0.2.

- Error: 10565 SQLSTATE: HY000 (`ER_RPL_SLAVE_FORCING_TO_RECONNECT_IO_THREAD`)

Message: Forcing to reconnect slave I/O thread%s

`ER_RPL_SLAVE_FORCING_TO_RECONNECT_IO_THREAD` was added in 8.0.2.

- Error: 10566 SQLSTATE: HY000 (`ER_RPL_SLAVE_ERROR_REQUESTING_BINLOG_DUMP`)

Message: Failed on request_dump()%s

`ER_RPL_SLAVE_ERROR_REQUESTING_BINLOG_DUMP` was added in 8.0.2.

- Error: 10567 SQLSTATE: HY000 (`ER_RPL_LOG_ENTRY_EXCEEDS_SLAVE_MAX_ALLOWED_PACKET`)

Message: Log entry on master is longer than slave_max_allowed_packet (%lu) on slave. If the entry is correct, restart the server with a higher value of slave_max_allowed_packet

ER_RPL_LOG_ENTRY_EXCEEDS_SLAVE_MAX_ALLOWED_PACKET was added in 8.0.2.

- Error: 10568 SQLSTATE: HY000 (ER_RPL_SLAVE_STOPPING_AS_MASTER_OOM)

Message: Stopping slave I/O thread due to out-of-memory error from master

ER_RPL_SLAVE_STOPPING_AS_MASTER_OOM was added in 8.0.2.

- Error: 10569 SQLSTATE: HY000
(ER_RPL_SLAVE_IO_THREAD_ABORTED_WAITING_FOR_RELAY_LOG_SPACE)

Message: Slave I/O thread aborted while waiting for relay log space

ER_RPL_SLAVE_IO_THREAD_ABORTED_WAITING_FOR_RELAY_LOG_SPACE was added in 8.0.2.

- Error: 10570 SQLSTATE: HY000 (ER_RPL_SLAVE_IO_THREAD_EXITING)

Message: Slave I/O thread exiting%s, read up to log '%s', position %s

ER_RPL_SLAVE_IO_THREAD_EXITING was added in 8.0.2.

- Error: 10571 SQLSTATE: HY000 (ER_RPL_SLAVE_CANT_INITIALIZE_SLAVE_WORKER)

Message: Failed during slave worker initialization%s

ER_RPL_SLAVE_CANT_INITIALIZE_SLAVE_WORKER was added in 8.0.2.

- Error: 10572 SQLSTATE: HY000
(ER_RPL_MTS_GROUP_RECOVERY_RELAY_LOG_INFO_FOR_WORKER)

Message: Slave: MTS group recovery relay log info based on Worker-Id %lu, group_relay_log_name %s, group_relay_log_pos %llu group_master_log_name %s, group_master_log_pos %llu

ER_RPL_MTS_GROUP_RECOVERY_RELAY_LOG_INFO_FOR_WORKER was added in 8.0.2.

- Error: 10573 SQLSTATE: HY000 (ER_RPL_ERROR_LOOKING_FOR_LOG)

Message: Error looking for %s.

ER_RPL_ERROR_LOOKING_FOR_LOG was added in 8.0.2.

- Error: 10574 SQLSTATE: HY000 (ER_RPL_MTS_GROUP_RECOVERY_RELAY_LOG_INFO)

Message: Slave: MTS group recovery relay log info group_master_log_name %s, event_master_log_pos %llu.

ER_RPL_MTS_GROUP_RECOVERY_RELAY_LOG_INFO was added in 8.0.2.

- Error: 10575 SQLSTATE: HY000 (ER_RPL_CANT_FIND_FOLLOWUP_FILE)

Message: Error looking for file after %s.

ER_RPL_CANT_FIND_FOLLOWUP_FILE was added in 8.0.2.

- Error: 10576 SQLSTATE: HY000 (ER_RPL_MTS_CHECKPOINT_PERIOD_DIFFERS_FROM_CNT)

Message: This an error cnt != mts_checkpoint_period

`ER_RPL_MTS_CHECKPOINT_PERIOD_DIFFERS_FROM_CNT` was added in 8.0.2.

- Error: 10577 SQLSTATE: HY000 (`ER_RPL_SLAVE_WORKER_THREAD_CREATION_FAILED`)

Message: Failed during slave worker thread creation%s

`ER_RPL_SLAVE_WORKER_THREAD_CREATION_FAILED` was added in 8.0.2.

- Error: 10578 SQLSTATE: HY000
(`ER_RPL_SLAVE_WORKER_THREAD_CREATION_FAILED_WITH_ERRNO`)

Message: Failed during slave worker thread creation%s (errno= %d)

`ER_RPL_SLAVE_WORKER_THREAD_CREATION_FAILED_WITH_ERRNO` was added in 8.0.2.

- Error: 10579 SQLSTATE: HY000 (`ER_RPL_SLAVE_FAILED_TO_INIT_PARTITIONS_HASH`)

Message: Failed to init partitions hash

`ER_RPL_SLAVE_FAILED_TO_INIT_PARTITIONS_HASH` was added in 8.0.2.

- Error: 10580 SQLSTATE: HY000 (`ER_RPL_SLAVE_NDB_TABLES_NOT_AVAILABLE`)

Message: Slave SQL thread : NDB : Tables not available after %lu seconds. Consider increasing --ndb-wait-setup value

`ER_RPL_SLAVE_NDB_TABLES_NOT_AVAILABLE` was added in 8.0.2, removed after 8.0.13.

- Error: 10581 SQLSTATE: HY000 (`ER_RPL_SLAVE_SQL_THREAD_STARTING`)

Message: Slave SQL thread%s initialized, starting replication in log '%s' at position %s, relay log '%s' position: %s

`ER_RPL_SLAVE_SQL_THREAD_STARTING` was added in 8.0.2.

- Error: 10582 SQLSTATE: HY000 (`ER_RPL_SLAVE_SKIP_COUNTER_EXECUTED`)

Message: 'SQL_SLAVE_SKIP_COUNTER=%ld' executed at relay_log_file='%s', relay_log_pos='%ld', master_log_name='%s', master_log_pos='%ld' and new position at relay_log_file='%s', relay_log_pos='%ld', master_log_name='%s', master_log_pos='%ld'

`ER_RPL_SLAVE_SKIP_COUNTER_EXECUTED` was added in 8.0.2.

- Error: 10583 SQLSTATE: HY000 (`ER_RPL_SLAVE_ADDITIONAL_ERROR_INFO_FROM_DA`)

Message: Slave (additional info): %s Error_code: MY-%06d

`ER_RPL_SLAVE_ADDITIONAL_ERROR_INFO_FROM_DA` was added in 8.0.2.

- Error: 10584 SQLSTATE: HY000 (`ER_RPL_SLAVE_ERROR_INFO_FROM_DA`)

Message: Slave: %s Error_code: MY-%06d

`ER_RPL_SLAVE_ERROR_INFO_FROM_DA` was added in 8.0.2.

- Error: 10585 SQLSTATE: HY000 (`ER_RPL_SLAVE_ERROR_LOADING_USER_DEFINED_LIBRARY`)

Message: Error loading user-defined library, slave SQL thread aborted. Install the missing library, and restart the slave SQL thread with "SLAVE START". We stopped at log '%s' position %s

`ER_RPL_SLAVE_ERROR_LOADING_USER_DEFINED_LIBRARY` was added in 8.0.2.

- Error: 10586 SQLSTATE: HY000 (`ER_RPL_SLAVE_ERROR_RUNNING_QUERY`)

Message: Error running query, slave SQL thread aborted. Fix the problem, and restart the slave SQL thread with "SLAVE START". We stopped at log '%s' position %s

`ER_RPL_SLAVE_ERROR_RUNNING_QUERY` was added in 8.0.2.

- Error: 10587 SQLSTATE: HY000 (`ER_RPL_SLAVE_SQL_THREAD_EXITING`)

Message: Slave SQL thread%s exiting, replication stopped in log '%s' at position %s

`ER_RPL_SLAVE_SQL_THREAD_EXITING` was added in 8.0.2.

- Error: 10588 SQLSTATE: HY000 (`ER_RPL_SLAVE_READ_INVALID_EVENT_FROM_MASTER`)

Message: Read invalid event from master: '%s', master could be corrupt but a more likely cause of this is a bug

`ER_RPL_SLAVE_READ_INVALID_EVENT_FROM_MASTER` was added in 8.0.2.

- Error: 10589 SQLSTATE: HY000
(`ER_RPL_SLAVE_QUEUE_EVENT_FAILED_INVALID_CONFIGURATION`)

Message: The queue event failed for channel '%s' as its configuration is invalid.

`ER_RPL_SLAVE_QUEUE_EVENT_FAILED_INVALID_CONFIGURATION` was added in 8.0.2.

- Error: 10590 SQLSTATE: HY000
(`ER_RPL_SLAVE_IO_THREAD_DETECTED_UNEXPECTED_EVENT_SEQUENCE`)

Message: An unexpected event sequence was detected by the IO thread while queuing the event received from master '%s' binary log file, at position %llu.

`ER_RPL_SLAVE_IO_THREAD_DETECTED_UNEXPECTED_EVENT_SEQUENCE` was added in 8.0.2.

- Error: 10591 SQLSTATE: HY000 (`ER_RPL_SLAVE_CANT_USE_CHARSET`)

Message: '%s' can not be used as client character set. '%s' will be used as default client character set while connecting to master.

`ER_RPL_SLAVE_CANT_USE_CHARSET` was added in 8.0.2.

- Error: 10592 SQLSTATE: HY000
(`ER_RPL_SLAVE_CONNECTED_TO_MASTER_REPLICATION_RESUMED`)

Message: Slave%s: connected to master '%s@%s:%d', replication resumed in log '%s' at position %s

`ER_RPL_SLAVE_CONNECTED_TO_MASTER_REPLICATION_RESUMED` was added in 8.0.2.

- Error: 10593 SQLSTATE: HY000 (`ER_RPL_SLAVE_NEXT_LOG_IS_ACTIVE`)

Message: next log '%s' is active

`ER_RPL_SLAVE_NEXT_LOG_IS_ACTIVE` was added in 8.0.2.

- Error: 10594 SQLSTATE: HY000 (`ER_RPL_SLAVE_NEXT_LOG_IS_INACTIVE`)

Message: next log '%s' is not active

`ER_RPL_SLAVE_NEXT_LOG_IS_INACTIVE` was added in 8.0.2.

- Error: 10595 SQLSTATE: HY000 (`ER_RPL_SLAVE_SQL_THREAD_IO_ERROR_READING_EVENT`)

Message: Slave SQL thread%s: I/O error reading event (errno: %d cur_log->error: %d)

`ER_RPL_SLAVE_SQL_THREAD_IO_ERROR_READING_EVENT` was added in 8.0.2.

- Error: 10596 SQLSTATE: HY000 (`ER_RPL_SLAVE_ERROR_READING_RELAY_LOG_EVENTS`)

Message: Error reading relay log event%s: %s

`ER_RPL_SLAVE_ERROR_READING_RELAY_LOG_EVENTS` was added in 8.0.2.

- Error: 10597 SQLSTATE: HY000 (`ER_SLAVE_CHANGE_MASTER_TO_EXECUTED`)

Message: 'CHANGE MASTER TO%s executed'. Previous state master_host='%s', master_port=%u, master_log_file='%s', master_log_pos= %ld, master_bind='%s'. New state master_host='%s', master_port= %u, master_log_file='%s', master_log_pos= %ld, master_bind='%s'.

`ER_SLAVE_CHANGE_MASTER_TO_EXECUTED` was added in 8.0.2.

- Error: 10598 SQLSTATE: HY000
(`ER_RPL_SLAVE_NEW_MASTER_INFO_NEEDS_REPOS_TYPE_OTHER_THAN_FILE`)

Message: Slave: Cannot create new master info structure when repositories are of type FILE. Convert slave repositories to TABLE to replicate from multiple sources.

`ER_RPL_SLAVE_NEW_MASTER_INFO_NEEDS_REPOS_TYPE_OTHER_THAN_FILE` was added in 8.0.2.

- Error: 10599 SQLSTATE: HY000 (`ER_RPL_FAILED_TO_STAT_LOG_IN_INDEX`)

Message: log %s listed in the index, but failed to stat.

`ER_RPL_FAILED_TO_STAT_LOG_IN_INDEX` was added in 8.0.2.

- Error: 10600 SQLSTATE: HY000
(`ER_RPL_LOG_NOT_FOUND_WHILE_COUNTING_RELAY_LOG_SPACE`)

Message: Could not find first log while counting relay log space.

`ER_RPL_LOG_NOT_FOUND_WHILE_COUNTING_RELAY_LOG_SPACE` was added in 8.0.2.

- Error: 10601 SQLSTATE: HY000 (`ER_SLAVE_CANT_USE_TMPDIR`)

Message: Unable to use slave's temporary directory '%s'.

`ER_SLAVE_CANT_USE_TMPDIR` was added in 8.0.2.

- Error: 10602 SQLSTATE: HY000 (`ER_RPL_RELAY_LOG_NEEDS_FILE_NOT_DIRECTORY`)

Message: Path '%s' is a directory name, please specify a file name for --relay-log option.

`ER_RPL_RELAY_LOG_NEEDS_FILE_NOT_DIRECTORY` was added in 8.0.2.

- Error: 10603 SQLSTATE: HY000 (`ER_RPL_RELAY_LOG_INDEX_NEEDS_FILE_NOT_DIRECTORY`)

Message: Path '%s' is a directory name, please specify a file name for --relay-log-index option.

`ER_RPL_RELAY_LOG_INDEX_NEEDS_FILE_NOT_DIRECTORY` was added in 8.0.2.

- Error: 10604 SQLSTATE: HY000 (`ER_RPL_PLEASE_USE_OPTION_RELAY_LOG`)

Message: Neither --relay-log nor --relay-log-index were used; so replication may break when this MySQL server acts as a slave and has his hostname changed!! Please use '--relay-log=%s' to avoid this problem.

`ER_RPL_PLEASE_USE_OPTION_RELAY_LOG` was added in 8.0.2.

- Error: 10605 SQLSTATE: HY000 (`ER_RPL_OPEN_INDEX_FILE_FAILED`)

Message: Failed in open_index_file() called from Relay_log_info::rli_init_info().

`ER_RPL_OPEN_INDEX_FILE_FAILED` was added in 8.0.2.

- Error: 10606 SQLSTATE: HY000 (`ER_RPL_CANT_INITIALIZE_GTID_SETS_IN_RLI_INIT_INFO`)

Message: Failed in init_gtid_sets() called from Relay_log_info::rli_init_info().

`ER_RPL_CANT_INITIALIZE_GTID_SETS_IN_RLI_INIT_INFO` was added in 8.0.2.

- Error: 10607 SQLSTATE: HY000 (`ER_RPL_CANT_OPEN_LOG_IN_RLI_INIT_INFO`)

Message: Failed in open_log() called from Relay_log_info::rli_init_info().

`ER_RPL_CANT_OPEN_LOG_IN_RLI_INIT_INFO` was added in 8.0.2.

- Error: 10608 SQLSTATE: HY000 (`ER_RPL_ERROR_WRITING_RELAY_LOG_CONFIGURATION`)

Message: Error writing relay log configuration.

`ER_RPL_ERROR_WRITING_RELAY_LOG_CONFIGURATION` was added in 8.0.2.

[ER_DB_OPT_NOT_FOUND_USING_DEFAULT_CHARSET](#) was added in 8.0.2.

- Error: 10773 SQLSTATE: HY000 (ER_EVENT_CANT_GET_TIMEZONE_FROM_FIELD)

Message: Event '%s'. '%s': invalid value in column mysql.event.time_zone.

This error can occur for upgrades to MySQL 8.0 from previous versions. During the upgrade process, the server reads the `mysql.event` system table and migrates its contents to the internal data dictionary.

`ER_EVENT_CANT_GET_TIMEZONE_FROM_FIELD` was added in 8.0.2.

- Error: 10774 SQLSTATE: HY000 (ER_EVENT_CANT_FIND_TIMEZONE)

Message: Event '%s'. '%s': has invalid time zone value

This error can occur for upgrades to MySQL 8.0 from previous versions. During the upgrade process, the server reads the `mysql.event` system table and migrates its contents to the internal data dictionary.

`ER_EVENT_CANT_FIND_TIMEZONE` was added in 8.0.2.

- Error: 10775 SQLSTATE: HY000 (ER_EVENT_CANT_GET_CHARSET)

Message: Event '%s'. '%s': invalid value in column mysql.event.character_set_client.

This error can occur for upgrades to MySQL 8.0 from previous versions. During the upgrade process, the server reads the `mysql.event` system table and migrates its contents to the internal data dictionary.

`ER_EVENT_CANT_GET_CHARSET` was added in 8.0.2.

- Error: 10776 SQLSTATE: HY000 (ER_EVENT_CANT_GET_COLLATION)

Message: Event '%s'. '%s': invalid value in column mysql.event.collation_connection.

This error can occur for upgrades to MySQL 8.0 from previous versions. During the upgrade process, the server reads the `mysql.event` system table and migrates its contents to the internal data dictionary.

`ER_EVENT_CANT_GET_COLLATION` was added in 8.0.2.

- Error: 10777 SQLSTATE: HY000 (ER_EVENT_CANT_OPEN_TABLE_MYSQL_EVENT)

Message: Failed to open mysql.event Table.

This error can occur for upgrades to MySQL 8.0 from previous versions. During the upgrade process, the server reads the `mysql.event` system table and migrates its contents to the internal data dictionary.

`ER_EVENT_CANT_OPEN_TABLE_MYSQL_EVENT` was added in 8.0.2.

- Error: 10778 SQLSTATE: HY000 (ER_CANT_PARSE_STORED_ROUTINE_BODY)

Message: Parsing '%s'. '%s' routine body failed. %s

`ER_CANT_PARSE_STORED_ROUTINE_BODY` was added in 8.0.2.

- Error: 10779 SQLSTATE: HY000 (ER_CANT_OPEN_TABLE_MYSQL_PROC)

Message: Failed to open mysql.proc Table.

This error can occur for upgrades to MySQL 8.0 from previous versions. During the upgrade process, the server reads the `mysql.proc` system table and migrates its contents to the internal data dictionary.

`ER_CANT_OPEN_TABLE_MYSQL_PROC` was added in 8.0.2.

- Error: 10780 SQLSTATE: HY000 (ER_CANT_READ_TABLE_MYSQL_PROC)

Message: Failed to read mysql.proc table.

This error can occur for upgrades to MySQL 8.0 from previous versions. During the upgrade process, the server reads the `mysql.proc` system table and migrates its contents to the internal data dictionary.

`ER_CANT_READ_TABLE_MYSQL_PROC` was added in 8.0.2.

- Error: 10781 SQLSTATE: HY000 (ER_FILE_EXISTS_DURING_UPGRADE)

Message: Found %s file in mysql schema. DD will create .ibd file with same name. Please rename table and start upgrade process again.

`ER_FILE_EXISTS_DURING_UPGRADE` was added in 8.0.2.

Message: Unable to obtain lock for dropping event %s from schema %s

[ER_EVENT_CANT_GET_LOCK_FOR_DROPPING_EVENT](#) was added in 8.0.2.

- Error: 10806 SQLSTATE: HY000 (ER_EVENT_UNABLE_TO_DROP_EVENT)
Message: Unable to drop event %s from schema %s
ER_EVENT_UNABLE_TO_DROP_EVENT was added in 8.0.2.
- Error: 10807 SQLSTATE: HY000
(ER_BINLOG_ATTACHING_THREAD_MEMORY_FINALLY_AVAILABLE)
Message: Server overcomes the temporary 'out of memory' in '%d' tries while attaching to session thread during the group commit phase.
ER_BINLOG_ATTACHING_THREAD_MEMORY_FINALLY_AVAILABLE was added in 8.0.2, removed after 8.0.13.
- Error: 10808 SQLSTATE: HY000 (ER_BINLOG_CANT_RESIZE_CACHE)
Message: Unable to resize binlog IOCACHE auxiliary file
ER_BINLOG_CANT_RESIZE_CACHE was added in 8.0.2.
- Error: 10809 SQLSTATE: HY000 (ER_BINLOG_FILE_BEING_READ_NOT_PURGED)
Message: file %s was not purged because it was being read by thread number %u
ER_BINLOG_FILE_BEING_READ_NOT_PURGED was added in 8.0.2.
- Error: 10810 SQLSTATE: HY000 (ER_BINLOG_IO_ERROR_READING_HEADER)
Message: I/O error reading the header from the binary log, errno=%d, io cache code=%d
ER_BINLOG_IO_ERROR_READING_HEADER was added in 8.0.2.
- Error: 10811 SQLSTATE: HY000 (ER_BINLOG_CANT_OPEN_LOG)
Message: Failed to open log (file '%s', errno %d)
ER_BINLOG_CANT_OPEN_LOG was added in 8.0.2, removed after 8.0.12.
- Error: 10812 SQLSTATE: HY000 (ER_BINLOG_CANT_CREATE_CACHE_FOR_LOG)
Message: Failed to create a cache on log (file '%s')
ER_BINLOG_CANT_CREATE_CACHE_FOR_LOG was added in 8.0.2, removed after 8.0.12.
- Error: 10813 SQLSTATE: HY000 (ER_BINLOG_FILE_EXTENSION_NUMBER_EXHAUSTED)
Message: Log filename extension number exhausted: %06lu. Please fix this by archiving old logs and updating the index files.
ER_BINLOG_FILE_EXTENSION_NUMBER_EXHAUSTED was added in 8.0.2.
- Error: 10814 SQLSTATE: HY000 (ER_BINLOG_FILE_NAME_TOO_LONG)
Message: Log filename too large: %s%s (%zu). Please fix this by archiving old logs and updating the index files.
ER_BINLOG_FILE_NAME_TOO_LONG was added in 8.0.2.
- Error: 10815 SQLSTATE: HY000 (ER_BINLOG_FILE_EXTENSION_NUMBER_RUNNING_LOW)

Message: Next log extension: %lu. Remaining log filename extensions: %lu. Please consider archiving some logs.

`ER_BINLOG_FILE_EXTENSION_NUMBER_RUNNING_LOW` was added in 8.0.2.

- Error: 10816 SQLSTATE: HY000 (`ER_BINLOG_CANT_OPEN_FOR_LOGGING`)

Message: Could not open %s for logging (error %d). Turning logging off for the whole duration of the MySQL server process. To turn it on again: fix the cause, shutdown the MySQL server and restart it.

`ER_BINLOG_CANT_OPEN_FOR_LOGGING` was added in 8.0.2.

- Error: 10817 SQLSTATE: HY000 (`ER_BINLOG_FAILED_TO_SYNC_INDEX_FILE`)

Message: MYSQL_BIN_LOG::open_index_file failed to sync the index file.

`ER_BINLOG_FAILED_TO_SYNC_INDEX_FILE` was added in 8.0.2.

- Error: 10818 SQLSTATE: HY000 (`ER_BINLOG_ERROR_READING_GTIDS_FROM_RELAY_LOG`)

Message: Error reading GTIDs from relaylog: %d

`ER_BINLOG_ERROR_READING_GTIDS_FROM_RELAY_LOG` was added in 8.0.2.

- Error: 10819 SQLSTATE: HY000 (`ER_BINLOG_EVENTS_READ_FROM_RELAY_LOG_INFO`)

Message: %lu events read in relaylog file '%s' for updating Retrieved_Gtid_Set and/or IO thread transaction parser state.

`ER_BINLOG_EVENTS_READ_FROM_RELAY_LOG_INFO` was added in 8.0.2.

- Error: 10820 SQLSTATE: HY000 (`ER_BINLOG_ERROR_READING_GTIDS_FROM_BINARY_LOG`)

Message: Error reading GTIDs from binary log: %d

`ER_BINLOG_ERROR_READING_GTIDS_FROM_BINARY_LOG` was added in 8.0.2.

- Error: 10821 SQLSTATE: HY000 (`ER_BINLOG_EVENTS_READ_FROM_BINLOG_INFO`)

Message: Read %lu events from binary log file '%s' to determine the GTIDs purged from binary logs.

`ER_BINLOG_EVENTS_READ_FROM_BINLOG_INFO` was added in 8.0.2.

- Error: 10822 SQLSTATE: HY000 (`ER_BINLOG_CANT_GENERATE_NEW_FILE_NAME`)

Message: MYSQL_BIN_LOG::open failed to generate new file name.

`ER_BINLOG_CANT_GENERATE_NEW_FILE_NAME` was added in 8.0.2.

- Error: 10823 SQLSTATE: HY000 (`ER_BINLOG_FAILED_TO_SYNC_INDEX_FILE_IN_OPEN`)

Message: MYSQL_BIN_LOG::open failed to sync the index file.

`ER_BINLOG_FAILED_TO_SYNC_INDEX_FILE_IN_OPEN` was added in 8.0.2.

- Error: 10824 SQLSTATE: HY000 (`ER_BINLOG_CANT_USE_FOR_LOGGING`)

Message: Could not use %s for logging (error %d). Turning logging off for the whole duration of the MySQL server process. To turn it on again: fix the cause, shutdown the MySQL server and restart it.

`ER_BINLOG_CANT_USE_FOR_LOGGING` was added in 8.0.2.

- Error: 10825 SQLSTATE: HY000
(`ER_BINLOG_FAILED_TO_CLOSE_INDEX_FILE_WHILE_REBUILDING`)

Message: While rebuilding index file %s: Failed to close the index file.

`ER_BINLOG_FAILED_TO_CLOSE_INDEX_FILE_WHILE_REBUILDING` was added in 8.0.2.

- Error: 10826 SQLSTATE: HY000
(`ER_BINLOG_FAILED_TO_DELETE_INDEX_FILE_WHILE_REBUILDING`)

Message: While rebuilding index file %s: Failed to delete the existing index file. It could be that file is being used by some other process.

`ER_BINLOG_FAILED_TO_DELETE_INDEX_FILE_WHILE_REBUILDING` was added in 8.0.2.

- Error: 10827 SQLSTATE: HY000
(`ER_BINLOG_FAILED_TO_RENAME_INDEX_FILE_WHILE_REBUILDING`)

Message: While rebuilding index file %s: Failed to rename the new index file to the existing index file.

`ER_BINLOG_FAILED_TO_RENAME_INDEX_FILE_WHILE_REBUILDING` was added in 8.0.2.

- Error: 10828 SQLSTATE: HY000
(`ER_BINLOG_FAILED_TO_OPEN_INDEX_FILE_AFTER_REBUILDING`)

Message: After rebuilding the index file %s: Failed to open the index file.

`ER_BINLOG_FAILED_TO_OPEN_INDEX_FILE_AFTER_REBUILDING` was added in 8.0.2.

- Error: 10829 SQLSTATE: HY000 (`ER_BINLOG_CANT_APPEND_LOG_TO_TMP_INDEX`)

Message: MYSQL_BIN_LOG::add_log_to_index failed to append log file name: %s, to crash safe index file.

`ER_BINLOG_CANT_APPEND_LOG_TO_TMP_INDEX` was added in 8.0.2.

- Error: 10830 SQLSTATE: HY000
(`ER_BINLOG_CANT_LOCATE_OLD_BINLOG_OR_RELAY_LOG_FILES`)

Message: Failed to locate old binlog or relay log files

`ER_BINLOG_CANT_LOCATE_OLD_BINLOG_OR_RELAY_LOG_FILES` was added in 8.0.2.

- Error: 10831 SQLSTATE: HY000 (`ER_BINLOG_CANT_DELETE_FILE`)

Message: Failed to delete file '%s'

`ER_BINLOG_CANT_DELETE_FILE` was added in 8.0.2.

- Error: 10832 SQLSTATE: HY000 (`ER_BINLOG_CANT_SET_TMP_INDEX_NAME`)

Message: MYSQL_BIN_LOG::set_crash_safe_index_file_name failed to set file name.

`ER_BINLOG_CANT_SET_TMP_INDEX_NAME` was added in 8.0.2.

- Error: 10833 SQLSTATE: HY000 (`ER_BINLOG_FAILED_TO_OPEN_TEMPORARY_INDEX_FILE`)

Message: MYSQL_BIN_LOG::open_crash_safe_index_file failed to open temporary index file.

[ER_BINLOG_FAILED_TO_OPEN_TEMPORARY_INDEX_FILE](#) was added in 8.0.2.

- Error: 10834 SQLSTATE: HY000 ([ER_BINLOG_ERROR_GETTING_NEXT_LOG_FROM_INDEX](#))

Message: next log error: %d offset: %s log: %s included: %d

[ER_BINLOG_ERROR_GETTING_NEXT_LOG_FROM_INDEX](#) was added in 8.0.2, removed after 8.0.12.

- Error: 10835 SQLSTATE: HY000 ([ER_BINLOG_CANT_OPEN_TMP_INDEX](#))

Message: %s failed to open the crash safe index file.

[ER_BINLOG_CANT_OPEN_TMP_INDEX](#) was added in 8.0.2.

- Error: 10836 SQLSTATE: HY000 ([ER_BINLOG_CANT_COPY_INDEX_TO_TMP](#))

Message: %s failed to copy index file to crash safe index file.

[ER_BINLOG_CANT_COPY_INDEX_TO_TMP](#) was added in 8.0.2.

- Error: 10837 SQLSTATE: HY000 ([ER_BINLOG_CANT_CLOSE_TMP_INDEX](#))

Message: %s failed to close the crash safe index file.

[ER_BINLOG_CANT_CLOSE_TMP_INDEX](#) was added in 8.0.2.

- Error: 10838 SQLSTATE: HY000 ([ER_BINLOG_CANT_MOVE_TMP_TO_INDEX](#))

Message: %s failed to move crash safe index file to index file.

[ER_BINLOG_CANT_MOVE_TMP_TO_INDEX](#) was added in 8.0.2.

- Error: 10839 SQLSTATE: HY000 ([ER_BINLOG_PURGE_LOGS_CALLED_WITH_FILE_NOT_IN_INDEX](#))

Message: MYSQL_BIN_LOG::purge_logs was called with file %s not listed in the index.

[ER_BINLOG_PURGE_LOGS_CALLED_WITH_FILE_NOT_IN_INDEX](#) was added in 8.0.2.

- Error: 10840 SQLSTATE: HY000 ([ER_BINLOG_PURGE_LOGS_CANT_SYNC_INDEX_FILE](#))

Message: MYSQL_BIN_LOG::purge_logs failed to sync the index file.

[ER_BINLOG_PURGE_LOGS_CANT_SYNC_INDEX_FILE](#) was added in 8.0.2.

- Error: 10841 SQLSTATE: HY000 ([ER_BINLOG_PURGE_LOGS_CANT_COPY_TO_REGISTER_FILE](#))

Message: MYSQL_BIN_LOG::purge_logs failed to copy %s to register file.

[ER_BINLOG_PURGE_LOGS_CANT_COPY_TO_REGISTER_FILE](#) was added in 8.0.2.

- Error: 10842 SQLSTATE: HY000 ([ER_BINLOG_PURGE_LOGS_CANT_FLUSH_REGISTER_FILE](#))

Message: MYSQL_BIN_LOG::purge_logs failed to flush register file.

[ER_BINLOG_PURGE_LOGS_CANT_FLUSH_REGISTER_FILE](#) was added in 8.0.2.

- Error: 10843 SQLSTATE: HY000 ([ER_BINLOG_PURGE_LOGS_CANT_UPDATE_INDEX_FILE](#))

Message: MYSQL_BIN_LOG::purge_logs failed to update the index file

ER_BINLOG_PURGE_LOGS_CANT_UPDATE_INDEX_FILE was added in 8.0.2.

- Error: 10844 SQLSTATE: HY000 (ER_BINLOG_PURGE_LOGS_FAILED_TO_PURGE_LOG)

Message: MYSQL_BIN_LOG::purge_logs failed to process registered files that would be purged.

ER_BINLOG_PURGE_LOGS_FAILED_TO_PURGE_LOG was added in 8.0.2.

- Error: 10845 SQLSTATE: HY000 (ER_BINLOG_FAILED_TO_SET_PURGE_INDEX_FILE_NAME)

Message: MYSQL_BIN_LOG::set_purge_index_file_name failed to set file name.

ER_BINLOG_FAILED_TO_SET_PURGE_INDEX_FILE_NAME was added in 8.0.2.

- Error: 10846 SQLSTATE: HY000 (ER_BINLOG_FAILED_TO_OPEN_REGISTER_FILE)

Message: MYSQL_BIN_LOG::open_purge_index_file failed to open register file.

ER_BINLOG_FAILED_TO_OPEN_REGISTER_FILE was added in 8.0.2.

- Error: 10847 SQLSTATE: HY000 (ER_BINLOG_FAILED_TO_REINIT_REGISTER_FILE)

Message: MYSQL_BIN_LOG::purge_index_entry failed to reinit register file for read

ER_BINLOG_FAILED_TO_REINIT_REGISTER_FILE was added in 8.0.2.

- Error: 10848 SQLSTATE: HY000 (ER_BINLOG_FAILED_TO_READ_REGISTER_FILE)

Message: MYSQL_BIN_LOG::purge_index_entry error %d reading from register file.

ER_BINLOG_FAILED_TO_READ_REGISTER_FILE was added in 8.0.2.

- Error: 10849 SQLSTATE: HY000 (ER_CANT_STAT_FILE)

Message: Partition table %s opened after converting to lower case. The table may have been moved from a case in-sensitive file system. Please recreate table in the current file system

`ER_INNODB_PARTITION_TABLE_LOWERCASED` was added in 8.0.2.

- Error: 10887 SQLSTATE: HY000 (`ER_ERRMSG_REPLACEMENT_DODGY`)

Message: Cannot replace error message (%s,%s,%s) "%s" with "%s"; wrong number or type of %% substitutions.

`ER_ERRMSG_REPLACEMENT_DODGY` was added in 8.0.2.

- Error: 10888 SQLSTATE: HY000 (`ER_ERRMSG_REPLACEMENTS_FAILED`)

Message: Table for error message replacements could not be found or read, or one or more replacements could not be applied.

`ER_ERRMSG_REPLACEMENTS_FAILED` was added in 8.0.2.

- Error: 10889 SQLSTATE: HY000 (`ER_NPIPE_CANT_CREATE`)

Message: %s: %s

`ER_NPIPE_CANT_CREATE` was added in 8.0.2.

- Error: 10890 SQLSTATE: HY000 (`ER_PARTITION_MOVE_CREATED_DUPLICATE_ROW_PLEASE_FIX`)

Message: Table '%s': Delete from part %d failed with error %d. But it was already inserted into part %d, when moving the misplaced row! Please manually fix the duplicate row: %s

[ER_PARTITION_MOVE_CREATED_DUPLICATE_ROW_PLEASE_FIX](#) was added in 8.0.2.

- Error: 10891 SQLSTATE: HY000 ([ER_AUDIT_CANT_ABORT_COMMAND](#))

Message: Command '%s' cannot be aborted. The trigger error was (%d) [%s]: %s

[ER_AUDIT_CANT_ABORT_COMMAND](#) was added in 8.0.2.

- Error: 10892 SQLSTATE: HY000 ([ER_AUDIT_CANT_ABORT_EVENT](#))

Message: Event '%s' cannot be aborted. The trigger error was (%d) [%s]: %s

[ER_AUDIT_CANT_ABORT_EVENT](#) was added in 8.0.2.

- Error: 10893 SQLSTATE: HY000 ([ER_AUDIT_WARNING](#))

Message: %s. The trigger error was (%d) [%s]: %s

[ER_AUDIT_WARNING](#) was added in 8.0.2.

- Error: 10894 SQLSTATE: HY000 ([ER_NDB_NUMBER_OF_CHANNELS](#))

Message: Slave SQL: Configuration with number of replication masters = %u' is not supported when applying to Ndb

[ER_NDB_NUMBER_OF_CHANNELS](#) was added in 8.0.2, removed after 8.0.13.

- Error: 10895 SQLSTATE: HY000 ([ER_NDB_SLAVE_PARALLEL_WORKERS](#))

Message: Slave SQL: Configuration 'slave_parallel_workers = %lu' is not supported when applying to Ndb

[ER_NDB_SLAVE_PARALLEL_WORKERS](#) was added in 8.0.2, removed after 8.0.13.

- Error: 10896 SQLSTATE: HY000 ([ER_NDB_DISTRIBUTING_ERR](#))

Message: NDB %s: distributing %s err: %u

[ER_NDB_DISTRIBUTING_ERR](#) was added in 8.0.2, removed after 8.0.13.

- Error: 10897 SQLSTATE: HY000 ([ER_RPL_SLAVE_INSECURE_CHANGE_MASTER](#))

Message: Storing MySQL user name or password information in the master info repository is not secure and is therefore not recommended. Please consider using the USER and PASSWORD connection options for START SLAVE; see the 'START SLAVE Syntax' in the MySQL Manual for more information.

[ER_RPL_SLAVE_INSECURE_CHANGE_MASTER](#) was added in 8.0.11.

- Error: 10898 SQLSTATE: HY000 ([ER_RPL_SLAVE_FLUSH_RELAY_LOGS_NOT_ALLOWED](#))

Message: FLUSH RELAY LOGS cannot be performed on channel '%s'.

[ER_RPL_SLAVE_FLUSH_RELAY_LOGS_NOT_ALLOWED](#) was added in 8.0.11.

- Error: 10899 SQLSTATE: HY000 ([ER_RPL_SLAVE_INCORRECT_CHANNEL](#))

Message: Slave channel '%s' does not exist.

`ER_RPL_SLAVE_INCORRECT_CHANNEL` was added in 8.0.11.

- Error: 10900 SQLSTATE: HY000 (`ER_FAILED_TO_FIND_DL_ENTRY`)

Message: Can't find symbol '%s' in library.

`ER_FAILED_TO_FIND_DL_ENTRY` was added in 8.0.11.

- Error: 10901 SQLSTATE: HY000 (`ER_FAILED_TO_OPEN_SHARED_LIBRARY`)

Message: Can't open shared library '%s' (errno: %d %s).

`ER_FAILED_TO_OPEN_SHARED_LIBRARY` was added in 8.0.11.

- Error: 10902 SQLSTATE: HY000 (`ER_THREAD_PRIORITY_IGNORED`)

Message: Thread priority attribute setting in Resource Group SQL shall be ignored due to unsupported platform or insufficient privilege.

`ER_THREAD_PRIORITY_IGNORED` was added in 8.0.4.

- Error: 10903 SQLSTATE: HY000 (`ER_BINLOG_CACHE_SIZE_TOO_LARGE`)

Message: Option binlog_cache_size (%lu) is greater than max_binlog_cache_size (%lu); setting binlog_cache_size equal to max_binlog_cache_size.

`ER_BINLOG_CACHE_SIZE_TOO_LARGE` was added in 8.0.11.

- Error: 10904 SQLSTATE: HY000 (`ER_BINLOG_STMT_CACHE_SIZE_TOO_LARGE`)

Message: Option binlog_stmt_cache_size (%lu) is greater than max_binlog_stmt_cache_size (%lu); setting binlog_stmt_cache_size equal to max_binlog_stmt_cache_size.

`ER_BINLOG_STMT_CACHE_SIZE_TOO_LARGE` was added in 8.0.11.

- Error: 10905 SQLSTATE: HY000 (`ER_FAILED_TO_GENERATE_UNIQUE_LOGFILE`)

Message: Can't generate a unique log-filename %s.(1-999).

`ER_FAILED_TO_GENERATE_UNIQUE_LOGFILE` was added in 8.0.11.

- Error: 10906 SQLSTATE: HY000 (`ER_FAILED_TO_READ_FILE`)

Message: Error reading file '%s' (errno: %d - %s)

`ER_FAILED_TO_READ_FILE` was added in 8.0.11.

- Error: 10907 SQLSTATE: HY000 (`ER_FAILED_TO_WRITE_TO_FILE`)

Message: Error writing file '%s' (errno: %d - %s)

`ER_FAILED_TO_WRITE_TO_FILE` was added in 8.0.11.

- Error: 10908 SQLSTATE: HY000 (`ER_BINLOG_UNSAFE_MESSAGE_AND_STATEMENT`)

Message: %s Statement: %s

[ER_BINLOG_UNSAFE_MESSAGE_AND_STATEMENT](#) was added in 8.0.11.

- Error: 10909 SQLSTATE: HY000 ([ER_FORCE_CLOSE_THREAD](#))

Message: %s: Forcing close of thread %ld user: '%s'.

[ER_FORCE_CLOSE_THREAD](#) was added in 8.0.11.

- Error: 10910 SQLSTATE: HY000 ([ER_SERVER_SHUTDOWN_COMPLETE](#))

Message: %s: Shutdown complete (mysqld %s) %s.

[ER_SERVER_SHUTDOWN_COMPLETE](#) was added in 8.0.11.

- Error: 10911 SQLSTATE: HY000 ([ER_RPL_CANT_HAVE_SAME_BASENAME](#))

Message: Cannot have same base name '%s' for both binary and relay logs. Please check %s (default '%s' if --log-bin option is not used, default '%s' if --log-bin option is used without argument) and %s (default '%s') options to ensure they do not conflict.

[ER_RPL_CANT_HAVE_SAME_BASENAME](#) was added in 8.0.3.

- Error: 10912 SQLSTATE: HY000
([ER_RPL_GTID_MODE_REQUIRES_ENFORCE_GTID_CONSISTENCY_ON](#))

Message: GTID_MODE = ON requires ENFORCE_GTID_CONSISTENCY = ON.

[ER_RPL_GTID_MODE_REQUIRES_ENFORCE_GTID_CONSISTENCY_ON](#) was added in 8.0.11.

- Error: 10913 SQLSTATE: HY000 ([ER_WARN_NO_SERVERID_SPECIFIED](#))

Message: You have not provided a mandatory server-id. Servers in a replication topology must have unique server-ids. Please refer to the proper server start-up parameters documentation.

[ER_WARN_NO_SERVERID_SPECIFIED](#) was added in 8.0.3.

- Error: 10914 SQLSTATE: HY000 ([ER_ABORTING_USER_CONNECTION](#))

Message: Aborted connection %u to db: '%s' user: '%s' host: '%s' (%s).

[ER_ABORTING_USER_CONNECTION](#) was added in 8.0.11.

- Error: 10915 SQLSTATE: HY000 ([ER_SQL_MODE_MERGED_WITH_STRICT_MODE](#))

Message: 'NO_ZERO_DATE', 'NO_ZERO_IN_DATE' and 'ERROR_FOR_DIVISION_BY_ZERO' sql modes should be used with strict mode. They will be merged with strict mode in a future release.

[ER_SQL_MODE_MERGED_WITH_STRICT_MODE](#) was added in 8.0.11.

- Error: 10916 SQLSTATE: HY000 ([ER_GTID_PURGED_WAS_UPDATED](#))

Message: @@GLOBAL.GTID_PURGED was changed from '%s' to '%s'.

[ER_GTID_PURGED_WAS_UPDATED](#) was added in 8.0.11.

- Error: 10917 SQLSTATE: HY000 ([ER_GTID_EXECUTED_WAS_UPDATED](#))

Message: @@GLOBAL.GTID_EXECUTED was changed from '%s' to '%s'.

[ER_GTID_EXECUTED_WAS_UPDATED](#) was added in 8.0.11.

- Error: 10918 SQLSTATE: HY000 ([ER_DEPRECATED_MSG_WITH_REPLACEMENT](#))

Message: '%s' is deprecated and will be removed in a future release. Please use %s instead.

[ER_DEPRECATED_MSG_WITH_REPLACEMENT](#) was added in 8.0.11.

- Error: 10919 SQLSTATE: HY000 ([ER_TRG_CREATION_CTX_NOT_SET](#))

Message: Triggers for table '%s`.`%s`' have no creation context

[ER_TRG_CREATION_CTX_NOT_SET](#) was added in 8.0.11.

- Error: 10920 SQLSTATE: HY000 ([ER_FILE_HAS_OLD_FORMAT](#))

Message: '%s' has an old format, you should re-create the '%s' object(s)

[ER_FILE_HAS_OLD_FORMAT](#) was added in 8.0.11.

- Error: 10921 SQLSTATE: HY000 ([ER_VIEW_CREATION_CTX_NOT_SET](#))

Message: View '%s`.`%s`' has no creation context

[ER_VIEW_CREATION_CTX_NOT_SET](#) was added in 8.0.11.

- Error: 10922 SQLSTATE: HY000 ([ER_TABLE_NAME_CAUSES_TOO_LONG_PATH](#))

Message: Long database name and identifier for object resulted in path length exceeding %d characters.
Path: '%s'.

[ER_TABLE_NAME_CAUSES_TOO_LONG_PATH](#) was added in 8.0.11.

- Error: 10923 SQLSTATE: HY000 ([ER_TABLE_UPGRADE_REQUIRED](#))

Message: Table upgrade required. Please do "REPAIR TABLE '%s'" or dump/reload to fix it!

[ER_TABLE_UPGRADE_REQUIRED](#) was added in 8.0.11.

- Error: 10924 SQLSTATE: HY000 ([ER_GET_ERRNO_FROM_STORAGE_ENGINE](#))

Message: Got error %d - '%s' from storage engine.

[ER_GET_ERRNO_FROM_STORAGE_ENGINE](#) was added in 8.0.11.

- Error: 10925 SQLSTATE: HY000 ([ER_ACCESS_DENIED_ERROR_WITHOUT_PASSWORD](#))

Message: Access denied for user '%s'@'%s'

[ER_ACCESS_DENIED_ERROR_WITHOUT_PASSWORD](#) was added in 8.0.11.

- Error: 10926 SQLSTATE: HY000 ([ER_ACCESS_DENIED_ERROR_WITH_PASSWORD](#))

Message: Access denied for user '%s'@'%s' (using password: %s)

[ER_ACCESS_DENIED_ERROR_WITH_PASSWORD](#) was added in 8.0.11.

- Error: 10927 SQLSTATE: HY000 ([ER_ACCESS_DENIED_FOR_USER_ACCOUNT_LOCKED](#))

Message: Access denied for user '%s'@'%s'. Account is locked.

[ER_ACCESS_DENIED_FOR_USER_ACCOUNT_LOCKED](#) was added in 8.0.11.

- Error: 10928 SQLSTATE: HY000 ([ER_MUST_CHANGE_EXPIRED_PASSWORD](#))

Message: Your password has expired. To log in you must change it using a client that supports expired passwords.

[ER_MUST_CHANGE_EXPIRED_PASSWORD](#) was added in 8.0.11.

- Error: 10929 SQLSTATE: HY000 ([ER_SYSTEM_TABLES_NOT_SUPPORTED_BY_STORAGE_ENGINE](#))

Message: Storage engine '%s' does not support system tables. [%s.%s].

[ER_SYSTEM_TABLES_NOT_SUPPORTED_BY_STORAGE_ENGINE](#) was added in 8.0.11.

- Error: 10930 SQLSTATE: HY000 ([ER_FILESORT_TERMINATED](#))

Message: Sort aborted

[ER_FILESORT_TERMINATED](#) was added in 8.0.11.

- Error: 10931 SQLSTATE: HY000 ([ER_SERVER_STARTUP_MSG](#))

Message: %s: ready for connections. Version: '%s' socket: '%s' port: %d %s.

[ER_SERVER_STARTUP_MSG](#) was added in 8.0.11.

- Error: 10932 SQLSTATE: HY000 ([ER_FAILED_TO_FIND_LOCALE_NAME](#))

Message: Unknown locale: '%s'.

[ER_FAILED_TO_FIND_LOCALE_NAME](#) was added in 8.0.11.

- Error: 10933 SQLSTATE: HY000 ([ER_FAILED_TO_FIND_COLLATION_NAME](#))

Message: Unknown collation: '%s'.

[ER_FAILED_TO_FIND_COLLATION_NAME](#) was added in 8.0.11.

- Error: 10934 SQLSTATE: HY000 ([ER_SERVER_OUT_OF_RESOURCES](#))

Message: Out of memory; check if mysqld or some other process uses all available memory; if not, you may have to use 'ulimit' to allow mysqld to use more memory or you can add more swap space

[ER_SERVER_OUT_OF_RESOURCES](#) was added in 8.0.11.

- Error: 10935 SQLSTATE: HY000 ([ER_SERVER_OUTOFMEMORY](#))

Message: Out of memory; restart server and try again (needed %d bytes)

[ER_SERVER_OUTOFMEMORY](#) was added in 8.0.11.

- Error: 10936 SQLSTATE: HY000 ([ER_INVALID_COLLATION_FOR_CHARSET](#))

Message: COLLATION '%s' is not valid for CHARACTER SET '%s'

[ER_INVALID_COLLATION_FOR_CHARSET](#) was added in 8.0.11.

- Error: 10937 SQLSTATE: HY000 (ER_CANT_START_ERROR_LOG_SERVICE)
Message: Failed to set %s at or around "%s" -- service is valid, but can not be initialized; please check its configuration and make sure it can read its input(s) and write to its output(s).
[ER_CANT_START_ERROR_LOG_SERVICE](#) was added in 8.0.11.
- Error: 10938 SQLSTATE: HY000 (ER_CREATING_NEW_UUID_FIRST_START)
Message: Generating a new UUID: %s.
[ER_CREATING_NEW_UUID_FIRST_START](#) was added in 8.0.11.
- Error: 10939 SQLSTATE: HY000 (ER_FAILED_TO_GET_ABSOLUTE_PATH)
Message: Failed to get absolute path of program executable %s
[ER_FAILED_TO_GET_ABSOLUTE_PATH](#) was added in 8.0.11.
- Error: 10940 SQLSTATE: HY000 (ER_PERFSCHEMA_COMPONENTS_INFRASTRUCTURE_BOOTSTRAP)
Message: Failed to bootstrap performance schema components infrastructure.
[ER_PERFSCHEMA_COMPONENTS_INFRASTRUCTURE_BOOTSTRAP](#) was added in 8.0.11.
- Error: 10941 SQLSTATE: HY000 (ER_PERFSCHEMA_COMPONENTS_INFRASTRUCTURE_SHUTDOWN)
Message: Failed to deinit performance schema components infrastructure.
[ER_PERFSCHEMA_COMPONENTS_INFRASTRUCTURE_SHUTDOWN](#) was added in 8.0.11.
- Error: 10942 SQLSTATE: HY000 (ER_DUP_FD_OPEN_FAILED)
Message: Could not open duplicate fd for %s: %s.
[ER_DUP_FD_OPEN_FAILED](#) was added in 8.0.11.
- Error: 10943 SQLSTATE: HY000 (ER_SYSTEM_VIEW_INIT_FAILED)
Message: System views initialization failed.
[ER_SYSTEM_VIEW_INIT_FAILED](#) was added in 8.0.11.
- Error: 10944 SQLSTATE: HY000 (ER_RESOURCE_GROUP_POST_INIT_FAILED)
Message: Resource group post initialization failed.
[ER_RESOURCE_GROUP_POST_INIT_FAILED](#) was added in 8.0.11.
- Error: 10945 SQLSTATE: HY000 (ER_RESOURCE_GROUP_SUBSYSTEM_INIT_FAILED)
Message: Resource Group subsystem initialization failed.
[ER_RESOURCE_GROUP_SUBSYSTEM_INIT_FAILED](#) was added in 8.0.11.
- Error: 10946 SQLSTATE: HY000 (ER_FAILED_START_MYSQLD_DAEMON)
Message: Failed to start mysqld daemon. Check mysqld error log.
[ER_FAILED_START_MYSQLD_DAEMON](#) was added in 8.0.11.

- Error: 10947 SQLSTATE: HY000 (ER_CANNOT_CHANGE_TO_ROOT_DIR)
Message: Cannot change to root directory: %s.

ER_CANNOT_CHANGE_TO_ROOT_DIR was added in 8.0.11.
- Error: 10948 SQLSTATE: HY000 (ER_PERSISTENT_PRIVILEGES_BOOTSTRAP)
Message: Failed to bootstrap persistent privileges.

ER_PERSISTENT_PRIVILEGES_BOOTSTRAP was added in 8.0.11.
- Error: 10949 SQLSTATE: HY000 (ER_BASEDIR_SET_TO)
Message: Basedir set to %s.

ER_BASEDIR_SET_TO was added in 8.0.11.
- Error: 10950 SQLSTATE: HY000 (ER_RPL_FILTER_ADD_WILD_DO_TABLE_FAILED)
Message: Could not add wild do table rule '%s'!

ER_RPL_FILTER_ADD_WILD_DO_TABLE_FAILED was added in 8.0.11.
- Error: 10951 SQLSTATE: HY000 (ER_RPL_FILTER_ADD_WILD_IGNORE_TABLE_FAILED)
Message: Could not add wild ignore table rule '%s'!

ER_RPL_FILTER_ADD_WILD_IGNORE_TABLE_FAILED was added in 8.0.11.
- Error: 10952 SQLSTATE: HY000 (ER_PRIVILEGE_SYSTEM_INIT_FAILED)
Message: The privilege system failed to initialize correctly. If you have upgraded your server, make sure you're executing mysql_upgrade to correct the issue.

ER_PRIVILEGE_SYSTEM_INIT_FAILED was added in 8.0.11.
- Error: 10953 SQLSTATE: HY000 (ER_CANNOT_SET_LOG_ERROR_SERVICES)
Message: Cannot set services "%s" requested in --log-error-services, using defaults.

ER_CANNOT_SET_LOG_ERROR_SERVICES was added in 8.0.11.
- Error: 10954 SQLSTATE: HY000 (ER_PERFSCHEMA_TABLES_INIT_FAILED)
Message: Performance schema tables initialization failed.

ER_PERFSCHEMA_TABLES_INIT_FAILED was added in 8.0.11.
- Error: 10955 SQLSTATE: HY000 (ER_TX_EXTRACTION_ALGORITHM_FOR_BINLOG_TX_DEPEDENCY_TRACKING)
Message: The transaction_write_set_extraction must be set to %s when binlog_transaction_dependency_tracking is %s.

ER_TX_EXTRACTION_ALGORITHM_FOR_BINLOG_TX_DEPEDENCY_TRACKING was added in 8.0.11.
- Error: 10956 SQLSTATE: HY000 (ER_INVALID_REPLICATION_TIMESTAMPS)

Message: Invalid replication timestamps: original commit timestamp is more recent than the immediate commit timestamp. This may be an issue if delayed replication is active. Make sure that servers have their clocks set to the correct time. No further message will be emitted until after timestamps become valid again.

`ER_INVALID_REPLICATION_TIMESTAMPS` was added in 8.0.11.

- Error: 10957 SQLSTATE: HY000 (`ER_RPL_TIMESTAMPS_RETURNED_TO_NORMAL`)

Message: The replication timestamps have returned to normal values.

`ER_RPL_TIMESTAMPS_RETURNED_TO_NORMAL` was added in 8.0.11.

- Error: 10958 SQLSTATE: HY000 (`ER_BINLOG_FILE_OPEN_FAILED`)

Message: %s.

`ER_BINLOG_FILE_OPEN_FAILED` was added in 8.0.11.

- Error: 10959 SQLSTATE: HY000 (`ER_BINLOG_EVENT_WRITE_TO_STMT_CACHE_FAILED`)

Message: Failed to write an incident event into stmt_cache.

`ER_BINLOG_EVENT_WRITE_TO_STMT_CACHE_FAILED` was added in 8.0.11.

- Error: 10960 SQLSTATE: HY000 (`ER_SLAVE_RELAY_LOG_TRUNCATE_INFO`)

Message: Relaylog file %s size was %llu, but was truncated at %llu.

`ER_SLAVE_RELAY_LOG_TRUNCATE_INFO` was added in 8.0.11.

- Error: 10961 SQLSTATE: HY000 (`ER_SLAVE_RELAY_LOG_PURGE_FAILED`)

Message: Unable to purge relay log files. %s:%s.

`ER_SLAVE_RELAY_LOG_PURGE_FAILED` was added in 8.0.11.

- Error: 10962 SQLSTATE: HY000 (`ER_RPL_SLAVE_FILTER_CREATE_FAILED`)

Message: Slave: failed in creating filter for channel '%s'.

`ER_RPL_SLAVE_FILTER_CREATE_FAILED` was added in 8.0.11.

- Error: 10963 SQLSTATE: HY000 (`ER_RPL_SLAVE_GLOBAL_FILTERS_COPY_FAILED`)

Message: Slave: failed in copying the global filters to its own per-channel filters on configuration for channel '%s'.

`ER_RPL_SLAVE_GLOBAL_FILTERS_COPY_FAILED` was added in 8.0.11.

- Error: 10964 SQLSTATE: HY000 (`ER_RPL_SLAVE_RESET_FILTER_OPTIONS`)

Message: There are per-channel replication filter(s) configured for channel '%s' which does not exist. The filter(s) have been discarded.

`ER_RPL_SLAVE_RESET_FILTER_OPTIONS` was added in 8.0.11.

- Error: 10965 SQLSTATE: HY000 (`ER_MISSING_GRANT_SYSTEM_TABLE`)

Message: Missing system table mysql.global_grants; please run mysql_upgrade to create it.

[ER_MISSING_GRANT_SYSTEM_TABLE](#) was added in 8.0.11.

- Error: 10966 SQLSTATE: HY000 ([ER_MISSING_ACL_SYSTEM_TABLE](#))

Message: ACL table mysql.%.s missing. Some operations may fail.

[ER_MISSING_ACL_SYSTEM_TABLE](#) was added in 8.0.11.

- Error: 10967 SQLSTATE: HY000

- Error: 10985 SQLSTATE: HY000 (`ER_RES_GRP_SET_THREAD_PRIORITY_FAILED`)

Message: Setting thread priority %d to thread id %llu failed. (error code %d - %s).

`ER_RES_GRP_SET_THREAD_PRIORITY_FAILED` was added in 8.0.11.

- Error: 10986 SQLSTATE: HY000 (`ER_RES_GRP_FAILED_TO_DETERMINE_NICE_CAPABILITY`)

Message: Unable to determine CAP_SYS_NICE capability.

`ER_RES_GRP_FAILED_TO_DETERMINE_NICE_CAPABILITY` was added in 8.0.11.

- Error: 10987 SQLSTATE: HY000 (`ER_RES_GRP_FAILED_TO_GET_THREAD_HANDLE`)

Message: %s failed: Failed to get handle for thread %llu.

`ER_RES_GRP_FAILED_TO_GET_THREAD_HANDLE` was added in 8.0.11.

- Error: 10988 SQLSTATE: HY000 (`ER_RES_GRP_GET_THREAD_PRIO_NOT_SUPPORTED`)

Message: Retrieval of thread priority unsupported on %s.

`ER_RES_GRP_GET_THREAD_PRIO_NOT_SUPPORTED` was added in 8.0.11.

- Error: 10989 SQLSTATE: HY000 (`ER_RES_GRP_FAILED_DETERMINE_CPU_COUNT`)

Message: Unable to determine the number of CPUs.

`ER_RES_GRP_FAILED_DETERMINE_CPU_COUNT` was added in 8.0.11.

- Error: 10990 SQLSTATE: HY000 (`ER_RES_GRP_FEATURE_NOT_AVAILABLE`)

Message: Resource group feature shall not be available. Incompatible thread handling option.

`ER_RES_GRP_FEATURE_NOT_AVAILABLE` was added in 8.0.11.

- Error: 10991 SQLSTATE: HY000 (`ER_RES_GRP_INVALID_THREAD_PRIORITY`)

Message: Invalid thread priority %d for a %s resource group. Allowed range is [%d, %d].

`ER_RES_GRP_INVALID_THREAD_PRIORITY` was added in 8.0.11.

- Error: 10992 SQLSTATE: HY000 (`ER_RES_GRP_SOLARIS_PROCESSOR_BIND_TO_CPUID_FAILED`)

Message: bind_to_cpu failed: processor_bind for cpuid %u failed (error code %d - %s).

`ER_RES_GRP_SOLARIS_PROCESSOR_BIND_TO_CPUID_FAILED` was added in 8.0.11.

- Error: 10993 SQLSTATE: HY000 (`ER_RES_GRP_SOLARIS_PROCESSOR_BIND_TO_THREAD_FAILED`)

Message: bind_to_cpu failed: processor_bind for thread %llu with cpu id %u (error code %d - %s).

`ER_RES_GRP_SOLARIS_PROCESSOR_BIND_TO_THREAD_FAILED` was added in 8.0.11.

- Error: 10994 SQLSTATE: HY000 (`ER_RES_GRP_SOLARIS_PROCESSOR_AFFINITY_FAILED`)

Message: %s failed: processor_affinity failed (error code %d - %s).

`ER_RES_GRP_SOLARIS_PROCESSOR_AFFINITY_FAILED` was added in 8.0.11.

- Error: 10995 SQLSTATE: HY000 (`ER_DD_UPGRADE_RENAME_IDX_STATS_FILE_FAILED`)

Message: Error in renaming mysql_index_stats.ibd.

`ER_DD_UPGRADE_RENAME_IDX_STATS_FILE_FAILED` was added in 8.0.11.

- Error: 10996 SQLSTATE: HY000 (`ER_DD_UPGRADE_DD_OPEN_FAILED`)

Message: Error in opening data directory %s.

`ER_DD_UPGRADE_DD_OPEN_FAILED` was added in 8.0.11.

- Error: 10997 SQLSTATE: HY000 (`ER_DD_UPGRADE_FAILED_TO_FETCH_TABLESPACES`)

Message: Error in fetching list of tablespaces.

`ER_DD_UPGRADE_FAILED_TO_FETCH_TABLESPACES` was added in 8.0.11.

- Error: 10998 SQLSTATE: HY000 (`ER_DD_UPGRADE_FAILED_TO_ACQUIRE_TABLESPACE`)

Message: Error in acquiring Tablespace for SDI insertion %s.

`ER_DD_UPGRADE_FAILED_TO_ACQUIRE_TABLESPACE` was added in 8.0.11.

- Error: 10999 SQLSTATE: HY000 (`ER_DD_UPGRADE_FAILED_TO_RESOLVE_TABLESPACE_ENGINE`)

Message: Error in resolving Engine name for tablespace %s with engine %s.

`ER_DD_UPGRADE_FAILED_TO_RESOLVE_TABLESPACE_ENGINE` was added in 8.0.11.

- Error: 11000 SQLSTATE: HY000 (`ER_FAILED_TO_CREATE_SDI_FOR_TABLESPACE`)

Message: Error in creating SDI for %s tablespace.

`ER_FAILED_TO_CREATE_SDI_FOR_TABLESPACE` was added in 8.0.11.

- Error: 11001 SQLSTATE: HY000 (`ER_FAILED_TO_STORE_SDI_FOR_TABLESPACE`)

Message: Error in storing SDI for %s tablespace.

`ER_FAILED_TO_STORE_SDI_FOR_TABLESPACE` was added in 8.0.11.

- Error: 11002 SQLSTATE: HY000 (`ER_DD_UPGRADE_FAILED_TO_FETCH_TABLES`)

Message: Error in fetching list of tables.

`ER_DD_UPGRADE_FAILED_TO_FETCH_TABLES` was added in 8.0.11.

- Error: 11003 SQLSTATE: HY000 (`ER_DD_UPGRADE_DD_POPULATED`)

Message: Finished populating Data Dictionary tables with data.

`ER_DD_UPGRADE_DD_POPULATED` was added in 8.0.11.

- Error: 11004 SQLSTATE: HY000 (`ER_DD_UPGRADE_INFO_FILE_OPEN_FAILED`)

Message: Could not open the upgrade info file '%s' in the MySQL servers datadir, errno: %d.

`ER_DD_UPGRADE_INFO_FILE_OPEN_FAILED` was added in 8.0.11.

- Error: 11005 SQLSTATE: HY000 (`ER_DD_UPGRADE_INFO_FILE_CLOSE_FAILED`)

Message: Could not close the upgrade info file '%s' in the MySQL servers datadir, errno: %d.

`ER_DD_UPGRADE_INFO_FILE_CLOSE_FAILED` was added in 8.0.11.

- Error: 11006 SQLSTATE: HY000 (`ER_DD_UPGRADE_TABLESPACE_MIGRATION_FAILED`)

Message: Got error %d from SE while migrating tablespaces.

`ER_DD_UPGRADE_TABLESPACE_MIGRATION_FAILED` was added in 8.0.11.

- Error: 11007 SQLSTATE: HY000 (`ER_DD_UPGRADE_FAILED_TO_CREATE_TABLE_STATS`)

Message: Error in creating TABLE statistics entry. Fix statistics data by using ANALYZE command.

`ER_DD_UPGRADE_FAILED_TO_CREATE_TABLE_STATS` was added in 8.0.11.

- Error: 11008 SQLSTATE: HY000 (`ER_DD_UPGRADE_TABLE_STATS_MIGRATE_COMPLETED`)

Message: Finished migrating TABLE statistics data.

`ER_DD_UPGRADE_TABLE_STATS_MIGRATE_COMPLETED` was added in 8.0.11.

- Error: 11009 SQLSTATE: HY000 (`ER_DD_UPGRADE_FAILED_TO_CREATE_INDEX_STATS`)

Message: Error in creating Index statistics entry. Fix statistics data by using ANALYZE command.

`ER_DD_UPGRADE_FAILED_TO_CREATE_INDEX_STATS` was added in 8.0.11.

- Error: 11010 SQLSTATE: HY000 (`ER_DD_UPGRADE_INDEX_STATS_MIGRATE_COMPLETED`)

Message: Finished migrating INDEX statistics data.

`ER_DD_UPGRADE_INDEX_STATS_MIGRATE_COMPLETED` was added in 8.0.11.

- Error: 11011 SQLSTATE: HY000 (`ER_DD_UPGRADE_FAILED_FIND_VALID_DATA_DIR`)

Message: Failed to find valid data directory.

`ER_DD_UPGRADE_FAILED_FIND_VALID_DATA_DIR` was added in 8.0.11.

- Error: 11012 SQLSTATE: HY000 (`ER_DD_UPGRADE_START`)

Message: Starting upgrade on data directory.

`ER_DD_UPGRADE_START` was added in 8.0.11.

- Error: 11013 SQLSTATE: HY000 (`ER_DD_UPGRADE_FAILED_INIT_DD_SE`)

Message: Failed to initialize DD Storage Engine.

`ER_DD_UPGRADE_FAILED_INIT_DD_SE` was added in 8.0.11.

- Error: 11014 SQLSTATE: HY000 (`ER_DD_UPGRADE_FOUND_PARTIALLY_UPGRADED_DD_ABORT`)

Message: Found partially upgraded DD. Aborting upgrade and deleting all DD tables. Start the upgrade process again.

`ER_DD_UPGRADE_FOUND_PARTIALLY_UPGRADED_DD_ABORT` was added in 8.0.11.

- Error: 11015 SQLSTATE: HY000 (`ER_DD_UPGRADE_FOUND_PARTIALLY_UPGRADED_DD_CONTINUE`)

Message: Found partially upgraded DD. Upgrade will continue and start the server.

`ER_DD_UPGRADE_FOUND_PARTIALLY_UPGRADED_DD_CONTINUE` was added in 8.0.11.

- Error: 11016 SQLSTATE: HY000 (`ER_DD_UPGRADE_SE_LOGS_FAILED`)

Message: Error in upgrading engine logs.

`ER_DD_UPGRADE_SE_LOGS_FAILED` was added in 8.0.11.

- Error: 11017 SQLSTATE: HY000 (`ER_DD_UPGRADE_SDI_INFO_UPDATE_FAILED`)

Message: Error in updating SDI information.

`ER_DD_UPGRADE_SDI_INFO_UPDATE_FAILED` was added in 8.0.11.

- Error: 11018 SQLSTATE: HY000 (`ER_SKIP_UPDATING_METADATA_IN_SE_RO_MODE`)

Message: Skip updating %s metadata in InnoDB read-only mode.

`ER_SKIP_UPDATING_METADATA_IN_SE_RO_MODE` was added in 8.0.11.

- Error: 11019 SQLSTATE: HY000 (`ER_CREATED_SYSTEM_WITH_VERSION`)

Message: Created system views with I_S version %d.

`ER_CREATED_SYSTEM_WITH_VERSION` was added in 8.0.11.

- Error: 11020 SQLSTATE: HY000 (`ER_UNKNOWN_ERROR_DETECTED_IN_SE`)

Message: Unknown error detected %d in handler.

`ER_UNKNOWN_ERROR_DETECTED_IN_SE` was added in 8.0.11.

- Error: 11021 SQLSTATE: HY000 (`ER_READ_LOG_EVENT_FAILED`)

Message: Error in Log_event::read_log_event(): '%s', data_len: %lu, event_type: %d.

`ER_READ_LOG_EVENT_FAILED` was added in 8.0.11.

- Error: 11022 SQLSTATE: HY000 (`ER_ROW_DATA_TOO_BIG_TO_WRITE_IN_BINLOG`)

Message: The row data is greater than 4GB, which is too big to write to the binary log.

`ER_ROW_DATA_TOO_BIG_TO_WRITE_IN_BINLOG` was added in 8.0.11.

- Error: 11023 SQLSTATE: HY000 (`ER_FAILED_TO_CONSTRUCT_DROP_EVENT_QUERY`)

Message: Unable to construct DROP EVENT SQL query string.

`ER_FAILED_TO_CONSTRUCT_DROP_EVENT_QUERY` was added in 8.0.11.

- Error: 11024 SQLSTATE: HY000 ([ER_FAILED_TO_BINLOG_DROP_EVENT](#))
Message: Unable to binlog drop event %s.%s.
[ER_FAILED_TO_BINLOG_DROP_EVENT](#) was added in 8.0.11.
- Error: 11025 SQLSTATE: HY000 ([ER_FAILED_TO_START_SLAVE_THREAD](#))
Message: Failed to start slave threads for channel '%s'.
[ER_FAILED_TO_START_SLAVE_THREAD](#) was added in 8.0.11.
- Error: 11026 SQLSTATE: HY000 ([ER_RPL_IO_THREAD_KILLED](#))
Message: %s%s.
[ER_RPL_IO_THREAD_KILLED](#) was added in 8.0.11.
- Error: 11027 SQLSTATE: HY000 ([ER_SLAVE_RECONNECT_FAILED](#))
Message: Failed registering on master, reconnecting to try again, log '%s' at position %s. %s.
[ER_SLAVE_RECONNECT_FAILED](#) was added in 8.0.11.
- Error: 11028 SQLSTATE: HY000 ([ER_SLAVE_KILLED_AFTER_RECONNECT](#))
Message: Slave I/O thread killed during or after reconnect.
[ER_SLAVE_KILLED_AFTER_RECONNECT](#) was added in 8.0.11.
- Error: 11029 SQLSTATE: HY000 ([ER_SLAVE_NOT_STARTED_ON_SOME_CHANNELS](#))
Message: Some of the channels are not created/initialized properly. Check for additional messages above. You will not be able to start replication on those channels until the issue is resolved and the server restarted.
[ER_SLAVE_NOT_STARTED_ON_SOME_CHANNELS](#) was added in 8.0.11.
- Error: 11030 SQLSTATE: HY000 ([ER_FAILED_TO_ADD_RPL_FILTER](#))
Message: Failed to add a replication filter into filter map for channel '%s'.
[ER_FAILED_TO_ADD_RPL_FILTER](#) was added in 8.0.11.
- Error: 11031 SQLSTATE: HY000 ([ER_PER_CHANNEL_RPL_FILTER_CONF_FOR_GRP_RPL](#))
Message: There are per-channel replication filter(s) configured for group replication channel '%s' which is disallowed. The filter(s) have been discarded.
[ER_PER_CHANNEL_RPL_FILTER_CONF_FOR_GRP_RPL](#) was added in 8.0.11.
- Error: 11032 SQLSTATE: HY000 ([ER_RPL_FILTERS_NOT_ATTACHED_TO_CHANNEL](#))
Message: There are per-channel replication filter(s) configured for channel '%s' which does not exist. The filter(s) have been discarded.
[ER_RPL_FILTERS_NOT_ATTACHED_TO_CHANNEL](#) was added in 8.0.11.
- Error: 11033 SQLSTATE: HY000 ([ER_FAILED_TO_BUILD_DO_AND_IGNORE_TABLE_HASHES](#))

Message: An error occurred while building do_table and ignore_table rules to hashes for per-channel filter.

`ER_FAILED_TO_BUILD_DO_AND_IGNORE_TABLE_HASHES` was added in 8.0.11.

- Error: 11034 SQLSTATE: HY000 (`ER_CLONE_PLUGIN_NOT_LOADED`)

Message: Clone plugin not loaded.

`ER_CLONE_PLUGIN_NOT_LOADED` was added in 8.0.11.

- Error: 11035 SQLSTATE: HY000 (`ER_CLONE_HANDLER_EXISTS`)

Message: Clone Handler exists.

`ER_CLONE_HANDLER_EXISTS` was added in 8.0.11.

- Error: 11036 SQLSTATE: HY000 (`ER_FAILED_TO_CREATE_CLONE_HANDLER`)

Message: Could not create Clone Handler.

`ER_FAILED_TO_CREATE_CLONE_HANDLER` was added in 8.0.11.

- Error: 11037 SQLSTATE: HY000 (`ER_CYCLE_TIMER_IS_NOT_AVAILABLE`)

Message: The CYCLE timer is not available. WAIT events in the performance_schema will not be timed.

`ER_CYCLE_TIMER_IS_NOT_AVAILABLE` was added in 8.0.11.

- Error: 11038 SQLSTATE: HY000 (`ER_NANOSECOND_TIMER_IS_NOT_AVAILABLE`)

Message: The NANOSECOND timer is not available. IDLE/STAGE/STATEMENT/TRANSACTION events in the performance_schema will not be timed.

`ER_NANOSECOND_TIMER_IS_NOT_AVAILABLE` was added in 8.0.11.

- Error: 11039 SQLSTATE: HY000 (`ER_MICROSECOND_TIMER_IS_NOT_AVAILABLE`)

Message: The MICROSECOND timer is not available. IDLE/STAGE/STATEMENT/TRANSACTION events in the performance_schema will not be timed.

`ER_MICROSECOND_TIMER_IS_NOT_AVAILABLE` was added in 8.0.11.

- Error: 11040 SQLSTATE: HY000 (`ER_PFS_MALLOC_ARRAY_OVERFLOW`)

Message: Failed to allocate memory for %zu chunks each of size %zu for buffer '%s' due to overflow.

`ER_PFS_MALLOC_ARRAY_OVERFLOW` was added in 8.0.11.

- Error: 11041 SQLSTATE: HY000 (`ER_PFS_MALLOC_ARRAY_OOM`)

Message: Failed to allocate %zu bytes for buffer '%s' due to out-of-memory.

`ER_PFS_MALLOC_ARRAY_OOM` was added in 8.0.11.

- Error: 11042 SQLSTATE: HY000 (`ER_INNO_DB_FAILED_TO_FIND_IDX_WITH_KEY_NO`)

Message: InnoDB could not find index %s key no %u for table %s through its index translation table.

`ER_INNODB_FAILED_TO_FIND_IDX_WITH_KEY_NO` was added in 8.0.11.

- Error: 11043 SQLSTATE: HY000 (`ER_INNODB_FAILED_TO_FIND_IDX`)

Message: Cannot find index %s in InnoDB index translation table.

`ER_INNODB_FAILED_TO_FIND_IDX` was added in 8.0.11.

- Error: 11044 SQLSTATE: HY000 (`ER_INNODB_FAILED_TO_FIND_IDX_FROM_DICT_CACHE`)

Message: InnoDB could not find key no %u with name %s from dict cache for table %s.

`ER_INNODB_FAILED_TO_FIND_IDX_FROM_DICT_CACHE` was added in 8.0.11.

- Error: 11045 SQLSTATE: HY000 (`ER_INNODB_ACTIVE_INDEX_CHANGE_FAILED`)

Message: InnoDB: change_active_index(%u) failed.

`ER_INNODB_ACTIVE_INDEX_CHANGE_FAILED` was added in 8.0.11.

- Error: 11046 SQLSTATE: HY000 (`ER_INNODB_DIFF_IN_REF_LEN`)

Message: Stored ref len is %lu, but table ref len is %lu.

`ER_INNODB_DIFF_IN_REF_LEN` was added in 8.0.11.

- Error: 11047 SQLSTATE: HY000 (`ER_WRONG_TYPE_FOR_COLUMN_PREFIX_IDX_FLD`)

Message: MySQL is trying to create a column prefix index field, on an inappropriate data type. Table name %s, column name %s.

`ER_WRONG_TYPE_FOR_COLUMN_PREFIX_IDX_FLD` was added in 8.0.11.

- Error: 11048 SQLSTATE: HY000 (`ER_INNODB_CANNOT_CREATE_TABLE`)

Message: Cannot create table %s.

`ER_INNODB_CANNOT_CREATE_TABLE` was added in 8.0.11.

- Error: 11049 SQLSTATE: HY000 (`ER_INNODB_INTERNAL_INDEX`)

Message: Found index %s in InnoDB index list but not its MySQL index number. It could be an InnoDB internal index.

`ER_INNODB_INTERNAL_INDEX` was added in 8.0.11.

- Error: 11050 SQLSTATE: HY000 (`ER_INNODB_IDX_CNT_MORE_THAN_DEFINED_IN_MYSQL`)

Message: InnoDB: Table %s contains %lu indexes inside InnoDB, which is different from the number of indexes %u defined in MySQL.

`ER_INNODB_IDX_CNT_MORE_THAN_DEFINED_IN_MYSQL` was added in 8.0.11.

- Error: 11051 SQLSTATE: HY000 (`ER_INNODB_IDX_CNT_FEWER_THAN_DEFINED_IN_MYSQL`)

Message: Table %s contains fewer indexes inside InnoDB than are defined in the MySQL. Have you mixed up with data dictionary from different installation?

`ER_INNODB_IDX_CNT_FEWER_THAN_DEFINED_IN_MYSQL` was added in 8.0.11.

- Error: 11052 SQLSTATE: HY000 (ER_INNODB_IDX_COLUMN_CNT_DIFF)

Message: Index %s of %s has %lu columns unique inside InnoDB, but MySQL is asking statistics for %lu columns. Have you mixed data dictionary from different installation?

ER_INNODB_IDX_COLUMN_CNT_DIFF was added in 8.0.11.

- Error: 11053 SQLSTATE: HY000 (ER_INNODB_USE_MONITOR_GROUP_NAME)

Message: Monitor counter '%s' cannot be turned on/off individually. Please use its module name to turn on/off the counters in the module as a group.

ER_INNODB_USE_MONITOR_GROUP_NAME was added in 8.0.11.

- Error: 11054 SQLSTATE: HY000 (ER_INNODB_MONITOR_DEFAULT_VALUE_NOT_DEFINED)

Message: Default value is not defined for this set option. Please specify correct counter or module name.

ER_INNODB_MONITOR_DEFAULT_VALUE_NOT_DEFINED was added in 8.0.11.

- Error: 11055 SQLSTATE: HY000 (ER_INNODB_MONITOR_IS_ENABLED)

Message: InnoDB: Monitor %s is already enabled.

ER_INNODB_MONITOR_IS_ENABLED was added in 8.0.11.

- Error: 11056 SQLSTATE: HY000 (ER_INNODB_INVALID_MONITOR_COUNTER_NAME)

Message: Invalid monitor counter : %s.

ER_INNODB_INVALID_MONITOR_COUNTER_NAME was added in 8.0.11.

- Error: 11057 SQLSTATE: HY000 (ER_WIN_LOAD_LIBRARY_FAILED)

Message: LoadLibrary("%s") failed: GetLastError returns %lu.

ER_WIN_LOAD_LIBRARY_FAILED was added in 8.0.11.

- Error: 11058 SQLSTATE: HY000 (ER_PARTITION_HANDLER_ADMIN_MSG)

Message: %s.

ER_PARTITION_HANDLER_ADMIN_MSG was added in 8.0.11.

- Error: 11059 SQLSTATE: HY000 (ER_RPL_RLI_INIT_INFO_MSG)

Message: %s.

ER_RPL_RLI_INIT_INFO_MSG was added in 8.0.11.

- Error: 11060 SQLSTATE: HY000 (ER_DD_UPGRADE_TABLE_INTACT_ERROR)

Message: %s.

ER_DD_UPGRADE_TABLE_INTACT_ERROR was added in 8.0.11.

- Error: 11061 SQLSTATE: HY000 (ER_SERVER_INIT_COMPILED_IN_COMMANDS)

Message: %s.

[ER_SERVER_INIT_COMPILED_IN_COMMANDS](#) was added in 8.0.11.

- Error: 11062 SQLSTATE: HY000 ([ER_MYISAM_CHECK_METHOD_ERROR](#))

Message: %s.

[ER_MYISAM_CHECK_METHOD_ERROR](#) was added in 8.0.11.

- Error: 11063 SQLSTATE: HY000 ([ER_MYISAM_CRASHED_ERROR](#))

Message: %s.

[ER_MYISAM_CRASHED_ERROR](#) was added in 8.0.11.

- Error: 11064 SQLSTATE: HY000 ([ER_WAITPID_FAILED](#))

Message: Unable to wait for process %ld.

[ER_WAITPID_FAILED](#) was added in 8.0.11.

- Error: 11065 SQLSTATE: HY000 ([ER_FAILED_TO_FIND_MYSQLD_STATUS](#))

Message: Unable to determine if daemon is running: %s (rc=%d).

[ER_FAILED_TO_FIND_MYSQLD_STATUS](#) was added in 8.0.11.

- Error: 11066 SQLSTATE: HY000 ([ER_INNODB_ERROR_LOGGER_MSG](#))

Message: %s

[ER_INNODB_ERROR_LOGGER_MSG](#) was added in 8.0.11.

- Error: 11067 SQLSTATE: HY000 ([ER_INNODB_ERROR_LOGGER_FATAL_MSG](#))

Message: [FATAL] InnoDB: %s

[ER_INNODB_ERROR_LOGGER_FATAL_MSG](#) was added in 8.0.11.

- Error: 11068 SQLSTATE: HY000 ([ER_DEPRECATED_SYNTAX_WITH_REPLACEMENT](#))

Message: The syntax '%s' is deprecated and will be removed in a future release. Please use %s instead.

[ER_DEPRECATED_SYNTAX_WITH_REPLACEMENT](#) was added in 8.0.11.

- Error: 11069 SQLSTATE: HY000 ([ER_DEPRECATED_SYNTAX_NO_REPLACEMENT](#))

Message: The syntax '%s' is deprecated and will be removed in a future release.

[ER_DEPRECATED_SYNTAX_NO_REPLACEMENT](#) was added in 8.0.11.

- Error: 11070 SQLSTATE: HY000 ([ER_DEPRECATED_MSG_NO_REPLACEMENT](#))

Message: '%s' is deprecated and will be removed in a future release.

[ER_DEPRECATED_MSG_NO_REPLACEMENT](#) was added in 8.0.11.

- Error: 11071 SQLSTATE: HY000 ([ER_LOG_PRINTF_MSG](#))

Message: %s

`ER_LOG_PRINTF_MSG` was added in 8.0.11.

- Error: 11072 SQLSTATE: HY000 (`ER_BINLOG_LOGGING_NOT_POSSIBLE`)

Message: Binary logging not possible. Message: %s.

`ER_BINLOG_LOGGING_NOT_POSSIBLE` was added in 8.0.11.

- Error: 11073 SQLSTATE: HY000 (`ER_FAILED_TO_SET_PERSISTED_OPTIONS`)

Message: Failed to set persisted options.

`ER_FAILED_TO_SET_PERSISTED_OPTIONS` was added in 8.0.11.

- Error: 11074 SQLSTATE: HY000
(`ER_COMPONENTS_FAILED_TO_ACQUIRE_SERVICE_IMPLEMENTATION`)

Message: Cannot acquire specified service implementation: '%s'.

`ER_COMPONENTS_FAILED_TO_ACQUIRE_SERVICE_IMPLEMENTATION` was added in 8.0.11.

- Error: 11075 SQLSTATE: HY000 (`ER_RES_GRP_INVALID_VCPU_RANGE`)

Message: Invalid VCPU range %u-%u.

`ER_RES_GRP_INVALID_VCPU_RANGE` was added in 8.0.11.

- Error: 11076 SQLSTATE: HY000 (`ER_RES_GRP_INVALID_VCPU_ID`)

Message: Invalid cpu id %u.

`ER_RES_GRP_INVALID_VCPU_ID` was added in 8.0.11.

- Error: 11077 SQLSTATE: HY000 (`ER_ERROR_DURING_FLUSH_LOG_COMMIT_PHASE`)

Message: Got error %d during FLUSH_LOGS.

`ER_ERROR_DURING_FLUSH_LOG_COMMIT_PHASE` was added in 8.0.11.

- Error: 11078 SQLSTATE: HY000 (`ER_DROP_DATABASE_FAILED_RMDIR_MANUALLY`)

Message: Problem while dropping database. Can't remove database directory (%s). Please remove it manually.

`ER_DROP_DATABASE_FAILED_RMDIR_MANUALLY` was added in 8.0.11.

- Error: 11079 SQLSTATE: HY000 (`ER_EXPIRE_LOGS_DAYS_IGNORED`)

Message: The option `expire_logs_days` cannot be used together with option `binlog_expire_logs_seconds`. Therefore, value of `expire_logs_days` is ignored.

`ER_EXPIRE_LOGS_DAYS_IGNORED` was added in 8.0.11.

- Error: 11080 SQLSTATE: HY000 (`ER_BINLOG_MALFORMED_OR_OLD_RELAY_LOG`)

Message: malformed or very old relay log which does not have FormatDescriptor.

`ER_BINLOG_MALFORMED_OR_OLD_RELAY_LOG` was added in 8.0.11.

- Error: 11081 SQLSTATE: HY000 ([ER_DD_UPGRADE_VIEW_COLUMN_NAME_TOO_LONG](#))
Message: Upgrade of view '%s.%s' failed. Re-create the view with the explicit column name lesser than 64 characters.
[ER_DD_UPGRADE_VIEW_COLUMN_NAME_TOO_LONG](#) was added in 8.0.11.
- Error: 11082 SQLSTATE: HY000 ([ER_TABLE_NEEDS_DUMP_UPGRADE](#))
Message: Table upgrade required for '%s'. '%s'. Please dump/reload table to fix it!
[ER_TABLE_NEEDS_DUMP_UPGRADE](#) was added in 8.0.11.
- Error: 11083 SQLSTATE: HY000

Message: Error in updating version number in %s tablespace.
[ER_DD_UPGRADE_FAILED_TO_UPDATE_VER_NO_IN_TABLESPACE](#) was added in 8.0.11.
- Error: 11084 SQLSTATE: HY000 ([ER_KEYRING_MIGRATION_FAILED](#))
Message: Keyring migration failed.
[ER_KEYRING_MIGRATION_FAILED](#) was added in 8.0.11.
- Error: 11085 SQLSTATE: HY000 ([ER_KEYRING_MIGRATION_SUCCESSFUL](#))
Message: Keyring migration successful.
[ER_KEYRING_MIGRATION_SUCCESSFUL](#) was added in 8.0.11.
- Error: 11086 SQLSTATE: HY000 ([ER_RESTART_RECEIVED_INFO](#))
Message: Received RESTART from user %s. Restarting mysqld (Version: %s).
[ER_RESTART_RECEIVED_INFO](#) was added in 8.0.11.
- Error: 11087 SQLSTATE: HY000 ([ER_LCTN_CHANGED](#))
Message: Different lower_case_table_names settings for server ('%u') and data dictionary ('%u').
[ER_LCTN_CHANGED](#) was added in 8.0.11.
- Error: 11088 SQLSTATE: HY000 ([ER_DD_INITIALIZE](#))
Message: Data dictionary initializing version '%u'.
[ER_DD_INITIALIZE](#) was added in 8.0.11.
- Error: 11089 SQLSTATE: HY000 ([ER_DD_RESTART](#))
Message: Data dictionary restarting version '%u'.
[ER_DD_RESTART](#) was added in 8.0.11.
- Error: 11090 SQLSTATE: HY000 ([ER_DD_UPGRADE](#))
Message: Data dictionary upgrading from version '%u' to '%u'.

`ER_DD_UPGRADE` was added in 8.0.11.

- Error: 11091 SQLSTATE: HY000 (`ER_DD_UPGRADE_OFF`)

Message: Data dictionary upgrade prohibited by the command line option '--no_dd_upgrade'.

`ER_DD_UPGRADE_OFF` was added in 8.0.11.

- Error: 11092 SQLSTATE: HY000 (`ER_DD_UPGRADE_VERSION_NOT_SUPPORTED`)

Message: Upgrading the data dictionary from dictionary version '%u' is not supported.

`ER_DD_UPGRADE_VERSION_NOT_SUPPORTED` was added in 8.0.11.

- Error: 11093 SQLSTATE: HY000 (`ER_DD_UPGRADE_SCHEMA_UNAVAILABLE`)

Message: Upgrading the data dictionary failed, temporary schema name '%s' not available.

`ER_DD_UPGRADE_SCHEMA_UNAVAILABLE` was added in 8.0.11.

- Error: 11094 SQLSTATE: HY000 (`ER_DD_MINOR_DOWNGRADE`)

Message: Data dictionary minor downgrade from version '%u' to '%u'.

`ER_DD_MINOR_DOWNGRADE` was added in 8.0.11.

- Error: 11095 SQLSTATE: HY000 (`ER_DD_MINOR_DOWNGRADE_VERSION_NOT_SUPPORTED`)

Message: Minor downgrade of the Data dictionary from dictionary version '%u' is not supported.

`ER_DD_MINOR_DOWNGRADE_VERSION_NOT_SUPPORTED` was added in 8.0.11.

- Error: 11096 SQLSTATE: HY000 (`ER_DD_NO_VERSION_FOUND`)

Message: No data dictionary version number found.

`ER_DD_NO_VERSION_FOUND` was added in 8.0.11.

- Error: 11097 SQLSTATE: HY000 (`ER_THREAD_POOL_NOT_SUPPORTED_ON_PLATFORM`)

Message: Thread pool not supported, requires a minimum of %s.

`ER_THREAD_POOL_NOT_SUPPORTED_ON_PLATFORM` was added in 8.0.11.

- Error: 11098 SQLSTATE: HY000 (`ER_THREAD_POOL_SIZE_TOO_LOW`)

Message: thread_pool_size=0 means thread pool disabled, Allowed range of thread_pool_size is %d-%d.

`ER_THREAD_POOL_SIZE_TOO_LOW` was added in 8.0.11.

- Error: 11099 SQLSTATE: HY000 (`ER_THREAD_POOL_SIZE_TOO_HIGH`)

Message: thread_pool_size=%lu is too high, %d is maximum, thread pool is disabled. Allowed range of thread_pool_size is %d-%d.

`ER_THREAD_POOL_SIZE_TOO_HIGH` was added in 8.0.11.

- Error: 11100 SQLSTATE: HY000 (`ER_THREAD_POOL_ALGORITHM_INVALID`)

Message: thread_pool_algorithm can be set to 0 and 1, 0 indicates the default low concurrency algorithm, 1 means a high concurrency algorithm.

`ER_THREAD_POOL_ALGORITHM_INVALID` was added in 8.0.11.

- Error: 11101 SQLSTATE: HY000 (`ER_THREAD_POOL_INVALID_STALL_LIMIT`)

Message: thread_pool_stall_limit can be %d at minimum and %d at maximum, smaller values would render the thread pool fairly useless and higher values could make it possible to have undetected deadlock issues in the MySQL Server.

`ER_THREAD_POOL_INVALID_STALL_LIMIT` was added in 8.0.11.

- Error: 11102 SQLSTATE: HY000 (`ER_THREAD_POOL_INVALID_PRIO_KICKUP_TIMER`)

Message: Invalid value of thread_pool_prio_kickup_timer specified. Value of thread_pool_prio_kickup_timer should be in range 0-4294967294.

`ER_THREAD_POOL_INVALID_PRIO_KICKUP_TIMER` was added in 8.0.11.

- Error: 11103 SQLSTATE: HY000 (`ER_THREAD_POOL_MAX_UNUSED_THREADS_INVALID`)

Message: thread_pool_max_unused_threads cannot be set higher than %d.

`ER_THREAD_POOL_MAX_UNUSED_THREADS_INVALID` was added in 8.0.11.

- Error: 11104 SQLSTATE: HY000 (`ER_THREAD_POOL_CON_HANDLER_INIT_FAILED`)

Message: Failed to instantiate the connection handler object.

`ER_THREAD_POOL_CON_HANDLER_INIT_FAILED` was added in 8.0.11.

- Error: 11105 SQLSTATE: HY000 (`ER_THREAD_POOL_INIT_FAILED`)

Message: Failed to initialize thread pool plugin.

`ER_THREAD_POOL_INIT_FAILED` was added in 8.0.11.

- Error: 11106 SQLSTATE: HY000 (`ER_THREAD_POOL_PLUGIN_STARTED`)

Message: Thread pool plugin started successfully with parameters: thread_pool_size = %lu, thread_pool_algorithm = %s, thread_pool_stall_limit = %u, thread_pool_prio_kickup_timer = %u, thread_pool_max_unused_threads = %u, thread_pool_high_priority_connection = %d.

`ER_THREAD_POOL_PLUGIN_STARTED` was added in 8.0.11.

- Error: 11107 SQLSTATE: HY000 (`ER_THREAD_POOL_CANNOT_SET_THREAD_SPECIFIC_DATA`)

Message: Can't setup connection teardown thread-specific data.

`ER_THREAD_POOL_CANNOT_SET_THREAD_SPECIFIC_DATA` was added in 8.0.11.

- Error: 11108 SQLSTATE: HY000
(`ER_THREAD_POOL_FAILED_TO_CREATE_CONNECT_HANDLER_THD`)

Message: Creation of connect handler thread failed.

`ER_THREAD_POOL_FAILED_TO_CREATE_CONNECT_HANDLER_THD` was added in 8.0.11.

- Error: 11109 SQLSTATE: HY000 (ER_THREAD_POOL_FAILED_TO_CREATE_THD_AND_AUTH_CONN)
Message: Failed to create thd and authenticate connection.
[ER_THREAD_POOL_FAILED_TO_CREATE_THD_AND_AUTH_CONN](#) was added in 8.0.11.
- Error: 11110 SQLSTATE: HY000 (ER_THREAD_POOL_FAILED_PROCESS_CONNECT_EVENT)
Message: Failed to process connection event.
[ER_THREAD_POOL_FAILED_PROCESS_CONNECT_EVENT](#) was added in 8.0.11.
- Error: 11111 SQLSTATE: HY000 (ER_THREAD_POOL_FAILED_TO_CREATE_POOL)
Message: Can't create pool thread (error %d, errno: %d).
[ER_THREAD_POOL_FAILED_TO_CREATE_POOL](#) was added in 8.0.11.
- Error: 11112 SQLSTATE: HY000 (ER_THREAD_POOL_RATE_LIMITED_ERROR_MSGS)
Message: %.*s.
[ER_THREAD_POOL_RATE_LIMITED_ERROR_MSGS](#) was added in 8.0.11.
- Error: 11113 SQLSTATE: HY000 (ER_TRHEAD_POOL_LOW_LEVEL_INIT_FAILED)
Message: tp_group_low_level_init() failed.
[ER_TRHEAD_POOL_LOW_LEVEL_INIT_FAILED](#) was added in 8.0.11.
- Error: 11114 SQLSTATE: HY000 (ER_THREAD_POOL_LOW_LEVEL_REARM_FAILED)
Message: Rearm failed even after 30 seconds, can't continue without notify socket.
[ER_THREAD_POOL_LOW_LEVEL_REARM_FAILED](#) was added in 8.0.11.
- Error: 11115 SQLSTATE: HY000 (ER_THREAD_POOL_BUFFER_TOO_SMALL)
Message: %s: %s buffer is too small
[ER_THREAD_POOL_BUFFER_TOO_SMALL](#) was added in 8.0.11.
- Error: 11116 SQLSTATE: HY000 (ER_MECAB_NOT_SUPPORTED)
Message: Mecab v%s is not supported, the lowest version supported is v%s.
[ER_MECAB_NOT_SUPPORTED](#) was added in 8.0.11.
- Error: 11117 SQLSTATE: HY000 (ER_MECAB_NOT_VERIFIED)
Message: Mecab v%s is not verified, the highest version supported is v%s.
[ER_MECAB_NOT_VERIFIED](#) was added in 8.0.11.
- Error: 11118 SQLSTATE: HY000 (ER_MECAB_CREATING_MODEL)
Message: Mecab: Trying createModel(%s).
[ER_MECAB_CREATING_MODEL](#) was added in 8.0.11.

- Error: 11119 SQLSTATE: HY000 ([ER_MECAB_FAILED_TO_CREATE_MODEL](#))
Message: Mecab: createModel() failed: %s.
[ER_MECAB_FAILED_TO_CREATE_MODEL](#) was added in 8.0.11.
- Error: 11120 SQLSTATE: HY000 ([ER_MECAB_FAILED_TO_CREATE_TRIGGER](#))
Message: Mecab: createTagger() failed: %s.
[ER_MECAB_FAILED_TO_CREATE_TRIGGER](#) was added in 8.0.11.
- Error: 11121 SQLSTATE: HY000 ([ER_MECAB_UNSUPPORTED_CHARSET](#))
Message: Mecab: Unsupported dictionary charset %s.
[ER_MECAB_UNSUPPORTED_CHARSET](#) was added in 8.0.11.
- Error: 11122 SQLSTATE: HY000 ([ER_MECAB_CHARSET_LOADED](#))
Message: Mecab: Loaded dictionary charset is %s.
[ER_MECAB_CHARSET_LOADED](#) was added in 8.0.11.
- Error: 11123 SQLSTATE: HY000 ([ER_MECAB_PARSE_FAILED](#))
Message: Mecab: parse() failed: %s.
[ER_MECAB_PARSE_FAILED](#) was added in 8.0.11.
- Error: 11124 SQLSTATE: HY000 ([ER_MECAB_OOM_WHILE_PARSING_TEXT](#))
Message: Mecab: parse() failed: out of memory.
[ER_MECAB_OOM_WHILE_PARSING_TEXT](#) was added in 8.0.11.
- Error: 11125 SQLSTATE: HY000 ([ER_MECAB_CREATE_LATTICE_FAILED](#))
Message: Mecab: createLattice() failed: %s.
[ER_MECAB_CREATE_LATTICE_FAILED](#) was added in 8.0.11.
- Error: 11126 SQLSTATE: HY000 ([ER_SEMISYNC_TRACE_ENTER_FUNC](#))
Message: ---> %s enter.
[ER_SEMISYNC_TRACE_ENTER_FUNC](#) was added in 8.0.11.
- Error: 11127 SQLSTATE: HY000 ([ER_SEMISYNC_TRACE_EXIT_WITH_INT_EXIT_CODE](#))
Message: <--- %s exit (%d).
[ER_SEMISYNC_TRACE_EXIT_WITH_INT_EXIT_CODE](#) was added in 8.0.11.
- Error: 11128 SQLSTATE: HY000 ([ER_SEMISYNC_TRACE_EXIT_WITH_BOOL_EXIT_CODE](#))
Message: <--- %s exit (%s).
[ER_SEMISYNC_TRACE_EXIT_WITH_BOOL_EXIT_CODE](#) was added in 8.0.11.

- Error: 11129 SQLSTATE: HY000 (ER_SEMISYNC_TRACE_EXIT)
Message: <--- %s exit.
[ER_SEMISYNC_TRACE_EXIT](#) was added in 8.0.11.
- Error: 11130 SQLSTATE: HY000 (ER_SEMISYNC_RPL_INIT_FOR_TRX)
Message: Semi-sync replication initialized for transactions.
[ER_SEMISYNC_RPL_INIT_FOR_TRX](#) was added in 8.0.11.
- Error: 11131 SQLSTATE: HY000 (ER_SEMISYNC_FAILED_TO_ALLOCATE_TRX_NODE)
Message: %s: transaction node allocation failed for: (%s, %lu).
[ER_SEMISYNC_FAILED_TO_ALLOCATE_TRX_NODE](#) was added in 8.0.11.
- Error: 11132 SQLSTATE: HY000 (ER_SEMISYNC_BINLOG_WRITE_OUT_OF_ORDER)
Message: %s: binlog write out-of-order, tail (%s, %lu), new node (%s, %lu).
[ER_SEMISYNC_BINLOG_WRITE_OUT_OF_ORDER](#) was added in 8.0.11.
- Error: 11133 SQLSTATE: HY000 (ER_SEMISYNC_INSERT_LOG_INFO_IN_ENTRY)
Message: %s: insert (%s, %lu) in entry(%u).
[ER_SEMISYNC_INSERT_LOG_INFO_IN_ENTRY](#) was added in 8.0.11.

[ER_SEMISYNC_MASTER_SIGNAL_ALL_WAITING_THREADS](#) was added in 8.0.11.
- Error: 11148 SQLSTATE: HY000 ([ER_SEMISYNC_MASTER_TRX_WAIT_POS](#))
Message: %s: wait pos (%s, %lu), repl(%d).
[ER_SEMISYNC_MASTER_TRX_WAIT_POS](#) was added in 8.0.11.

- Error: 11149 SQLSTATE: HY000 (ER_SEMISYNC_BINLOG_REPLY_IS_AHEAD)
Message: %s: Binlog reply is ahead (%s, %lu).
ER_SEMISYNC_BINLOG_REPLY_IS_AHEAD was added in 8.0.11.
- Error: 11150 SQLSTATE: HY000 (ER_SEMISYNC_MOVE_BACK_WAIT_POS)
Message: %s: move back wait position (%s, %lu).
ER_SEMISYNC_MOVE_BACK_WAIT_POS was added in 8.0.11.
- Error: 11151 SQLSTATE: HY000 (ER_SEMISYNC_INIT_WAIT_POS)
Message: %s: init wait position (%s, %lu).
ER_SEMISYNC_INIT_WAIT_POS was added in 8.0.11.
- Error: 11152 SQLSTATE: HY000 (ER_SEMISYNC_WAIT_TIME_FOR_BINLOG_SENT)
Message: %s: wait %lu ms for binlog sent (%s, %lu).
ER_SEMISYNC_WAIT_TIME_FOR_BINLOG_SENT was added in 8.0.11.
- Error: 11153 SQLSTATE: HY000 (ER_SEMISYNC_WAIT_FOR_BINLOG_TIMEDOUT)
Message: Timeout waiting for reply of binlog (file: %s, pos: %lu), semi-sync up to file %s, position %lu.
ER_SEMISYNC_WAIT_FOR_BINLOG_TIMEDOUT was added in 8.0.11.
- Error: 11154 SQLSTATE: HY000
(ER_SEMISYNC_WAIT_TIME_ASSESSMENT_FOR_COMMIT_TRX_FAILED)
Message: Assessment of waiting time for commitTrx failed at wait position (%s, %lu).
ER_SEMISYNC_WAIT_TIME_ASSESSMENT_FOR_COMMIT_TRX_FAILED was added in 8.0.11.
- Error: 11155 SQLSTATE: HY000 (ER_SEMISYNC_RPL_SWITCHED_OFF)
Message: Semi-sync replication switched OFF.
ER_SEMISYNC_RPL_SWITCHED_OFF was added in 8.0.11.
- Error: 11156 SQLSTATE: HY000 (ER_SEMISYNC_RPL_SWITCHED_ON)
Message: Semi-sync replication switched ON at (%s, %lu).
ER_SEMISYNC_RPL_SWITCHED_ON was added in 8.0.11.
- Error: 11157 SQLSTATE: HY000 (ER_SEMISYNC_NO_SPACE_IN_THE_PKT)
Message: No enough space in the packet for semi-sync extra header, semi-sync replication disabled.
ER_SEMISYNC_NO_SPACE_IN_THE_PKT was added in 8.0.11.
- Error: 11158 SQLSTATE: HY000 (ER_SEMISYNC_SYNC_HEADER_UPDATE_INFO)
Message: %s: server(%d), (%s, %lu) sync(%d), repl(%d).
ER_SEMISYNC_SYNC_HEADER_UPDATE_INFO was added in 8.0.11.

- Error: 11159 SQLSTATE: HY000 ([ER_SEMISYNC_FAILED_TO_INSERT_TRX_NODE](#))
Message: Semi-sync failed to insert tranx_node for binlog file: %s, position: %lu.
[ER_SEMISYNC_FAILED_TO_INSERT_TRX_NODE](#) was added in 8.0.11.
- Error: 11160 SQLSTATE: HY000 ([ER_SEMISYNC_TRX_SKIPPED_AT_POS](#))
Message: %s: Transaction skipped at (%s, %lu).
[ER_SEMISYNC_TRX_SKIPPED_AT_POS](#) was added in 8.0.11.
- Error: 11161 SQLSTATE: HY000 ([ER_SEMISYNC_MASTER_FAILED_ON_NET_FLUSH](#))
Message: Semi-sync master failed on net_flush() before waiting for slave reply.
[ER_SEMISYNC_MASTER_FAILED_ON_NET_FLUSH](#) was added in 8.0.11.
- Error: 11162 SQLSTATE: HY000 ([ER_SEMISYNC_RECEIVED_ACK_IS_SMALLER](#))
Message: The received ack is smaller than m_greatest_ack.
[ER_SEMISYNC_RECEIVED_ACK_IS_SMALLER](#) was added in 8.0.11.
- Error: 11163 SQLSTATE: HY000 ([ER_SEMISYNC_ADD_ACK_TO_SLOT](#))
Message: Add the ack into slot %u.
[ER_SEMISYNC_ADD_ACK_TO_SLOT](#) was added in 8.0.11.
- Error: 11164 SQLSTATE: HY000 ([ER_SEMISYNC_UPDATE_EXISTING_SLAVE_ACK](#))
Message: Update an existing ack in slot %u.
[ER_SEMISYNC_UPDATE_EXISTING_SLAVE_ACK](#) was added in 8.0.11.
- Error: 11165 SQLSTATE: HY000 ([ER_SEMISYNC_FAILED_TO_START_ACK_RECEIVER_THD](#))
Message: Failed to start semi-sync ACK receiver thread, could not create thread(errno=%d).
[ER_SEMISYNC_FAILED_TO_START_ACK_RECEIVER_THD](#) was added in 8.0.11.
- Error: 11166 SQLSTATE: HY000 ([ER_SEMISYNC_STARTING_ACK_RECEIVER_THD](#))
Message: Starting ack receiver thread.
[ER_SEMISYNC_STARTING_ACK_RECEIVER_THD](#) was added in 8.0.11.
- Error: 11167 SQLSTATE: HY000 ([ER_SEMISYNC_FAILED_TO_WAIT_ON_DUMP_SOCKET](#))
Message: Failed to wait on semi-sync dump sockets, error: errno=%d.
[ER_SEMISYNC_FAILED_TO_WAIT_ON_DUMP_SOCKET](#) was added in 8.0.11.
- Error: 11168 SQLSTATE: HY000 ([ER_SEMISYNC_STOPPING_ACK_RECEIVER_THREAD](#))
Message: Stopping ack receiver thread.
[ER_SEMISYNC_STOPPING_ACK_RECEIVER_THREAD](#) was added in 8.0.11.

- Error: 11169 SQLSTATE: HY000 (ER_SEMISYNC_FAILED_REGISTER_SLAVE_TO_RECEIVER)
Message: Failed to register slave to semi-sync ACK receiver thread.
ER_SEMISYNC_FAILED_REGISTER_SLAVE_TO_RECEIVER was added in 8.0.11.
- Error: 11170 SQLSTATE: HY000 (ER_SEMISYNC_START_BINLOG_DUMP_TO_SLAVE)
Message: Start %s binlog_dump to slave (server_id: %d), pos(%s, %lu).
ER_SEMISYNC_START_BINLOG_DUMP_TO_SLAVE was added in 8.0.11.
- Error: 11171 SQLSTATE: HY000 (ER_SEMISYNC_STOP_BINLOG_DUMP_TO_SLAVE)
Message: Stop %s binlog_dump to slave (server_id: %d).
ER_SEMISYNC_STOP_BINLOG_DUMP_TO_SLAVE was added in 8.0.11.
- Error: 11172 SQLSTATE: HY000 (ER_SEMISYNC_UNREGISTER_TRX_OBSERVER_FAILED)
Message: unregister_trans_observer failed.
ER_SEMISYNC_UNREGISTER_TRX_OBSERVER_FAILED was added in 8.0.11.
- Error: 11173 SQLSTATE: HY000
(ER_SEMISYNC_UNREGISTER_BINLOG_STORAGE_OBSERVER_FAILED)
Message: unregister_binlog_storage_observer failed.
ER_SEMISYNC_UNREGISTER_BINLOG_STORAGE_OBSERVER_FAILED was added in 8.0.11.
- Error: 11174 SQLSTATE: HY000
(ER_SEMISYNC_UNREGISTER_BINLOG_TRANSMIT_OBSERVER_FAILED)
Message: unregister_binlog_transmit_observer failed.
ER_SEMISYNC_UNREGISTER_BINLOG_TRANSMIT_OBSERVER_FAILED was added in 8.0.11.
- Error: 11175 SQLSTATE: HY000 (ER_SEMISYNC_UNREGISTERED_REPLICATOR)
Message: unregister_replicator OK.
ER_SEMISYNC_UNREGISTERED_REPLICATOR was added in 8.0.11.
- Error: 11176 SQLSTATE: HY000 (ER_SEMISYNC_SOCKET_FD_TOO_LARGE)
Message: Semisync slave socket fd is %u. select() cannot handle if the socket fd is bigger than %u (FD_SETSIZE).
ER_SEMISYNC_SOCKET_FD_TOO_LARGE was added in 8.0.11.
- Error: 11177 SQLSTATE: HY000 (ER_SEMISYNC_SLAVE_REPLY)
Message: %s: reply - %d.
ER_SEMISYNC_SLAVE_REPLY was added in 8.0.11.
- Error: 11178 SQLSTATE: HY000 (ER_SEMISYNC_MISSING_MAGIC_NO_FOR_SEMISYNC_PKT)
Message: Missing magic number for semi-sync packet, packet len: %lu.

`ER_SEMISYNC_MISSING_MAGIC_NO_FOR_SEMISYNC_PKT` was added in 8.0.11.

- Error: 11179 SQLSTATE: HY000 (`ER_SEMISYNC_SLAVE_START`)

Message: Slave I/O thread: Start %s replication to master '%s@%s:%d' in log '%s' at position %lu.

`ER_SEMISYNC_SLAVE_START` was added in 8.0.11.

- Error: 11180 SQLSTATE: HY000 (`ER_SEMISYNC_SLAVE_REPLY_WITH_BINLOG_INFO`)

Message: %s: reply (%s, %lu).

`ER_SEMISYNC_SLAVE_REPLY_WITH_BINLOG_INFO` was added in 8.0.11.

- Error: 11181 SQLSTATE: HY000 (`ER_SEMISYNC_SLAVE_NET_FLUSH_REPLY_FAILED`)

Message: Semi-sync slave net_flush() reply failed.

`ER_SEMISYNC_SLAVE_NET_FLUSH_REPLY_FAILED` was added in 8.0.11.

- Error: 11182 SQLSTATE: HY000 (`ER_SEMISYNC_SLAVE_SEND_REPLY_FAILED`)

Message: Semi-sync slave send reply failed: %s (%d).

`ER_SEMISYNC_SLAVE_SEND_REPLY_FAILED` was added in 8.0.11.

- Error: 11183 SQLSTATE: HY000 (`ER_SEMISYNC_EXECUTION_FAILED_ON_MASTER`)

Message: Execution failed on master: %s; error %d

`ER_SEMISYNC_EXECUTION_FAILED_ON_MASTER` was added in 8.0.11.

- Error: 11184 SQLSTATE: HY000 (`ER_SEMISYNC_NOT_SUPPORTED_BY_MASTER`)

Message: Master server does not support semi-sync, fallback to asynchronous replication

`ER_SEMISYNC_NOT_SUPPORTED_BY_MASTER` was added in 8.0.11.

- Error: 11185 SQLSTATE: HY000 (`ER_SEMISYNC_SLAVE_SET_FAILED`)

Message: Set 'rpl_semi_sync_slave=1' on master failed

`ER_SEMISYNC_SLAVE_SET_FAILED` was added in 8.0.11.

- Error: 11186 SQLSTATE: HY000 (`ER_SEMISYNC_FAILED_TO_STOP_ACK_RECEIVER_THD`)

Message: Failed to stop ack receiver thread on my_thread_join, errno(%d).

`ER_SEMISYNC_FAILED_TO_STOP_ACK_RECEIVER_THD` was added in 8.0.11.

- Error: 11187 SQLSTATE: HY000 (`ER_FIREWALL_FAILED_TO_READ_FIREWALL_TABLES`)

Message: Failed to read the firewall tables

`ER_FIREWALL_FAILED_TO_READ_FIREWALL_TABLES` was added in 8.0.11.

- Error: 11188 SQLSTATE: HY000 (`ER_FIREWALL_FAILED_TO_REG_DYNAMIC_PRIVILEGES`)

Message: Failed to register dynamic privileges

`ER_FIREWALL_FAILED_TO_REG_DYNAMIC_PRIVILEGES` was added in 8.0.11.

- Error: 11189 SQLSTATE: HY000 (`ER_FIREWALL_RECORDING_STMT_WAS_TRUNCATED`)

Message: Statement was truncated and not recorded: %s

`ER_FIREWALL_RECORDING_STMT_WAS_TRUNCATED` was added in 8.0.11.

- Error: 11190 SQLSTATE: HY000 (`ER_FIREWALL_RECORDING_STMT_WITHOUT_TEXT`)

Message: Statement with no text was not recorded

`ER_FIREWALL_RECORDING_STMT_WITHOUT_TEXT` was added in 8.0.11.

- Error: 11191 SQLSTATE: HY000 (`ER_FIREWALL_SUSPICIOUS_STMT`)

Message: SUSPICIOUS STATEMENT from '%s'. Reason: %s Statement: %s

`ER_FIREWALL_SUSPICIOUS_STMT` was added in 8.0.11.

- Error: 11192 SQLSTATE: HY000 (`ER_FIREWALL_ACCESS_DENIED`)

Message: ACCESS DENIED for '%s'. Reason: %s Statement: %s

`ER_FIREWALL_ACCESS_DENIED` was added in 8.0.11.

- Error: 11193 SQLSTATE: HY000 (`ER_FIREWALL_SKIPPED_UNKNOWN_USER_MODE`)

Message: Skipped unknown user mode '%s'

`ER_FIREWALL_SKIPPED_UNKNOWN_USER_MODE` was added in 8.0.11.

- Error: 11194 SQLSTATE: HY000 (`ER_FIREWALL_RELOADING_CACHE`)

Message: Reloading cache from disk

`ER_FIREWALL_RELOADING_CACHE` was added in 8.0.11.

- Error: 11195 SQLSTATE: HY000 (`ER_FIREWALL_RESET_FOR_USER`)

Message: FIREWALL RESET for '%s'

`ER_FIREWALL_RESET_FOR_USER` was added in 8.0.11.

- Error: 11196 SQLSTATE: HY000 (`ER_FIREWALL_STATUS_FLUSHED`)

Message: Counters are reset to zero

`ER_FIREWALL_STATUS_FLUSHED` was added in 8.0.11.

- Error: 11197 SQLSTATE: HY000 (`ER_KEYRING_LOGGER_ERROR_MSG`)

Message: %s

`ER_KEYRING_LOGGER_ERROR_MSG` was added in 8.0.11.

- Error: 11198 SQLSTATE: HY000 (`ER_AUDIT_LOG_FILTER_IS_NOT_INSTALLED`)

Message: Audit Log plugin supports a filtering, which has not been installed yet. Audit Log plugin will run in the legacy mode, which will be disabled in the next release.

`ER_AUDIT_LOG_FILTER_IS_NOT_INSTALLED` was added in 8.0.11.

- Error: 11199 SQLSTATE: HY000 (`ER_AUDIT_LOG_SWITCHING_TO_INCLUDE_LIST`)

Message: Previously exclude list is used, now we start using include list, exclude list is set to NULL.

`ER_AUDIT_LOG_SWITCHING_TO_INCLUDE_LIST` was added in 8.0.11.

- Error: 11200 SQLSTATE: HY000
(`ER_AUDIT_LOG_CANNOT_SET_LOG_POLICY_WITH_OTHER_POLICIES`)

Message: Cannot set `audit_log_policy` simultaneously with either `audit_log_connection_policy` or `audit_log_statement_policy`, setting `audit_log_connection_policy` and `audit_log_statement_policy` based on `audit_log_policy`.

`ER_AUDIT_LOG_CANNOT_SET_LOG_POLICY_WITH_OTHER_POLICIES` was added in 8.0.11.

- Error: 11201 SQLSTATE: HY000 (`ER_AUDIT_LOG_ONLY_INCLUDE_LIST_USED`)

Message: Both include and exclude lists provided, include list is preferred, exclude list is set to NULL.

`ER_AUDIT_LOG_ONLY_INCLUDE_LIST_USED` was added in 8.0.11.

- Error: 11202 SQLSTATE: HY000 (`ER_AUDIT_LOG_INDEX_MAP_CANNOT_ACCESS_DIR`)

Message: Could not access '%s' directory.

`ER_AUDIT_LOG_INDEX_MAP_CANNOT_ACCESS_DIR` was added in 8.0.11.

- Error: 11203 SQLSTATE: HY000 (`ER_AUDIT_LOG_WRITER_RENAME_FILE_FAILED`)

Message: Could not rename file from '%s' to '%s'.

`ER_AUDIT_LOG_WRITER_RENAME_FILE_FAILED` was added in 8.0.11.

- Error: 11204 SQLSTATE: HY000 (`ER_AUDIT_LOG_WRITER_DEST_FILE_ALREADY_EXISTS`)

Message: File '%s' should not exist. It may be incomplete. The server crashed.

`ER_AUDIT_LOG_WRITER_DEST_FILE_ALREADY_EXISTS` was added in 8.0.11.

- Error: 11205 SQLSTATE: HY000
(`ER_AUDIT_LOG_WRITER_RENAME_FILE_FAILED_REMOVE_FILE_MANUALLY`)

Message: Could not rename file from '%s' to '%s'. Remove the file manually.

`ER_AUDIT_LOG_WRITER_RENAME_FILE_FAILED_REMOVE_FILE_MANUALLY` was added in 8.0.11.

- Error: 11206 SQLSTATE: HY000 (`ER_AUDIT_LOG_WRITER_INCOMPLETE_FILE_RENAMED`)

Message: Incomplete file renamed from '%s' to '%s'.

`ER_AUDIT_LOG_WRITER_INCOMPLETE_FILE_RENAMED` was added in 8.0.11.

- Error: 11207 SQLSTATE: HY000 (`ER_AUDIT_LOG_WRITER_FAILED_TO_WRITE_TO_FILE`)

Message: Error writing file '%s' (errno: %d - %s).

ER_AUDIT_LOG_WRITER_FAILED_TO_WRITE_TO_FILE was added in 8.0.11.

- Error: 11208 SQLSTATE: HY000 (ER_AUDIT_LOG_EC_WRITER_FAILED_TO_INIT_ENCRYPTION)

Message: Could not initialize audit log file encryption.

ER_AUDIT_LOG_EC_WRITER_FAILED_TO_INIT_ENCRYPTION was added in 8.0.11.

- Error: 11209 SQLSTATE: HY000 (ER_AUDIT_LOG_EC_WRITER_FAILED_TO_INIT_COMPRESSION)

Message: Could not initialize audit log file compression.

ER_AUDIT_LOG_EC_WRITER_FAILED_TO_INIT_COMPRESSION was added in 8.0.11.

- Error: 11210 SQLSTATE: HY000 (ER_AUDIT_LOG_EC_WRITER_FAILED_TO_CREATE_FILE)

Message: Could not create '%s' file for audit logging.

ER_AUDIT_LOG_EC_WRITER_FAILED_TO_CREATE_FILE was added in 8.0.11.

- Error: 11211 SQLSTATE: HY000 (ER_AUDIT_LOG_RENAME_LOG_FILE_BEFORE_FLUSH)

Message: Audit log file (%s) must be manually renamed before audit_log_flush is set to true.

ER_AUDIT_LOG_RENAME_LOG_FILE_BEFORE_FLUSH was added in 8.0.11.

- Error: 11212 SQLSTATE: HY000 (ER_AUDIT_LOG_FILTER_RESULT_MSG)

Message: %s

ER_AUDIT_LOG_FILTER_RESULT_MSG was added in 8.0.11.

- Error: 11213 SQLSTATE: HY000 (ER_AUDIT_LOG_JSON_READER_FAILED_TO_PARSE)

Message: Error parsing JSON event. Event not accessible.

ER_AUDIT_LOG_JSON_READER_FAILED_TO_PARSE was added in 8.0.11.

- Error: 11214 SQLSTATE: HY000 (ER_AUDIT_LOG_JSON_READER_BUF_TOO_SMALL)

Message: Buffer is too small to hold JSON event. Number of events skipped: %zu.

ER_AUDIT_LOG_JSON_READER_BUF_TOO_SMALL was added in 8.0.11.

- Error: 11215 SQLSTATE: HY000 (ER_AUDIT_LOG_JSON_READER_FAILED_TO_OPEN_FILE)

Message: Could not open JSON file for reading. Reading next file if exists.

ER_AUDIT_LOG_JSON_READER_FAILED_TO_OPEN_FILE was added in 8.0.11.

- Error: 11216 SQLSTATE: HY000 (ER_AUDIT_LOG_JSON_READER_FILE_PARSING_ERROR)

Message: JSON file parsing error. Reading next file if exists

ER_AUDIT_LOG_JSON_READER_FILE_PARSING_ERROR was added in 8.0.11.

- Error: 11217 SQLSTATE: HY000 (ER_AUDIT_LOG_FILTER_INVALID_COLUMN_COUNT)

Message: Invalid column count in the '%s.%s' table.

[ER_AUDIT_LOG_FILTER_INVALID_COLUMN_COUNT](#) was added in 8.0.11.

- Error: 11218 SQLSTATE: HY000 ([ER_AUDIT_LOG_FILTER_INVALID_COLUMN_DEFINITION](#))

Message: Invalid column definition of the '%s.%s' table.

[ER_AUDIT_LOG_FILTER_INVALID_COLUMN_DEFINITION](#) was added in 8.0.11.

- Error: 11219 SQLSTATE: HY000 ([ER_AUDIT_LOG_FILTER_FAILED_TO_STORE_TABLE_FLDS](#))

Message: Could not store field of the %s table.

[ER_AUDIT_LOG_FILTER_FAILED_TO_STORE_TABLE_FLDS](#) was added in 8.0.11.

- Error: 11220 SQLSTATE: HY000 ([ER_AUDIT_LOG_FILTER_FAILED_TO_UPDATE_TABLE](#))

Message: Could not update %s table.

[ER_AUDIT_LOG_FILTER_FAILED_TO_UPDATE_TABLE](#) was added in 8.0.11.

- Error: 11221 SQLSTATE: HY000 ([ER_AUDIT_LOG_FILTER_FAILED_TO_INSERT_INTO_TABLE](#))

Message: Could not insert into %s table.

[ER_AUDIT_LOG_FILTER_FAILED_TO_INSERT_INTO_TABLE](#) was added in 8.0.11.

- Error: 11222 SQLSTATE: HY000 ([ER_AUDIT_LOG_FILTER_FAILED_TO_DELETE_FROM_TABLE](#))

Message: Could not delete from %s table.

[ER_AUDIT_LOG_FILTER_FAILED_TO_DELETE_FROM_TABLE](#) was added in 8.0.11.

- Error: 11223 SQLSTATE: HY000 ([ER_AUDIT_LOG_FILTER_FAILED_TO_INIT_TABLE_FOR_READ](#))

Message: Could not initialize %s table for reading.

[ER_AUDIT_LOG_FILTER_FAILED_TO_INIT_TABLE_FOR_READ](#) was added in 8.0.11.

- Error: 11224 SQLSTATE: HY000 ([ER_AUDIT_LOG_FILTER_FAILED_TO_READ_TABLE](#))

Message: Could not read %s table.

[ER_AUDIT_LOG_FILTER_FAILED_TO_READ_TABLE](#) was added in 8.0.11.

- Error: 11225 SQLSTATE: HY000
([ER_AUDIT_LOG_FILTER_FAILED_TO_CLOSE_TABLE_AFTER_READING](#))

Message: Could not close %s table reading.

[ER_AUDIT_LOG_FILTER_FAILED_TO_CLOSE_TABLE_AFTER_READING](#) was added in 8.0.11.

- Error: 11226 SQLSTATE: HY000 ([ER_AUDIT_LOG_FILTER_USER_AND_HOST_CANNOT_BE_EMPTY](#))

Message: Both user and host columns of %s table cannot be empty.

[ER_AUDIT_LOG_FILTER_USER_AND_HOST_CANNOT_BE_EMPTY](#) was added in 8.0.11.

- Error: 11227 SQLSTATE: HY000 (ER_AUDIT_LOG_FILTER_FLD_FILTERNAME_CANNOT_BE_EMPTY)
Message: Filtername column of %s table cannot be empty.
ER_AUDIT_LOG_FILTER_FLD_FILTERNAME_CANNOT_BE_EMPTY was added in 8.0.11.
- Error: 11228 SQLSTATE: HY000 (ER_VALIDATE_PWD_DICT_FILE_NOT_SPECIFIED)
Message: Dictionary file not specified
ER_VALIDATE_PWD_DICT_FILE_NOT_SPECIFIED was added in 8.0.11.
- Error: 11229 SQLSTATE: HY000 (ER_VALIDATE_PWD_DICT_FILE_NOT_LOADED)
Message: Dictionary file not loaded
ER_VALIDATE_PWD_DICT_FILE_NOT_LOADED was added in 8.0.11.
- Error: 11230 SQLSTATE: HY000 (ER_VALIDATE_PWD_DICT_FILE_TOO_BIG)
Message: Dictionary file size exceeded MAX_DICTIONARY_FILE_LENGTH, not loaded
ER_VALIDATE_PWD_DICT_FILE_TOO_BIG was added in 8.0.11.
- Error: 11231 SQLSTATE: HY000 (ER_VALIDATE_PWD_FAILED_TO_READ_DICT_FILE)
Message: Exception while reading the dictionary file
ER_VALIDATE_PWD_FAILED_TO_READ_DICT_FILE was added in 8.0.11.
- Error: 11232 SQLSTATE: HY000
(ER_VALIDATE_PWD_FAILED_TO_GET_FLD_FROM_SECURITY_CTX)
Message: Can't retrieve the %s from the security context
ER_VALIDATE_PWD_FAILED_TO_GET_FLD_FROM_SECURITY_CTX was added in 8.0.11.
- Error: 11233 SQLSTATE: HY000 (ER_VALIDATE_PWD_FAILED_TO_GET_SECURITY_CTX)
Message: Can't retrieve the security context
ER_VALIDATE_PWD_FAILED_TO_GET_SECURITY_CTX was added in 8.0.11.
- Error: 11234 SQLSTATE: HY000 (ER_VALIDATE_PWD_LENGTH_CHANGED)
Message: Effective value of validate_password_length is changed. New value is %d
ER_VALIDATE_PWD_LENGTH_CHANGED was added in 8.0.11.
- Error: 11235 SQLSTATE: HY000 (ER_REWRITER_QUERY_ERROR_MSG)
Message: %s
ER_REWRITER_QUERY_ERROR_MSG was added in 8.0.11.
- Error: 11236 SQLSTATE: HY000 (ER_REWRITER_QUERY_FAILED)
Message: Rewritten query failed to parse:%s
ER_REWRITER_QUERY_FAILED was added in 8.0.11.

- Error: 11237 SQLSTATE: HY000 ([ER_XPLUGIN_STARTUP_FAILED](#))
Message: Startup failed with error "%s"
[ER_XPLUGIN_STARTUP_FAILED](#) was added in 8.0.11.
- Error: 11238 SQLSTATE: HY000 ([ER_XPLUGIN_SERVER_EXITING](#))
Message: Exiting
[ER_XPLUGIN_SERVER_EXITING](#) was added in 8.0.11, removed after 8.0.12.
- Error: 11239 SQLSTATE: HY000 ([ER_XPLUGIN_SERVER_EXITED](#))
Message: Exit done
[ER_XPLUGIN_SERVER_EXITED](#) was added in 8.0.11, removed after 8.0.12.
- Error: 11240 SQLSTATE: HY000 ([ER_XPLUGIN_USING_SSL_CONF_FROM_SERVER](#))
Message: Using SSL configuration from MySQL Server
[ER_XPLUGIN_USING_SSL_CONF_FROM_SERVER](#) was added in 8.0.11.
- Error: 11241 SQLSTATE: HY000 ([ER_XPLUGIN_USING_SSL_CONF_FROM_MYSQLX](#))
Message: Using SSL configuration from Mysqlx Plugin
[ER_XPLUGIN_USING_SSL_CONF_FROM_MYSQLX](#) was added in 8.0.11.
- Error: 11242 SQLSTATE: HY000 ([ER_XPLUGIN_FAILED_TO_USE_SSL_CONF](#))
Message: Neither MySQL Server nor Mysqlx Plugin has valid SSL configuration
[ER_XPLUGIN_FAILED_TO_USE_SSL_CONF](#) was added in 8.0.11.
- Error: 11243 SQLSTATE: HY000 ([ER_XPLUGIN_USING_SSL_FOR_TLS_CONNECTION](#))
Message: Using %s for TLS connections
[ER_XPLUGIN_USING_SSL_FOR_TLS_CONNECTION](#) was added in 8.0.11.
- Error: 11244 SQLSTATE: HY000 ([ER_XPLUGIN_REFERENCE_TO_SECURE_CONN_WITH_XPLUGIN](#))
Message: For more information, please see the Using Secure Connections with X Plugin section in the MySQL documentation
[ER_XPLUGIN_REFERENCE_TO_SECURE_CONN_WITH_XPLUGIN](#) was added in 8.0.11.
- Error: 11245 SQLSTATE: HY000 ([ER_XPLUGIN_ERROR_MSG](#))
Message: %s
[ER_XPLUGIN_ERROR_MSG](#) was added in 8.0.11.
- Error: 11246 SQLSTATE: HY000 ([ER_SHA_PWD_FAILED_TO_PARSE_AUTH_STRING](#))
Message: Failed to parse stored authentication string for %s. Please check if mysql.user table not corrupted

`ER_SHA_PWD_FAILED_TO_PARSE_AUTH_STRING` was added in 8.0.11.

- Error: 11247 SQLSTATE: HY000 (`ER_SHA_PWD_FAILED_TO_GENERATE_MULTI_ROUND_HASH`)
Message: Error in generating multi-round hash for %s. Plugin can not perform authentication without it.
This may be a transient problem

`ER_SHA_PWD_FAILED_TO_GENERATE_MULTI_ROUND_HASH` was added in 8.0.11.

- Error: 11248 SQLSTATE: HY000 (`ER_SHA_PWD_AUTH_REQUIRES_RSA_OR_SSL`)
Message: Authentication requires either RSA keys or SSL encryption

`ER_SHA_PWD_AUTH_REQUIRES_RSA_OR_SSL` was added in 8.0.11.

- Error: 11249 SQLSTATE: HY000 (`ER_SHA_PWD_RSA_KEY_TOO_LONG`)
Message: RSA key cipher length of %u is too long. Max value is %u

`ER_SHA_PWD_RSA_KEY_TOO_LONG` was added in 8.0.11.

- Error: 11250 SQLSTATE: HY000 (`ER_PLUGIN_COMMON_FAILED_TO_OPEN_FILTER_TABLES`)
Message: Failed to open the %s filter tables

`ER_PLUGIN_COMMON_FAILED_TO_OPEN_FILTER_TABLES` was added in 8.0.11.

- Error: 11251 SQLSTATE: HY000 (`ER_PLUGIN_COMMON_FAILED_TO_OPEN_TABLE`)
Message: Failed to open '%s.%s' %s table

`ER_PLUGIN_COMMON_FAILED_TO_OPEN_TABLE` was added in 8.0.11.

- Error: 11252 SQLSTATE: HY000 (`ER_AUTH_LDAP_ERROR_LOGGER_ERROR_MSG`)
Message: %s

`ER_AUTH_LDAP_ERROR_LOGGER_ERROR_MSG` was added in 8.0.11.

- Error: 11253 SQLSTATE: HY000 (`ER_CONN_CONTROL_ERROR_MSG`)
Message: %s

`ER_CONN_CONTROL_ERROR_MSG` was added in 8.0.11.

- Error: 11254 SQLSTATE: HY000 (`ER_GRP_RPL_ERROR_MSG`)
Message: %s

`ER_GRP_RPL_ERROR_MSG` was added in 8.0.11.

- Error: 11255 SQLSTATE: HY000 (`ER_SHA_PWD_SALT_FOR_USER_CORRUPT`)
Message: Password salt for user '%s' is corrupt

`ER_SHA_PWD_SALT_FOR_USER_CORRUPT` was added in 8.0.11.

- Error: 11256 SQLSTATE: HY000 (`ER_SYS_VAR_COMPONENT_OOM`)

Message: Out of memory for component system variable '%s'.

[ER_SYS_VAR_COMPONENT_OOM](#) was added in 8.0.11.

- Error: 11257 SQLSTATE: HY000 ([ER_SYS_VAR_COMPONENT_VARIABLE_SET_READ_ONLY](#))

Message: variable %s of component %s was forced to be read-only: string variable without update_func and PLUGIN_VAR_MEMALLOC flag.

[ER_SYS_VAR_COMPONENT_VARIABLE_SET_READ_ONLY](#) was added in 8.0.11.

- Error: 11258 SQLSTATE: HY000 ([ER_SYS_VAR_COMPONENT_UNKNOWN_VARIABLE_TYPE](#))

Message: Unknown variable type code 0x%x in component '%s'.

[ER_SYS_VAR_COMPONENT_UNKNOWN_VARIABLE_TYPE](#) was added in 8.0.11.

- Error: 11259 SQLSTATE: HY000 ([ER_SYS_VAR_COMPONENT_FAILED_TO_PARSE_VARIABLE_OPTIONS](#))

Message: Parsing options for variable '%s' failed.

[ER_SYS_VAR_COMPONENT_FAILED_TO_PARSE_VARIABLE_OPTIONS](#) was added in 8.0.11.

- Error: 11260 SQLSTATE: HY000 ([ER_SYS_VAR_COMPONENT_FAILED_TO_MAKE_VARIABLE_PERSISTENT](#))

Message: Setting persistent options for component variable '%s' failed.

[ER_SYS_VAR_COMPONENT_FAILED_TO_MAKE_VARIABLE_PERSISTENT](#) was added in 8.0.11.

- Error: 11261 SQLSTATE: HY000 ([ER_COMPONENT_FILTER_CONFUSED](#))

Message: The log-filter component "%s" got confused at "%s" (state: %s) ...

[ER_COMPONENT_FILTER_CONFUSED](#) was added in 8.0.11.

- Error: 11262 SQLSTATE: HY000 ([ER_STOP_SLAVE_IO_THREAD_DISK_SPACE](#))

Message: Waiting until I/O thread for channel '%s' finish writing to disk before stopping. Free some disk space or use 'KILL' to abort I/O thread operation. Notice that aborting the I/O thread while rotating the relay log might corrupt the relay logs, requiring a server restart to fix it.

[ER_STOP_SLAVE_IO_THREAD_DISK_SPACE](#) was added in 8.0.2.

- Error: 11263 SQLSTATE: HY000 ([ER_LOG_FILE_CANNOT_OPEN](#))

Message: Could not use %s for logging (error %d - %s). Turning logging off for the server process. To turn it on again: fix the cause, then %s restart the MySQL server.

[ER_LOG_FILE_CANNOT_OPEN](#) was added in 8.0.2.

- Error: 11268 SQLSTATE: HY000 ([ER_PERSIST_OPTION_STATUS](#))

Message: Configuring persisted options failed: "%s".

[ER_PERSIST_OPTION_STATUS](#) was added in 8.0.11.

- Error: 11269 SQLSTATE: HY000 ([ER_NOT_IMPLEMENTED_GET_TABLESPACE_STATISTICS](#))

Message: The storage engine '%s' does not provide dynamic table statistics

[ER_NOT_IMPLEMENTED_GET_TABLESPACE_STATISTICS](#) was added in 8.0.11.

- Error: 11272 SQLSTATE: HY000 ([ER_SSL_FIPS_MODE_ERROR](#))

Message: SSL fips mode error: %s

[ER_SSL_FIPS_MODE_ERROR](#) was added in 8.0.11.

- Error: 11273 SQLSTATE: HY000 ([ER_CONN_INIT_CONNECT_IGNORED](#))

Message: init_connect variable is ignored for user: %s host: %s due to expired password.

[ER_CONN_INIT_CONNECT_IGNORED](#) was added in 8.0.11.

- Error: 11274 SQLSTATE: HY000 ([ER_UNSUPPORTED_SQL_MODE](#))

Message: sql_mode=0x%08x is not supported

[ER_UNSUPPORTED_SQL_MODE](#) was added in 8.0.11.

- Error: 11275 SQLSTATE: HY000 ([ER_REWRITER_OOM](#))

Message: Out of memory.

[ER_REWRITER_OOM](#) was added in 8.0.11.

- Error: 11276 SQLSTATE: HY000 ([ER_REWRITER_TABLE_MALFORMED_ERROR](#))

Message: Wrong column count or names when loading rules.

[ER_REWRITER_TABLE_MALFORMED_ERROR](#) was added in 8.0.11.

- Error: 11277 SQLSTATE: HY000 ([ER_REWRITER_LOAD_FAILED](#))

Message: Some rules failed to load.

[ER_REWRITER_LOAD_FAILED](#) was added in 8.0.11.

- Error: 11278 SQLSTATE: HY000 ([ER_REWRITER_READ_FAILED](#))

Message: Got error from storage engine while refreshing rewrite rules.

[ER_REWRITER_READ_FAILED](#) was added in 8.0.11.

- Error: 11279 SQLSTATE: HY000 ([ER_CONN_CONTROL_EVENT_COORDINATOR_INIT_FAILED](#))

Message: Failed to initialize Connection_event_coordinator

[ER_CONN_CONTROL_EVENT_COORDINATOR_INIT_FAILED](#) was added in 8.0.11.

- Error: 11280 SQLSTATE: HY000
([ER_CONN_CONTROL_STAT_CONN_DELAY_TRIGGERED_UPDATE_FAILED](#))

Message: Failed to update connection delay triggered stats

[ER_CONN_CONTROL_STAT_CONN_DELAY_TRIGGERED_UPDATE_FAILED](#) was added in 8.0.11.

- Error: 11281 SQLSTATE: HY000 (ER_CONN_CONTROL_STAT_CONN_DELAY_TRIGGERED_RESET_FAILED)
Message: Failed to reset connection delay triggered stats
ER_CONN_CONTROL_STAT_CONN_DELAY_TRIGGERED_RESET_FAILED was added in 8.0.11.
- Error: 11282 SQLSTATE: HY000 (ER_CONN_CONTROL_INVALID_CONN_DELAY_TYPE)
Message: Unexpected option type for connection delay.
ER_CONN_CONTROL_INVALID_CONN_DELAY_TYPE was added in 8.0.11.
- Error: 11283 SQLSTATE: HY000 (ER_CONN_CONTROL_DELAY_ACTION_INIT_FAILED)
Message: Failed to initialize Connection_delay_action
ER_CONN_CONTROL_DELAY_ACTION_INIT_FAILED was added in 8.0.11.
- Error: 11284 SQLSTATE: HY000 (ER_CONN_CONTROL_FAILED_TO_SET_CONN_DELAY)
Message: Could not set %s delay for connection delay.
ER_CONN_CONTROL_FAILED_TO_SET_CONN_DELAY was added in 8.0.11.
- Error: 11285 SQLSTATE: HY000 (ER_CONN_CONTROL_FAILED_TO_UPDATE_CONN_DELAY_HASH)
Message: Failed to update connection delay hash for account : %s
ER_CONN_CONTROL_FAILED_TO_UPDATE_CONN_DELAY_HASH was added in 8.0.11.
- Error: 11286 SQLSTATE: HY000 (ER_XPLUGIN_FORCE_STOP_CLIENT)
Message: %s: Force stopping client because exception occurred: %s
ER_XPLUGIN_FORCE_STOP_CLIENT was added in 8.0.11.
- Error: 11287 SQLSTATE: HY000 (ER_XPLUGIN_MAX_AUTH_ATTEMPTS_REACHED)
Message: %s.%u: Maximum number of authentication attempts reached, login failed.
ER_XPLUGIN_MAX_AUTH_ATTEMPTS_REACHED was added in 8.0.11.
- Error: 11288 SQLSTATE: HY000 (ER_XPLUGIN_BUFFER_PAGE_ALLOC_FAILED)
Message: Error allocating Buffer_page: %s
ER_XPLUGIN_BUFFER_PAGE_ALLOC_FAILED was added in 8.0.11.
- Error: 11289 SQLSTATE: HY000 (ER_XPLUGIN_DETECTED_HANGING_CLIENTS)
Message: Detected %u hanging client(s)
ER_XPLUGIN_DETECTED_HANGING_CLIENTS was added in 8.0.11.
- Error: 11290 SQLSTATE: HY000 (ER_XPLUGIN_FAILED_TO_ACCEPT_CLIENT)
Message: Error accepting client
ER_XPLUGIN_FAILED_TO_ACCEPT_CLIENT was added in 8.0.11.

- Error: 11291 SQLSTATE: HY000 (ER_XPLUGIN_FAILED_TO_SCHEDULE_CLIENT)
Message: Internal error scheduling client for execution
[ER_XPLUGIN_FAILED_TO_SCHEDULE_CLIENT](#) was added in 8.0.11.
- Error: 11292 SQLSTATE: HY000 (ER_XPLUGIN_FAILED_TO_PREPARE_IO_INTERFACES)
Message: Preparation of I/O interfaces failed, X Protocol won't be accessible
[ER_XPLUGIN_FAILED_TO_PREPARE_IO_INTERFACES](#) was added in 8.0.11.
- Error: 11293 SQLSTATE: HY000 (ER_XPLUGIN_SRV_SESSION_INIT_THREAD_FAILED)
Message: srv_session_init_thread returned error
[ER_XPLUGIN_SRV_SESSION_INIT_THREAD_FAILED](#) was added in 8.0.11.
- Error: 11294 SQLSTATE: HY000 (ER_XPLUGIN_UNABLE_TO_USE_USER_SESSION_ACCOUNT)
Message: Unable to use user mysql.session account when connecting the server for internal plugin requests.
[ER_XPLUGIN_UNABLE_TO_USE_USER_SESSION_ACCOUNT](#) was added in 8.0.11.
- Error: 11295 SQLSTATE: HY000 (ER_XPLUGIN_REFERENCE_TO_USER_ACCOUNT_DOC_SECTION)
Message: For more information, please see the X Plugin User Account section in the MySQL documentation
[ER_XPLUGIN_REFERENCE_TO_USER_ACCOUNT_DOC_SECTION](#) was added in 8.0.11.
- Error: 11296 SQLSTATE: HY000 (ER_XPLUGIN_UNEXPECTED_EXCEPTION_DISPATCHING_CMD)
Message: %s: Unexpected exception dispatching command: %s
[ER_XPLUGIN_UNEXPECTED_EXCEPTION_DISPATCHING_CMD](#) was added in 8.0.11.
- Error: 11297 SQLSTATE: HY000 (ER_XPLUGIN_EXCEPTION_IN_TASK_SCHEDULER)
Message: Exception in post: %s
[ER_XPLUGIN_EXCEPTION_IN_TASK_SCHEDULER](#) was added in 8.0.11.
- Error: 11298 SQLSTATE: HY000 (ER_XPLUGIN_TASK_SCHEDULING_FAILED)
Message: Internal error scheduling task
[ER_XPLUGIN_TASK_SCHEDULING_FAILED](#) was added in 8.0.11.
- Error: 11299 SQLSTATE: HY000 (ER_XPLUGIN_EXCEPTION_IN_EVENT_LOOP)
Message: Exception in event loop: "%s": %s
[ER_XPLUGIN_EXCEPTION_IN_EVENT_LOOP](#) was added in 8.0.11.
- Error: 11300 SQLSTATE: HY000 (ER_XPLUGIN_LISTENER_SETUP_FAILED)
Message: Setup of %s failed, %s

`ER_XPLUGIN_LISTENER_SETUP_FAILED` was added in 8.0.11.

- Error: 11301 SQLSTATE: HY000 (`ER_XPLUING_NET_STARTUP_FAILED`)

Message: %s

`ER_XPLUING_NET_STARTUP_FAILED` was added in 8.0.11.

- Error: 11302 SQLSTATE: HY000 (`ER_XPLUGIN_FAILED_AT_SSL_CONF`)

Message: Failed at SSL configuration: "%s"

`ER_XPLUGIN_FAILED_AT_SSL_CONF` was added in 8.0.11.

- Error: 11303 SQLSTATE: HY000 (`ER_XPLUGIN_CLIENT_SSL_HANDSHAKE_FAILED`)

Message: Error during SSL handshake for client connection (%i)

`ER_XPLUGIN_CLIENT_SSL_HANDSHAKE_FAILED` was added in 8.0.11, removed after 8.0.12.

- Error: 11304 SQLSTATE: HY000 (`ER_XPLUGIN_SSL_HANDSHAKE_WITH_SERVER_FAILED`)

Message: %s: Error during SSL handshake

`ER_XPLUGIN_SSL_HANDSHAKE_WITH_SERVER_FAILED` was added in 8.0.11, removed after 8.0.12.

- Error: 11305 SQLSTATE: HY000 (`ER_XPLUGIN_FAILED_TO_CREATE_SESSION_FOR_CONN`)

Message: %s: Error creating session for connection from %s

`ER_XPLUGIN_FAILED_TO_CREATE_SESSION_FOR_CONN` was added in 8.0.11.

- Error: 11306 SQLSTATE: HY000 (`ER_XPLUGIN_FAILED_TO_INITIALIZE_SESSION`)

Message: %s: Error initializing session for connection: %s

`ER_XPLUGIN_FAILED_TO_INITIALIZE_SESSION` was added in 8.0.11.

- Error: 11307 SQLSTATE: HY000 (`ER_XPLUGIN_MESSAGE_TOO_LONG`)

Message: %s: Message of size %u received, exceeding the limit of %i

`ER_XPLUGIN_MESSAGE_TOO_LONG` was added in 8.0.11.

- Error: 11308 SQLSTATE: HY000 (`ER_XPLUGIN_UNINITIALIZED_MESSAGE`)

Message: Message is not properly initialized: %s

`ER_XPLUGIN_UNINITIALIZED_MESSAGE` was added in 8.0.11.

- Error: 11309 SQLSTATE: HY000 (`ER_XPLUGIN_FAILED_TO_SET_MIN_NUMBER_OF_WORKERS`)

Message: Unable to set minimal number of workers to %u; actual value is %i

`ER_XPLUGIN_FAILED_TO_SET_MIN_NUMBER_OF_WORKERS` was added in 8.0.11.

- Error: 11310 SQLSTATE: HY000 (`ER_XPLUGIN_UNABLE_TO_ACCEPT_CONNECTION`)

Message: Unable to accept connection, disconnecting client

`ER_XPLUGIN_UNABLE_TO_ACCEPT_CONNECTION` was added in 8.0.11.

- Error: 11311 SQLSTATE: HY000 (`ER_XPLUGIN_ALL_IO_INTERFACES_DISABLED`)

Message: All I/O interfaces are disabled, X Protocol won't be accessible

`ER_XPLUGIN_ALL_IO_INTERFACES_DISABLED` was added in 8.0.11.

- Error: 11312 SQLSTATE: HY000 (`ER_XPLUGIN_INVALID_MSG_DURING_CLIENT_INIT`)

Message: %s: Invalid message %i received during client initialization

`ER_XPLUGIN_INVALID_MSG_DURING_CLIENT_INIT` was added in 8.0.11, removed after 8.0.12.

- Error: 11313 SQLSTATE: HY000 (`ER_XPLUGIN_CLOSING_CLIENTS_ON_SHUTDOWN`)

Message: %s: closing client because of shutdown (state: %i)

`ER_XPLUGIN_CLOSING_CLIENTS_ON_SHUTDOWN` was added in 8.0.11, removed after 8.0.12.

- Error: 11314 SQLSTATE: HY000 (`ER_XPLUGIN_ERROR_READING_SOCKET`)

Message: %s: Error reading from socket %s (%i)

`ER_XPLUGIN_ERROR_READING_SOCKET` was added in 8.0.11.

- Error: 11315 SQLSTATE: HY000
(`ER_XPLUGIN_PEER_DISCONNECTED_WHILE_READING_MSG_BODY`)

Message: %s: peer disconnected while reading message body

`ER_XPLUGIN_PEER_DISCONNECTED_WHILE_READING_MSG_BODY` was added in 8.0.11.

- Error: 11316 SQLSTATE: HY000 (`ER_XPLUGIN_READ_FAILED_CLOSING_CONNECTION`)

Message: client_id:%s - %s while reading from socket, closing connection

`ER_XPLUGIN_READ_FAILED_CLOSING_CONNECTION` was added in 8.0.11.

- Error: 11317 SQLSTATE: HY000 (`ER_XPLUGIN_INVALID_AUTH_METHOD`)

Message: %s.%u: Invalid authentication method %s

`ER_XPLUGIN_INVALID_AUTH_METHOD` was added in 8.0.11, removed after 8.0.12.

- Error: 11318 SQLSTATE: HY000 (`ER_XPLUGIN_UNEXPECTED_MSG_DURING_AUTHENTICATION`)

Message: %s: Unexpected message of type %i received during authentication

`ER_XPLUGIN_UNEXPECTED_MSG_DURING_AUTHENTICATION` was added in 8.0.11, removed after 8.0.12.

- Error: 11319 SQLSTATE: HY000 (`ER_XPLUGIN_ERROR_WRITING_TO_CLIENT`)

Message: Error writing to client: %s (%i)

`ER_XPLUGIN_ERROR_WRITING_TO_CLIENT` was added in 8.0.11, removed after 8.0.12.

- Error: 11320 SQLSTATE: HY000 (`ER_XPLUGIN_SCHEDULER_STARTED`)

Message: Scheduler "%s" started.

[ER_XPLUGIN_SCHEDULER_STARTED](#) was added in 8.0.11, removed after 8.0.12.

- Error: 11321 SQLSTATE: HY000 ([ER_XPLUGIN_SCHEDULER_STOPPED](#))

Message: Scheduler "%s" stopped.

[ER_XPLUGIN_SCHEDULER_STOPPED](#) was added in 8.0.11, removed after 8.0.12.

- Error: 11322 SQLSTATE: HY000 ([ER_XPLUGIN_LISTENER_SYS_VARIABLE_ERROR](#))

Message: Please see the MySQL documentation for '%s' system variables to fix the error

[ER_XPLUGIN_LISTENER_SYS_VARIABLE_ERROR](#) was added in 8.0.11.

- Error: 11323 SQLSTATE: HY000 ([ER_XPLUGIN_LISTENER_STATUS_MSG](#))

Message: X Plugin ready for connections. %s

[ER_XPLUGIN_LISTENER_STATUS_MSG](#) was added in 8.0.11.

- Error: 11324 SQLSTATE: HY000 ([ER_XPLUGIN_RETRYING_BIND_ON_PORT](#))

Message: Retrying `bind()` on TCP/IP port %i

[ER_XPLUGIN_RETRYING_BIND_ON_PORT](#) was added in 8.0.11.

- Error: 11325 SQLSTATE: HY000 ([ER_XPLUGIN_SHUTDOWN_TRIGGERED](#))

Message: Shutdown triggered by mysqld abort flag

[ER_XPLUGIN_SHUTDOWN_TRIGGERED](#) was added in 8.0.11, removed after 8.0.12.

- Error: 11326 SQLSTATE: HY000 ([ER_XPLUGIN_USER_ACCOUNT_WITH_ALL_PERMISSIONS](#))

Message: Using %s account for authentication which has all required permissions

[ER_XPLUGIN_USER_ACCOUNT_WITH_ALL_PERMISSIONS](#) was added in 8.0.11, removed after 8.0.12.

- Error: 11327 SQLSTATE: HY000 ([ER_XPLUGIN_EXISTING_USER_ACCOUNT_WITH_INCOMPLETE_GRANTS](#))

Message: Using existing %s account for authentication. Incomplete grants will be fixed

[ER_XPLUGIN_EXISTING_USER_ACCOUNT_WITH_INCOMPLETE_GRANTS](#) was added in 8.0.11.

- Error: 11328 SQLSTATE: HY000 ([ER_XPLUGIN_SERVER_STARTS_HANDLING_CONNECTIONS](#))

Message: Server starts handling incoming connections

[ER_XPLUGIN_SERVER_STARTS_HANDLING_CONNECTIONS](#) was added in 8.0.11, removed after 8.0.12.

- Error: 11329 SQLSTATE: HY000 ([ER_XPLUGIN_SERVER_STOPPED_HANDLING_CONNECTIONS](#))

Message: Stopped handling incoming connections

[ER_XPLUGIN_SERVER_STOPPED_HANDLING_CONNECTIONS](#) was added in 8.0.11, removed after 8.0.12.

- Error: 11330 SQLSTATE: HY000 (ER_XPLUGIN_FAILED_TO_INTERRUPT_SESSION)
Message: %s: Could not interrupt client session
[ER_XPLUGIN_FAILED_TO_INTERRUPT_SESSION](#) was added in 8.0.11, removed after 8.0.12.
- Error: 11331 SQLSTATE: HY000 (ER_XPLUGIN_CLIENT_RELEASE_TRIGGERED)
Message: %s: release triggered by timeout in state:%i
[ER_XPLUGIN_CLIENT_RELEASE_TRIGGERED](#) was added in 8.0.11, removed after 8.0.12.
- Error: 11332 SQLSTATE: HY000 (ER_XPLUGIN_IPv6_AVAILABLE)
Message: IPv6 is available
[ER_XPLUGIN_IPv6_AVAILABLE](#) was added in 8.0.11.
- Error: 11333 SQLSTATE: HY000 (ER_XPLUGIN_UNIX_SOCKET_NOT_CONFIGURED)
Message: UNIX socket not configured
[ER_XPLUGIN_UNIX_SOCKET_NOT_CONFIGURED](#) was added in 8.0.11, removed after 8.0.12.
- Error: 11334 SQLSTATE: HY000 (ER_XPLUGIN_CLIENT_KILL_MSG)
Message: Kill client: %i %s
[ER_XPLUGIN_CLIENT_KILL_MSG](#) was added in 8.0.11.
- Error: 11335 SQLSTATE: HY000 (ER_XPLUGIN_FAILED_TO_GET_SECURITY_CTX)
Message: Could not get security context for session
[ER_XPLUGIN_FAILED_TO_GET_SECURITY_CTX](#) was added in 8.0.11.
- Error: 11336 SQLSTATE: HY000 (ER_XPLUGIN_FAILED_TO_SWITCH_SECURITY_CTX_TO_ROOT)
Message: Unable to switch security context to root
[ER_XPLUGIN_FAILED_TO_SWITCH_SECURITY_CTX_TO_ROOT](#) was added in 8.0.11, removed after 8.0.12.
- Error: 11337 SQLSTATE: HY000 (ER_XPLUGIN_FAILED_TO_CLOSE_SQL_SESSION)
Message: Error closing SQL session
[ER_XPLUGIN_FAILED_TO_CLOSE_SQL_SESSION](#) was added in 8.0.11.
- Error: 11338 SQLSTATE: HY000 (ER_XPLUGIN_FAILED_TO_EXECUTE_ADMIN_CMD)
Message: Error executing admin command %s: %s
[ER_XPLUGIN_FAILED_TO_EXECUTE_ADMIN_CMD](#) was added in 8.0.11.
- Error: 11339 SQLSTATE: HY000 (ER_XPLUGIN_EMPTY_ADMIN_CMD)
Message: Error executing empty admin command
[ER_XPLUGIN_EMPTY_ADMIN_CMD](#) was added in 8.0.11.

- Error: 11340 SQLSTATE: HY000 ([ER_XPLUGIN_FAILED_TO_GET_SYS_VAR](#))
Message: Unable to retrieve system variable '%s'
[ER_XPLUGIN_FAILED_TO_GET_SYS_VAR](#) was added in 8.0.11.
- Error: 11341 SQLSTATE: HY000 ([ER_XPLUGIN_FAILED_TO_GET_CREATION_STMT](#))
Message: Unable to get creation stmt for collection '%s'; query result size: %lu
[ER_XPLUGIN_FAILED_TO_GET_CREATION_STMT](#) was added in 8.0.11.
- Error: 11342 SQLSTATE: HY000 ([ER_XPLUGIN_FAILED_TO_GET_ENGINE_INFO](#))
Message: Unable to get engine info for collection '%s'; creation stmt: %s
[ER_XPLUGIN_FAILED_TO_GET_ENGINE_INFO](#) was added in 8.0.11.
- Error: 11343 SQLSTATE: HY000 ([ER_XPLUGIN_FAIL_TO_GET_RESULT_DATA](#))
Message: Error getting result data: %s
[ER_XPLUGIN_FAIL_TO_GET_RESULT_DATA](#) was added in 8.0.11, removed after 8.0.12.
- Error: 11344 SQLSTATE: HY000 ([ER_XPLUGIN_CAPABILITY_EXPIRED_PASSWORD](#))
Message: Capability expired password failed with error: %s
[ER_XPLUGIN_CAPABILITY_EXPIRED_PASSWORD](#) was added in 8.0.11, removed after 8.0.12.
- Error: 11345 SQLSTATE: HY000 ([ER_XPLUGIN_FAILED_TO_SET_SO_REUSEADDR_FLAG](#))
Message: Failed to set SO_REUSEADDR flag (error: %d).
[ER_XPLUGIN_FAILED_TO_SET_SO_REUSEADDR_FLAG](#) was added in 8.0.11.
- Error: 11346 SQLSTATE: HY000 ([ER_XPLUGIN_FAILED_TO_OPEN_INTERNAL_SESSION](#))
Message: Could not open internal MySQL session
[ER_XPLUGIN_FAILED_TO_OPEN_INTERNAL_SESSION](#) was added in 8.0.11.
- Error: 11347 SQLSTATE: HY000 ([ER_XPLUGIN_FAILED_TO_SWITCH_CONTEXT](#))
Message: Unable to switch context to user %s
[ER_XPLUGIN_FAILED_TO_SWITCH_CONTEXT](#) was added in 8.0.11.
- Error: 11348 SQLSTATE: HY000 ([ER_XPLUGIN_FAILED_TO_UNREGISTER_UDF](#))
Message: Can't unregister '%s' user defined function
[ER_XPLUGIN_FAILED_TO_UNREGISTER_UDF](#) was added in 8.0.11.
- Error: 11349 SQLSTATE: HY000 ([ER_XPLUGIN_GET_PEER_ADDRESS_FAILED](#))
Message: %s: get peer address failed, can't resolve IP to hostname
[ER_XPLUGIN_GET_PEER_ADDRESS_FAILED](#) was added in 8.0.11, removed after 8.0.12.

- Error: 11350 SQLSTATE: HY000 (ER_XPLUGIN_CAPABILITY_CLIENT_INTERACTIVE_FAILED)
Message: Capability client interactive failed with error: %s
[ER_XPLUGIN_CAPABILITY_CLIENT_INTERACTIVE_FAILED](#) was added in 8.0.11, removed after 8.0.12.
- Error: 11351 SQLSTATE: HY000 (ER_XPLUGIN_FAILED_TO_RESET_IPV6_V6ONLY_FLAG)
Message: Failed to reset IPV6_V6ONLY flag (error: %d). The server will listen to IPv6 addresses only.
[ER_XPLUGIN_FAILED_TO_RESET_IPV6_V6ONLY_FLAG](#) was added in 8.0.11.
- Error: 11352 SQLSTATE: HY000 (ER_KEYRING_INVALID_KEY_TYPE)
Message: Invalid key type
[ER_KEYRING_INVALID_KEY_TYPE](#) was added in 8.0.11.
- Error: 11353 SQLSTATE: HY000 (ER_KEYRING_INVALID_KEY_LENGTH)
Message: Invalid key length for given block cipher
[ER_KEYRING_INVALID_KEY_LENGTH](#) was added in 8.0.11.
- Error: 11354 SQLSTATE: HY000 (ER_KEYRING_FAILED_TO_CREATE_KEYRING_DIR)
Message: Could not create keyring directory. The keyring_file will stay unusable until correct path to the keyring directory gets provided
[ER_KEYRING_FAILED_TO_CREATE_KEYRING_DIR](#) was added in 8.0.11.
- Error: 11355 SQLSTATE: HY000 (ER_KEYRING_FILE_INIT_FAILED)
Message: keyring_file initialization failure. Please check if the keyring_file_data points to readable keyring file or keyring file can be created in the specified location. The keyring_file will stay unusable until correct path to the keyring file gets provided
[ER_KEYRING_FILE_INIT_FAILED](#) was added in 8.0.11.
- Error: 11356 SQLSTATE: HY000 (ER_KEYRING_INTERNAL_EXCEPTION_FAILED_FILE_INIT)
Message: keyring_file initialization failure due to internal exception inside the plugin.
[ER_KEYRING_INTERNAL_EXCEPTION_FAILED_FILE_INIT](#) was added in 8.0.11.
- Error: 11357 SQLSTATE: HY000 (ER_KEYRING_FAILED_TO_GENERATE_KEY)
Message: Failed to generate a key due to internal exception inside keyring_file plugin
[ER_KEYRING_FAILED_TO_GENERATE_KEY](#) was added in 8.0.11.
- Error: 11358 SQLSTATE: HY000 (ER_KEYRING_CHECK_KEY_FAILED_DUE_TO_INVALID_KEY)
Message: Error while %s key: invalid key_type
[ER_KEYRING_CHECK_KEY_FAILED_DUE_TO_INVALID_KEY](#) was added in 8.0.11.
- Error: 11359 SQLSTATE: HY000 (ER_KEYRING_CHECK_KEY_FAILED_DUE_TO_EMPTY_KEY_ID)

Message: Error while %s key: key_id cannot be empty

[ER_KEYRING_CHECK_KEY_FAILED_DUE_TO_EMPTY_KEY_ID](#) was added in 8.0.11.

- Error: 11360 SQLSTATE: HY000 ([ER_KEYRING_OPERATION_FAILED_DUE_TO_INTERNAL_ERROR](#))

Message: Failed to %s due to internal exception inside %s plugin

[ER_KEYRING_OPERATION_FAILED_DUE_TO_INTERNAL_ERROR](#) was added in 8.0.11.

- Error: 11361 SQLSTATE: HY000 ([ER_KEYRING_INCORRECT_FILE](#))

Message: Incorrect Keyring file

[ER_KEYRING_INCORRECT_FILE](#) was added in 8.0.11.

- Error: 11362 SQLSTATE: HY000 ([ER_KEYRING_FOUND_MALFORMED_BACKUP_FILE](#))

Message: Found malformed keyring backup file - removing it

[ER_KEYRING_FOUND_MALFORMED_BACKUP_FILE](#) was added in 8.0.11.

- Error: 11363 SQLSTATE: HY000 ([ER_KEYRING_FAILED_TO_RESTORE_FROM_BACKUP_FILE](#))

Message: Error while restoring keyring from backup file cannot overwrite keyring with backup

[ER_KEYRING_FAILED_TO_RESTORE_FROM_BACKUP_FILE](#) was added in 8.0.11.

- Error: 11364 SQLSTATE: HY000 ([ER_KEYRING_FAILED_TO_FLUSH_KEYRING_TO_FILE](#))

Message: Error while flushing in-memory keyring into keyring file

[ER_KEYRING_FAILED_TO_FLUSH_KEYRING_TO_FILE](#) was added in 8.0.11.

- Error: 11365 SQLSTATE: HY000 ([ER_KEYRING_FAILED_TO_GET_FILE_STAT](#))

Message: Error while reading stat for %s. Please check if file %s was not removed. OS returned this error: %s

[ER_KEYRING_FAILED_TO_GET_FILE_STAT](#) was added in 8.0.11.

- Error: 11366 SQLSTATE: HY000 ([ER_KEYRING_FAILED_TO_REMOVE_FILE](#))

Message: Could not remove file %s OS returned this error: %s

[ER_KEYRING_FAILED_TO_REMOVE_FILE](#) was added in 8.0.11.

- Error: 11367 SQLSTATE: HY000 ([ER_KEYRING_FAILED_TO_TRUNCATE_FILE](#))

Message: Could not truncate file %s. OS returned this error: %s

[ER_KEYRING_FAILED_TO_TRUNCATE_FILE](#) was added in 8.0.11.

- Error: 11368 SQLSTATE: HY000 ([ER_KEYRING_UNKNOWN_ERROR](#))

Message: Unknown error %d

[ER_KEYRING_UNKNOWN_ERROR](#) was added in 8.0.11.

- Error: 11369 SQLSTATE: HY000 (ER_KEYRING_FAILED_TO_SET_KEYRING_FILE_DATA)
Message: keyring_file_data cannot be set to new value as the keyring file cannot be created/accessed in the provided path

ER_KEYRING_FAILED_TO_SET_KEYRING_FILE_DATA was added in 8.0.11.
- Error: 11370 SQLSTATE: HY000 (ER_KEYRING_FILE_IO_ERROR)
Message: %s

ER_KEYRING_FILE_IO_ERROR was added in 8.0.11.
- Error: 11371 SQLSTATE: HY000 (ER_KEYRING_FAILED_TO_LOAD_KEYRING_CONTENT)
Message: Error while loading keyring content. The keyring might be malformed

ER_KEYRING_FAILED_TO_LOAD_KEYRING_CONTENT was added in 8.0.11.
- Error: 11372 SQLSTATE: HY000 (ER_KEYRING_FAILED_TO_FLUSH_KEYS_TO_KEYRING)
Message: Could not flush keys to keyring

ER_KEYRING_FAILED_TO_FLUSH_KEYS_TO_KEYRING was added in 8.0.11.
- Error: 11373 SQLSTATE: HY000 (ER_KEYRING_FAILED_TO_FLUSH_KEYS_TO_KEYRING_BACKUP)
Message: Could not flush keys to keyring's backup

ER_KEYRING_FAILED_TO_FLUSH_KEYS_TO_KEYRING_BACKUP was added in 8.0.11.
- Error: 11374 SQLSTATE: HY000 (ER_KEYRING_KEY_FETCH_FAILED_DUE_TO_EMPTY_KEY_ID)
Message: Error while fetching key: key_id cannot be empty

ER_KEYRING_KEY_FETCH_FAILED_DUE_TO_EMPTY_KEY_ID was added in 8.0.11.
- Error: 11375 SQLSTATE: HY000 (ER_KEYRING_FAILED_TO_REMOVE_KEY_DUE_TO_EMPTY_ID)
Message: Error while removing key: key_id cannot be empty

ER_KEYRING_FAILED_TO_REMOVE_KEY_DUE_TO_EMPTY_ID was added in 8.0.11.
- Error: 11376 SQLSTATE: HY000 (ER_KEYRING_OKV_INCORRECT_KEY_VAULT_CONFIGURED)
Message: For keyring_okv to be initialized, please point keyring_okv_conf_dir variable to a directory with Oracle Key Vault configuration file and ssl materials

ER_KEYRING_OKV_INCORRECT_KEY_VAULT_CONFIGURED was added in 8.0.11.
- Error: 11377 SQLSTATE: HY000 (ER_KEYRING_OKV_INIT_FAILED_DUE_TO_INCORRECT_CONF)
Message: keyring_okv initialization failure. Please check that the keyring_okv_conf_dir points to a readable directory and that the directory contains Oracle Key Vault configuration file and ssl materials. Please also check that Oracle Key Vault is up and running.

ER_KEYRING_OKV_INIT_FAILED_DUE_TO_INCORRECT_CONF was added in 8.0.11.
- Error: 11378 SQLSTATE: HY000 (ER_KEYRING_OKV_INIT_FAILED_DUE_TO_INTERNAL_ERROR)

Message: keyring_okv initialization failure due to internal exception inside the plugin

[ER_KEYRING_OKV_INIT_FAILED_DUE_TO_INTERNAL_ERROR](#) was added in 8.0.11.

- Error: 11379 SQLSTATE: HY000 ([ER_KEYRING_OKV_INVALID_KEY_TYPE](#))

Message: Invalid key type

[ER_KEYRING_OKV_INVALID_KEY_TYPE](#) was added in 8.0.11.

- Error: 11380 SQLSTATE: HY000 ([ER_KEYRING_OKV_INVALID_KEY_LENGTH_FOR_CIPHER](#))

Message: Invalid key length for given block cipher

[ER_KEYRING_OKV_INVALID_KEY_LENGTH_FOR_CIPHER](#) was added in 8.0.11.

Message: Could not find entry for server in configuration file %s

[ER_KEYRING_OKV_FAILED_TO_FIND_SERVER_ENTRY](#) was added in 8.0.11.

- Error: 11383 SQLSTATE: HY000 ([ER_KEYRING_OKV_FAILED_TO_FIND_STANDBY_SERVER_ENTRY](#))

Message: Could not find entry for standby server in configuration file %s

[ER_KEYRING_OKV_FAILED_TO_FIND_STANDBY_SERVER_ENTRY](#) was added in 8.0.11.

- Error: 11384 SQLSTATE: HY000 ([ER_KEYRING_OKV_FAILED_TO_PARSE_CONF_FILE](#))

Message: Could not parse the %s file provided

[ER_KEYRING_OKV_FAILED_TO_PARSE_CONF_FILE](#) was added in 8.0.11.

- Error: 11385 SQLSTATE: HY000 ([ER_KEYRING_OKV_FAILED_TO_LOAD_KEY_UID](#))

Message: Could not load keys' uids from the OKV server

[ER_KEYRING_OKV_FAILED_TO_LOAD_KEY_UID](#) was added in 8.0.11.

- Error: 11386 SQLSTATE: HY000 ([ER_KEYRING_OKV_FAILED_TO_INIT_SSL_LAYER](#))

Message: Could not initialize ssl layer

[ER_KEYRING_OKV_FAILED_TO_INIT_SSL_LAYER](#) was added in 8.0.11.

- Error: 11387 SQLSTATE: HY000 ([ER_KEYRING_OKV_FAILED_TO_INIT_CLIENT](#))

Message: Could not initialize OKV client

[ER_KEYRING_OKV_FAILED_TO_INIT_CLIENT](#) was added in 8.0.11.

- Error: 11388 SQLSTATE: HY000 (ER_KEYRING_OKV_CONNECTION_TO_SERVER_FAILED)
Message: Could not connect to the OKV server
`ER_KEYRING_OKV_CONNECTION_TO_SERVER_FAILED` was added in 8.0.11.
- Error: 11389 SQLSTATE: HY000 (ER_KEYRING_OKV_FAILED_TO_REMOVE_KEY)
Message: Could not remove the key
`ER_KEYRING_OKV_FAILED_TO_REMOVE_KEY` was added in 8.0.11.
- Error: 11390 SQLSTATE: HY000 (ER_KEYRING_OKV_FAILED_TO_ADD_ATTRIBUTE)
Message: Could not add attribute, attribute_name=%s attribute value=%s
`ER_KEYRING_OKV_FAILED_TO_ADD_ATTRIBUTE` was added in 8.0.11.
- Error: 11391 SQLSTATE: HY000 (ER_KEYRING_OKV_FAILED_TO_GENERATE_KEY)
Message: Could not generate the key.
`ER_KEYRING_OKV_FAILED_TO_GENERATE_KEY` was added in 8.0.11.
- Error: 11392 SQLSTATE: HY000 (ER_KEYRING_OKV_FAILED_TO_STORE_KEY)
Message: Could not store the key.
`ER_KEYRING_OKV_FAILED_TO_STORE_KEY` was added in 8.0.11.
- Error: 11393 SQLSTATE: HY000 (ER_KEYRING_OKV_FAILED_TO_ACTIVATE_KEYS)
Message: Could not activate the key.
`ER_KEYRING_OKV_FAILED_TO_ACTIVATE_KEYS` was added in 8.0.11.
- Error: 11394 SQLSTATE: HY000 (ER_KEYRING_OKV_FAILED_TO_FETCH_KEY)
Message: Could not fetch generated key
`ER_KEYRING_OKV_FAILED_TO_FETCH_KEY` was added in 8.0.11.
- Error: 11395 SQLSTATE: HY000 (ER_KEYRING_OKV_FAILED_TO_STORE_OR_GENERATE_KEY)
Message: Could not store/generate the key - failed to set key attribute x-key-ready
`ER_KEYRING_OKV_FAILED_TO_STORE_OR_GENERATE_KEY` was added in 8.0.11.
- Error: 11396 SQLSTATE: HY000 (ER_KEYRING_OKV_FAILED_TO_RETRIEVE_KEY_SIGNATURE)
Message: Could not retrieve key signature from custom attributes
`ER_KEYRING_OKV_FAILED_TO_RETRIEVE_KEY_SIGNATURE` was added in 8.0.11.
- Error: 11397 SQLSTATE: HY000 (ER_KEYRING_OKV_FAILED_TO_RETRIEVE_KEY)
Message: Could not retrieve key from OKV
`ER_KEYRING_OKV_FAILED_TO_RETRIEVE_KEY` was added in 8.0.11.

- Error: 11398 SQLSTATE: HY000 (ER_KEYRING_OKV_FAILED_TO_LOAD_SSL_TRUST_STORE)
Message: Error loading trust store

ER_KEYRING_OKV_FAILED_TO_LOAD_SSL_TRUST_STORE was added in 8.0.11.
- Error: 11399 SQLSTATE: HY000 (ER_KEYRING_OKV_FAILED_TO_SET_CERTIFICATE_FILE)
Message: Error setting the certificate file.

ER_KEYRING_OKV_FAILED_TO_SET_CERTIFICATE_FILE was added in 8.0.11.
- Error: 11400 SQLSTATE: HY000 (ER_KEYRING_OKV_FAILED_TO_SET_KEY_FILE)
Message: Error setting the key file.

ER_KEYRING_OKV_FAILED_TO_SET_KEY_FILE was added in 8.0.11.
- Error: 11401 SQLSTATE: HY000 (ER_KEYRING_OKV_KEY_MISMATCH)
Message: Private key does not match the certificate public key

ER_KEYRING_OKV_KEY_MISMATCH was added in 8.0.11.
- Error: 11402 SQLSTATE: HY000 (ER_KEYRING_ENCRYPTED_FILE_INCORRECT_KEYRING_FILE)
Message: Incorrect Keyring file

ER_KEYRING_ENCRYPTED_FILE_INCORRECT_KEYRING_FILE was added in 8.0.11.
- Error: 11403 SQLSTATE: HY000 (ER_KEYRING_ENCRYPTED_FILE_DECRYPTION_FAILED)
Message: Keyring_encrypted_file decryption failed. Please verify --keyring-encrypted-file-password option value.

ER_KEYRING_ENCRYPTED_FILE_DECRYPTION_FAILED was added in 8.0.11.
- Error: 11404 SQLSTATE: HY000
(ER_KEYRING_ENCRYPTED_FILE_FOUND_MALFORMED_BACKUP_FILE)
Message: Found malformed keyring backup file - removing it

ER_KEYRING_ENCRYPTED_FILE_FOUND_MALFORMED_BACKUP_FILE was added in 8.0.11.
- Error: 11405 SQLSTATE: HY000
(ER_KEYRING_ENCRYPTED_FILE_FAILED_TO_RESTORE_KEYRING)
Message: Error while restoring keyring from backup file cannot overwrite keyring with backup

ER_KEYRING_ENCRYPTED_FILE_FAILED_TO_RESTORE_KEYRING was added in 8.0.11.
- Error: 11406 SQLSTATE: HY000 (ER_KEYRING_ENCRYPTED_FILE_FAILED_TO_FLUSH_KEYRING)
Message: Error while flushing in-memory keyring into keyring file

ER_KEYRING_ENCRYPTED_FILE_FAILED_TO_FLUSH_KEYRING was added in 8.0.11.
- Error: 11407 SQLSTATE: HY000 (ER_KEYRING_ENCRYPTED_FILE_ENCRYPTION_FAILED)

Message: Keyring_encrypted_file encryption failed. Please verify --keyring-encrypted-file-password option value.

`ER_KEYRING_ENCRYPTED_FILE_ENCRYPTION_FAILED` was added in 8.0.11.

- Error: 11408 SQLSTATE: HY000 (`ER_KEYRING_ENCRYPTED_FILE_INVALID_KEYRING_DIR`)

Message: keyring_encrypted_file_data cannot be set to new value as the keyring file cannot be created/ accessed in the provided path

`ER_KEYRING_ENCRYPTED_FILE_INVALID_KEYRING_DIR` was added in 8.0.11.

- Error: 11409 SQLSTATE: HY000 (`ER_KEYRING_ENCRYPTED_FILE_FAILED_TO_CREATE_KEYRING_DIR`)

Message: Could not create keyring directory The keyring_encrypted_file will stay unusable until correct path to the keyring directory gets provided

`ER_KEYRING_ENCRYPTED_FILE_FAILED_TO_CREATE_KEYRING_DIR` was added in 8.0.11.

- Error: 11410 SQLSTATE: HY000 (`ER_KEYRING_ENCRYPTED_FILE_PASSWORD_IS_INVALID`)

Message: The keyring_encrypted_file_password must be set to a valid value.

`ER_KEYRING_ENCRYPTED_FILE_PASSWORD_IS_INVALID` was added in 8.0.11.

- Error: 11411 SQLSTATE: HY000 (`ER_KEYRING_ENCRYPTED_FILE_PASSWORD_IS_TOO_LONG`)

Message: Too long keyring_encrypted_file_password value.

`ER_KEYRING_ENCRYPTED_FILE_PASSWORD_IS_TOO_LONG` was added in 8.0.11.

- Error: 11412 SQLSTATE: HY000 (`ER_KEYRING_ENCRYPTED_FILE_INIT_FAILURE`)

Message: keyring_encrypted_file initialization failure. Please check if the keyring_encrypted_file_data points to readable keyring file or keyring file can be created in the specified location or password to decrypt keyring file is correct.

`ER_KEYRING_ENCRYPTED_FILE_INIT_FAILURE` was added in 8.0.11.

- Error: 11413 SQLSTATE: HY000 (`ER_KEYRING_ENCRYPTED_FILE_INIT_FAILED_DUE_TO_INTERNAL_ERROR`)

Message: keyring_encrypted_file initialization failure due to internal exception inside the plugin

`ER_KEYRING_ENCRYPTED_FILE_INIT_FAILED_DUE_TO_INTERNAL_ERROR` was added in 8.0.11.

- Error: 11414 SQLSTATE: HY000 (`ER_KEYRING_ENCRYPTED_FILE_GEN_KEY_FAILED_DUE_TO_INTERNAL_ERROR`)

Message: Failed to generate a key due to internal exception inside keyring_encrypted_file plugin

`ER_KEYRING_ENCRYPTED_FILE_GEN_KEY_FAILED_DUE_TO_INTERNAL_ERROR` was added in 8.0.11.

- Error: 11415 SQLSTATE: HY000 (`ER_KEYRING_AWS_FAILED_TO_SET_CMK_ID`)

Message: keyring_aws_cmk_id cannot be set to the new value as AWS KMS seems to not understand the id provided. Please check that CMK id provided is correct.

`ER_KEYRING_AWS_FAILED_TO_SET_CMK_ID` was added in 8.0.11.

- Error: 11416 SQLSTATE: HY000 (`ER_KEYRING_AWS_FAILED_TO_SET_REGION`)

Message: keyring_aws_region cannot be set to the new value as AWS KMS seems to not understand the region provided. Please check that region provided is correct.

`ER_KEYRING_AWS_FAILED_TO_SET_REGION` was added in 8.0.11.

- Error: 11417 SQLSTATE: HY000 (`ER_KEYRING_AWS_FAILED_TO_OPEN_CONF_FILE`)

Message: Could not open keyring_aws configuration file: %s. OS returned this error: %s

`ER_KEYRING_AWS_FAILED_TO_OPEN_CONF_FILE` was added in 8.0.11.

- Error: 11418 SQLSTATE: HY000
(`ER_KEYRING_AWS_FAILED_TO_ACCESS_KEY_ID_FROM_CONF_FILE`)

Message: Could not read AWS access key id from keyring_aws configuration file: %s. OS returned this error: %s

`ER_KEYRING_AWS_FAILED_TO_ACCESS_KEY_ID_FROM_CONF_FILE` was added in 8.0.11.

- Error: 11419 SQLSTATE: HY000 (`ER_KEYRING_AWS_FAILED_TO_ACCESS_KEY_FROM_CONF_FILE`)

Message: Could not read AWS access key from keyring_aws configuration file: %s. OS returned this error: %s

`ER_KEYRING_AWS_FAILED_TO_ACCESS_KEY_FROM_CONF_FILE` was added in 8.0.11.

- Error: 11420 SQLSTATE: HY000 (`ER_KEYRING_AWS_INVALID_CONF_FILE_PATH`)

Message: Path to keyring aws configuration file cannot be empty

`ER_KEYRING_AWS_INVALID_CONF_FILE_PATH` was added in 8.0.11.

- Error: 11421 SQLSTATE: HY000 (`ER_KEYRING_AWS_INVALID_DATA_FILE_PATH`)

Message: Path to keyring_aws storage file cannot be empty.

`ER_KEYRING_AWS_INVALID_DATA_FILE_PATH` was added in 8.0.11.

- Error: 11422 SQLSTATE: HY000
(`ER_KEYRING_AWS_FAILED_TO_ACCESS_OR_CREATE_KEYRING_DIR`)

Message: Unable to create/access keyring directory.

`ER_KEYRING_AWS_FAILED_TO_ACCESS_OR_CREATE_KEYRING_DIR` was added in 8.0.11.

- Error: 11423 SQLSTATE: HY000
(`ER_KEYRING_AWS_FAILED_TO_ACCESS_OR_CREATE_KEYRING_DATA_FILE`)

Message: Unable to create/access keyring_aws storage file. Please check if keyring_aws_data_file points to location where keyring file can be created/accessed. Please also make sure that MySQL server's user has high enough privileges to access this location.

`ER_KEYRING_AWS_FAILED_TO_ACCESS_OR_CREATE_KEYRING_DATA_FILE` was added in 8.0.11.

- Error: 11424 SQLSTATE: HY000
(`ER_KEYRING_AWS_FAILED_TO_INIT_DUE_TO_INTERNAL_ERROR`)

Message: keyring_aws initialization failed due to internal error when initializing synchronization primitive
- %s. OS returned this error: %s:

`ER_KEYRING_AWS_FAILED_TO_INIT_DUE_TO_INTERNAL_ERROR` was added in 8.0.11.

- Error: 11425 SQLSTATE: HY000 (`ER_KEYRING_AWS_FAILED_TO_ACCESS_DATA_FILE`)

Message: Could not access keyring_aws storage file in the path provided. Please check if the
keyring_aws directory can be accessed by MySQL Server

`ER_KEYRING_AWS_FAILED_TO_ACCESS_DATA_FILE` was added in 8.0.11.

- Error: 11426 SQLSTATE: HY000 (`ER_KEYRING_AWS_CMK_ID_NOT_SET`)

Message: keyring_aws_cmek_id has to be set

`ER_KEYRING_AWS_CMK_ID_NOT_SET` was added in 8.0.11.

- Error: 11427 SQLSTATE: HY000
(`ER_KEYRING_AWS_FAILED_TO_GET_KMS_CREDENTIAL_FROM_CONF_FILE`)

Message: Could not get AWS KMS credentials from the configuration file

`ER_KEYRING_AWS_FAILED_TO_GET_KMS_CREDENTIAL_FROM_CONF_FILE` was added in 8.0.11.

- Error: 11428 SQLSTATE: HY000 (`ER_KEYRING_AWS_INIT_FAILURE`)

Message: keyring_aws initialization failure.

`ER_KEYRING_AWS_INIT_FAILURE` was added in 8.0.11.

- Error: 11429 SQLSTATE: HY000
(`ER_KEYRING_AWS_FAILED_TO_INIT_DUE_TO_PLUGIN_INTERNAL_ERROR`)

Message: keyring_aws initialization failure due to internal exception inside the plugin

`ER_KEYRING_AWS_FAILED_TO_INIT_DUE_TO_PLUGIN_INTERNAL_ERROR` was added in 8.0.11.

- Error: 11430 SQLSTATE: HY000 (`ER_KEYRING_AWS_INVALID_KEY_LENGTH_FOR_CIPHER`)

Message: Invalid key length for given block cipher

`ER_KEYRING_AWS_INVALID_KEY_LENGTH_FOR_CIPHER` was added in 8.0.11.

- Error: 11431 SQLSTATE: HY000
(`ER_KEYRING_AWS_FAILED_TO_GENERATE_KEY_DUE_TO_INTERNAL_ERROR`)

Message: Failed to generate a key due to internal exception inside keyring_file plugin

`ER_KEYRING_AWS_FAILED_TO_GENERATE_KEY_DUE_TO_INTERNAL_ERROR` was added in 8.0.11.

- Error: 11432 SQLSTATE: HY000 (`ER_KEYRING_AWS_INCORRECT_FILE`)

Message: Incorrect Keyring file

`ER_KEYRING_AWS_INCORRECT_FILE` was added in 8.0.11.

- Error: 11433 SQLSTATE: HY000 (`ER_KEYRING_AWS_FOUND_MALFORMED_BACKUP_FILE`)

Message: Found malformed keyring backup file - removing it

`ER_KEYRING_AWS_FOUND_MALFORMED_BACKUP_FILE` was added in 8.0.11.

- Error: 11434 SQLSTATE: HY000 (`ER_KEYRING_AWS_FAILED_TO_RESTORE_FROM_BACKUP_FILE`)

Message: Error while restoring keyring from backup file cannot overwrite keyring with backup

`ER_KEYRING_AWS_FAILED_TO_RESTORE_FROM_BACKUP_FILE` was added in 8.0.11.

- Error: 11435 SQLSTATE: HY000 (`ER_KEYRING_AWS_FAILED_TO_FLUSH_KEYRING_TO_FILE`)

Message: Error while flushing in-memory keyring into keyring file

`ER_KEYRING_AWS_FAILED_TO_FLUSH_KEYRING_TO_FILE` was added in 8.0.11.

- Error: 11436 SQLSTATE: HY000 (`ER_KEYRING_AWS_INCORRECT_REGION`)

Message: Wrong region

`ER_KEYRING_AWS_INCORRECT_REGION` was added in 8.0.11.

- Error: 11437 SQLSTATE: HY000 (`ER_KEYRING_AWS_FAILED_TO_CONNECT_KMS`)

Message: Could not connect to AWS KMS with the credentials provided. Please make sure they are correct. AWS KMS returned this error: %s

`ER_KEYRING_AWS_FAILED_TO_CONNECT_KMS` was added in 8.0.11.

- Error: 11438 SQLSTATE: HY000 (`ER_KEYRING_AWS_FAILED_TO_GENERATE_NEW_KEY`)

Message: Could not generate a new key. AWS KMS returned this error: %s

`ER_KEYRING_AWS_FAILED_TO_GENERATE_NEW_KEY` was added in 8.0.11.

- Error: 11439 SQLSTATE: HY000 (`ER_KEYRING_AWS_FAILED_TO_ENCRYPT_KEY`)

Message: Could not encrypt key. AWS KMS returned this error: %s

`ER_KEYRING_AWS_FAILED_TO_ENCRYPT_KEY` was added in 8.0.11.

- Error: 11440 SQLSTATE: HY000 (`ER_KEYRING_AWS_FAILED_TO_RE_ENCRYPT_KEY`)

Message: Could not re-encrypt key. AWS KMS returned this error: %s

`ER_KEYRING_AWS_FAILED_TO_RE_ENCRYPT_KEY` was added in 8.0.11.

- Error: 11441 SQLSTATE: HY000 (`ER_KEYRING_AWS_FAILED_TO_DECRYPT_KEY`)

Message: Could not decrypt key. AWS KMS returned this error: %s

`ER_KEYRING_AWS_FAILED_TO_DECRYPT_KEY` was added in 8.0.11.

- Error: 11442 SQLSTATE: HY000 (`ER_KEYRING_AWS_FAILED_TO_ROTATE_CMK`)

Message: Could not rotate the CMK. AWS KMS returned this error: %s

[ER_KEYRING_AWS_FAILED_TO_ROTATE_CMK](#) was added in 8.0.11.

- Error: 11443 SQLSTATE: HY000 ([ER_GRP_RPL_GTID_ALREADY_USED](#))

Message: The requested GTID '%s:%lld' was already used, the transaction will rollback.

[ER_GRP_RPL_GTID_ALREADY_USED](#) was added in 8.0.11.

- Error: 11444 SQLSTATE: HY000 ([ER_GRP_RPL_APPLIER_THD_KILLED](#))

Message: The group replication applier thread was killed.

[ER_GRP_RPL_APPLIER_THD_KILLED](#) was added in 8.0.11.

- Error: 11445 SQLSTATE: HY000 ([ER_GRP_RPL_EVENT_HANDLING_ERROR](#))

Message: Error at event handling! Got error: %d.

[ER_GRP_RPL_EVENT_HANDLING_ERROR](#) was added in 8.0.11.

- Error: 11446 SQLSTATE: HY000 ([ER_GRP_RPL_ERROR_GTID_EXECUTION_INFO](#))

Message: Error when extracting group GTID execution information, some recovery operations may face future issues.

[ER_GRP_RPL_ERROR_GTID_EXECUTION_INFO](#) was added in 8.0.11.

- Error: 11447 SQLSTATE: HY000 ([ER_GRP_RPL_CERTIFICATE_SIZE_ERROR](#))

Message: An error occurred when trying to reduce the Certification information size for transmission.

[ER_GRP_RPL_CERTIFICATE_SIZE_ERROR](#) was added in 8.0.11.

- Error: 11448 SQLSTATE: HY000 ([ER_GRP_RPL_CREATE_APPLIER_CACHE_ERROR](#))

Message: Failed to create group replication pipeline applier cache!

[ER_GRP_RPL_CREATE_APPLIER_CACHE_ERROR](#) was added in 8.0.11.

- Error: 11449 SQLSTATE: HY000 ([ER_GRP_RPL_UNBLOCK_WAITING_THD](#))

Message: Unblocking the group replication thread waiting for applier to start, as the start group replication was killed.

[ER_GRP_RPL_UNBLOCK_WAITING_THD](#) was added in 8.0.11.

- Error: 11450 SQLSTATE: HY000 ([ER_GRP_RPL_APPLIER_PIPELINE_NOT_DISPOSED](#))

Message: The group replication applier pipeline was not properly disposed. Check the error log for further info.

[ER_GRP_RPL_APPLIER_PIPELINE_NOT_DISPOSED](#) was added in 8.0.11.

- Error: 11451 SQLSTATE: HY000 ([ER_GRP_RPL_APPLIER_THD_EXECUTION_ABORTED](#))

Message: The applier thread execution was aborted. Unable to process more transactions, this member will now leave the group.

`ER_GRP_RPL_APPLIER_THD_EXECUTION_ABORTED` was added in 8.0.11.

- Error: 11452 SQLSTATE: HY000 (`ER_GRP_RPL_APPLIER_EXECUTION_FATAL_ERROR`)

Message: Fatal error during execution on the Applier process of Group Replication. The server will now leave the group.

`ER_GRP_RPL_APPLIER_EXECUTION_FATAL_ERROR` was added in 8.0.11.

- Error: 11453 SQLSTATE: HY000 (`ER_GRP_RPL_ERROR_STOPPING_CHANNELS`)

Message: Error stopping all replication channels while server was leaving the group. %s

`ER_GRP_RPL_ERROR_STOPPING_CHANNELS` was added in 8.0.11.

- Error: 11454 SQLSTATE: HY000 (`ER_GRP_RPL_ERROR_SENDING_SINGLE_PRIMARY_MSSG`)

Message: Error sending single primary message informing that primary did apply relay logs.

`ER_GRP_RPL_ERROR_SENDING_SINGLE_PRIMARY_MSSG` was added in 8.0.11.

- Error: 11455 SQLSTATE: HY000 (`ER_GRP_RPL_UPDATE_TRANS_SNAPSHOT_VER_ERROR`)

Message: Error updating transaction snapshot version after transaction being positively certified.

`ER_GRP_RPL_UPDATE_TRANS_SNAPSHOT_VER_ERROR` was added in 8.0.11.

- Error: 11456 SQLSTATE: HY000 (`ER_GRP_RPL_SIDNO_FETCH_ERROR`)

Message: Error fetching transaction sidno after transaction being positively certified.

`ER_GRP_RPL_SIDNO_FETCH_ERROR` was added in 8.0.11.

- Error: 11457 SQLSTATE: HY000 (`ER_GRP_RPL_BROADCAST_COMMIT_TRANS_MSSG_FAILED`)

Message: Broadcast of committed transactions message failed.

`ER_GRP_RPL_BROADCAST_COMMIT_TRANS_MSSG_FAILED` was added in 8.0.11.

- Error: 11458 SQLSTATE: HY000 (`ER_GRP_RPL_GROUP_NAME_PARSE_ERROR`)

Message: Unable to parse the group name during the Certification module initialization.

`ER_GRP_RPL_GROUP_NAME_PARSE_ERROR` was added in 8.0.11.

- Error: 11459 SQLSTATE: HY000 (`ER_GRP_RPL_ADD_GRP_SID_TO_GRP_GTID_SID_MAP_ERROR`)

Message: Unable to add the group_sid in the group_gtid_sid_map during the Certification module initialization.

`ER_GRP_RPL_ADD_GRP_SID_TO_GRP_GTID_SID_MAP_ERROR` was added in 8.0.11.

- Error: 11460 SQLSTATE: HY000 (`ER_GRP_RPL_UPDATE_GRP_GTID_EXECUTED_ERROR`)

Message: Error updating group_gtid_executed GITD set during the Certification module initialization.

`ER_GRP_RPL_UPDATE_GRP_GTID_EXECUTED_ERROR` was added in 8.0.11.

- Error: 11461 SQLSTATE: HY000 (`ER_GRP_RPL_DONOR_TRANS_INFO_ERROR`)

Message: Unable to handle the donor's transaction information when initializing the conflict detection component. Possible out of memory error.

`ER_GRP_RPL_DONOR_TRANS_INFO_ERROR` was added in 8.0.11.

- Error: 11462 SQLSTATE: HY000 (`ER_GRP_RPL_SERVER_CONN_ERROR`)

Message: Error when establishing a server connection during the Certification module initialization.

`ER_GRP_RPL_SERVER_CONN_ERROR` was added in 8.0.11.

- Error: 11463 SQLSTATE: HY000 (`ER_GRP_RPL_ERROR_FETCHING_GTID_EXECUTED_SET`)

Message: Error when extracting this member GTID executed set. Certification module can't be properly initialized.

`ER_GRP_RPL_ERROR_FETCHING_GTID_EXECUTED_SET` was added in 8.0.11.

- Error: 11464 SQLSTATE: HY000 (`ER_GRP_RPL_ADD_GTID_TO_GRPGTID_EXECUTED_ERROR`)

Message: Error while adding the server GTID EXECUTED set to the group_gtid_execute during the Certification module initialization.

`ER_GRP_RPL_ADD_GTID_TO_GRPGTID_EXECUTED_ERROR` was added in 8.0.11.

- Error: 11465 SQLSTATE: HY000 (`ER_GRP_RPL_ERROR_FETCHING_GTID_SET`)

Message: Error when extracting this member retrieved set for its applier. Certification module can't be properly initialized.

`ER_GRP_RPL_ERROR_FETCHING_GTID_SET` was added in 8.0.11.

- Error: 11466 SQLSTATE: HY000
(`ER_GRP_RPL_ADD_RETRIEVED_SET_TO_GRP_GTID_EXECUTED_ERROR`)

Message: Error while adding the member retrieved set to the group_gtid_executed during the Certification module initialization.

`ER_GRP_RPL_ADD_RETRIEVED_SET_TO_GRP_GTID_EXECUTED_ERROR` was added in 8.0.11.

- Error: 11467 SQLSTATE: HY000 (`ER_GRP_RPL_CERTIFICATION_INITIALIZATION_FAILURE`)

Message: Error during Certification module initialization.

`ER_GRP_RPL_CERTIFICATION_INITIALIZATION_FAILURE` was added in 8.0.11.

- Error: 11468 SQLSTATE: HY000 (`ER_GRP_RPL_UPDATE_LAST_CONFLICT_FREE_TRANS_ERROR`)

Message: Unable to update last conflict free transaction, this transaction will not be tracked on performance_schema.replication_group_member_stats.last_conflict_free_transaction.

`ER_GRP_RPL_UPDATE_LAST_CONFLICT_FREE_TRANS_ERROR` was added in 8.0.11.

- Error: 11469 SQLSTATE: HY000 (`ER_GRP_RPL_UPDATE_TRANS_SNAPSHOT_REF_VER_ERROR`)

Message: Error updating transaction snapshot version reference for internal storage.

`ER_GRP_RPL_UPDATE_TRANS_SNAPSHOT_REF_VER_ERROR` was added in 8.0.11.

- Error: 11470 SQLSTATE: HY000 ([ER_GRP_RPL_FETCH_TRANS_SIDNO_ERROR](#))
Message: Error fetching transaction sidno while adding to the group_gtid_executed set.
[ER_GRP_RPL_FETCH_TRANS_SIDNO_ERROR](#) was added in 8.0.11.
- Error: 11471 SQLSTATE: HY000 ([ER_GRP_RPL_ERROR_VERIFYING_SIDNO](#))
Message: Error while ensuring the sidno be present in the group_gtid_executed.
[ER_GRP_RPL_ERROR_VERIFYING_SIDNO](#) was added in 8.0.11.
- Error: 11472 SQLSTATE: HY000 ([ER_GRP_RPL_CANT_GENERATE_GTID](#))
Message: Impossible to generate Global Transaction Identifier: the integer component reached the maximal value. Restart the group with a new group_replication_group_name.
[ER_GRP_RPL_CANT_GENERATE_GTID](#) was added in 8.0.11.
- Error: 11473 SQLSTATE: HY000 ([ER_GRP_RPL_INVALID_GTID_SET](#))
Message: Invalid stable transactions set.
[ER_GRP_RPL_INVALID_GTID_SET](#) was added in 8.0.11.
- Error: 11474 SQLSTATE: HY000 ([ER_GRP_RPL_UPDATE_GTID_SET_ERROR](#))
Message: Error updating stable transactions set.
[ER_GRP_RPL_UPDATE_GTID_SET_ERROR](#) was added in 8.0.11.
- Error: 11475 SQLSTATE: HY000 ([ER_GRP_RPL_RECEIVED_SET_MISSING_GTIDS](#))
Message: There was an error when filling the missing GTIDs on the applier channel received set. Despite not critical, on the long run this may cause performance issues.
[ER_GRP_RPL_RECEIVED_SET_MISSING_GTIDS](#) was added in 8.0.11.
- Error: 11476 SQLSTATE: HY000 ([ER_GRP_RPL_SKIP_COMPUTATION_TRANS_COMMITTED](#))
Message: Skipping the computation of the Transactions_committed_all_members field as an older instance of this computation is still ongoing.
[ER_GRP_RPL_SKIP_COMPUTATION_TRANS_COMMITTED](#) was added in 8.0.11.
- Error: 11477 SQLSTATE: HY000 ([ER_GRP_RPL_NULL_PACKET](#))
Message: Null packet on certifier's queue.
[ER_GRP_RPL_NULL_PACKET](#) was added in 8.0.11.
- Error: 11478 SQLSTATE: HY000 ([ER_GRP_RPL_CANT_READ_GTID](#))
Message: Error reading GTIDs from the message.
[ER_GRP_RPL_CANT_READ_GTID](#) was added in 8.0.11.
- Error: 11479 SQLSTATE: HY000 ([ER_GRP_RPL_PROCESS_GTID_SET_ERROR](#))
Message: Error processing stable transactions set.

`ER_GRP_RPL_PROCESS_GTID_SET_ERROR` was added in 8.0.11.

- Error: 11480 SQLSTATE: HY000 (`ER_GRP_RPL_PROCESS_INTERSECTION_GTID_SET_ERROR`)

Message: Error processing intersection of stable transactions set.

`ER_GRP_RPL_PROCESS_INTERSECTION_GTID_SET_ERROR` was added in 8.0.11.

- Error: 11481 SQLSTATE: HY000 (`ER_GRP_RPL_SET_STABLE_TRANS_ERROR`)

Message: Error setting stable transactions set.

`ER_GRP_RPL_SET_STABLE_TRANS_ERROR` was added in 8.0.11.

- Error: 11482 SQLSTATE: HY000 (`ER_GRP_RPL_CANT_READ_GRP_GTID_EXTRACTED`)

Message: Error reading group_gtid_extracted from the View_change_log_event.

`ER_GRP_RPL_CANT_READ_GRP_GTID_EXTRACTED` was added in 8.0.11.

- Error: 11483 SQLSTATE: HY000 (`ER_GRP_RPL_CANT_READ_WRITE_SET_ITEM`)

Message: Error reading the write set item '%s' from the View_change_log_event.

`ER_GRP_RPL_CANT_READ_WRITE_SET_ITEM` was added in 8.0.11.

- Error: 11484 SQLSTATE: HY000 (`ER_GRP_RPL_INIT_CERTIFICATION_INFO_FAILURE`)

Message: Error during certification_info initialization.

`ER_GRP_RPL_INIT_CERTIFICATION_INFO_FAILURE` was added in 8.0.11.

- Error: 11485 SQLSTATE: HY000 (`ER_GRP_RPL_CONFLICT_DETECTION_DISABLED`)

Message: Primary had applied all relay logs, disabled conflict detection.

`ER_GRP_RPL_CONFLICT_DETECTION_DISABLED` was added in 8.0.11.

- Error: 11486 SQLSTATE: HY000 (`ER_GRP_RPL_MSG_DISCARDED`)

Message: Message received while the plugin is not ready, message discarded.

`ER_GRP_RPL_MSG_DISCARDED` was added in 8.0.11.

- Error: 11487 SQLSTATE: HY000 (`ER_GRP_RPL_MISSING_GRP_RPL_APPLIER`)

Message: Message received without a proper group replication applier.

`ER_GRP_RPL_MISSING_GRP_RPL_APPLIER` was added in 8.0.11.

- Error: 11488 SQLSTATE: HY000 (`ER_GRP_RPL_CERTIFIER_MSSG_PROCESS_ERROR`)

Message: Error processing message in Certifier.

`ER_GRP_RPL_CERTIFIER_MSSG_PROCESS_ERROR` was added in 8.0.11.

- Error: 11489 SQLSTATE: HY000 (`ER_GRP_RPL_SRV_NOT_ONLINE`)

Message: This server was not declared online since it is on status %s.

`ER_GRP_RPL_SRV_NOT_ONLINE` was added in 8.0.11.

- Error: 11490 SQLSTATE: HY000 (`ER_GRP_RPL_SRV_ONLINE`)

Message: This server was declared online within the replication group.

`ER_GRP_RPL_SRV_ONLINE` was added in 8.0.11.

- Error: 11491 SQLSTATE: HY000 (`ER_GRP_RPL_DISABLE_SRV_READ_MODE_RESTRICTed`)

Message: When declaring the plugin online it was not possible to disable the server read mode settings. Try to disable it manually.

`ER_GRP_RPL_DISABLE_SRV_READ_MODE_RESTRICTed` was added in 8.0.11.

- Error: 11492 SQLSTATE: HY000 (`ER_GRP_RPL_MEM_ONLINE`)

Message: The member with address %s:%u was declared online within the replication group.

`ER_GRP_RPL_MEM_ONLINE` was added in 8.0.11.

- Error: 11493 SQLSTATE: HY000 (`ER_GRP_RPL_MEM_UNREACHABLE`)

Message: Member with address %s:%u has become unreachable.

`ER_GRP_RPL_MEM_UNREACHABLE` was added in 8.0.11.

- Error: 11494 SQLSTATE: HY000 (`ER_GRP_RPL_MEM_REACHABLE`)

Message: Member with address %s:%u is reachable again.

`ER_GRP_RPL_MEM_REACHABLE` was added in 8.0.11.

- Error: 11495 SQLSTATE: HY000 (`ER_GRP_RPL_SRV_BLOCKED`)

Message: This server is not able to reach a majority of members in the group. This server will now block all updates. The server will remain blocked until contact with the majority is restored. It is possible to use `group_replication_force_members` to force a new group membership.

`ER_GRP_RPL_SRV_BLOCKED` was added in 8.0.11.

- Error: 11496 SQLSTATE: HY000 (`ER_GRP_RPL_SRV_BLOCKED_FOR_SECS`)

Message: This server is not able to reach a majority of members in the group. This server will now block all updates. The server will remain blocked for the next %lu seconds. Unless contact with the majority is restored, after this time the member will error out and leave the group. It is possible to use `group_replication_force_members` to force a new group membership.

`ER_GRP_RPL_SRV_BLOCKED_FOR_SECS` was added in 8.0.11.

- Error: 11497 SQLSTATE: HY000 (`ER_GRP_RPL_CHANGE_GRP_MEM_NOT_PROCESSED`)

Message: A group membership change was received but the plugin is already leaving due to the configured timeout on `group_replication_unreachable_majority_timeout` option.

`ER_GRP_RPL_CHANGE_GRP_MEM_NOT_PROCESSED` was added in 8.0.11.

- Error: 11498 SQLSTATE: HY000 (`ER_GRP_RPL_MEMBER_CONTACT_RESTORED`)

Message: The member has resumed contact with a majority of the members in the group. Regular operation is restored and transactions are unblocked.

`ER_GRP_RPL_MEMBER_CONTACT_RESTORED` was added in 8.0.11.

- Error: 11499 SQLSTATE: HY000 (`ER_GRP_RPL_MEMBER_REMOVED`)

Message: Members removed from the group: %s

`ER_GRP_RPL_MEMBER_REMOVED` was added in 8.0.11.

- Error: 11500 SQLSTATE: HY000 (`ER_GRP_RPL_PRIMARY_MEMBER_LEFT_GRP`)

Message: Primary server with address %s left the group. Electing new Primary.

`ER_GRP_RPL_PRIMARY_MEMBER_LEFT_GRP` was added in 8.0.11.

- Error: 11501 SQLSTATE: HY000 (`ER_GRP_RPL_MEMBER_ADDED`)

Message: Members joined the group: %s

`ER_GRP_RPL_MEMBER_ADDED` was added in 8.0.11.

- Error: 11502 SQLSTATE: HY000 (`ER_GRP_RPL_MEMBER_EXIT_PLUGIN_ERROR`)

Message: There was a previous plugin error while the member joined the group. The member will now exit the group.

`ER_GRP_RPL_MEMBER_EXIT_PLUGIN_ERROR` was added in 8.0.11.

- Error: 11503 SQLSTATE: HY000 (`ER_GRP_RPL_MEMBER_CHANGE`)

Message: Group membership changed to %s on view %s.

`ER_GRP_RPL_MEMBER_CHANGE` was added in 8.0.11.

- Error: 11504 SQLSTATE: HY000 (`ER_GRP_RPL_MEMBER_LEFT_GRP`)

Message: Group membership changed: This member has left the group.

`ER_GRP_RPL_MEMBER_LEFT_GRP` was added in 8.0.11.

- Error: 11505 SQLSTATE: HY000 (`ER_GRP_RPL_MEMBER_EXPELLED`)

Message: Member was expelled from the group due to network failures, changing member status to ERROR.

`ER_GRP_RPL_MEMBER_EXPELLED` was added in 8.0.11.

- Error: 11506 SQLSTATE: HY000 (`ER_GRP_RPL_SESSION_OPEN_FAILED`)

Message: Unable to open session to (re)set read only mode. Skipping.

`ER_GRP_RPL_SESSION_OPEN_FAILED` was added in 8.0.11.

- Error: 11507 SQLSTATE: HY000 (`ER_GRP_RPL_NEW_PRIMARY_ELECTED`)

Message: A new primary with address %s:%u was elected. %s

[ER_GRP_RPL_NEW_PRIMARY_ELECTED](#) was added in 8.0.11.

- Error: 11508 SQLSTATE: HY000 ([ER_GRP_RPL_DISABLE_READ_ONLY_FAILED](#))

Message: Unable to disable super read only flag. Try to disable it manually

[ER_GRP_RPL_DISABLE_READ_ONLY_FAILED](#) was added in 8.0.11.

- Error: 11509 SQLSTATE: HY000 ([ER_GRP_RPL_ENABLE_READ_ONLY_FAILED](#))

Message: Unable to set super read only flag. Try to set it manually.

[ER_GRP_RPL_ENABLE_READ_ONLY_FAILED](#) was added in 8.0.11.

- Error: 11510 SQLSTATE: HY000 ([ER_GRP_RPL_SRV_PRIMARY_MEM](#))

Message: This server is working as primary member.

[ER_GRP_RPL_SRV_PRIMARY_MEM](#) was added in 8.0.11.

- Error: 11511 SQLSTATE: HY000 ([ER_GRP_RPL_SRV_SECONDARY_MEM](#))

Message: This server is working as secondary member with primary member address %s:%u.

[ER_GRP_RPL_SRV_SECONDARY_MEM](#) was added in 8.0.11.

- Error: 11512 SQLSTATE: HY000 ([ER_GRP_RPL_NO_SUITABLE_PRIMARY_MEM](#))

Message: Unable to set any member as primary. No suitable candidate.

[ER_GRP_RPL_NO_SUITABLE_PRIMARY_MEM](#) was added in 8.0.11.

- Error: 11513 SQLSTATE: HY000 ([ER_GRP_RPL_SUPER_READ_ONLY_ACTIVATE_ERROR](#))

Message: Error when activating super_read_only mode on start. The member will now exit the group.

[ER_GRP_RPL_SUPER_READ_ONLY_ACTIVATE_ERROR](#) was added in 8.0.11.

- Error: 11514 SQLSTATE: HY000 ([ER_GRP_RPL_EXCEEDS_AUTO_INC_VALUE](#))

Message: Group contains %lu members which is greater than group_replication_auto_increment_increment value of %lu. This can lead to an higher rate of transactional aborts.

[ER_GRP_RPL_EXCEEDS_AUTO_INC_VALUE](#) was added in 8.0.11.

- Error: 11515 SQLSTATE: HY000 ([ER_GRP_RPL_DATA_NOT_PROVIDED_BY_MEM](#))

Message: Member with address '%s:%u' didn't provide any data during the last group change. Group information can be outdated and lead to errors on recovery.

[ER_GRP_RPL_DATA_NOT_PROVIDED_BY_MEM](#) was added in 8.0.11.

- Error: 11516 SQLSTATE: HY000 ([ER_GRP_RPL_MEMBER_ALREADY_EXISTS](#))

Message: There is already a member with server_uuid %s. The member will now exit the group.

[ER_GRP_RPL_MEMBER_ALREADY_EXISTS](#) was added in 8.0.11.

- Error: 11517 SQLSTATE: HY000 (ER_GRP_RPL_GRP_CHANGE_INFO_EXTRACT_ERROR)
Message: Error when extracting information for group change. Operations and checks made to group joiners may be incomplete.
ER_GRP_RPL_GRP_CHANGE_INFO_EXTRACT_ERROR was added in 8.0.11.
- Error: 11518 SQLSTATE: HY000 (ER_GRP_RPL_GTID_EXECUTED_EXTRACT_ERROR)
Message: Error when extracting this member GTID executed set. Operations and checks made to group joiners may be incomplete.
ER_GRP_RPL_GTID_EXECUTED_EXTRACT_ERROR was added in 8.0.11.
- Error: 11519 SQLSTATE: HY000 (ER_GRP_RPL_GTID_SET_EXTRACT_ERROR)
Message: Error when extracting this member retrieved set for its applier. Operations and checks made to group joiners may be incomplete.
ER_GRP_RPL_GTID_SET_EXTRACT_ERROR was added in 8.0.11.
- Error: 11520 SQLSTATE: HY000 (ER_GRP_RPL_START_FAILED)
Message: The START GROUP_REPLICATION command failed since the group already has 9 members.
ER_GRP_RPL_START_FAILED was added in 8.0.11.
- Error: 11521 SQLSTATE: HY000 (ER_GRP_RPL_MEMBER_VER_INCOMPATIBLE)
Message: Member version is incompatible with the group.
ER_GRP_RPL_MEMBER_VER_INCOMPATIBLE was added in 8.0.11.
- Error: 11522 SQLSTATE: HY000 (ER_GRP_RPL_TRANS_NOT_PRESENT_IN_GRP)
Message: The member contains transactions not present in the group. The member will now exit the group.
ER_GRP_RPL_TRANS_NOT_PRESENT_IN_GRP was added in 8.0.11.
- Error: 11523 SQLSTATE: HY000 (ER_GRP_RPL_TRANS_GREATER_THAN_GRP)
Message: It was not possible to assess if the member has more transactions than the group. The member will now exit the group.
ER_GRP_RPL_TRANS_GREATER_THAN_GRP was added in 8.0.11.
- Error: 11524 SQLSTATE: HY000 (ER_GRP_RPL_MEMBER_VERSION_LOWER_THAN_GRP)
Message: Member version is lower than some group member, but since option 'group_replication_allow_local_lower_version_join' is enabled, member will be allowed to join.
ER_GRP_RPL_MEMBER_VERSION_LOWER_THAN_GRP was added in 8.0.11.
- Error: 11525 SQLSTATE: HY000 (ER_GRP_RPL_LOCAL_GTID_SETS_PROCESS_ERROR)
Message: Error processing local GTID sets when comparing this member transactions against the group.

[ER_GRP_RPL_LOCAL_GTID_SETS_PROCESS_ERROR](#) was added in 8.0.11.

- Error: 11526 SQLSTATE: HY000 ([ER_GRP_RPL_MEMBER_TRANS_GREATER_THAN_GRP](#))

Message: This member has more executed transactions than those present in the group. Local transactions: %s > Group transactions: %s

[ER_GRP_RPL_MEMBER_TRANS_GREATER_THAN_GRP](#) was added in 8.0.11.

- Error: 11527 SQLSTATE: HY000 ([ER_GRP_RPL_BLOCK_SIZE_DIFF_FROM_GRP](#))

Message: The member is configured with a group_replication_gtid_assignment_block_size option value '%llu' different from the group '%llu'. The member will now exit the group.

[ER_GRP_RPL_BLOCK_SIZE_DIFF_FROM_GRP](#) was added in 8.0.11.

- Error: 11528 SQLSTATE: HY000 ([ER_GRP_RPL_TRANS_WRITE_SET_EXTRACT_DIFF_FROM_GRP](#))

Message: The member is configured with a transaction-write-set-extraction option value '%s' different from the group '%s'. The member will now exit the group.

[ER_GRP_RPL_TRANS_WRITE_SET_EXTRACT_DIFF_FROM_GRP](#) was added in 8.0.11.

- Error: 11529 SQLSTATE: HY000 ([ER_GRP_RPL_MEMBER_CFG_INCOMPATIBLE_WITH_GRP_CFG](#))

Message: The member configuration is not compatible with the group configuration. Variables such as single_primary_mode or enforce_update_everywhere_checks must have the same value on every server in the group. (member configuration option: [%s], group configuration option: [%s]).

[ER_GRP_RPL_MEMBER_CFG_INCOMPATIBLE_WITH_GRP_CFG](#) was added in 8.0.11.

- Error: 11530 SQLSTATE: HY000 ([ER_GRP_RPL_MEMBER_STOP_RPL_CHANNELS_ERROR](#))

Message: Error stopping all replication channels while server was leaving the group. %s

[ER_GRP_RPL_MEMBER_STOP_RPL_CHANNELS_ERROR](#) was added in 8.0.11.

- Error: 11531 SQLSTATE: HY000 ([ER_GRP_RPL_PURGE_APPLIER_LOGS](#))

Message: Detected previous RESET MASTER invocation or an issue exists in the group replication applier relay log. Purging existing applier logs.

[ER_GRP_RPL_PURGE_APPLIER_LOGS](#) was added in 8.0.11.

- Error: 11532 SQLSTATE: HY000 ([ER_GRP_RPL_RESET_APPLIER_MODULE_LOGS_ERROR](#))

Message: Unknown error occurred while resetting applier's module logs.

[ER_GRP_RPL_RESET_APPLIER_MODULE_LOGS_ERROR](#) was added in 8.0.11.

- Error: 11533 SQLSTATE: HY000 ([ER_GRP_RPL_APPLIER_THD_SETUP_ERROR](#))

Message: Failed to setup the group replication applier thread.

[ER_GRP_RPL_APPLIER_THD_SETUP_ERROR](#) was added in 8.0.11.

- Error: 11534 SQLSTATE: HY000 ([ER_GRP_RPL_APPLIER_THD_START_ERROR](#))

Message: Error while starting the group replication applier thread

[ER_GRP_RPL_APPLIER_THD_START_ERROR](#) was added in 8.0.11.

- Error: 11535 SQLSTATE: HY000 ([ER_GRP_RPL_APPLIER_THD_STOP_ERROR](#))

Message: Failed to stop the group replication applier thread.

[ER_GRP_RPL_APPLIER_THD_STOP_ERROR](#) was added in 8.0.11.

- Error: 11536 SQLSTATE: HY000 ([ER_GRP_RPL_FETCH_TRANS_DATA_FAILED](#))

Message: Failed to fetch transaction data containing required transaction info for applier

[ER_GRP_RPL_FETCH_TRANS_DATA_FAILED](#) was added in 8.0.11.

- Error: 11537 SQLSTATE: HY000 ([ER_GRP_RPL_SLAVE_IO_THD_PRIMARY_UNKNOWN](#))

Message: Can't start slave IO THREAD of channel '%s' when group replication is running with single-primary mode and the primary member is not known.

[ER_GRP_RPL_SLAVE_IO_THD_PRIMARY_UNKNOWN](#) was added in 8.0.11.

- Error: 11538 SQLSTATE: HY000 ([ER_GRP_RPL_SLAVE_IO_THD_ON_SECONDARY_MEMBER](#))

Message: Can't start slave IO THREAD of channel '%s' when group replication is running with single-primary mode on a secondary member.

[ER_GRP_RPL_SLAVE_IO_THD_ON_SECONDARY_MEMBER](#) was added in 8.0.11.

- Error: 11539 SQLSTATE: HY000 ([ER_GRP_RPL_SLAVE_SQL_THD_PRIMARY_UNKNOWN](#))

Message: Can't start slave SQL THREAD of channel '%s' when group replication is running with single-primary mode and the primary member is not known.

[ER_GRP_RPL_SLAVE_SQL_THD_PRIMARY_UNKNOWN](#) was added in 8.0.11.

- Error: 11540 SQLSTATE: HY000 ([ER_GRP_RPL_SLAVE_SQL_THD_ON_SECONDARY_MEMBER](#))

Message: Can't start slave SQL THREAD of channel '%s' when group replication is running with single-primary mode on a secondary member.

[ER_GRP_RPL_SLAVE_SQL_THD_ON_SECONDARY_MEMBER](#) was added in 8.0.11.

- Error: 11541 SQLSTATE: HY000 ([ER_GRP_RPL_NEEDS_INNO_DB_TABLE](#))

Message: Table %s does not use the InnoDB storage engine. This is not compatible with Group Replication.

[ER_GRP_RPL_NEEDS_INNO_DB_TABLE](#) was added in 8.0.11.

- Error: 11542 SQLSTATE: HY000 ([ER_GRP_RPL_PRIMARY_KEY_NOT_DEFINED](#))

Message: Table %s does not have any PRIMARY KEY. This is not compatible with Group Replication.

[ER_GRP_RPL_PRIMARY_KEY_NOT_DEFINED](#) was added in 8.0.11.

- Error: 11543 SQLSTATE: HY000 ([ER_GRP_RPL_FK_WITH_CASCADE_UNSUPPORTED](#))

Message: Table %s has a foreign key with 'CASCADE' clause. This is not compatible with Group Replication.

`ER_GRP_RPL_FK_WITH_CASCADE_UNSUPPORTED` was added in 8.0.11.

- Error: 11544 SQLSTATE: HY000 (`ER_GRP_RPL_AUTO_INC_RESET`)

Message: auto_increment_increment is reset to %lu

`ER_GRP_RPL_AUTO_INC_RESET` was added in 8.0.11.

- Error: 11545 SQLSTATE: HY000 (`ER_GRP_RPL_AUTO_INC_OFFSET_RESET`)

Message: auto_increment_offset is reset to %lu

`ER_GRP_RPL_AUTO_INC_OFFSET_RESET` was added in 8.0.11.

- Error: 11546 SQLSTATE: HY000 (`ER_GRP_RPL_AUTO_INC_SET`)

Message: auto_increment_increment is set to %lu

`ER_GRP_RPL_AUTO_INC_SET` was added in 8.0.11.

- Error: 11547 SQLSTATE: HY000 (`ER_GRP_RPL_AUTO_INC_OFFSET_SET`)

Message: auto_increment_offset is set to %lu

`ER_GRP_RPL_AUTO_INC_OFFSET_SET` was added in 8.0.11.

- Error: 11548 SQLSTATE: HY000 (`ER_GRP_RPL_FETCH_TRANS_CONTEXT_FAILED`)

Message: Failed to fetch transaction context containing required transaction info for certification

`ER_GRP_RPL_FETCH_TRANS_CONTEXT_FAILED` was added in 8.0.11.

- Error: 11549 SQLSTATE: HY000 (`ER_GRP_RPL_FETCH_FORMAT_DESC_LOG_EVENT_FAILED`)

Message: Failed to fetch Format_description_log_event containing required server info for applier

`ER_GRP_RPL_FETCH_FORMAT_DESC_LOG_EVENT_FAILED` was added in 8.0.11.

- Error: 11550 SQLSTATE: HY000 (`ER_GRP_RPL_FETCH_TRANS_CONTEXT_LOG_EVENT_FAILED`)

Message: Failed to fetch Transaction_context_log_event containing required transaction info for certification

`ER_GRP_RPL_FETCH_TRANS_CONTEXT_LOG_EVENT_FAILED` was added in 8.0.11.

- Error: 11551 SQLSTATE: HY000 (`ER_GRP_RPL_FETCH_SNAPSHOT_VERSION_FAILED`)

Message: Failed to read snapshot version from transaction context event required for certification

`ER_GRP_RPL_FETCH_SNAPSHOT_VERSION_FAILED` was added in 8.0.11.

- Error: 11552 SQLSTATE: HY000 (`ER_GRP_RPL_FETCH_GTID_LOG_EVENT_FAILED`)

Message: Failed to fetch Gtid_log_event containing required transaction info for certification

`ER_GRP_RPL_FETCH_GTID_LOG_EVENT_FAILED` was added in 8.0.11.

- Error: 11553 SQLSTATE: HY000 (`ER_GRP_RPL_UPDATE_SERV_CERTIFICATE_FAILED`)

Message: Unable to update certification result on server side, thread_id: %lu

[ER_GRP_RPL_UPDATE_SERV_CERTIFICATE_FAILED](#) was added in 8.0.11.

- Error: 11554 SQLSTATE: HY000 ([ER_GRP_RPL_ADD_GTID_INFO_WITH_LOCAL_GTID_FAILED](#))

Message: Unable to add gtid information to the group_gtid_executed set when gtid was provided for local transactions

[ER_GRP_RPL_ADD_GTID_INFO_WITH_LOCAL_GTID_FAILED](#) was added in 8.0.11.

- Error: 11555 SQLSTATE: HY000 ([ER_GRP_RPL_ADD_GTID_INFO_WITHOUT_LOCAL_GTID_FAILED](#))

Message: Unable to add gtid information to the group_gtid_executed set when no gtid was provided for local transactions

[ER_GRP_RPL_ADD_GTID_INFO_WITHOUT_LOCAL_GTID_FAILED](#) was added in 8.0.11.

- Error: 11556 SQLSTATE: HY000 ([ER_GRP_RPL_NOTIFY_CERTIFICATION_OUTCOME_FAILED](#))

Message: Failed to notify certification outcome

[ER_GRP_RPL_NOTIFY_CERTIFICATION_OUTCOME_FAILED](#) was added in 8.0.11.

- Error: 11557 SQLSTATE: HY000 ([ER_GRP_RPL_ADD_GTID_INFO_WITH_REMOTE_GTID_FAILED](#))

Message: Unable to add gtid information to the group_gtid_executed set when gtid was provided for remote transactions

[ER_GRP_RPL_ADD_GTID_INFO_WITH_REMOTE_GTID_FAILED](#) was added in 8.0.11.

- Error: 11558 SQLSTATE: HY000 ([ER_GRP_RPL_ADD_GTID_INFO_WITHOUT_REMOTE_GTID_FAILED](#))

Message: Unable to add gtid information to the group_gtid_executed set when gtid was not provided for remote transactions

[ER_GRP_RPL_ADD_GTID_INFO_WITHOUT_REMOTE_GTID_FAILED](#) was added in 8.0.11.

- Error: 11559 SQLSTATE: HY000 ([ER_GRP_RPL_FETCH_VIEW_CHANGE_LOG_EVENT_FAILED](#))

Message: Failed to fetch View_change_log_event containing required info for certification

[ER_GRP_RPL_FETCH_VIEW_CHANGE_LOG_EVENT_FAILED](#) was added in 8.0.11.

- Error: 11560 SQLSTATE: HY000 ([ER_GRP_RPL_CONTACT_WITH_SRV_FAILED](#))

Message: Error when contacting the server to ensure the proper logging of a group change in the binlog

[ER_GRP_RPL_CONTACT_WITH_SRV_FAILED](#) was added in 8.0.11.

- Error: 11561 SQLSTATE: HY000 ([ER_GRP_RPL_SRV_WAIT_TIME_OUT](#))

Message: Timeout when waiting for the server to execute local transactions in order assure the group change proper logging

[ER_GRP_RPL_SRV_WAIT_TIME_OUT](#) was added in 8.0.11.

- Error: 11562 SQLSTATE: HY000 ([ER_GRP_RPL_FETCH_LOG_EVENT_FAILED](#))

Message: Failed to fetch Log_event containing required server info for applier

`ER_GRP_RPL_FETCH_LOG_EVENT_FAILED` was added in 8.0.11.

- Error: 11563 SQLSTATE: HY000 (`ER_GRP_RPL_START_GRP_RPL_FAILED`)

Message: Unable to start Group Replication. Replication applier infrastructure is not initialized since the server was started with --initialize or --initialize-insecure.

`ER_GRP_RPL_START_GRP_RPL_FAILED` was added in 8.0.11.

- Error: 11564 SQLSTATE: HY000 (`ER_GRP_RPL_CONN_INTERNAL_PLUGIN_FAIL`)

Message: Failed to establish an internal server connection to execute plugin operations

`ER_GRP_RPL_CONN_INTERNAL_PLUGIN_FAIL` was added in 8.0.11.

- Error: 11565 SQLSTATE: HY000 (`ER_GRP_RPL_SUPER_READ_ON`)

Message: Setting super_read_only=ON.

`ER_GRP_RPL_SUPER_READ_ON` was added in 8.0.11.

- Error: 11566 SQLSTATE: HY000 (`ER_GRP_RPL_SUPER_READ_OFF`)

Message: Setting super_read_only=OFF.

`ER_GRP_RPL_SUPER_READ_OFF` was added in 8.0.11.

- Error: 11567 SQLSTATE: HY000 (`ER_GRP_RPL_KILLED_SESSION_ID`)

Message: killed session id: %d status: %d

`ER_GRP_RPL_KILLED_SESSION_ID` was added in 8.0.11.

- Error: 11568 SQLSTATE: HY000 (`ER_GRP_RPL_KILLED_FAILED_ID`)

Message: killed failed id: %d failed: %d

`ER_GRP_RPL_KILLED_FAILED_ID` was added in 8.0.11.

- Error: 11569 SQLSTATE: HY000 (`ER_GRP_RPL_INTERNAL_QUERY`)

Message: Internal query: %s result in error. Error number: %ld

`ER_GRP_RPL_INTERNAL_QUERY` was added in 8.0.11.

- Error: 11570 SQLSTATE: HY000 (`ER_GRP_RPL_COPY_FROM_EMPTY_STRING`)

Message: Error copying from empty string

`ER_GRP_RPL_COPY_FROM_EMPTY_STRING` was added in 8.0.11.

- Error: 11571 SQLSTATE: HY000 (`ER_GRP_RPL_QUERY_FAIL`)

Message: Query execution resulted in failure. errno: %d

`ER_GRP_RPL_QUERY_FAIL` was added in 8.0.11.

- Error: 11572 SQLSTATE: HY000 (ER_GRP_RPL_CREATE_SESSION_UNABLE)
Message: Unable to create a session for executing the queries on the server
[ER_GRP_RPL_CREATE_SESSION_UNABLE](#) was added in 8.0.11.
- Error: 11573 SQLSTATE: HY000 (ER_GRP_RPL_MEMBER_NOT_FOUND)
Message: The member with address %s:%u has unexpectedly disappeared, killing the current group replication recovery connection
[ER_GRP_RPL_MEMBER_NOT_FOUND](#) was added in 8.0.11.
- Error: 11574 SQLSTATE: HY000 (ER_GRP_RPL_MAXIMUM_CONNECTION_RETRIES_REACHED)
Message: Maximum number of retries when trying to connect to a donor reached. Aborting group replication recovery.
[ER_GRP_RPL_MAXIMUM_CONNECTION_RETRIES_REACHED](#) was added in 8.0.11.
- Error: 11575 SQLSTATE: HY000 (ER_GRP_RPL_ALL_DONORS_LEFT_ABORT_RECOVERY)
Message: All donors left. Aborting group replication recovery.
[ER_GRP_RPL_ALL_DONORS_LEFT_ABORT_RECOVERY](#) was added in 8.0.11.
- Error: 11576 SQLSTATE: HY000 (ER_GRP_RPL_ESTABLISH_RECOVERY_WITH_DONOR)
Message: Establishing group recovery connection with a possible donor. Attempt %d/%d
[ER_GRP_RPL_ESTABLISH_RECOVERY_WITH_DONOR](#) was added in 8.0.11.
- Error: 11577 SQLSTATE: HY000 (ER_GRP_RPL_ESTABLISH_RECOVERY_WITH_ANOTHER_DONOR)
Message: Retrying group recovery connection with another donor. Attempt %d/%d
[ER_GRP_RPL_ESTABLISH_RECOVERY_WITH_ANOTHER_DONOR](#) was added in 8.0.11.
- Error: 11578 SQLSTATE: HY000 (ER_GRP_RPL_NO_VALID_DONOR)
Message: No valid donors exist in the group, retrying
[ER_GRP_RPL_NO_VALID_DONOR](#) was added in 8.0.11.
- Error: 11579 SQLSTATE: HY000 (ER_GRP_RPL_CONFIG_RECOVERY)
Message: Error when configuring the group recovery connection to the donor.
[ER_GRP_RPL_CONFIG_RECOVERY](#) was added in 8.0.11.
- Error: 11580 SQLSTATE: HY000 (ER_GRP_RPL_ESTABLISHING_CONN_GRP_REC_DONOR)
Message: Establishing connection to a group replication recovery donor %s at %s port: %d.
[ER_GRP_RPL_ESTABLISHING_CONN_GRP_REC_DONOR](#) was added in 8.0.11.
- Error: 11581 SQLSTATE: HY000 (ER_GRP_RPL_CREATE_GRP_RPL_REC_CHANNEL)
Message: Error while creating the group replication recovery channel with donor %s at %s port: %d.

[ER_GRP_RPL_CREATE_GRP_RPL_REC_CHANNEL](#) was added in 8.0.11.

- Error: 11582 SQLSTATE: HY000 ([ER_GRP_RPL_DONOR_SERVER_CONN](#))

Message: There was an error when connecting to the donor server. Please check that group_replication_recovery channel credentials and all MEMBER_HOST column values of performance_schema.replication_group_members table are correct and DNS resolvable.

[ER_GRP_RPL_DONOR_SERVER_CONN](#) was added in 8.0.11.

- Error: 11583 SQLSTATE: HY000 ([ER_GRP_RPL_CHECK_STATUS_TABLE](#))

Message: For details please check performance_schema.replication_connection_status table and error log messages of Slave I/O for channel group_replication_recovery.

[ER_GRP_RPL_CHECK_STATUS_TABLE](#) was added in 8.0.11.

- Error: 11584 SQLSTATE: HY000 ([ER_GRP_RPL_STARTING_GRP_REC](#))

Message: Error while starting the group replication recovery receiver/applier threads

[ER_GRP_RPL_STARTING_GRP_REC](#) was added in 8.0.11.

- Error: 11585 SQLSTATE: HY000 ([ER_GRP_RPL_DONOR_CONN_TERMINATION](#))

Message: Terminating existing group replication donor connection and purging the corresponding logs.

[ER_GRP_RPL_DONOR_CONN_TERMINATION](#) was added in 8.0.11.

- Error: 11586 SQLSTATE: HY000 ([ER_GRP_RPL_STOPPING_GRP_REC](#))

Message: Error when stopping the group replication recovery's donor connection

[ER_GRP_RPL_STOPPING_GRP_REC](#) was added in 8.0.11.

- Error: 11587 SQLSTATE: HY000 ([ER_GRP_RPL_PURGE_REC](#))

Message: Error when purging the group replication recovery's relay logs

[ER_GRP_RPL_PURGE_REC](#) was added in 8.0.11.

- Error: 11588 SQLSTATE: HY000 ([ER_GRP_RPL_UNABLE_TO_KILL_CONN_REC_DONOR_APPLIER](#))

Message: Unable to kill the current group replication recovery donor connection after an applier error. Recovery will shutdown.

[ER_GRP_RPL_UNABLE_TO_KILL_CONN_REC_DONOR_APPLIER](#) was added in 8.0.11.

- Error: 11589 SQLSTATE: HY000 ([ER_GRP_RPL_UNABLE_TO_KILL_CONN_REC_DONOR_FAILOVER](#))

Message: Unable to kill the current group replication recovery donor connection during failover. Recovery will shutdown.

[ER_GRP_RPL_UNABLE_TO_KILL_CONN_REC_DONOR_FAILOVER](#) was added in 8.0.11.

- Error: 11590 SQLSTATE: HY000 ([ER_GRP_RPL_FAILED_TO_NOTIFY_GRP_MEMBERSHIP_EVENT](#))

Message: Unexpected error when notifying an internal component named %s regarding a group membership event.

`ER_GRP_RPL_FAILED_TO_NOTIFY_GRP_MEMBERSHIP_EVENT` was added in 8.0.11.

- Error: 11591 SQLSTATE: HY000
(`ER_GRP_RPL_FAILED_TO_BROADCAST_GRP_MEMBERSHIP_NOTIFICATION`)

Message: An undefined error was found while broadcasting an internal group membership notification! This is likely to happen if your components or plugins are not properly loaded or are malfunctioning!

`ER_GRP_RPL_FAILED_TO_BROADCAST_GRP_MEMBERSHIP_NOTIFICATION` was added in 8.0.11.

- Error: 11592 SQLSTATE: HY000
(`ER_GRP_RPL_FAILED_TO_BROADCAST_MEMBER_STATUS_NOTIFICATION`)

Message: An undefined error was found while broadcasting an internal group member status notification! This is likely to happen if your components or plugins are not properly loaded or are malfunctioning!

`ER_GRP_RPL_FAILED_TO_BROADCAST_MEMBER_STATUS_NOTIFICATION` was added in 8.0.11.

- Error: 11593 SQLSTATE: HY000
(`ER_GRP_RPL_OOM_FAILED_TO_GENERATE_IDENTIFICATION_HASH`)

Message: No memory to generate write identification hash

`ER_GRP_RPL_OOM_FAILED_TO_GENERATE_IDENTIFICATION_HASH` was added in 8.0.11.

- Error: 11594 SQLSTATE: HY000 (`ER_GRP_RPL_WRITE_IDENT_HASH_BASE64_ENCODING_FAILED`)

Message: Base 64 encoding of the write identification hash failed

`ER_GRP_RPL_WRITE_IDENT_HASH_BASE64_ENCODING_FAILED` was added in 8.0.11.

- Error: 11595 SQLSTATE: HY000 (`ER_GRP_RPL_INVALID_BINLOG_FORMAT`)

Message: Binlog format should be ROW for Group Replication

`ER_GRP_RPL_INVALID_BINLOG_FORMAT` was added in 8.0.11.

- Error: 11596 SQLSTATE: HY000 (`ER_GRP_RPL_BINLOG_CHECKSUM_SET`)

Message: binlog_checksum should be NONE for Group Replication

`ER_GRP_RPL_BINLOG_CHECKSUM_SET` was added in 8.0.11.

- Error: 11597 SQLSTATE: HY000 (`ER_GRP_RPL_TRANS_WRITE_SET_EXTRACTION_NOT_SET`)

Message: A transaction_write_set_extraction algorithm should be selected when running Group Replication

`ER_GRP_RPL_TRANS_WRITE_SET_EXTRACTION_NOT_SET` was added in 8.0.11.

- Error: 11598 SQLSTATE: HY000 (`ER_GRP_RPL_UNSUPPORTED_TRANS_ISOLATION`)

Message: Transaction isolation level (tx_isolation) is set to SERIALIZABLE, which is not compatible with Group Replication

`ER_GRP_RPL_UNSUPPORTED_TRANS_ISOLATION` was added in 8.0.11.

- Error: 11599 SQLSTATE: HY000 (`ER_GRP_RPL_CANNOT_EXECUTE_TRANS_WHILE_STOPPING`)

Message: Transaction cannot be executed while Group Replication is stopping.

`ER_GRP_RPL_CANNOT_EXECUTE_TRANS_WHILE_STOPPING` was added in 8.0.11.

- Error: 11600 SQLSTATE: HY000 (`ER_GRP_RPL_CANNOT_EXECUTE_TRANS_WHILE_RECOVERING`)

Message: Transaction cannot be executed while Group Replication is recovering. Try again when the server is ONLINE.

`ER_GRP_RPL_CANNOT_EXECUTE_TRANS_WHILE_RECOVERING` was added in 8.0.11.

- Error: 11601 SQLSTATE: HY000 (`ER_GRP_RPL_CANNOT_EXECUTE_TRANS_IN_ERROR_STATE`)

Message: Transaction cannot be executed while Group Replication is on ERROR state. Check for errors and restart the plugin

`ER_GRP_RPL_CANNOT_EXECUTE_TRANS_IN_ERROR_STATE` was added in 8.0.11.

- Error: 11602 SQLSTATE: HY000 (`ER_GRP_RPL_CANNOT_EXECUTE_TRANS_IN_OFFLINE_MODE`)

Message: Transaction cannot be executed while Group Replication is OFFLINE. Check for errors and restart the plugin

`ER_GRP_RPL_CANNOT_EXECUTE_TRANS_IN_OFFLINE_MODE` was added in 8.0.11.

- Error: 11603 SQLSTATE: HY000
(`ER_GRP_RPL_MULTIPLE_CACHE_TYPE_NOT_SUPPORTED_FOR_SESSION`)

Message: We can only use one cache type at a time on session %u

`ER_GRP_RPL_MULTIPLE_CACHE_TYPE_NOT_SUPPORTED_FOR_SESSION` was added in 8.0.11.

- Error: 11604 SQLSTATE: HY000 (`ER_GRP_RPL_FAILED_TO_REINIT_BINLOG_CACHE_FOR_READ`)

Message: Failed to reinit binlog cache log for read on session %u

`ER_GRP_RPL_FAILED_TO_REINIT_BINLOG_CACHE_FOR_READ` was added in 8.0.11.

- Error: 11605 SQLSTATE: HY000 (`ER_GRP_RPL_FAILED_TO_CREATE_TRANS_CONTEXT`)

Message: Failed to create the context of the current transaction on session %u

`ER_GRP_RPL_FAILED_TO_CREATE_TRANS_CONTEXT` was added in 8.0.11.

- Error: 11606 SQLSTATE: HY000 (`ER_GRP_RPL_FAILED_TO_EXTRACT_TRANS_WRITE_SET`)

Message: Failed to extract the set of items written during the execution of the current transaction on session %u

`ER_GRP_RPL_FAILED_TO_EXTRACT_TRANS_WRITE_SET` was added in 8.0.11.

- Error: 11607 SQLSTATE: HY000 (`ER_GRP_RPL_FAILED_TO_GATHER_TRANS_WRITE_SET`)

Message: Failed to gather the set of items written during the execution of the current transaction on session %u

`ER_GRP_RPL_FAILED_TO_GATHER_TRANS_WRITE_SET` was added in 8.0.11.

- Error: 11608 SQLSTATE: HY000 (`ER_GRP_RPL_TRANS_SIZE_EXCEEDS_LIMIT`)

Message: Error on session %u. Transaction of size %llu exceeds specified limit %lu. To increase the limit please adjust group_replication_transaction_size_limit option.

`ER_GRP_RPL_TRANS_SIZE_EXCEEDS_LIMIT` was added in 8.0.11.

- Error: 11609 SQLSTATE: HY000 (`ER_GRP_RPL_REINIT_OF_INTERNAL_CACHE_FOR_READ_FAILED`)

Message: Error while re-initializing an internal cache, for read operations, on session %u

`ER_GRP_RPL_REINIT_OF_INTERNAL_CACHE_FOR_READ_FAILED` was added in 8.0.11, removed after 8.0.12.

- Error: 11610 SQLSTATE: HY000 (`ER_GRP_RPL_APPENDING_DATA_TO_INTERNAL_CACHE_FAILED`)

Message: Error while appending data to an internal cache on session %u

`ER_GRP_RPL_APPENDING_DATA_TO_INTERNAL_CACHE_FAILED` was added in 8.0.11, removed after 8.0.12.

- Error: 11611 SQLSTATE: HY000 (`ER_GRP_RPL_WRITE_TO_BINLOG_CACHE_FAILED`)

Message: Error while writing binary log cache on session %u

`ER_GRP_RPL_WRITE_TO_BINLOG_CACHE_FAILED` was added in 8.0.11, removed after 8.0.12.

- Error: 11611 SQLSTATE: HY000 (`ER_GRP_RPL_WRITE_TO_TRANSACTION_MESSAGE_FAILED`)

Message: Error while writing to transaction message on session %u

`ER_GRP_RPL_WRITE_TO_TRANSACTION_MESSAGE_FAILED` was added in 8.0.13.

- Error: 11612 SQLSTATE: HY000 (`ER_GRP_RPL_FAILED_TO_REGISTER_TRANS_OUTCOME_NOTIFICATION`)

Message: Unable to register for getting notifications regarding the outcome of the transaction on session %u

`ER_GRP_RPL_FAILED_TO_REGISTER_TRANS_OUTCOME_NOTIFICATION` was added in 8.0.11.

- Error: 11613 SQLSTATE: HY000 (`ER_GRP_RPL_MSG_TOO_LONG_BROADCASTING_TRANS_FAILED`)

Message: Error broadcasting transaction to the group on session %u. Message is too big.

`ER_GRP_RPL_MSG_TOO_LONG_BROADCASTING_TRANS_FAILED` was added in 8.0.11.

- Error: 11614 SQLSTATE: HY000 (`ER_GRP_RPL_BROADCASTING_TRANS_TO_GRP_FAILED`)

Message: Error while broadcasting the transaction to the group on session %u

`ER_GRP_RPL_BROADCASTING_TRANS_TO_GRP_FAILED` was added in 8.0.11.

- Error: 11615 SQLSTATE: HY000 (`ER_GRP_RPL_ERROR_WHILE_WAITING_FOR_CONFLICT_DETECTION`)

Message: Error while waiting for conflict detection procedure to finish on session %u

`ER_GRP_RPL_ERROR_WHILE_WAITING_FOR_CONFLICT_DETECTION` was added in 8.0.11.

- Error: 11616 SQLSTATE: HY000 ([ER_GRP_RPL_REINIT_OF_INTERNAL_CACHE_FOR_WRITE_FAILED](#))
Message: Error while re-initializing an internal cache, for write operations, on session %u
[ER_GRP_RPL_REINIT_OF_INTERNAL_CACHE_FOR_WRITE_FAILED](#) was added in 8.0.11, removed after 8.0.12.
- Error: 11617 SQLSTATE: HY000 ([ER_GRP_RPL_FAILED_TO_CREATE_COMMIT_CACHE](#))
Message: Failed to create group replication commit cache on session %u
[ER_GRP_RPL_FAILED_TO_CREATE_COMMIT_CACHE](#) was added in 8.0.11, removed after 8.0.12.
- Error: 11618 SQLSTATE: HY000 ([ER_GRP_RPL_REINIT_OF_COMMIT_CACHE_FOR_WRITE_FAILED](#))
Message: Failed to reinit group replication commit cache for write on session %u
[ER_GRP_RPL_REINIT_OF_COMMIT_CACHE_FOR_WRITE_FAILED](#) was added in 8.0.11, removed after 8.0.12.
- Error: 11619 SQLSTATE: HY000 ([ER_GRP_RPL_PREV_REC_SESSION_RUNNING](#))
Message: A previous recovery session is still running. Please stop the group replication plugin and wait for it to stop
[ER_GRP_RPL_PREV_REC_SESSION_RUNNING](#) was added in 8.0.11.
- Error: 11620 SQLSTATE: HY000 ([ER_GRP_RPL_FATAL_REC_PROCESS](#))
Message: Fatal error during the recovery process of Group Replication. The server will leave the group.
[ER_GRP_RPL_FATAL_REC_PROCESS](#) was added in 8.0.11.
- Error: 11621 SQLSTATE: HY000 ([ER_GRP_RPL_WHILE_STOPPING_REP_CHANNEL](#))
Message: Error stopping all replication channels while server was leaving the group. %s
[ER_GRP_RPL_WHILE_STOPPING_REP_CHANNEL](#) was added in 8.0.11.
- Error: 11622 SQLSTATE: HY000 ([ER_GRP_RPL_UNABLE_TO_EVALUATE_APPLIER_STATUS](#))
Message: Unable to evaluate the group replication applier execution status. Group replication recovery will shutdown to avoid data corruption.
[ER_GRP_RPL_UNABLE_TO_EVALUATE_APPLIER_STATUS](#) was added in 8.0.11.
- Error: 11623 SQLSTATE: HY000 ([ER_GRP_RPL_ONLY_ONE_SERVER_ALIVE](#))
Message: Only one server alive. Declaring this server as online within the replication group
[ER_GRP_RPL_ONLY_ONE_SERVER_ALIVE](#) was added in 8.0.11.
- Error: 11624 SQLSTATE: HY000 ([ER_GRP_RPL_CERTIFICATION_REC_PROCESS](#))
Message: Error when processing certification information in the recovery process
[ER_GRP_RPL_CERTIFICATION_REC_PROCESS](#) was added in 8.0.11.
- Error: 11625 SQLSTATE: HY000 ([ER_GRP_RPL_UNABLE_TO_ENSURE_EXECUTION_REC](#))

Message: Unable to ensure the execution of group transactions received during recovery.

[ER_GRP_RPL_UNABLE_TO_ENSURE_EXECUTION_REC](#) was added in 8.0.11.

- Error: 11626 SQLSTATE: HY000 ([ER_GRP_RPL_WHILE_SENDING_MSG_REC](#))

Message: Error while sending message for group replication recovery

[ER_GRP_RPL_WHILE_SENDING_MSG_REC](#) was added in 8.0.11.

- Error: 11627 SQLSTATE: HY000 ([ER_GRP_RPL_READ_UNABLE_FOR_SUPER_READ_ONLY](#))

Message: Unable to read the server value for the super_read_only variable.

[ER_GRP_RPL_READ_UNABLE_FOR_SUPER_READ_ONLY](#) was added in 8.0.11.

- Error: 11628 SQLSTATE: HY000
([ER_GRP_RPL_READ_UNABLE_FOR_READ_ONLY_SUPER_READ_ONLY](#))

Message: Unable to read the server values for the read_only and super_read_only variables.

[ER_GRP_RPL_READ_UNABLE_FOR_READ_ONLY_SUPER_READ_ONLY](#) was added in 8.0.11.

- Error: 11629 SQLSTATE: HY000 ([ER_GRP_RPL_UNABLE_TO_RESET_SERVER_READ_MODE](#))

Message: Unable to reset the server read mode settings. Try to reset them manually.

[ER_GRP_RPL_UNABLE_TO_RESET_SERVER_READ_MODE](#) was added in 8.0.11.

- Error: 11630 SQLSTATE: HY000 ([ER_GRP_RPL_UNABLE_TO_CERTIFY_PLUGIN_TRANS](#))

Message: Due to a plugin error, some transactions were unable to be certified and will now rollback.

[ER_GRP_RPL_UNABLE_TO_CERTIFY_PLUGIN_TRANS](#) was added in 8.0.11.

- Error: 11631 SQLSTATE: HY000 ([ER_GRP_RPL_UNBLOCK_CERTIFIED_TRANS](#))

Message: Error when trying to unblock non certified or consistent transactions. Check for consistency errors when restarting the service

[ER_GRP_RPL_UNBLOCK_CERTIFIED_TRANS](#) was added in 8.0.11.

- Error: 11632 SQLSTATE: HY000 ([ER_GRP_RPL_SERVER_WORKING_AS_SECONDARY](#))

Message: This server is working as secondary member with primary member address %s:%u.

[ER_GRP_RPL_SERVER_WORKING_AS_SECONDARY](#) was added in 8.0.11.

- Error: 11633 SQLSTATE: HY000 ([ER_GRP_RPL_FAILED_TO_START_WITH_INVALID_SERVER_ID](#))

Message: Unable to start Group Replication. Replication applier infrastructure is not initialized since the server was started with server_id=0. Please, restart the server with server_id larger than 0.

[ER_GRP_RPL_FAILED_TO_START_WITH_INVALID_SERVER_ID](#) was added in 8.0.11.

- Error: 11634 SQLSTATE: HY000 ([ER_GRP_RPL_FORCE_MEMBERS_MUST_BE_EMPTY](#))

Message: group_replication_force_members must be empty on group start. Current value: '%s'

`ER_GRP_RPL_FORCE_MEMBERS_MUST_BE_EMPTY` was added in 8.0.11.

- Error: 11635 SQLSTATE: HY000
(`ER_GRP_RPL_PLUGIN_STRUCT_INIT_NOT_POSSIBLE_ON_SERVER_START`)

Message: It was not possible to guarantee the initialization of plugin structures on server start

`ER_GRP_RPL_PLUGIN_STRUCT_INIT_NOT_POSSIBLE_ON_SERVER_START` was added in 8.0.11.

- Error: 11636 SQLSTATE: HY000 (`ER_GRP_RPL_FAILED_TO_ENABLE_SUPER_READ_ONLY_MODE`)

Message: Could not enable the server read only mode and guarantee a safe recovery execution

`ER_GRP_RPL_FAILED_TO_ENABLE_SUPER_READ_ONLY_MODE` was added in 8.0.11.

- Error: 11637 SQLSTATE: HY000 (`ER_GRP_RPL_FAILED_TO_INIT_COMMUNICATION_ENGINE`)

Message: Error on group communication engine initialization

`ER_GRP_RPL_FAILED_TO_INIT_COMMUNICATION_ENGINE` was added in 8.0.11.

- Error: 11638 SQLSTATE: HY000
(`ER_GRP_RPL_FAILED_TO_START_ON_SECONDARY_WITH_ASYNC_CHANNELS`)

Message: Can't start group replication on secondary member with single-primary mode while asynchronous replication channels are running.

`ER_GRP_RPL_FAILED_TO_START_ON_SECONDARY_WITH_ASYNC_CHANNELS` was added in 8.0.11.

- Error: 11639 SQLSTATE: HY000 (`ER_GRP_RPL_FAILED_TO_START_COMMUNICATION_ENGINE`)

Message: Error on group communication engine start

`ER_GRP_RPL_FAILED_TO_START_COMMUNICATION_ENGINE` was added in 8.0.11.

- Error: 11640 SQLSTATE: HY000 (`ER_GRP_RPL_TIMEOUT_ON_VIEW_AFTER_JOINING_GRP`)

Message: Timeout on wait for view after joining group

`ER_GRP_RPL_TIMEOUT_ON_VIEW_AFTER_JOINING_GRP` was added in 8.0.11.

- Error: 11641 SQLSTATE: HY000
(`ER_GRP_RPL_FAILED_TO_CALL_GRP_COMMUNICATION_INTERFACE`)

Message: Error calling group communication interfaces

`ER_GRP_RPL_FAILED_TO_CALL_GRP_COMMUNICATION_INTERFACE` was added in 8.0.11.

- Error: 11642 SQLSTATE: HY000
(`ER_GRP_RPL_MEMBER_SERVER_UUID_IS_INCOMPATIBLE_WITH_GRP`)

Message: Member server_uuid is incompatible with the group. Server_uuid %s matches group_name %s.

`ER_GRP_RPL_MEMBER_SERVER_UUID_IS_INCOMPATIBLE_WITH_GRP` was added in 8.0.11.

- Error: 11643 SQLSTATE: HY000 (`ER_GRP_RPL_MEMBER_CONF_INFO`)

Message: Member configuration: member_id: %lu; member_uuid: "%s"; single-primary mode: "%s"; group_replication_auto_increment_increment: %lu;

[ER_GRP_RPL_MEMBER_CONF_INFO](#) was added in 8.0.11.

- Error: 11644 SQLSTATE: HY000 ([ER_GRP_RPL_FAILED_TO_CONFIRM_IF_SERVER_LEFT_GRP](#))

Message: Unable to confirm whether the server has left the group or not. Check performance_schema.replication_group_members to check group membership information.

[ER_GRP_RPL_FAILED_TO_CONFIRM_IF_SERVER_LEFT_GRP](#) was added in 8.0.11.

- Error: 11645 SQLSTATE: HY000 ([ER_GRP_RPL_SERVER_IS_ALREADY_LEAVING](#))

Message: Skipping leave operation: concurrent attempt to leave the group is on-going.

[ER_GRP_RPL_SERVER_IS_ALREADY_LEAVING](#) was added in 8.0.11.

- Error: 11646 SQLSTATE: HY000 ([ER_GRP_RPL_SERVER_ALREADY_LEFT](#))

Message: Skipping leave operation: member already left the group.

[ER_GRP_RPL_SERVER_ALREADY_LEFT](#) was added in 8.0.11.

- Error: 11647 SQLSTATE: HY000 ([ER_GRP_RPL_WAITING_FOR_VIEW_UPDATE](#))

Message: Going to wait for view modification

[ER_GRP_RPL_WAITING_FOR_VIEW_UPDATE](#) was added in 8.0.11.

- Error: 11648 SQLSTATE: HY000 ([ER_GRP_RPL_TIMEOUT_RECEIVING_VIEW_CHANGE_ON_SHUTDOWN](#))

Message: On shutdown there was a timeout receiving a view change. This can lead to a possible inconsistent state. Check the log for more details

[ER_GRP_RPL_TIMEOUT_RECEIVING_VIEW_CHANGE_ON_SHUTDOWN](#) was added in 8.0.11.

- Error: 11649 SQLSTATE: HY000 ([ER_GRP_RPL_REQUESTING_NON_MEMBER_SERVER_TO_LEAVE](#))

Message: Requesting to leave the group despite of not being a member

[ER_GRP_RPL_REQUESTING_NON_MEMBER_SERVER_TO_LEAVE](#) was added in 8.0.11.

- Error: 11650 SQLSTATE: HY000 ([ER_GRP_RPL_IS_STOPPING](#))

Message: Plugin 'group_replication' is stopping.

[ER_GRP_RPL_IS_STOPPING](#) was added in 8.0.11.

- Error: 11651 SQLSTATE: HY000 ([ER_GRP_RPL_IS_STOPPED](#))

Message: Plugin 'group_replication' has been stopped.

[ER_GRP_RPL_IS_STOPPED](#) was added in 8.0.11.

- Error: 11652 SQLSTATE: HY000 ([ER_GRP_RPL_FAILED_TO_ENABLE_READ_ONLY_MODE_ON_SHUTDOWN](#))

Message: On plugin shutdown it was not possible to enable the server read only mode. Local transactions will be accepted and committed.

`ER_GRP_RPL_FAILED_TO_ENABLE_READ_ONLY_MODE_ON_SHUTDOWN` was added in 8.0.11.

- Error: 11653 SQLSTATE: HY000
(`ER_GRP_RPL_RECOVERY_MODULE_TERMINATION_TIMED_OUT_ON_SHUTDOWN`)

Message: On shutdown there was a timeout on the Group Replication recovery module termination. Check the log for more details

`ER_GRP_RPL_RECOVERY_MODULE_TERMINATION_TIMED_OUT_ON_SHUTDOWN` was added in 8.0.11.

- Error: 11654 SQLSTATE: HY000
(`ER_GRP_RPL_APPLIER_TERMINATION_TIMED_OUT_ON_SHUTDOWN`)

Message: On shutdown there was a timeout on the Group Replication applier termination.

`ER_GRP_RPL_APPLIER_TERMINATION_TIMED_OUT_ON_SHUTDOWN` was added in 8.0.11.

- Error: 11655 SQLSTATE: HY000 (`ER_GRP_RPL_FAILED_TO_SHUTDOWN_REGISTRY_MODULE`)

Message: Unexpected failure while shutting down registry module!

`ER_GRP_RPL_FAILED_TO_SHUTDOWN_REGISTRY_MODULE` was added in 8.0.11.

- Error: 11656 SQLSTATE: HY000 (`ER_GRP_RPL_FAILED_TO_INIT_HANDLER`)

Message: Failure during Group Replication handler initialization

`ER_GRP_RPL_FAILED_TO_INIT_HANDLER` was added in 8.0.11.

- Error: 11657 SQLSTATE: HY000
(`ER_GRP_RPL_FAILED_TO_REGISTER_SERVER_STATE_OBSERVER`)

Message: Failure when registering the server state observers

`ER_GRP_RPL_FAILED_TO_REGISTER_SERVER_STATE_OBSERVER` was added in 8.0.11.

- Error: 11658 SQLSTATE: HY000 (`ER_GRP_RPL_FAILED_TO_REGISTER_TRANS_STATE_OBSERVER`)

Message: Failure when registering the transactions state observers

`ER_GRP_RPL_FAILED_TO_REGISTER_TRANS_STATE_OBSERVER` was added in 8.0.11.

- Error: 11659 SQLSTATE: HY000
(`ER_GRP_RPL_FAILED_TO_REGISTER_BINLOG_STATE_OBSERVER`)

Message: Failure when registering the binlog state observers

`ER_GRP_RPL_FAILED_TO_REGISTER_BINLOG_STATE_OBSERVER` was added in 8.0.11.

- Error: 11660 SQLSTATE: HY000 (`ER_GRP_RPL_FAILED_TO_START_ON_BOOT`)

Message: Unable to start Group Replication on boot

`ER_GRP_RPL_FAILED_TO_START_ON_BOOT` was added in 8.0.11.

- Error: 11661 SQLSTATE: HY000 (`ER_GRP_RPL_FAILED_TO_STOP_ON_PLUGIN_UNINSTALL`)

Message: Failure when stopping Group Replication on plugin uninstall

`ER_GRP_RPL_FAILED_TO_STOP_ON_PLUGIN_UNINSTALL` was added in 8.0.11.

- Error: 11662 SQLSTATE: HY000 (`ER_GRP_RPL_FAILED_TO_UNREGISTER_SERVER_STATE_OBSERVER`)

Message: Failure when unregistering the server state observers

`ER_GRP_RPL_FAILED_TO_UNREGISTER_SERVER_STATE_OBSERVER` was added in 8.0.11.

- Error: 11663 SQLSTATE: HY000 (`ER_GRP_RPL_FAILED_TO_UNREGISTER_TRANS_STATE_OBSERVER`)

Message: Failure when unregistering the transactions state observers

`ER_GRP_RPL_FAILED_TO_UNREGISTER_TRANS_STATE_OBSERVER` was added in 8.0.11.

- Error: 11664 SQLSTATE: HY000 (`ER_GRP_RPL_FAILED_TO_UNREGISTER_BINLOG_STATE_OBSERVER`)

Message: Failure when unregistering the binlog state observers

`ER_GRP_RPL_FAILED_TO_UNREGISTER_BINLOG_STATE_OBSERVER` was added in 8.0.11.

- Error: 11665 SQLSTATE: HY000 (`ER_GRP_RPL_ALL_OBSERVERS_UNREGISTERED`)

Message: All Group Replication server observers have been successfully unregistered

`ER_GRP_RPL_ALL_OBSERVERS_UNREGISTERED` was added in 8.0.11.

- Error: 11666 SQLSTATE: HY000 (`ER_GRP_RPL_FAILED_TO_PARSE_THE_GRP_NAME`)

Message: Unable to parse the group name.

`ER_GRP_RPL_FAILED_TO_PARSE_THE_GRP_NAME` was added in 8.0.11.

- Error: 11667 SQLSTATE: HY000 (`ER_GRP_RPL_FAILED_TO_GENERATE_SIDNO_FOR_GRP`)

Message: Unable to parse the group name.

`ER_GRP_RPL_FAILED_TO_GENERATE_SIDNO_FOR_GRP` was added in 8.0.11.

- Error: 11668 SQLSTATE: HY000 (`ER_GRP_RPL_APPLIER_NOT_STARTED_DUE_TO_RUNNING_PREV_SHUTDOWN`)

Message: Cannot start the Group Replication applier as a previous shutdown is still running: The thread will stop once its task is complete.

`ER_GRP_RPL_APPLIER_NOT_STARTED_DUE_TO_RUNNING_PREV_SHUTDOWN` was added in 8.0.11.

- Error: 11669 SQLSTATE: HY000 (`ER_GRP_RPL_FAILED_TO_INIT_APPLIER_MODULE`)

Message: Unable to initialize the Group Replication applier module.

`ER_GRP_RPL_FAILED_TO_INIT_APPLIER_MODULE` was added in 8.0.11.

- Error: 11670 SQLSTATE: HY000 (`ER_GRP_RPL_APPLIER_INITIALIZED`)

Message: Group Replication applier module successfully initialized!

[ER_GRP_RPL_APPLIER_INITIALIZED](#) was added in 8.0.11.

- Error: 11671 SQLSTATE: HY000 ([ER_GRP_RPL_COMMUNICATION_SSL_CONF_INFO](#))

Message: Group communication SSL configuration: group_replication_ssl_mode: "%s"; server_key_file: "%s"; server_cert_file: "%s"; client_key_file: "%s"; client_cert_file: "%s"; ca_file: "%s"; ca_path: "%s"; cipher: "%s"; tls_version: "%s"; crl_file: "%s"; crl_path: "%s"; ssl_fips_mode: "%s"

[ER_GRP_RPL_COMMUNICATION_SSL_CONF_INFO](#) was added in 8.0.11.

- Error: 11672 SQLSTATE: HY000 ([ER_GRP_RPL_ABORTS_AS_SSL_NOT_SUPPORTED_BY_MYSQLD](#))

Message: MySQL server does not have SSL support and group_replication_ssl_mode is "%s", START GROUP_REPLICATION will abort

[ER_GRP_RPL_ABORTS_AS_SSL_NOT_SUPPORTED_BY_MYSQLD](#) was added in 8.0.11.

- Error: 11673 SQLSTATE: HY000 ([ER_GRP_RPL_SSL_DISABLED](#))

Message: Group communication SSL configuration: group_replication_ssl_mode: "%s"

[ER_GRP_RPL_SSL_DISABLED](#) was added in 8.0.11.

- Error: 11674 SQLSTATE: HY000 ([ER_GRP_RPL_UNABLE_TO_INIT_COMMUNICATION_ENGINE](#))

Message: Unable to initialize the group communication engine

[ER_GRP_RPL_UNABLE_TO_INIT_COMMUNICATION_ENGINE](#) was added in 8.0.11.

- Error: 11675 SQLSTATE: HY000 ([ER_GRP_RPL_BINLOG_DISABLED](#))

Message: Binlog must be enabled for Group Replication

[ER_GRP_RPL_BINLOG_DISABLED](#) was added in 8.0.11.

- Error: 11676 SQLSTATE: HY000 ([ER_GRP_RPL_GTID_MODE_OFF](#))

Message: Gtid mode should be ON for Group Replication

[ER_GRP_RPL_GTID_MODE_OFF](#) was added in 8.0.11.

- Error: 11677 SQLSTATE: HY000 ([ER_GRP_RPL_LOG_SLAVE_UPDATES_NOT_SET](#))

Message: LOG_SLAVE_UPDATES should be ON for Group Replication

[ER_GRP_RPL_LOG_SLAVE_UPDATES_NOT_SET](#) was added in 8.0.11.

- Error: 11678 SQLSTATE: HY000 ([ER_GRP_RPL_INVALID_TRANS_WRITE_SET_EXTRACTION_VALUE](#))

Message: Extraction of transaction write sets requires an hash algorithm configuration. Please, double check that the parameter transaction-write-set-extraction is set to a valid algorithm.

[ER_GRP_RPL_INVALID_TRANS_WRITE_SET_EXTRACTION_VALUE](#) was added in 8.0.11.

- Error: 11679 SQLSTATE: HY000 ([ER_GRP_RPL_RELAY_LOG_INFO_REPO_MUST_BE_TABLE](#))

Message: Relay log info repository must be set to TABLE

`ER_GRP_RPL_RELAY_LOG_INFO_REPO_MUST_BE_TABLE` was added in 8.0.11.

- Error: 11680 SQLSTATE: HY000 (`ER_GRP_RPL_MASTER_INFO_REPO_MUST_BE_TABLE`)

Message: Master info repository must be set to TABLE.

`ER_GRP_RPL_MASTER_INFO_REPO_MUST_BE_TABLE` was added in 8.0.11.

- Error: 11681 SQLSTATE: HY000 (`ER_GRP_RPL_INCORRECT_TYPE_SET_FOR_PARALLEL_APPLIER`)

Message: In order to use parallel applier on Group Replication, parameter slave-parallel-type must be set to 'LOGICAL_CLOCK'.

`ER_GRP_RPL_INCORRECT_TYPE_SET_FOR_PARALLEL_APPLIER` was added in 8.0.11.

- Error: 11682 SQLSTATE: HY000 (`ER_GRP_RPL_SLAVE_PRESERVE_COMMIT_ORDER_NOT_SET`)

Message: Group Replication requires slave-preserve-commit-order to be set to ON when using more than 1 applier threads.

`ER_GRP_RPL_SLAVE_PRESERVE_COMMIT_ORDER_NOT_SET` was added in 8.0.11.

- Error: 11683 SQLSTATE: HY000
(`ER_GRP_RPL_SINGLE_PRIM_MODE_NOT_ALLOWED_WITH_UPDATE_EVERYWHERE`)

Message: It is not allowed to run single primary mode with 'enforce_update_everywhere_checks' enabled.

`ER_GRP_RPL_SINGLE_PRIM_MODE_NOT_ALLOWED_WITH_UPDATE_EVERYWHERE` was added in 8.0.11.

- Error: 11684 SQLSTATE: HY000 (`ER_GRP_RPL_MODULE_TERMINATE_ERROR`)

Message: error_message: %s

`ER_GRP_RPL_MODULE_TERMINATE_ERROR` was added in 8.0.11.

- Error: 11685 SQLSTATE: HY000 (`ER_GRP_RPL_GRP_NAME_OPTION_MANDATORY`)

Message: The group name option is mandatory

`ER_GRP_RPL_GRP_NAME_OPTION_MANDATORY` was added in 8.0.11.

- Error: 11686 SQLSTATE: HY000 (`ER_GRP_RPL_GRP_NAME_IS_TOO_LONG`)

Message: The group name '%s' is not a valid UUID, its length is too big

`ER_GRP_RPL_GRP_NAME_IS_TOO_LONG` was added in 8.0.11.

- Error: 11687 SQLSTATE: HY000 (`ER_GRP_RPL_GRP_NAME_IS_NOT_VALID_UUID`)

Message: The group name '%s' is not a valid UUID

`ER_GRP_RPL_GRP_NAME_IS_NOT_VALID_UUID` was added in 8.0.11.

- Error: 11688 SQLSTATE: HY000
(`ER_GRP_RPL_FLOW_CTRL_MIN_QUOTA_GREATER_THAN_MAX_QUOTA`)

Message: group_replication_flow_control_min_quota cannot be larger than group_replication_flow_control_max_quota

[ER_GRP_RPL_FLOW_CTRL_MIN_QUOTA_GREATER_THAN_MAX_QUOTA](#) was added in 8.0.11.

- Error: 11689 SQLSTATE: HY000 ([ER_GRP_RPL_FLOW_CTRL_MIN_RECOVERY_QUOTA_GREATER_THAN_MAX_QUOTA](#))

Message: group_replication_flow_control_min_recovery_quota cannot be larger than group_replication_flow_control_max_quota

[ER_GRP_RPL_FLOW_CTRL_MIN_RECOVERY_QUOTA_GREATER_THAN_MAX_QUOTA](#) was added in 8.0.11.

- Error: 11690 SQLSTATE: HY000 ([ER_GRP_RPL_FLOW_CTRL_MAX_QUOTA_SMALLER_THAN_MIN_QUOTAS](#))

Message: group_replication_flow_control_max_quota cannot be smaller than group_replication_flow_control_min_quota or group_replication_flow_control_min_recovery_quota

[ER_GRP_RPL_FLOW_CTRL_MAX_QUOTA_SMALLER_THAN_MIN_QUOTAS](#) was added in 8.0.11.

- Error: 11691 SQLSTATE: HY000 ([ER_GRP_RPL_INVALID_SSL_RECOVERY_STRING](#))

Message: The given value for recovery ssl option '%s' is invalid as its length is beyond the limit

[ER_GRP_RPL_INVALID_SSL_RECOVERY_STRING](#) was added in 8.0.11.

- Error: 11692 SQLSTATE: HY000 ([ER_GRP_RPL_SUPPORTS_ONLY_ONE_FORCE_MEMBERS_SET](#))

Message: There is one group_replication_force_members operation already ongoing

[ER_GRP_RPL_SUPPORTS_ONLY_ONE_FORCE_MEMBERS_SET](#) was added in 8.0.11.

- Error: 11693 SQLSTATE: HY000 ([ER_GRP_RPL_FORCE_MEMBERS_SET_UPDATE_NOT_ALLOWED](#))

Message: group_replication_force_members can only be updated when Group Replication is running and a majority of the members are unreachable

[ER_GRP_RPL_FORCE_MEMBERS_SET_UPDATE_NOT_ALLOWED](#) was added in 8.0.11.

- Error: 11694 SQLSTATE: HY000 ([ER_GRP_RPL_GRP_COMMUNICATION_INIT_WITH_CONF](#))

Message: Initialized group communication with configuration: group_replication_group_name: '%s'; group_replication_local_address: '%s'; group_replication_group_seeds: '%s'; group_replication_bootstrap_group: '%s'; group_replication_poll_spin_loops: %lu; group_replication_compression_threshold: %lu; group_replication_ip_whitelist: '%s'; group_replication_communication_debug_options: '%s'; group_replication_member_expel_timeout: '%lu'

[ER_GRP_RPL_GRP_COMMUNICATION_INIT_WITH_CONF](#) was added in 8.0.11.

(ER_GRP_RPL_FAILED_TO_BOOTSTRAP_EVENT_HANDLING_INFRASTRUCTURE)

Message: Unable to bootstrap group replication event handling infrastructure. Unknown handler type: %d

ER_GRP_RPL_FAILED_TO_BOOTSTRAP_EVENT_HANDLING_INFRASTRUCTURE was added in 8.0.11.
- Error: 11697 SQLSTATE: HY000 (ER_GRP_RPL_APPLIER_HANDLER_NOT_INITIALIZED)

Message: One of the group replication applier handlers is null due to an initialization error

ER_GRP_RPL_APPLIER_HANDLER_NOT_INITIALIZED was added in 8.0.11.
- Error: 11698 SQLSTATE: HY000 (ER_GRP_RPL_APPLIER_HANDLER_IS_IN_USE)

Message: A group replication applier handler, marked as unique, is already in use.

ER_GRP_RPL_APPLIER_HANDLER_IS_IN_USE was added in 8.0.11.
- Error: 11699 SQLSTATE: HY000 (ER_GRP_RPL_APPLIER_HANDLER_ROLE_IS_IN_USE)

Message: A group replication applier handler role, that was marked as unique, is already in use.

ER_GRP_RPL_APPLIER_HANDLER_ROLE_IS_IN_USE was added in 8.0.11.
- Error: 11700 SQLSTATE: HY000 (ER_GRP_RPL_FAILED_TO_INIT_APPLIER_HANDLER)

Message: Error on group replication applier handler initialization

ER_GRP_RPL_FAILED_TO_INIT_APPLIER_HANDLER was added in 8.0.11.
- Error: 11701 SQLSTATE: HY000
(ER_GRP_RPL_SQL_SERVICE_FAILED_TO_INIT_SESSION_THREAD)

Message: Error when initializing a session thread for internal server connection.

ER_GRP_RPL_SQL_SERVICE_FAILED_TO_INIT_SESSION_THREAD was added in 8.0.11.
- Error: 11702 SQLSTATE: HY000
(ER_GRP_RPL_SQL_SERVICE_COMM_SESSION_NOT_INITIALIZED)

Message: Error running internal SQL query: %s. The internal server communication session is not initialized

ER_GRP_RPL_SQL_SERVICE_COMM_SESSION_NOT_INITIALIZED was added in 8.0.11.
- Error: 11703 SQLSTATE: HY000 (ER_GRP_RPL_SQL_SERVICE_SERVER_SESSION_KILLED)

Message: Error running internal SQL query: %s. The internal server session was killed or server is shutting down.

ER_GRP_RPL_SQL_SERVICE_SERVER_SESSION_KILLED was added in 8.0.11.
- Error: 11704 SQLSTATE: HY000 (ER_GRP_RPL_SQL_SERVICE_FAILED_TO_RUN_SQL_QUERY)

Message: Error running internal SQL query: %s. Got internal SQL error: %s(%d)

ER_GRP_RPL_SQL_SERVICE_FAILED_TO_RUN_SQL_QUERY was added in 8.0.11.

- Error: 11705 SQLSTATE: HY000 (ER_GRP_RPL_SQL_SERVICE_SERVER_INTERNAL_FAILURE)
Message: Error running internal SQL query: %s. Internal failure.
ER_GRP_RPL_SQL_SERVICE_SERVER_INTERNAL_FAILURE was added in 8.0.11.
- Error: 11706 SQLSTATE: HY000 (ER_GRP_RPL_SQL_SERVICE_RETRIES_EXCEEDED_ON_SESSION_STATE)
Message: Error, maximum number of retries exceeded when waiting for the internal server session state to be operating
ER_GRP_RPL_SQL_SERVICE_RETRIES_EXCEEDED_ON_SESSION_STATE was added in 8.0.11.
- Error: 11707 SQLSTATE: HY000 (ER_GRP_RPL_SQL_SERVICE_FAILED_TO_FETCH_SECURITY_CTX)
Message: Error when trying to fetch security context when contacting the server for internal plugin requests.
ER_GRP_RPL_SQL_SERVICE_FAILED_TO_FETCH_SECURITY_CTX was added in 8.0.11.
- Error: 11708 SQLSTATE: HY000 (ER_GRP_RPL_SQL_SERVICE_SERVER_ACCESS_DENIED_FOR_USER)
Message: There was an error when trying to access the server with user: %s. Make sure the user is present in the server and that mysql_upgrade was run after a server update.
ER_GRP_RPL_SQL_SERVICE_SERVER_ACCESS_DENIED_FOR_USER was added in 8.0.11.
- Error: 11709 SQLSTATE: HY000 (ER_GRP_RPL_SQL_SERVICE_MAX_CONN_ERROR_FROM_SERVER)
Message: Failed to establish an internal server connection to execute plugin operations since the server does not have available connections, please increase @@GLOBAL.MAX_CONNECTIONS. Server error: %i.
ER_GRP_RPL_SQL_SERVICE_MAX_CONN_ERROR_FROM_SERVER was added in 8.0.11.
- Error: 11710 SQLSTATE: HY000 (ER_GRP_RPL_SQL_SERVICE_SERVER_ERROR_ON_CONN)
Message: Failed to establish an internal server connection to execute plugin operations. Server error: %i. Server error message: %s
ER_GRP_RPL_SQL_SERVICE_SERVER_ERROR_ON_CONN was added in 8.0.11.
- Error: 11711 SQLSTATE: HY000 (ER_GRP_RPL_UNREACHABLE_MAJORITY_TIMEOUT_FOR_MEMBER)
Message: This member could not reach a majority of the members for more than %ld seconds. The member will now leave the group as instructed by the group_replication_unreachable_majority_timeout option.
ER_GRP_RPL_UNREACHABLE_MAJORITY_TIMEOUT_FOR_MEMBER was added in 8.0.11.
- Error: 11712 SQLSTATE: HY000 (ER_GRP_RPL_SERVER_SET_TO_READ_ONLY_DUE_TO_ERRORS)
Message: The server was automatically set into read only mode after an error was detected.
ER_GRP_RPL_SERVER_SET_TO_READ_ONLY_DUE_TO_ERRORS was added in 8.0.11.

- Error: 11713 SQLSTATE: HY000 (ER_GRP_RPL_GMS_LISTENER_FAILED_TO_LOG_NOTIFICATION)
Message: Unable to log notification to table (errno: %lu) (res: %d)! Message: %s
ER_GRP_RPL_GMS_LISTENER_FAILED_TO_LOG_NOTIFICATION was added in 8.0.11.
- Error: 11714 SQLSTATE: HY000 (ER_GRP_RPL_GRP_COMMUNICATION_ENG_INIT_FAILED)

[ER_SYSTEMD_NOTIFY_PATH_TOO_LONG](#) was added in 8.0.11.
- Error: 11807 SQLSTATE: HY000 (ER_SYSTEMD_NOTIFY_CONNECT_FAILED)
Message: Failed to connect to systemd notification socket named %s. Error: '%s'
[ER_SYSTEMD_NOTIFY_CONNECT_FAILED](#) was added in 8.0.11.
- Error: 11808 SQLSTATE: HY000 (ER_SYSTEMD_NOTIFY_WRITE_FAILED)
Message: Failed to write '%s' to systemd notification. Error: '%s'
[ER_SYSTEMD_NOTIFY_WRITE_FAILED](#) was added in 8.0.11.
- Error: 11809 SQLSTATE: HY000 (ER_FOUND_MISSING_GTIDS)
Message: Cannot replicate to server with server_uuid='%s' because the present server has purged required binary logs. The connecting server needs to replicate the missing transactions from elsewhere, or be replaced by a new server created from a more recent backup. To prevent this error in the future, consider increasing the binary log expiration period on the present server. The missing transactions are '%s'.
[ER_FOUND_MISSING_GTIDS](#) was added in 8.0.11.
- Error: 11810 SQLSTATE: HY000 (ER_PID_FILE_PRIV_DIRECTORY_INSECURE)

Message: Insecure configuration for --pid-file: Location '%s' in the path is accessible to all OS users. Consider choosing a different directory.

`ER_PID_FILE_PRIV_DIRECTORY_INSECURE` was added in 8.0.11.

- Error: 11811 SQLSTATE: HY000 (`ER_CANT_CHECK_PID_PATH`)

Message: Can't start server: can't check PID filepath: %s

`ER_CANT_CHECK_PID_PATH` was added in 8.0.11.

- Error: 11812 SQLSTATE: HY000 (`ER_VALIDATE_PWD_STATUS_VAR_REGISTRATION_FAILED`)

Message: validate_password status variables registration failed.

`ER_VALIDATE_PWD_STATUS_VAR_REGISTRATION_FAILED` was added in 8.0.11.

- Error: 11813 SQLSTATE: HY000 (`ER_VALIDATE_PWD_STATUS_VAR_UNREGISTRATION_FAILED`)

Message: validate_password status variables unregistration failed.

`ER_VALIDATE_PWD_STATUS_VAR_UNREGISTRATION_FAILED` was added in 8.0.11.

- Error: 11814 SQLSTATE: HY000 (`ER_VALIDATE_PWD_DICT_FILE_OPEN_FAILED`)

Message: Dictionary file open failed

`ER_VALIDATE_PWD_DICT_FILE_OPEN_FAILED` was added in 8.0.11.

- Error: 11815 SQLSTATE: HY000 (`ER_VALIDATE_PWD_COULD_BE_NULL`)

Message: given password string could be null

`ER_VALIDATE_PWD_COULD_BE_NULL` was added in 8.0.11.

- Error: 11816 SQLSTATE: HY000 (`ER_VALIDATE_PWD_STRING_CONV_TO_LOWERCASE_FAILED`)

Message: failed to convert the password string to lower case

`ER_VALIDATE_PWD_STRING_CONV_TO_LOWERCASE_FAILED` was added in 8.0.11.

- Error: 11817 SQLSTATE: HY000 (`ER_VALIDATE_PWD_STRING_CONV_TO_BUFFER_FAILED`)

Message: failed to convert the password string into a buffer

`ER_VALIDATE_PWD_STRING_CONV_TO_BUFFER_FAILED` was added in 8.0.11.

- Error: 11818 SQLSTATE: HY000
(`ER_VALIDATE_PWD_STRING_HANDLER_MEM_ALLOCATION_FAILED`)

Message: memory allocation failed for string handler

`ER_VALIDATE_PWD_STRING_HANDLER_MEM_ALLOCATION_FAILED` was added in 8.0.11.

- Error: 11819 SQLSTATE: HY000
(`ER_VALIDATE_PWD_STRONG_POLICY_DICT_FILE_UNSPECIFIED`)

Message: Since the validate_password_policy is mentioned as Strong, dictionary file must be specified

`ER_VALIDATE_PWD_STRONG_POLICY_DICT_FILE_UNSPECIFIED` was added in 8.0.11.

- Error: 11820 SQLSTATE: HY000 (`ER_VALIDATE_PWD_CONVERT_TO_BUFFER_FAILED`)

Message: convert_to_buffer service failed

`ER_VALIDATE_PWD_CONVERT_TO_BUFFER_FAILED` was added in 8.0.11.

- Error: 11821 SQLSTATE: HY000 (`ER_VALIDATE_PWD_VARIABLE_REGISTRATION_FAILED`)

Message: %s variable registration failed.

`ER_VALIDATE_PWD_VARIABLE_REGISTRATION_FAILED` was added in 8.0.11.

- Error: 11822 SQLSTATE: HY000 (`ER_VALIDATE_PWD_VARIABLE_UNREGISTRATION_FAILED`)

Message: %s variable unregistration failed.

`ER_VALIDATE_PWD_VARIABLE_UNREGISTRATION_FAILED` was added in 8.0.11.

- Error: 11823 SQLSTATE: HY000 (`ER_KEYRING_MIGRATION_EXTRA_OPTIONS`)

Message: Please specify options specific to keyring migration. Any additional options can be ignored.

NOTE: Although some options are valid, migration tool can still report error example: plugin variables for which plugin is not loaded yet.

`ER_KEYRING_MIGRATION_EXTRA_OPTIONS` was added in 8.0.11.

Message: STOP SLAVE command execution is incomplete: Slave SQL thread got the stop signal, thread is busy, SQL thread will stop once the current task is complete.

[ER_RPL_SLAVE_SQL_THREAD_STOP_CMD_EXEC_TIMEOUT](#) was added in 8.0.11.

- Error: 13097 SQLSTATE: HY000 ([ER_RPL_SLAVE_IO_THREAD_STOP_CMD_EXEC_TIMEOUT](#))

Message: STOP SLAVE command execution is incomplete: Slave IO thread got the stop signal, thread is busy, IO thread will stop once the current task is complete.

[ER_RPL_SLAVE_IO_THREAD_STOP_CMD_EXEC_TIMEOUT](#) was added in 8.0.11.

- Error: 13098 SQLSTATE: HY000 ([ER_RPL_GTID_UNSAFE_STMT_ON_NON_TRANS_TABLE](#))

Message: Statement violates GTID consistency: Updates to non-transactional tables can only be done in either autocommitted statements or single-statement transactions, and never in the same statement as updates to transactional tables.

[ER_RPL_GTID_UNSAFE_STMT_ON_NON_TRANS_TABLE](#) was added in 8.0.11.

- Error: 13099 SQLSTATE: HY000 (ER_RPL_GTID_UNSAFE_STMT_CREATE_SELECT)

Message: Statement violates GTID consistency: CREATE TABLE ... SELECT.

ER_RPL_GTID_UNSAFE_STMT_CREATE_SELECT was added in 8.0.11.

- Error: 13100 SQLSTATE: HY000 (ER_RPL_GTID_UNSAFE_STMT_ON_TEMPORARY_TABLE)

Message: Statement violates GTID consistency: CREATE TEMPORARY TABLE and DROP TEMPORARY TABLE can only be executed outside transactional context. These statements are also not allowed in a function or trigger because functions and triggers are also considered to be multi-statement transactions.

ER_RPL_GTID_UNSAFE_STMT_ON_TEMPORARY_TABLE was added in 8.0.11, removed after 8.0.12.

- Error: 13101 SQLSTATE: HY000 (ER_BINLOG_ROW_VALUE_OPTION_IGNORED)

Message: When %s, the option binlog_row_value_options=%s will be ignored and updates will be written in full format to binary log.

ER_BINLOG_ROW_VALUE_OPTION_IGNORED was added in 8.0.11.

- Error: 13102 SQLSTATE: HY000 (ER_BINLOG_USE_V1_ROW_EVENTS_IGNORED)

Message: When %s, the option log_bin_use_v1_row_events=1 will be ignored and row events will be written in new format to binary log.

ER_BINLOG_USE_V1_ROW_EVENTS_IGNORED was added in 8.0.11.

- Error: 13103 SQLSTATE: HY000
(ER_BINLOG_ROW_VALUE_OPTION_USED_ONLY_FOR_AFTER_IMAGES)

Message: When %s, the option binlog_row_value_options=%s will be used only for the after-image. Full values will be written in the before-image, so the saving in disk space due to binlog_row_value_options is limited to less than 50%%.

ER_BINLOG_ROW_VALUE_OPTION_USED_ONLY_FOR_AFTER_IMAGES was added in 8.0.11.

- Error: 13104 SQLSTATE: HY000 (ER_CONNECTION_ABORTED)

Message: Aborted connection %u to db: '%s' user: '%s' host: '%s' (%s).

ER_CONNECTION_ABORTED was added in 8.0.11.

- Error: 13105 SQLSTATE: HY000 (ER_NORMAL_SERVER_SHUTDOWN)

Message: %s: Normal shutdown.

ER_NORMAL_SERVER_SHUTDOWN was added in 8.0.11.

- Error: 13106 SQLSTATE: HY000 (ER_KEYRING_MIGRATE_FAILED)

Message: Can not perform keyring migration : %s.

ER_KEYRING_MIGRATE_FAILED was added in 8.0.11.

- Error: 13107 SQLSTATE: HY000 (ER_GRP_RPL_LOWER_CASE_TABLE_NAMES_DIFF_FROM_GRP)

Message: The member is configured with a `lower_case_table_names` option value '%u' different from the group '%u'. The member will now exit the group. If there is existing data on member, it may be incompatible with group if it was created with a `lower_case_table_names` value different from the group.

`ER_GRP_RPL_LOWER_CASE_TABLE_NAMES_DIFF_FROM_GRP` was added in 8.0.11.

- Error: 13108 SQLSTATE: HY000 (`ER_OOM_SAVE_GTIDS`)

Message: An out-of-memory error occurred while saving the set of GTIDs from the last binary log into the `mysql.gtid_executed` table

`ER_OOM_SAVE_GTIDS` was added in 8.0.11.

- Error: 13109 SQLSTATE: HY000 (`ER_LCTN_NOT_FOUND`)

Message: The `lower_case_table_names` setting for the data dictionary was not found. Starting the server using `lower_case_table_names = '%u'`.

`ER_LCTN_NOT_FOUND` was added in 8.0.11.

- Error: 13110 SQLSTATE: HY000 (`ER_REGEXP_INVALID_CAPTURE_GROUP_NAME`)

Message: A capture group has an invalid name.

`ER_REGEXP_INVALID_CAPTURE_GROUP_NAME` was added in 8.0.11.

- Error: 13111 SQLSTATE: HY000 (`ER_COMPONENT_FILTER_WRONG_VALUE`)

Message: Variable '%s' can't be set to the value of '%s'

`ER_COMPONENT_FILTER_WRONG_VALUE` was added in 8.0.11.

- Error: 13112 SQLSTATE: HY000 (`ER_XPLUGIN_FAILED_TO_STOP_SERVICES`)

Message: Stopping services failed with error "%s"

`ER_XPLUGIN_FAILED_TO_STOP_SERVICES` was added in 8.0.11.

Message: Unknown system variable '%s'

ER_SERVER_UNKNOWN_SYSTEM_VARIABLE was added in 8.0.11.

- Error: 13129 SQLSTATE: HY000 (ER_SERVER_NO_SESSION_TO_SEND_TO)

Message: A message intended for a client cannot be sent there as no client-session is attached. Therefore, we're sending the information to the error-log instead: MY-%06d - %s

[ER_SERVER_NO_SESSION_TO_SEND_TO](#) was added in 8.0.11.

- Error: 13130 SQLSTATE: 08S01 ([ER_SERVER_NEW_ABORTING_CONNECTION](#))

Message: Aborted connection %u to db: '%s' user: '%s' host: '%s' (%s; diagnostics area: MY-%06d - %s)

[ER_SERVER_NEW_ABORTING_CONNECTION](#) was added in 8.0.11.

- Error: 13131 SQLSTATE: HY000 ([ER_SERVER_OUT_OF_SORTMEMORY](#))

Message: Out of sort memory, consider increasing server sort buffer size!

[ER_SERVER_OUT_OF_SORTMEMORY](#) was added in 8.0.11.

- Error: 13132 SQLSTATE: HY000 ([ER_SERVER_RECORD_FILE_FULL](#))

Message: The table '%s' is full!

[ER_SERVER_RECORD_FILE_FULL](#) was added in 8.0.11.

- Error: 13133 SQLSTATE: HY000 ([ER_SERVER_DISK_FULL_NOWAIT](#))

Message: Create table/tablespace '%s' failed, as disk is full.

[ER_SERVER_DISK_FULL_NOWAIT](#) was added in 8.0.11.

- Error: 13134 SQLSTATE: HY000 ([ER_SERVER_HANDLER_ERROR](#))

Message: Handler reported error %d - %s

[ER_SERVER_HANDLER_ERROR](#) was added in 8.0.11.

- Error: 13135 SQLSTATE: HY000 ([ER_SERVER_NOT_FORM_FILE](#))

Message: Incorrect information in file: '%s'

[ER_SERVER_NOT_FORM_FILE](#) was added in 8.0.11.

- Error: 13136 SQLSTATE: HY000 ([ER_SERVER_CANT_OPEN_FILE](#))

Message: Can't open file: '%s' (OS errno: %d - %s)

[ER_SERVER_CANT_OPEN_FILE](#) was added in 8.0.11.

- Error: 13137 SQLSTATE: HY000 ([ER_SERVER_FILE_NOT_FOUND](#))

Message: Can't find file: '%s' (OS errno: %d - %s)

[ER_SERVER_FILE_NOT_FOUND](#) was added in 8.0.11.

- Error: 13138 SQLSTATE: HY000 ([ER_SERVER_FILE_USED](#))

Message: '%s' is locked against change (OS errno: %d - %s)

[ER_SERVER_FILE_USED](#) was added in 8.0.11.

- Error: 13139 SQLSTATE: HY000 (ER_SERVER_CANNOT_LOAD_FROM_TABLE_V2)
Message: Cannot load from %s.%s. The table is probably corrupted!
[ER_SERVER_CANNOT_LOAD_FROM_TABLE_V2](#) was added in 8.0.11.
- Error: 13140 SQLSTATE: HY000 (ER_ERROR_INFO_FROM_DA)
Message: Error in diagnostics area: MY-%06d - %s
[ER_ERROR_INFO_FROM_DA](#) was added in 8.0.11.
- Error: 13141 SQLSTATE: HY000 (ER_SERVER_TABLE_CHECK_FAILED)
Message: Incorrect definition of table %s.%s: expected column '%s' at position %d, found '%s'.
[ER_SERVER_TABLE_CHECK_FAILED](#) was added in 8.0.11.
- Error: 13142 SQLSTATE: HY000 (ER_SERVER_COL_COUNT_DOESNT_MATCH_PLEASE_UPDATE_V2)
Message: Column count of %s.%s is wrong. Expected %d, found %d. Created with MySQL %d, now running %d. Please use mysql_upgrade to fix this error.
[ER_SERVER_COL_COUNT_DOESNT_MATCH_PLEASE_UPDATE_V2](#) was added in 8.0.11.
- Error: 13143 SQLSTATE: HY000 (ER_SERVER_COL_COUNT_DOESNT_MATCH_CORRUPTED_V2)
Message: Column count of %s.%s is wrong. Expected %d, found %d. The table is probably corrupted
[ER_SERVER_COL_COUNT_DOESNT_MATCH_CORRUPTED_V2](#) was added in 8.0.11.
- Error: 13144 SQLSTATE: HY000 (ER_SERVER_ACL_TABLE_ERROR)
Message:
[ER_SERVER_ACL_TABLE_ERROR](#) was added in 8.0.11.
- Error: 13145 SQLSTATE: HY000 (ER_SERVER_SLAVE_INIT_QUERY_FAILED)
Message: Slave SQL thread aborted. Can't execute init_slave query, MY-%06d - '%s'
[ER_SERVER_SLAVE_INIT_QUERY_FAILED](#) was added in 8.0.11.
- Error: 13146 SQLSTATE: HY000 (ER_SERVER_SLAVE_CONVERSION_FAILED)
Message: Column %d of table '%s.%s' cannot be converted from type '%s' to type '%s'
[ER_SERVER_SLAVE_CONVERSION_FAILED](#) was added in 8.0.11.
- Error: 13147 SQLSTATE: HY000 (ER_SERVER_SLAVE_IGNORED_TABLE)
Message: Slave SQL thread ignored the query because of replicate-*-table rules
[ER_SERVER_SLAVE_IGNORED_TABLE](#) was added in 8.0.11.
- Error: 13148 SQLSTATE: HY000 (ER_CANT_REPLICATE_ANONYMOUS_WITH_AUTO_POSITION)
Message: Cannot replicate anonymous transaction when AUTO_POSITION = 1, at file %s, position %lld.
- Error: 13149 SQLSTATE: HY000 (ER_CANT_REPLICATE_ANONYMOUS_WITH_GTID_MODE_ON)

Message: Cannot replicate anonymous transaction when @@GLOBAL.GTID_MODE = ON, at file %s, position %lld.

- Error: 13150 SQLSTATE: HY000 (ER_CANT_REPLICATE_GTID_WITH_GTID_MODE_OFF)

Message: Cannot replicate GTID-transaction when @@GLOBAL.GTID_MODE = OFF, at file %s, position %lld.

- Error: 13151 SQLSTATE: HY000 (ER_SERVER_TEST_MESSAGE)

Message: Simulated error

ER_SERVER_TEST_MESSAGE was added in 8.0.11.

- Error: 13152 SQLSTATE: HY000 (ER_AUDIT_LOG_JSON_FILTER_PARSING_ERROR)

Message: %s

ER_AUDIT_LOG_JSON_FILTER_PARSING_ERROR was added in 8.0.11.

- Error: 13153 SQLSTATE: HY000 (ER_AUDIT_LOG_JSON_FILTERING_NOT_ENABLED)

Message: Audit Log filtering has not been installed.

ER_AUDIT_LOG_JSON_FILTERING_NOT_ENABLED was added in 8.0.11.

- Error: 13154 SQLSTATE: HY000 (ER_PLUGIN_FAILED_TO_OPEN_TABLES)

Message: Failed to open the %s filter tables.

ER_PLUGIN_FAILED_TO_OPEN_TABLES was added in 8.0.11.

- Error: 13155 SQLSTATE: HY000 (ER_PLUGIN_FAILED_TO_OPEN_TABLE)

Message: Failed to open '%s.%s' %s table.

ER_PLUGIN_FAILED_TO_OPEN_TABLE was added in 8.0.11.

- Error: 13156 SQLSTATE: HY000 (ER_AUDIT_LOG_JSON_FILTER_NAME_CANNOT_BE_EMPTY)

Message: Filter name cannot be empty.

ER_AUDIT_LOG_JSON_FILTER_NAME_CANNOT_BE_EMPTY was added in 8.0.11.

- Error: 13157 SQLSTATE: HY000 (ER_AUDIT_LOG_USER_NAME_INVALID_CHARACTER)

Message: Invalid character in the user name.

ER_AUDIT_LOG_USER_NAME_INVALID_CHARACTER was added in 8.0.11.

- Error: 13158 SQLSTATE: HY000 (ER_AUDIT_LOG_UDF_INSUFFICIENT_PRIVILEGE)

Message: Request ignored for '%s'@'%s'. SUPER or AUDIT_ADMIN needed to perform operation

ER_AUDIT_LOG_UDF_INSUFFICIENT_PRIVILEGE was added in 8.0.11.

- Error: 13159 SQLSTATE: HY000 (ER_AUDIT_LOG_NO_KEYRING_PLUGIN_INSTALLED)

Message: No keyring plugin installed.

`ER_AUDIT_LOG_NO_KEYRING_PLUGIN_INSTALLED` was added in 8.0.11.

- Error: 13160 SQLSTATE: HY000 (`ER_AUDIT_LOG_HOST_NAME_INVALID_CHARACTER`)

Message: Invalid character in the host name.

`ER_AUDIT_LOG_HOST_NAME_INVALID_CHARACTER` was added in 8.0.11.

- Error: 13161 SQLSTATE: HY000 (`ER_AUDIT_LOG_ENCRYPTION_PASSWORD_HAS_NOT_BEEN_SET`)

Message: Audit log encryption password has not been set; it will be generated automatically. Use `audit_log_encryption_password_get` to obtain the password or `audit_log_encryption_password_set` to set a new one.

`ER_AUDIT_LOG_ENCRYPTION_PASSWORD_HAS_NOT_BEEN_SET` was added in 8.0.11.

- Error: 13162 SQLSTATE: HY000 (`ER_AUDIT_LOG_COULD_NOT_CREATE_AES_KEY`)

Message: Could not create AES key. OpenSSL's `EVP_BytesToKey` function failed.

`ER_AUDIT_LOG_COULD_NOT_CREATE_AES_KEY` was added in 8.0.11.

- Error: 13163 SQLSTATE: HY000 (`ER_AUDIT_LOG_ENCRYPTION_PASSWORD_CANNOT_BE_FETCHED`)

Message: Audit log encryption password cannot be fetched from the keyring. Password used so far is used for encryption.

`ER_AUDIT_LOG_ENCRYPTION_PASSWORD_CANNOT_BE_FETCHED` was added in 8.0.11.

- Error: 13164 SQLSTATE: HY000 (`ER_COULD_NOT_REINITIALIZE_AUDIT_LOG_FILTERS`)

Message: Could not reinitialize audit log filters.

`ER_COULD_NOT_REINITIALIZE_AUDIT_LOG_FILTERS` was added in 8.0.11.

- Error: 13165 SQLSTATE: HY000 (`ER_AUDIT_LOG_JSON_USER_NAME_CANNOT_BE_EMPTY`)

Message: User cannot be empty.

`ER_AUDIT_LOG_JSON_USER_NAME_CANNOT_BE_EMPTY` was added in 8.0.11.

- Error: 13166 SQLSTATE: HY000
(`ER_AUDIT_LOG_USER_FIRST_CHARACTER_MUST_BE_ALPHANUMERIC`)

Message: First character of the user name must be alphanumeric.

`ER_AUDIT_LOG_USER_FIRST_CHARACTER_MUST_BE_ALPHANUMERIC` was added in 8.0.11.

- Error: 13167 SQLSTATE: HY000 (`ER_AUDIT_LOG_JSON_FILTER_DOES_NOT_EXIST`)

Message: Specified filter has not been found.

`ER_AUDIT_LOG_JSON_FILTER_DOES_NOT_EXIST` was added in 8.0.11.

- Error: 13168 SQLSTATE: HY000 (`ER_IB_MSG_1271`)

Message: Cannot upgrade server earlier than 5.7 to 8.0

`ER_IB_MSG_1271` was added in 8.0.12.

- Error: 13169 SQLSTATE: HY000 ([ER_STARTING_INIT](#))
Message: %s (mysqld %s) initializing of server in progress as process %lu
[ER_STARTING_INIT](#) was added in 8.0.12.
- Error: 13170 SQLSTATE: HY000 ([ER_ENDING_INIT](#))
Message: %s (mysqld %s) initializing of server has completed
[ER_ENDING_INIT](#) was added in 8.0.12.
- Error: 13171 SQLSTATE: HY000 ([ER_IB_MSG_1272](#))
Message: Cannot boot server version %lu on data directory built by version %lu. Downgrade is not supported
[ER_IB_MSG_1272](#) was added in 8.0.12.
- Error: 13172 SQLSTATE: HY000 ([ER_SERVER_SHUTDOWN_INFO](#))
Message: Received SHUTDOWN from user %s. Shutting down mysqld (Version: %s).
[ER_SERVER_SHUTDOWN_INFO](#) was added in 8.0.12.
- Error: 13173 SQLSTATE: HY000 ([ER_GRP_RPL_PLUGIN_ABORT](#))
Message: The plugin encountered a critical error and will abort: %s
[ER_GRP_RPL_PLUGIN_ABORT](#) was added in 8.0.12.
- Error: 13174 SQLSTATE: HY000 ([ER_REGEX_INVALID_FLAG](#))
Message: Invalid match mode flag in regular expression.
[ER_REGEX_INVALID_FLAG](#) was added in 8.0.12.
- Error: 13175 SQLSTATE: HY000 ([ER_XA_REPLICATION_FILTERS](#))
Message: The use of replication filters with XA transactions is not supported, and can lead to an undefined state in the replication slave.
[ER_XA_REPLICATION_FILTERS](#) was added in 8.0.12.
- Error: 13176 SQLSTATE: HY000 ([ER_UPDATE_GTID_PURGED_WITH_GR](#))
Message: Cannot update GTID_PURGED with the Group Replication plugin running
[ER_UPDATE_GTID_PURGED_WITH_GR](#) was added in 8.0.12.
- Error: 13177 SQLSTATE: HY000 ([ER_AUDIT_LOG_TABLE_DEFINITION_NOT_UPDATED](#))
Message: '%s.%s' table definition has not been upgraded; to upgrade it, run mysql_upgrade command.
[ER_AUDIT_LOG_TABLE_DEFINITION_NOT_UPDATED](#) was added in 8.0.12.
- Error: 13178 SQLSTATE: HY000 ([ER_DD_INITIALIZE_SQL_ERROR](#))
Message: Execution of server-side SQL statement '%s' failed with error code = %d, error message = '%s'.

`ER_DD_INITIALIZE_SQL_ERROR` was added in 8.0.12.

- Error: 13179 SQLSTATE: HY000 (`ER_NO_PATH_FOR_SHARED_LIBRARY`)

Message: No paths allowed for shared library.

`ER_NO_PATH_FOR_SHARED_LIBRARY` was added in 8.0.13.

- Error: 13180 SQLSTATE: HY000 (`ER_UDF_ALREADY_EXISTS`)

Message: Function '%s' already exists.

`ER_UDF_ALREADY_EXISTS` was added in 8.0.13.

- Error: 13181 SQLSTATE: HY000 (`ER_SET_EVENT_FAILED`)

Message: Got Error: %ld from SetEvent.

`ER_SET_EVENT_FAILED` was added in 8.0.13.

- Error: 13182 SQLSTATE: HY000 (`ER_FAILED_TO_ALLOCATE_SSL_BIO`)

Message: Error allocating SSL BIO.

`ER_FAILED_TO_ALLOCATE_SSL_BIO` was added in 8.0.13.

- Error: 13183 SQLSTATE: HY000 (`ER_IB_MSG_1273`)

Message: %s

`ER_IB_MSG_1273` was added in 8.0.13.

- Error: 13184 SQLSTATE: HY000 (`ER_PID_FILEPATH_LOCATIONS_INACCESSIBLE`)

Message: One or several locations were inaccessible while checking PID filepath.

`ER_PID_FILEPATH_LOCATIONS_INACCESSIBLE` was added in 8.0.13.

- Error: 13185 SQLSTATE: HY000 (`ER_UNKNOWN_VARIABLE_IN_PERSISTED_CONFIG_FILE`)

Message: Currently unknown variable '%s' was read from the persisted config file.

`ER_UNKNOWN_VARIABLE_IN_PERSISTED_CONFIG_FILE` was added in 8.0.13.

- Error: 13186 SQLSTATE: HY000 (`ER_FAILED_TO_HANDLE_DEFAULTS_FILE`)

Message: Fatal error in defaults handling. Program aborted!

`ER_FAILED_TO_HANDLE_DEFAULTS_FILE` was added in 8.0.13.

- Error: 13187 SQLSTATE: HY000 (`ER_DUPLICATE_SYS_VAR`)

Message: Duplicate variable name '%s'.

`ER_DUPLICATE_SYS_VAR` was added in 8.0.13.

- Error: 13188 SQLSTATE: HY000 (`ER_FAILED_TO_INIT_SYS_VAR`)

Message: Failed to initialize system variables.

[ER_FAILED_TO_INIT_SYS_VAR](#) was added in 8.0.13.

- Error: 13189 SQLSTATE: HY000 ([ER_SYS_VAR_NOT_FOUND](#))

Message: Variable name '%s' not found.

[ER_SYS_VAR_NOT_FOUND](#) was added in 8.0.13.

- Error: 13190 SQLSTATE: HY000 ([ER_IB_MSG_1274](#))

Message: "Some (%d) threads are still active

[ER_IB_MSG_1274](#) was added in 8.0.13.

- Error: 13191 SQLSTATE: HY000 ([ER_IB_MSG_1275](#))

Message: %s

[ER_IB_MSG_1275](#) was added in 8.0.13.

- Error: 13192 SQLSTATE: HY000 ([ER_TARGET_TS_UNENCRYPTED](#))

Message: Source tablespace is encrypted but target tablespace is not.

[ER_TARGET_TS_UNENCRYPTED](#) was added in 8.0.13.

- Error: 13193 SQLSTATE: HY000 ([ER_IB_MSG_1276](#))

Message: %s

[ER_IB_MSG_1276](#) was added in 8.0.13, removed after 8.0.13.

- Error: 13193 SQLSTATE: HY000 ([ER_IB_MSG_WAIT_FOR_ENCRYPT_THREAD](#))

Message: Waiting for tablespace_alter_encrypt_thread to to exit

[ER_IB_MSG_WAIT_FOR_ENCRYPT_THREAD](#) was added in 8.0.14.

- Error: 13194 SQLSTATE: HY000 ([ER_IB_MSG_1277](#))

Message: %s

[ER_IB_MSG_1277](#) was added in 8.0.13.

- Error: 13195 SQLSTATE: HY000 ([ER_IB_MSG_1278](#))

Message: %s

[ER_IB_MSG_1278](#) was added in 8.0.13, removed after 8.0.13.

- Error: 13195 SQLSTATE: HY000 ([ER_IB_MSG_NO_ENCRYPT_PROGRESS_FOUND](#))

Message: %s

[ER_IB_MSG_NO_ENCRYPT_PROGRESS_FOUND](#) was added in 8.0.14.

Message: Could not parse key-value pairs in property string '%s'

[ER_WARN_PROPERTY_STRING_PARSE_FAILED](#) was added in 8.0.15.

B.4 Client Error Codes and Messages

Client error information comes from the following source files:

- The Error values and the symbols in parentheses correspond to definitions in the [include/errmsg.h](#) MySQL source file.

- The Message values correspond to the error messages that are listed in the `libmysql/errmsg.c` file. `%d` and `%s` represent numbers and strings, respectively, that are substituted into the messages when they are displayed.

Because updates are frequent, it is possible that those files will contain additional error information not listed here.

- Error: 2000 (`CR_UNKNOWN_ERROR`)
Message: Unknown MySQL error
- Error: 2001 (`CR_SOCKET_CREATE_ERROR`)
Message: Can't create UNIX socket (%d)
- Error: 2002 (`CR_CONNECTION_ERROR`)
Message: Can't connect to local MySQL server through socket '%s' (%d)
- Error: 2003 (`CR_CONN_HOST_ERROR`)

`CR_FILE_NAME_TOO_LONG` was added in 8.0.1.

- Error: 2064 (`CR_SSL_FIPS_MODE_ERR`)

Message: Set FIPS mode ON/STRICT failed

`CR_SSL_FIPS_MODE_ERR` was added in 8.0.11.

B.5 Problems and Common Errors

This section lists some common problems and error messages that you may encounter. It describes how to determine the causes of the problems and what to do to solve them.

B.5.1 How to Determine What Is Causing a Problem

When you run into a problem, the first thing you should do is to find out which program or piece of equipment is causing it:

- If you have one of the following symptoms, then it is probably a hardware problems (such as memory, motherboard, CPU, or hard disk) or kernel problem:
 - The keyboard does not work. This can normally be checked by pressing the Caps Lock key. If the Caps Lock light does not change, you have to replace your keyboard. (Before doing this, you should try to restart your computer and check all cables to the keyboard.)

- The mouse pointer does not move.
- The machine does not answer to a remote machine's pings.
- Other programs that are not related to MySQL do not behave correctly.
- Your system restarted unexpectedly. (A faulty user-level program should never be able to take down your system.)

In this case, you should start by checking all your cables and run some diagnostic tool to check your hardware! You should also check whether there are any patches, updates, or service packs for your operating system that could likely solve your problem. Check also that all your libraries (such as [glibc](#)) are up to date.

It is always good to use a machine with ECC memory to discover memory problems early.

- If your keyboard is locked up, you may be able to recover by logging in to your machine from another machine and executing `kbd_mode -a`.
- Please examine your system log file (`/var/log/messages` or similar) for reasons for your problem. If you think the problem is in MySQL, you should also examine MySQL's log files. See [Section 5.4](#), “MySQL Server Logs”.
- If you do not think you have hardware problems, you should try to find out which program is causing problems. Try using `top`, `ps`, Task Manager, or some similar program, to check which program is taking all CPU or is locking the machine.
- Use `top`, `df`, or a similar program to check whether you are out of memory, disk space, file descriptors, or some other critical resource.
- If the problem is some runaway process, you can always try to kill it. If it does not want to die, there is probably a bug in the operating system.

If after you have examined all other possibilities and you have concluded that the MySQL server or a MySQL client is causing the problem, it is time to create a bug report for our mailing list or our support team. In the bug report, try to give a very detailed description of how the system is behaving and what you think is happening. You should also state why you think that MySQL is causing the problem. Take into consideration all the situations in this chapter. State any problems exactly how they appear when you examine your system. Use the “copy and paste” method for any output and error messages from programs and log files.

Try to describe in detail which program is not working and all symptoms you see. We have in the past received many bug reports that state only “the system does not work.” This provides us with no information about what could be the problem.

If a program fails, it is always useful to know the following information:

- Has the program in question made a segmentation fault (did it dump core)?
- Is the program taking up all available CPU time? Check with `top`. Let the program run for a while, it may simply be evaluating something computationally intensive.
- If the `mysqld` server is causing problems, can you get any response from it with `mysqladmin -u root ping` or `mysqladmin -u root processlist`?
- What does a client program say when you try to connect to the MySQL server? (Try with `mysql`, for example.) Does the client jam? Do you get any output from the program?

When sending a bug report, you should follow the outline described in [Section 1.7, “How to Report Bugs or Problems”](#).

B.5.2 Common Errors When Using MySQL Programs

This section lists some errors that users frequently encounter when running MySQL programs. Although the problems show up when you try to run client programs, the solutions to many of the problems involves changing the configuration of the MySQL server.

B.5.2.1 Access denied

An `Access denied` error can have many causes. Often the problem is related to the MySQL accounts that the server permits client programs to use when connecting. See [Section 6.2, “The MySQL Access Privilege System”](#), and [Section 6.2.9, “Troubleshooting Problems Connecting to MySQL”](#).

B.5.2.2 Can't connect to [local] MySQL server

A MySQL client on Unix can connect to the `mysqld` server in two different ways: By using a Unix socket file to connect through a file in the file system (default `/tmp/mysql.sock`), or by using TCP/IP, which connects through a port number. A Unix socket file connection is faster than TCP/IP, but can be used only when connecting to a server on the same computer. A Unix socket file is used if you do not specify a host name or if you specify the special host name `localhost`.

If the MySQL server is running on Windows, you can connect using TCP/IP. If the server is started with the `--enable-named-pipe` option, you can also connect with named pipes if you run the client on the host where the server is running. The name of the named pipe is `MySQL` by default. If you do not give a host name when connecting to `mysqld`, a MySQL client first tries to connect to the named pipe. If that does not work, it connects to the TCP/IP port. You can force the use of named pipes on Windows by using `.` as the host name.

The error (2002) `Can't connect to ...` normally means that there is no MySQL server running on the system or that you are using an incorrect Unix socket file name or TCP/IP port number when trying to connect to the server. You should also check that the TCP/IP port you are using has not been blocked by a firewall or port blocking service.

The error (2003) `Can't connect to MySQL server on 'server' (10061)` indicates that the network connection has been refused. You should check that there is a MySQL server running, that it has network connections enabled, and that the network port you specified is the one configured on the server.

Start by checking whether there is a process named `mysqld` running on your server host. (Use `ps xa | grep mysqld` on Unix or the Task Manager on Windows.) If there is no such process, you should start the server. See [Section 2.10.2, “Starting the Server”](#).

If a `mysqld` process is running, you can check it by trying the following commands. The port number or Unix socket file name might be different in your setup. `host_ip` represents the IP address of the machine where the server is running.

```
shell> mysqladmin version
shell> mysqladmin variables
shell> mysqladmin -h `hostname` version variables
shell> mysqladmin -h `hostname` --port=3306 version
shell> mysqladmin -h host_ip version
shell> mysqladmin --protocol=SOCKET --socket=/tmp/mysql.sock version
```

Note the use of backticks rather than forward quotation marks with the `hostname` command; these cause the output of `hostname` (that is, the current host name) to be substituted into the `mysqladmin` command.

If you have no `hostname` command or are running on Windows, you can manually type the host name of your machine (without backticks) following the `-h` option. You can also try `-h 127.0.0.1` to connect with TCP/IP to the local host.

Make sure that the server has not been configured to ignore network connections or (if you are attempting to connect remotely) that it has not been configured to listen only locally on its network interfaces. If the server was started with `--skip-networking`, it will not accept TCP/IP connections at all. If the server was started with `--bind-address=127.0.0.1`, it will listen for TCP/IP connections only locally on the loopback interface and will not accept remote connections.

Check to make sure that there is no firewall blocking access to MySQL. Your firewall may be configured on the basis of the application being executed, or the port number used by MySQL for communication (3306 by default). Under Linux or Unix, check your IP tables (or similar) configuration to ensure that the port has not been blocked. Under Windows, applications such as ZoneAlarm or Windows Firewall may need to be configured not to block the MySQL port.

Here are some reasons the `Can't connect to local MySQL server` error might occur:

- `mysqld` is not running on the local host. Check your operating system's process list to ensure the `mysqld` process is present.
- You're running a MySQL server on Windows with many TCP/IP connections to it. If you're experiencing that quite often your clients get that error, you can find a workaround here: [Connection to MySQL Server Failing on Windows](#).
- Someone has removed the Unix socket file that `mysqld` uses (`/tmp/mysql.sock` by default). For example, you might have a `cron` job that removes old files from the `/tmp` directory. You can always run `mysqladmin version` to check whether the Unix socket file that `mysqladmin` is trying to use really exists. The fix in this case is to change the `cron` job to not remove `mysql.sock` or to place the socket file somewhere else. See [Section B.5.3.6, "How to Protect or Change the MySQL Unix Socket File"](#).
- You have started the `mysqld` server with the `--socket=/path/to/socket` option, but forgotten to tell client programs the new name of the socket file. If you change the socket path name for the server, you must also notify the MySQL clients. You can do this by providing the same `--socket` option when you run client programs. You also need to ensure that clients have permission to access the `mysql.sock` file. To find out where the socket file is, you can do:

```
shell> netstat -ln | grep mysql
```

See [Section B.5.3.6, "How to Protect or Change the MySQL Unix Socket File"](#).

- You are using Linux and one server thread has died (dumped core). In this case, you must kill the other `mysqld` threads (for example, with `kill`) before you can restart the MySQL server. See [Section B.5.3.3, "What to Do If MySQL Keeps Crashing"](#).
- The server or client program might not have the proper access privileges for the directory that holds the Unix socket file or the socket file itself. In this case, you must either change the access privileges for the directory or socket file so that the server and clients can access them, or restart `mysqld` with a `--socket` option that specifies a socket file name in a directory where the server can create it and where client programs can access it.

If you get the error message `Can't connect to MySQL server on some_host`, you can try the following things to find out what the problem is:

- Check whether the server is running on that host by executing `telnet some_host 3306` and pressing the Enter key a couple of times. (3306 is the default MySQL port number. Change the value if your

server is listening to a different port.) If there is a MySQL server running and listening to the port, you should get a response that includes the server's version number. If you get an error such as `telnet: Unable to connect to remote host: Connection refused`, then there is no server running on the given port.

- If the server is running on the local host, try using `mysqladmin -h localhost variables` to connect using the Unix socket file. Verify the TCP/IP port number that the server is configured to listen to (it is the value of the `port` variable.)
- If you are running under Linux and Security-Enhanced Linux (SELinux) is enabled, make sure you have disabled SELinux protection for the `mysqld` process.

Connection to MySQL Server Failing on Windows

When you're running a MySQL server on Windows with many TCP/IP connections to it, and you're experiencing that quite often your clients get a `Can't connect to MySQL server` error, the reason might be that Windows does not allow for enough ephemeral (short-lived) ports to serve those connections.

The purpose of `TIME_WAIT` is to keep a connection accepting packets even after the connection has been closed. This is because Internet routing can cause a packet to take a slow route to its destination and it may arrive after both sides have agreed to close. If the port is in use for a new connection, that packet from the old connection could break the protocol or compromise personal information from the original connection. The `TIME_WAIT` delay prevents this by ensuring that the port cannot be reused until after some time has been permitted for those delayed packets to arrive.

It is safe to reduce `TIME_WAIT` greatly on LAN connections because there is little chance of packets arriving at very long delays, as they could through the Internet with its comparatively large distances and latencies.

Windows permits ephemeral (short-lived) TCP ports to the user. After any port is closed it will remain in a `TIME_WAIT` status for 120 seconds. The port will not be available again until this time expires. The default range of port numbers depends on the version of Windows, with a more limited number of ports in older versions:

- Windows through Server 2003: Ports in range 1025–5000
- Windows Vista, Server 2008, and newer: Ports in range 49152–65535

With a small stack of available TCP ports (5000) and a high number of TCP ports being open and closed over a short period of time along with the `TIME_WAIT` status you have a good chance for running out of ports. There are two ways to address this problem:

- Reduce the number of TCP ports consumed quickly by investigating connection pooling or persistent connections where possible
- Tune some settings in the Windows registry (see below)

Important

The following procedure involves modifying the Windows registry. Before you modify the registry, make sure to back it up and make sure that you understand how to restore it if a problem occurs. For information about how to back up, restore, and edit the registry, view the following article in the Microsoft Knowledge Base: <http://support.microsoft.com/kb/256986/EN-US/>.

1. Start Registry Editor (`Regedt32.exe`).
2. Locate the following key in the registry:

```
HKEY_LOCAL_MACHINE\SYSTEM\CurrentControlSet\Services\Tcpip\Parameters
```

3. On the [Edit](#) menu, click [Add Value](#), and then add the following registry value:

```
Value Name: MaxUserPort  
Data Type: REG_DWORD  
Value: 65534
```

This sets the number of ephemeral ports available to any user. The valid range is between 5000 and 65534 (decimal). The default value is 0x1388 (5000 decimal).

4. On the [Edit](#) menu, click [Add Value](#), and then add the following registry value:

```
Value Name: TcpTimedWaitDelay  
Data Type: REG_DWORD  
Value: 30
```

This sets the number of seconds to hold a TCP port connection in [TIME_WAIT](#) state before closing. The valid range is between 30 and 300 decimal, although you may wish to check with Microsoft for the latest permitted values. The default value is 0x78 (120 decimal).

5. Quit Registry Editor.
6. Reboot the machine.

Note: Undoing the above should be as simple as deleting the registry entries you've created.

B.5.2.3 Lost connection to MySQL server

There are three likely causes for this error message.

Usually it indicates network connectivity trouble and you should check the condition of your network if this error occurs frequently. If the error message includes “during query,” this is probably the case you are experiencing.

Sometimes the “during query” form happens when millions of rows are being sent as part of one or more queries. If you know that this is happening, you should try increasing [net_read_timeout](#) from its default of 30 seconds to 60 seconds or longer, sufficient for the data transfer to complete.

More rarely, it can happen when the client is attempting the initial connection to the server. In this case, if your [connect_timeout](#) value is set to only a few seconds, you may be able to resolve the problem by increasing it to ten seconds, perhaps more if you have a very long distance or slow connection. You can determine whether you are experiencing this more uncommon cause by using [SHOW GLOBAL STATUS LIKE 'Aborted_connects'](#). It will increase by one for each initial connection attempt that the server aborts. You may see “reading authorization packet” as part of the error message; if so, that also suggests that this is the solution that you need.

If the cause is none of those just described, you may be experiencing a problem with [BLOB](#) values that are larger than [max_allowed_packet](#), which can cause this error with some clients. Sometime you may see an [ER_NET_PACKET_TOO_LARGE](#) error, and that confirms that you need to increase [max_allowed_packet](#).

B.5.2.4 Password Fails When Entered Interactively

MySQL client programs prompt for a password when invoked with a [--password](#) or [-p](#) option that has no following password value:

```
shell> mysql -u user_name -p
Enter password:
```

On some systems, you may find that your password works when specified in an option file or on the command line, but not when you enter it interactively at the `Enter password:` prompt. This occurs when the library provided by the system to read passwords limits password values to a small number of characters (typically eight). That is a problem with the system library, not with MySQL. To work around it, change your MySQL password to a value that is eight or fewer characters long, or put your password in an option file.

B.5.2.5 Host 'host_name' is blocked

If the following error occurs, it means that `mysqld` has received many connection requests from the given host that were interrupted in the middle:

```
Host 'host_name' is blocked because of many connection errors.
Unblock with 'mysqladmin flush-hosts'
```

The value of the `max_connect_errors` system variable determines how many successive interrupted connection requests are permitted. (See [Section 5.1.7, “Server System Variables”](#).) After `max_connect_errors` failed requests without a successful connection, `mysqld` assumes that something is wrong (for example, that someone is trying to break in), and blocks the host from further connections until you issue a `FLUSH HOSTS` statement or execute a `mysqladmin flush-hosts` command.

By default, `mysqld` blocks a host after 100 connection errors. You can adjust the value by setting `max_connect_errors` at server startup:

```
shell> mysqld_safe --max_connect_errors=10000 &
```

The value can also be set at runtime:

```
mysql> SET GLOBAL max_connect_errors=10000;
```

If you get the `Host 'host_name' is blocked` error message for a given host, you should first verify that there is nothing wrong with TCP/IP connections from that host. If you are having network problems, it does you no good to increase the value of the `max_connect_errors` variable.

B.5.2.6 Too many connections

If you get a `Too many connections` error when you try to connect to the `mysqld` server, this means that all available connections are in use by other clients.

The number of connections permitted is controlled by the `max_connections` system variable. The default value is 151 to improve performance when MySQL is used with the Apache Web server. (Previously, the default was 100.) If you need to support more connections, you should set a larger value for this variable.

`mysqld` actually permits `max_connections+1` clients to connect. The extra connection is reserved for use by accounts that have the `CONNECTION_ADMIN` or `SUPER` privilege. By granting the privilege to administrators and not to normal users (who should not need it), an administrator who also has the `PROCESS` privilege can connect to the server and use `SHOW PROCESSLIST` to diagnose problems even if the maximum number of unprivileged clients are connected. See [Section 13.7.6.29, “SHOW PROCESSLIST Syntax”](#).

The maximum number of connections MySQL supports depends on the quality of the thread library on a given platform, the amount of RAM available, how much RAM is used for each connection, the workload

from each connection, and the desired response time. Linux or Solaris should be able to support at least 500 to 1000 simultaneous connections routinely and as many as 10,000 connections if you have many gigabytes of RAM available and the workload from each is low or the response time target undemanding.

Increasing `open-files-limit` may be necessary. Also see [Section 2.5, “Installing MySQL on Linux”](#), for how to raise the operating system limit on how many handles can be used by MySQL.

B.5.2.7 Out of memory

If you issue a query using the `mysql` client program and receive an error like the following one, it means that `mysql` does not have enough memory to store the entire query result:

```
mysql: Out of memory at line 42, 'malloc.c'
mysql: needed 8136 byte (8k), memory in use: 12481367 bytes (12189k)
ERROR 2008: MySQL client ran out of memory
```

To remedy the problem, first check whether your query is correct. Is it reasonable that it should return so many rows? If not, correct the query and try again. Otherwise, you can invoke `mysql` with the `--quick` option. This causes it to use the `mysql_use_result()` C API function to retrieve the result set, which places less of a load on the client (but more on the server).

B.5.2.8 MySQL server has gone away

This section also covers the related `Lost connection to server during query` error.

The most common reason for the `MySQL server has gone away` error is that the server timed out and closed the connection. In this case, you normally get one of the following error codes (which one you get is operating system-dependent).

Error Code	Description
<code>CR_SERVER_GONE_ERROR</code>	The client couldn't send a question to the server.
<code>CR_SERVER_LOST</code>	The client didn't get an error when writing to the server, but it didn't get a full answer (or any answer) to the question.

By default, the server closes the connection after eight hours if nothing has happened. You can change the time limit by setting the `wait_timeout` variable when you start `mysqld`. See [Section 5.1.7, “Server System Variables”](#).

If you have a script, you just have to issue the query again for the client to do an automatic reconnection. This assumes that you have automatic reconnection in the client enabled (which is the default for the `mysql` command-line client).

Some other common reasons for the `MySQL server has gone away` error are:

- You (or the db administrator) has killed the running thread with a `KILL` statement or a `mysqladmin kill` command.
- You tried to run a query after closing the connection to the server. This indicates a logic error in the application that should be corrected.
- A client application running on a different host does not have the necessary privileges to connect to the MySQL server from that host.
- You got a timeout from the TCP/IP connection on the client side. This may happen if you have been using the commands: `mysql_options(..., MYSQL_OPT_READ_TIMEOUT,...)` or `mysql_options(..., MYSQL_OPT_WRITE_TIMEOUT,...)`. In this case increasing the timeout may help solve the problem.

- You have encountered a timeout on the server side and the automatic reconnection in the client is disabled (the `reconnect` flag in the `MYSQL` structure is equal to 0).
- You are using a Windows client and the server had dropped the connection (probably because `wait_timeout` expired) before the command was issued.

The problem on Windows is that in some cases MySQL does not get an error from the OS when writing to the TCP/IP connection to the server, but instead gets the error when trying to read the answer from the connection.

The solution to this is to either do a `mysql_ping()` on the connection if there has been a long time since the last query (this is what Connector/ODBC does) or set `wait_timeout` on the `mysqld` server so high that it in practice never times out.

- You can also get these errors if you send a query to the server that is incorrect or too large. If `mysqld` receives a packet that is too large or out of order, it assumes that something has gone wrong with the client and closes the connection. If you need big queries (for example, if you are working with big `BLOB` columns), you can increase the query limit by setting the server's `max_allowed_packet` variable, which has a default value of 64MB. You may also need to increase the maximum packet size on the client end. More information on setting the packet size is given in [Section B.5.2.9, "Packet Too Large"](#).

An `INSERT` or `REPLACE` statement that inserts a great many rows can also cause these sorts of errors. Either one of these statements sends a single request to the server irrespective of the number of rows to be inserted; thus, you can often avoid the error by reducing the number of rows sent per `INSERT` or `REPLACE`.

- It is also possible to see this error if host name lookups fail (for example, if the DNS server on which your server or network relies goes down). This is because MySQL is dependent on the host system for name resolution, but has no way of knowing whether it is working—from MySQL's point of view the problem is indistinguishable from any other network timeout.

You may also see the `MySQL server has gone away` error if MySQL is started with the `--skip-networking` option.

Another networking issue that can cause this error occurs if the MySQL port (default 3306) is blocked by your firewall, thus preventing any connections at all to the MySQL server.

- You can also encounter this error with applications that fork child processes, all of which try to use the same connection to the MySQL server. This can be avoided by using a separate connection for each child process.
- You have encountered a bug where the server died while executing the query.

You can check whether the MySQL server died and restarted by executing `mysqladmin version` and examining the server's uptime. If the client connection was broken because `mysqld` crashed and restarted, you should concentrate on finding the reason for the crash. Start by checking whether issuing the query again kills the server again. See [Section B.5.3.3, "What to Do If MySQL Keeps Crashing"](#).

You can get more information about the lost connections by starting `mysqld` with the `log_error_verbosity` system variable set to 3. This logs some of the disconnection messages in the `hostname.err` file. See [Section 5.4.2, "The Error Log"](#).

If you want to create a bug report regarding this problem, be sure that you include the following information:

- Indicate whether the MySQL server died. You can find information about this in the server error log. See [Section B.5.3.3, "What to Do If MySQL Keeps Crashing"](#).

- If a specific query kills `mysqld` and the tables involved were checked with `CHECK TABLE` before you ran the query, can you provide a reproducible test case? See [Section 28.5, “Debugging and Porting MySQL”](#).
- What is the value of the `wait_timeout` system variable in the MySQL server? (`mysqladmin variables` gives you the value of this variable.)
- Have you tried to run `mysqld` with the general query log enabled to determine whether the problem query appears in the log? (See [Section 5.4.3, “The General Query Log”](#).)

See also [Section B.5.2.10, “Communication Errors and Aborted Connections”](#), and [Section 1.7, “How to Report Bugs or Problems”](#).

B.5.2.9 Packet Too Large

A communication packet is a single SQL statement sent to the MySQL server, a single row that is sent to the client, or a binary log event sent from a master replication server to a slave.

The largest possible packet that can be transmitted to or from a MySQL 8.0 server or client is 1GB.

When a MySQL client or the `mysqld` server receives a packet bigger than `max_allowed_packet` bytes, it issues an `ER_NET_PACKET_TOO_LARGE` error and closes the connection. With some clients, you may also get a `Lost connection to MySQL server during query` error if the communication packet is too large.

Both the client and the server have their own `max_allowed_packet` variable, so if you want to handle big packets, you must increase this variable both in the client and in the server.

If you are using the `mysql` client program, its default `max_allowed_packet` variable is 16MB. To set a larger value, start `mysql` like this:

```
shell> mysql --max_allowed_packet=32M
```

That sets the packet size to 32MB.

The server's default `max_allowed_packet` value is 64MB. You can increase this if the server needs to handle big queries (for example, if you are working with big `BLOB` columns). For example, to set the variable to 128MB, start the server like this:

```
shell> mysqld --max_allowed_packet=128M
```

You can also use an option file to set `max_allowed_packet`. For example, to set the size for the server to 128MB, add the following lines in an option file:

```
[mysqld]
max_allowed_packet=128M
```

It is safe to increase the value of this variable because the extra memory is allocated only when needed. For example, `mysqld` allocates more memory only when you issue a long query or when `mysqld` must return a large result row. The small default value of the variable is a precaution to catch incorrect packets between the client and server and also to ensure that you do not run out of memory by using large packets accidentally.

You can also get strange problems with large packets if you are using large `BLOB` values but have not given `mysqld` access to enough memory to handle the query. If you suspect this is the case, try adding `ulimit -d 256000` to the beginning of the `mysqld_safe` script and restarting `mysqld`.

B.5.2.10 Communication Errors and Aborted Connections

If connection problems occur such as communication errors or aborted connections, use these sources of information to diagnose problems:

- The error log. See [Section 5.4.2, “The Error Log”](#).
- The general query log. See [Section 5.4.3, “The General Query Log”](#).
- The `Aborted_xxx` and `Connection_errors_xxx` status variables. See [Section 5.1.9, “Server Status Variables”](#).
- The host cache, which is accessible using the `host_cache` Performance Schema table. See [Section 8.12.4.2, “DNS Lookup Optimization and the Host Cache”](#), and [Section 25.11.17.1, “The host_cache Table”](#).

If the server has the `log_error_verbosity` system variable set to 3, you might find messages like this in your error log:

```
[Note] Aborted connection 854 to db: 'employees' user: 'josh'
```

If a client is unable even to connect, the server increments the `Aborted_connects` status variable. Unsuccessful connection attempts can occur for the following reasons:

- A client attempts to access a database but has no privileges for it.
- A client uses an incorrect password.
- A connection packet does not contain the right information.
- It takes more than `connect_timeout` seconds to obtain a connect packet. See [Section 5.1.7, “Server System Variables”](#).

If these kinds of things happen, it might indicate that someone is trying to break into your server! If the general query log is enabled, messages for these types of problems are logged to it.

If a client successfully connects but later disconnects improperly or is terminated, the server increments the `Aborted_clients` status variable, and logs an `Aborted connection` message to the error log. The cause can be any of the following:

- The client program did not call `mysql_close()` before exiting.
- The client had been sleeping more than `wait_timeout` or `interactive_timeout` seconds without issuing any requests to the server. See [Section 5.1.7, “Server System Variables”](#).
- The client program ended abruptly in the middle of a data transfer.

Other reasons for problems with aborted connections or aborted clients:

- The `max_allowed_packet` variable value is too small or queries require more memory than you have allocated for `mysqld`. See [Section B.5.2.9, “Packet Too Large”](#).
- Use of Ethernet protocol with Linux, both half and full duplex. Some Linux Ethernet drivers have this bug. You should test for this bug by transferring a huge file using FTP between the client and server machines. If a transfer goes in burst-pause-burst-pause mode, you are experiencing a Linux duplex syndrome. Switch the duplex mode for both your network card and hub/switch to either full duplex or to half duplex and test the results to determine the best setting.

- A problem with the thread library that causes interrupts on reads.
- Badly configured TCP/IP.
- Faulty Ethernets, hubs, switches, cables, and so forth. This can be diagnosed properly only by replacing hardware.

See also [Section B.5.2.8, “MySQL server has gone away”](#).

B.5.2.11 The table is full

If a table-full error occurs, it may be that the disk is full or that the table has reached its maximum size. The effective maximum table size for MySQL databases is usually determined by operating system constraints on file sizes, not by MySQL internal limits. See [Section C.10.3, “Limits on Table Size”](#).

B.5.2.12 Can't create/write to file

If you get an error of the following type for some queries, it means that MySQL cannot create a temporary file for the result set in the temporary directory:

```
Can't create/write to file '...\sqla3fe_0.ism'.
```

The preceding error is a typical message for Windows; the Unix message is similar.

One fix is to start `mysqld` with the `--tmpdir` option or to add the option to the `[mysqld]` section of your option file. For example, to specify a directory of `C:\temp`, use these lines:

```
[mysqld]
tmpdir=C:/temp
```

The `C:\temp` directory must exist and have sufficient space for the MySQL server to write to. See [Section 4.2.7, “Using Option Files”](#).

Another cause of this error can be permissions issues. Make sure that the MySQL server can write to the `tmpdir` directory.

Check also the error code that you get with `pererror`. One reason the server cannot write to a table is that the file system is full:

```
shell> pererror 28
OS error code 28: No space left on device
```

If you get an error of the following type during startup, it indicates that the file system or directory used for storing data files is write protected. Provided that the write error is to a test file, the error is not serious and can be safely ignored.

```
Can't create test file /usr/local/mysql/data/master.lower-test
```

B.5.2.13 Commands out of sync

If you get `Commands out of sync; you can't run this command now` in your client code, you are calling client functions in the wrong order.

This can happen, for example, if you are using `mysql_use_result()` and try to execute a new query before you have called `mysql_free_result()`. It can also happen if you try to execute two queries that return data without calling `mysql_use_result()` or `mysql_store_result()` in between.

B.5.2.14 Ignoring user

If you get the following error, it means that when `mysqld` was started or when it reloaded the grant tables, it found an account in the `user` table that had an invalid password.

```
Found wrong password for user 'some_user'@'some_host'; ignoring user
```

As a result, the account is simply ignored by the permission system. To fix this problem, assign a new, valid password to the account.

B.5.2.15 Table 'tbl_name' doesn't exist

If you get either of the following errors, it usually means that no table exists in the default database with the given name:

```
Table 'tbl_name' doesn't exist
Can't find file: 'tbl_name' (errno: 2)
```

In some cases, it may be that the table does exist but that you are referring to it incorrectly:

- Because MySQL uses directories and files to store databases and tables, database and table names are case sensitive if they are located on a file system that has case-sensitive file names.
- Even for file systems that are not case-sensitive, such as on Windows, all references to a given table within a query must use the same lettercase.

You can check which tables are in the default database with `SHOW TABLES`. See [Section 13.7.6, “SHOW Syntax”](#).

B.5.2.16 Can't initialize character set

You might see an error like this if you have character set problems:

```
MySQL Connection Failed: Can't initialize character set charset_name
```

This error can have any of the following causes:

- The character set is a multibyte character set and you have no support for the character set in the client. In this case, you need to recompile the client by running `CMake` with the `-DDEFAULT_CHARSET=charset_name` option. See [Section 2.9.4, “MySQL Source-Configuration Options”](#).

All standard MySQL binaries are compiled with support for all multibyte character sets.

- The character set is a simple character set that is not compiled into `mysqld`, and the character set definition files are not in the place where the client expects to find them.

In this case, you need to use one of the following methods to solve the problem:

- Recompile the client with support for the character set. See [Section 2.9.4, “MySQL Source-Configuration Options”](#).
- Specify to the client the directory where the character set definition files are located. For many clients, you can do this with the `--character-sets-dir` option.
- Copy the character definition files to the path where the client expects them to be.

B.5.2.17 File Not Found and Similar Errors

If you get `ERROR 'file_name' not found (errno: 23), Can't open file: file_name (errno: 24)`, or any other error with `errno 23` or `errno 24` from MySQL, it means that you have not allocated enough file descriptors for the MySQL server. You can use the `pererror` utility to get a description of what the error number means:

```
shell> pererror 23
OS error code 23: File table overflow
shell> pererror 24
OS error code 24: Too many open files
shell> pererror 11
OS error code 11: Resource temporarily unavailable
```

The problem here is that `mysqld` is trying to keep open too many files simultaneously. You can either tell `mysqld` not to open so many files at once or increase the number of file descriptors available to `mysqld`.

To tell `mysqld` to keep open fewer files at a time, you can make the table cache smaller by reducing the value of the `table_open_cache` system variable (the default value is 64). This may not entirely prevent running out of file descriptors because in some circumstances the server may attempt to extend the cache size temporarily, as described in [Section 8.4.3.1, “How MySQL Opens and Closes Tables”](#). Reducing the value of `max_connections` also reduces the number of open files (the default value is 100).

To change the number of file descriptors available to `mysqld`, you can use the `--open-files-limit` option to `mysqld_safe` or set the `open_files_limit` system variable. See [Section 5.1.7, “Server System Variables”](#). The easiest way to set these values is to add an option to your option file. See [Section 4.2.7, “Using Option Files”](#). If you have an old version of `mysqld` that does not support setting the open files limit, you can edit the `mysqld_safe` script. There is a commented-out line `ulimit -n 256` in the script. You can remove the `#` character to uncomment this line, and change the number 256 to set the number of file descriptors to be made available to `mysqld`.

`--open-files-limit` and `ulimit` can increase the number of file descriptors, but only up to the limit imposed by the operating system. There is also a “hard” limit that can be overridden only if you start `mysqld_safe` or `mysqld` as `root` (just remember that you also need to start the server with the `--user` option in this case so that it does not continue to run as `root` after it starts up). If you need to increase the operating system limit on the number of file descriptors available to each process, consult the documentation for your system.

Note

If you run the `tcsh` shell, `ulimit` does not work! `tcsh` also reports incorrect values when you ask for the current limits. In this case, you should start `mysqld_safe` using `sh`.

B.5.2.18 Table-Corruption Issues

If you have started `mysqld` with `--myisam-recover-options`, MySQL automatically checks and tries to repair `MyISAM` tables if they are marked as 'not closed properly' or 'crashed'. If this happens, MySQL writes an entry in the `hostname.err` file `'Warning: Checking table ...'` which is followed by `Warning: Repairing table` if the table needs to be repaired. If you get a lot of these errors, without `mysqld` having died unexpectedly just before, then something is wrong and needs to be investigated further.

When the server detects `MyISAM` table corruption, it writes additional information to the error log, such as the name and line number of the source file, and the list of threads accessing the table. Example: `Got an error from thread_id=1, mi_dynrec.c:368`. This is useful information to include in bug reports.

See also [Section 5.1.6, “Server Command Options”](#), and [Section 28.5.1.7, “Making a Test Case If You Experience Table Corruption”](#).

B.5.3 Administration-Related Issues

B.5.3.1 Problems with File Permissions

If you have problems with file permissions, the `UMASK` or `UMASK_DIR` environment variable might be set incorrectly when `mysqld` starts. For example, MySQL might issue the following error message when you create a table:

```
ERROR: Can't find file: 'path/with/file_name' (Errcode: 13)
```

The default `UMASK` and `UMASK_DIR` values are `0640` and `0750`, respectively. MySQL assumes that the value for `UMASK` or `UMASK_DIR` is in octal if it starts with a zero. For example, setting `UMASK=0600` is equivalent to `UMASK=384` because `0600` octal is `384` decimal.

To change the default `UMASK` value, start `mysqld_safe` as follows:

```
shell> UMASK=384 # = 600 in octal
shell> export UMASK
shell> mysqld_safe &
```

By default, MySQL creates database directories with an access permission value of `0750`. To modify this behavior, set the `UMASK_DIR` variable. If you set its value, new directories are created with the combined `UMASK` and `UMASK_DIR` values. For example, to give group access to all new directories, start `mysqld_safe` as follows:

```
shell> UMASK_DIR=504 # = 770 in octal
shell> export UMASK_DIR
shell> mysqld_safe &
```

For additional details, see [Section 4.9, “MySQL Program Environment Variables”](#).

B.5.3.2 How to Reset the Root Password

If you have never assigned a `root` password for MySQL, the server does not require a password at all for connecting as `root`. However, this is insecure. For instructions on assigning a password, see [Section 2.10.4, “Securing the Initial MySQL Account”](#).

If you know the `root` password and want to change it, see [Section 13.7.1.1, “ALTER USER Syntax”](#), and [Section 13.7.1.10, “SET PASSWORD Syntax”](#).

If you assigned a `root` password previously but have forgotten it, you can assign a new password. The following sections provide instructions for Windows and Unix and Unix-like systems, as well as generic instructions that apply to any system.

Resetting the Root Password: Windows Systems

On Windows, use the following procedure to reset the password for the MySQL `'root'@'localhost'` account. To change the password for a `root` account with a different host name part, modify the instructions to use that host name.

1. Log on to your system as Administrator.

2. Stop the MySQL server if it is running. For a server that is running as a Windows service, go to the Services manager: From the **Start** menu, select **Control Panel**, then **Administrative Tools**, then **Services**. Find the MySQL service in the list and stop it.

If your server is not running as a service, you may need to use the Task Manager to force it to stop.

3. Create a text file containing the password-assignment statement on a single line. Replace the password with the password that you want to use.

```
ALTER USER 'root'@'localhost' IDENTIFIED BY 'MyNewPass';
```

4. Save the file. This example assumes that you name the file `C:\mysql-init.txt`.
5. Open a console window to get to the command prompt: From the **Start** menu, select **Run**, then enter `cmd` as the command to be run.
6. Start the MySQL server with the special `--init-file` option (notice that the backslash in the option value is doubled):

```
C:\> cd "C:\Program Files\MySQL\MySQL Server 8.0\bin"  
C:\> mysql --init-file=C:\\mysql-init.txt
```

If you installed MySQL to a different location, adjust the `cd` command accordingly.

The server executes the contents of the file named by the `--init-file` option at startup, changing the `'root'@'localhost'` account password.

To have server output to appear in the console window rather than in a log file, add the `--console` option to the `mysqld` command.

If you installed MySQL using the MySQL Installation Wizard, you may need to specify a `--defaults-file` option. For example:

```
C:\> mysql  
--defaults-file="C:\\ProgramData\\MySQL\\MySQL Server 8.0\\my.ini"  
--init-file=C:\\mysql-init.txt
```

The appropriate `--defaults-file` setting can be found using the Services Manager: From the **Start** menu, select **Control Panel**, then **Administrative Tools**, then **Services**. Find the MySQL service in the list, right-click it, and choose the **Properties** option. The **Path to executable** field contains the `--defaults-file` setting.

7. After the server has started successfully, delete `C:\mysql-init.txt`.

You should now be able to connect to the MySQL server as `root` using the new password. Stop the MySQL server and restart it normally. If you run the server as a service, start it from the Windows Services window. If you start the server manually, use whatever command you normally use.

Resetting the Root Password: Unix and Unix-Like Systems

On Unix, use the following procedure to reset the password for the MySQL `'root'@'localhost'` account. To change the password for a `root` account with a different host name part, modify the instructions to use that host name.

The instructions assume that you will start the MySQL server from the Unix login account that you normally use for running it. For example, if you run the server using the `mysql` login account, you should log in as

`mysql` before using the instructions. Alternatively, you can log in as `root`, but in this case you *must* start `mysqld` with the `--user=mysql` option. If you start the server as `root` without using `--user=mysql`, the server may create `root`-owned files in the data directory, such as log files, and these may cause permission-related problems for future server startups. If that happens, you will need to either change the ownership of the files to `mysql` or remove them.

1. Log on to your system as the Unix user that the MySQL server runs as (for example, `mysql`).
2. Stop the MySQL server if it is running. Locate the `.pid` file that contains the server's process ID. The exact location and name of this file depend on your distribution, host name, and configuration. Common locations are `/var/lib/mysql/`, `/var/run/mysqld/`, and `/usr/local/mysql/data/`. Generally, the file name has an extension of `.pid` and begins with either `mysqld` or your system's host name.

Stop the MySQL server by sending a normal `kill` (not `kill -9`) to the `mysqld` process. Use the actual path name of the `.pid` file in the following command:

```
shell> kill `cat /mysql-data-directory/host_name.pid`
```

Use backticks (not forward quotation marks) with the `cat` command. These cause the output of `cat` to be substituted into the `kill` command.

3. Create a text file containing the password-assignment statement on a single line. Replace the password with the password that you want to use.

```
ALTER USER 'root'@'localhost' IDENTIFIED BY 'MyNewPass';
```

4. Save the file. This example assumes that you name the file `/home/me/mysql-init`. The file contains the password, so do not save it where it can be read by other users. If you are not logged in as `mysql` (the user the server runs as), make sure that the file has permissions that permit `mysql` to read it.
5. Start the MySQL server with the special `--init-file` option:

```
shell> mysqld --init-file=/home/me/mysql-init &
```

The server executes the contents of the file named by the `--init-file` option at startup, changing the `'root'@'localhost'` account password.

Other options may be necessary as well, depending on how you normally start your server. For example, `--defaults-file` may be needed before `--init-file`.

6. After the server has started successfully, delete `/home/me/mysql-init`.

You should now be able to connect to the MySQL server as `root` using the new password. Stop the server and restart it normally.

Resetting the Root Password: Generic Instructions

The preceding sections provide password-resetting instructions specifically for Windows and Unix and Unix-like systems. Alternatively, on any platform, you can reset the password using the `mysql` client (but this approach is less secure):

1. Stop the MySQL server if necessary, then restart it with the `--skip-grant-tables` option. This enables anyone to connect without a password and with all privileges, and disables account-management statements such as `ALTER USER` and `SET PASSWORD`. Because this is insecure, if

the server is started with the `--skip-grant-tables` option, it enables `--skip-networking` automatically to prevent remote connections.

2. Connect to the MySQL server using the `mysql` client; no password is necessary because the server was started with `--skip-grant-tables`:

```
shell> mysql
```

3. In the `mysql` client, tell the server to reload the grant tables so that account-management statements work:

```
mysql> FLUSH PRIVILEGES;
```

Then change the `'root'@'localhost'` account password. Replace the password with the password that you want to use. To change the password for a `root` account with a different host name part, modify the instructions to use that host name.

```
mysql> ALTER USER 'root'@'localhost' IDENTIFIED BY 'MyNewPass';
```

You should now be able to connect to the MySQL server as `root` using the new password. Stop the server and restart it normally (without the `--skip-grant-tables` and `--skip-networking` options).

B.5.3.3 What to Do If MySQL Keeps Crashing

Each MySQL version is tested on many platforms before it is released. This does not mean that there are no bugs in MySQL, but if there are bugs, they should be very few and can be hard to find. If you have a problem, it always helps if you try to find out exactly what crashes your system, because you have a much better chance of getting the problem fixed quickly.

First, you should try to find out whether the problem is that the `mysqld` server dies or whether your problem has to do with your client. You can check how long your `mysqld` server has been up by executing `mysqladmin version`. If `mysqld` has died and restarted, you may find the reason by looking in the server's error log. See [Section 5.4.2, “The Error Log”](#).

On some systems, you can find in the error log a stack trace of where `mysqld` died that you can resolve with the `resolve_stack_dump` program. See [Section 28.5, “Debugging and Porting MySQL”](#). Note that the variable values written in the error log may not always be 100% correct.

Many server crashes are caused by corrupted data files or index files. MySQL updates the files on disk with the `write()` system call after every SQL statement and before the client is notified about the result. (This is not true if you are running with `--delay-key-write`, in which case data files are written but not index files.) This means that data file contents are safe even if `mysqld` crashes, because the operating system ensures that the unflushed data is written to disk. You can force MySQL to flush everything to disk after every SQL statement by starting `mysqld` with the `--flush` option.

The preceding means that normally you should not get corrupted tables unless one of the following happens:

- The MySQL server or the server host was killed in the middle of an update.
- You have found a bug in `mysqld` that caused it to die in the middle of an update.
- Some external program is manipulating data files or index files at the same time as `mysqld` without locking the table properly.

- You are running many `mysqld` servers using the same data directory on a system that does not support good file system locks (normally handled by the `lockd` lock manager), or you are running multiple servers with external locking disabled.
- You have a crashed data file or index file that contains very corrupt data that confused `mysqld`.
- You have found a bug in the data storage code. This isn't likely, but it is at least possible. In this case, you can try to change the storage engine to another engine by using `ALTER TABLE` on a repaired copy of the table.

Because it is very difficult to know why something is crashing, first try to check whether things that work for others crash for you. Try the following things:

- Stop the `mysqld` server with `mysqladmin shutdown`, run `myisamchk --silent --force */*.MYI` from the data directory to check all MyISAM tables, and restart `mysqld`. This ensures that you are running from a clean state. See [Chapter 5, MySQL Server Administration](#).
- Start `mysqld` with the general query log enabled (see [Section 5.4.3, “The General Query Log”](#)). Then try to determine from the information written to the log whether some specific query kills the server. About 95% of all bugs are related to a particular query. Normally, this is one of the last queries in the log file just before the server restarts. See [Section 5.4.3, “The General Query Log”](#). If you can repeatedly kill MySQL with a specific query, even when you have checked all tables just before issuing it, then you have isolated the bug and should submit a bug report for it. See [Section 1.7, “How to Report Bugs or Problems”](#).
- Try to make a test case that we can use to repeat the problem. See [Section 28.5, “Debugging and Porting MySQL”](#).
- Try the `fork_big.pl` script. (It is located in the `tests` directory of source distributions.)
- Configuring MySQL for debugging makes it much easier to gather information about possible errors if something goes wrong. Reconfigure MySQL with the `-DWITH_DEBUG=1` option to `CMake` and then recompile. See [Section 28.5, “Debugging and Porting MySQL”](#).
- Make sure that you have applied the latest patches for your operating system.
- Use the `--skip-external-locking` option to `mysqld`. On some systems, the `lockd` lock manager does not work properly; the `--skip-external-locking` option tells `mysqld` not to use external locking. (This means that you cannot run two `mysqld` servers on the same data directory and that you must be careful if you use `myisamchk`. Nevertheless, it may be instructive to try the option as a test.)
- If `mysqld` appears to be running but not responding, try `mysqladmin -u root processlist`. Sometimes `mysqld` is not hung even though it seems unresponsive. The problem may be that all connections are in use, or there may be some internal lock problem. `mysqladmin -u root processlist` usually is able to make a connection even in these cases, and can provide useful information about the current number of connections and their status.
- Run the command `mysqladmin -i 5 status` or `mysqladmin -i 5 -r status` in a separate window to produce statistics while running other queries.
- Try the following:
 1. Start `mysqld` from `gdb` (or another debugger). See [Section 28.5, “Debugging and Porting MySQL”](#).
 2. Run your test scripts.
 3. Print the backtrace and the local variables at the three lowest levels. In `gdb`, you can do this with the following commands when `mysqld` has crashed inside `gdb`:

```
backtrace
info local
up
info local
up
info local
```

With `gdb`, you can also examine which threads exist with `info threads` and switch to a specific thread with `thread N`, where `N` is the thread ID.

- Try to simulate your application with a Perl script to force MySQL to crash or misbehave.
- Send a normal bug report. See [Section 1.7, “How to Report Bugs or Problems”](#). Be even more detailed than usual. Because MySQL works for many people, the crash might result from something that exists only on your computer (for example, an error that is related to your particular system libraries).
- If you have a problem with tables containing dynamic-length rows and you are using only `VARCHAR` columns (not `BLOB` or `TEXT` columns), you can try to change all `VARCHAR` to `CHAR` with `ALTER TABLE`. This forces MySQL to use fixed-size rows. Fixed-size rows take a little extra space, but are much more tolerant to corruption.

The current dynamic row code has been in use for several years with very few problems, but dynamic-length rows are by nature more prone to errors, so it may be a good idea to try this strategy to see whether it helps.

- Consider the possibility of hardware faults when diagnosing problems. Defective hardware can be the cause of data corruption. Pay particular attention to your memory and disk subsystems when troubleshooting hardware.

B.5.3.4 How MySQL Handles a Full Disk

This section describes how MySQL responds to disk-full errors (such as “no space left on device”), and to quota-exceeded errors (such as “write failed” or “user block limit reached”).

This section is relevant for writes to `MyISAM` tables. It also applies for writes to binary log files and binary log index file, except that references to “row” and “record” should be understood to mean “event.”

When a disk-full condition occurs, MySQL does the following:

- It checks once every minute to see whether there is enough space to write the current row. If there is enough space, it continues as if nothing had happened.
- Every 10 minutes it writes an entry to the log file, warning about the disk-full condition.

To alleviate the problem, take the following actions:

- To continue, you only have to free enough disk space to insert all records.
- Alternatively, to abort the thread, use `mysqladmin kill`. The thread is aborted the next time it checks the disk (in one minute).
- Other threads might be waiting for the table that caused the disk-full condition. If you have several “locked” threads, killing the one thread that is waiting on the disk-full condition enables the other threads to continue.

Exceptions to the preceding behavior are when you use `REPAIR TABLE` or `OPTIMIZE TABLE` or when the indexes are created in a batch after `LOAD DATA INFILE` or after an `ALTER TABLE` statement. All of these statements may create large temporary files that, if left to themselves, would cause big problems for

the rest of the system. If the disk becomes full while MySQL is doing any of these operations, it removes the big temporary files and mark the table as crashed. The exception is that for `ALTER TABLE`, the old table is left unchanged.

B.5.3.5 Where MySQL Stores Temporary Files

On Unix, MySQL uses the value of the `TMPDIR` environment variable as the path name of the directory in which to store temporary files. If `TMPDIR` is not set, MySQL uses the system default, which is usually `/tmp`, `/var/tmp`, or `/usr/tmp`.

On Windows, MySQL checks in order the values of the `TMPDIR`, `TEMP`, and `TMP` environment variables. For the first one found to be set, MySQL uses it and does not check those remaining. If none of `TMPDIR`, `TEMP`, or `TMP` are set, MySQL uses the Windows system default, which is usually `C:\windows\temp\`.

If the file system containing your temporary file directory is too small, you can use the `mysqld --tmpdir` option to specify a directory in a file system where you have enough space. On replication slaves, you can use `--slave-load-tmpdir` to specify a separate directory for holding temporary files when replicating `LOAD DATA INFILE` statements.

The `--tmpdir` option can be set to a list of several paths that are used in round-robin fashion. Paths should be separated by colon characters (:) on Unix and semicolon characters (;) on Windows.

Note

To spread the load effectively, these paths should be located on different *physical* disks, not different partitions of the same disk.

If the MySQL server is acting as a replication slave, you should be sure to set `--slave-load-tmpdir` not to point to a directory that is on a memory-based file system or to a directory that is cleared when the server host restarts. A replication slave needs some of its temporary files to survive a machine restart so that it can replicate temporary tables or `LOAD DATA INFILE` operations. If files in the slave temporary file directory are lost when the server restarts, replication fails.

MySQL arranges that temporary files are removed if `mysqld` is terminated. On platforms that support it (such as Unix), this is done by unlinking the file after opening it. The disadvantage of this is that the name does not appear in directory listings and you do not see a big temporary file that fills up the file system in which the temporary file directory is located. (In such cases, `ls -l` may be helpful in identifying large files associated with `mysqld`.)

When sorting (`ORDER BY` or `GROUP BY`), MySQL normally uses one or two temporary files. The maximum disk space required is determined by the following expression:

```
(length of what is sorted + sizeof(row pointer))
* number of matched rows
* 2
```

The row pointer size is usually four bytes, but may grow in the future for really big tables.

For some `SELECT` queries, MySQL also creates temporary SQL tables. These are not hidden and have names of the form `SQL_*`.

DDL operations that rebuild the table and are not performed online using the `ALGORITHM=INPLACE` technique create a temporary copy of the original table in the same directory as the original table.

Online DDL operations may use temporary log files for recording concurrent DML, temporary sort files when creating an index, and temporary intermediate tables files when rebuilding the table. For more information, see [Section 15.12.3, “Online DDL Space Requirements”](#).

InnoDB user-created temporary tables and on-disk internal temporary tables are created in a temporary tablespace file named `ibtmp1` in the MySQL data directory. For more information, see [Section 15.4.11, “Temporary Tablespace”](#).

B.5.3.6 How to Protect or Change the MySQL Unix Socket File

The default location for the Unix socket file that the server uses for communication with local clients is `/tmp/mysql.sock`. (For some distribution formats, the directory might be different, such as `/var/lib/mysql` for RPMs.)

On some versions of Unix, anyone can delete files in the `/tmp` directory or other similar directories used for temporary files. If the socket file is located in such a directory on your system, this might cause problems.

On most versions of Unix, you can protect your `/tmp` directory so that files can be deleted only by their owners or the superuser (`root`). To do this, set the `sticky` bit on the `/tmp` directory by logging in as `root` and using the following command:

```
shell> chmod +t /tmp
```

You can check whether the `sticky` bit is set by executing `ls -ld /tmp`. If the last permission character is `t`, the bit is set.

Another approach is to change the place where the server creates the Unix socket file. If you do this, you should also let client programs know the new location of the file. You can specify the file location in several ways:

- Specify the path in a global or local option file. For example, put the following lines in `/etc/my.cnf`:

```
[mysqld]
socket=/path/to/socket

[client]
socket=/path/to/socket
```

See [Section 4.2.7, “Using Option Files”](#).

- Specify a `--socket` option on the command line to `mysqld_safe` and when you run client programs.
- Set the `MYSQL_UNIX_PORT` environment variable to the path of the Unix socket file.
- Recompile MySQL from source to use a different default Unix socket file location. Define the path to the file with the `MYSQL_UNIX_ADDR` option when you run `CMake`. See [Section 2.9.4, “MySQL Source-Configuration Options”](#).

You can test whether the new socket location works by attempting to connect to the server with this command:

```
shell> mysqladmin --socket=/path/to/socket version
```

B.5.3.7 Time Zone Problems

If you have a problem with `SELECT NOW()` returning values in UTC and not your local time, you have to tell the server your current time zone. The same applies if `UNIX_TIMESTAMP()` returns the wrong value. This should be done for the environment in which the server runs; for example, in `mysqld_safe` or `mysql.server`. See [Section 4.9, “MySQL Program Environment Variables”](#).

You can set the time zone for the server with the `--timezone=timezone_name` option to `mysqld_safe`. You can also set it by setting the `TZ` environment variable before you start `mysqld`.

The permissible values for `--timezone` or `TZ` are system dependent. Consult your operating system documentation to see what values are acceptable.

B.5.4 Query-Related Issues

B.5.4.1 Case Sensitivity in String Searches

For nonbinary strings (`CHAR`, `VARCHAR`, `TEXT`), string searches use the collation of the comparison operands. For binary strings (`BINARY`, `VARBINARY`, `BLOB`), comparisons use the numeric values of the bytes in the operands; this means that for alphabetic characters, comparisons will be case-sensitive.

A comparison between a nonbinary string and binary string is treated as a comparison of binary strings.

Simple comparison operations (`>=`, `>`, `=`, `<`, `<=`, sorting, and grouping) are based on each character's "sort value." Characters with the same sort value are treated as the same character. For example, if `e` and `é` have the same sort value in a given collation, they compare as equal.

The default character set and collation are `utf8mb4` and `utf8mb4_0900_ai_ci`, so nonbinary string comparisons are case insensitive by default. This means that if you search with `col_name LIKE 'a%'`, you get all column values that start with `A` or `a`. To make this search case-sensitive, make sure that one of the operands has a case-sensitive or binary collation. For example, if you are comparing a column and a string that both have the `utf8mb4` character set, you can use the `COLLATE` operator to cause either operand to have the `utf8mb4_0900_as_cs` or `utf8mb4_bin` collation:

```
col_name COLLATE utf8mb4_0900_as_cs LIKE 'a%'
col_name LIKE 'a%' COLLATE utf8mb4_0900_as_cs
col_name COLLATE utf8mb4_bin LIKE 'a%'
col_name LIKE 'a%' COLLATE utf8mb4_bin
```

If you want a column always to be treated in case-sensitive fashion, declare it with a case-sensitive or binary collation. See [Section 13.1.18, "CREATE TABLE Syntax"](#).

To cause a case-sensitive comparison of nonbinary strings to be case insensitive, use `COLLATE` to name a case-insensitive collation. The strings in the following example normally are case-sensitive, but `COLLATE` changes the comparison to be case insensitive:

```
mysql> SET NAMES 'utf8mb4';
mysql> SET @s1 = 'MySQL' COLLATE utf8mb4_bin,
        @s2 = 'mysql' COLLATE utf8mb4_bin;
mysql> SELECT @s1 = @s2;
+-----+
| @s1 = @s2 |
+-----+
|          0 |
+-----+
mysql> SELECT @s1 COLLATE utf8mb4_0900_ai_ci = @s2;
+-----+
| @s1 COLLATE utf8mb4_0900_ai_ci = @s2 |
+-----+
|                                     1 |
+-----+
```

A binary string is case-sensitive in comparisons. To compare the string as case insensitive, convert it to a nonbinary string and use `COLLATE` to name a case-insensitive collation:

```
mysql> SET @s = BINARY 'MySQL';
mysql> SELECT @s = 'mysql';
+-----+
| @s = 'mysql' |
+-----+
| 0 |
+-----+
mysql> SELECT CONVERT(@s USING utf8mb4) COLLATE utf8mb4_0900_ai_ci = 'mysql';
+-----+
| CONVERT(@s USING utf8mb4) COLLATE utf8mb4_0900_ai_ci = 'mysql' |
+-----+
| 1 |
+-----+
```

To determine whether a value will compare as a nonbinary or binary string, use the `COLLATION()` function. This example shows that `VERSION()` returns a string that has a case-insensitive collation, so comparisons are case insensitive:

```
mysql> SELECT COLLATION(VERSION());
+-----+
| COLLATION(VERSION()) |
+-----+
| utf8_general_ci |
+-----+
```

For binary strings, the collation value is `binary`, so comparisons will be case sensitive. One context in which you will see `binary` is for compression functions, which return binary strings as a general rule: string:

```
mysql> SELECT COLLATION(COMPRESS('x'));
+-----+
| COLLATION(COMPRESS('x')) |
+-----+
| binary |
+-----+
```

To check the sort value of a string, the `WEIGHT_STRING()` may be helpful. See [Section 12.5, “String Functions”](#).

B.5.4.2 Problems Using DATE Columns

The format of a `DATE` value is `'YYYY-MM-DD'`. According to standard SQL, no other format is permitted. You should use this format in `UPDATE` expressions and in the `WHERE` clause of `SELECT` statements. For example:

```
SELECT * FROM t1 WHERE date >= '2003-05-05';
```

As a convenience, MySQL automatically converts a date to a number if the date is used in a numeric context and vice versa. MySQL also permits a “relaxed” string format when updating and in a `WHERE` clause that compares a date to a `DATE`, `DATETIME`, or `TIMESTAMP` column. “Relaxed” format means that any punctuation character may be used as the separator between parts. For example, `'2004-08-15'` and `'2004#08#15'` are equivalent. MySQL can also convert a string containing no separators (such as `'20040815'`), provided it makes sense as a date.

When you compare a `DATE`, `TIME`, `DATETIME`, or `TIMESTAMP` to a constant string with the `<`, `<=`, `=`, `>=`, `>`, or `BETWEEN` operators, MySQL normally converts the string to an internal long integer for faster comparison (and also for a bit more “relaxed” string checking). However, this conversion is subject to the following exceptions:

- When you compare two columns
- When you compare a [DATE](#), [TIME](#), [DATETIME](#), or [TIMESTAMP](#) column to an expression
- When you use any comparison method other than those just listed, such as [IN](#) or [STRCMP\(\)](#).

For those exceptions, the comparison is done by converting the objects to strings and performing a string comparison.

To be on the safe side, assume that strings are compared as strings and use the appropriate string functions if you want to compare a temporal value to a string.

The special “zero” date `'0000-00-00'` can be stored and retrieved as `'0000-00-00'`. When a `'0000-00-00'` date is used through Connector/ODBC, it is automatically converted to [NULL](#) because ODBC cannot handle that kind of date.

Because MySQL performs the conversions just described, the following statements work (assume that `idate` is a [DATE](#) column):

```
INSERT INTO t1 (idate) VALUES (19970505);
INSERT INTO t1 (idate) VALUES ('19970505');
INSERT INTO t1 (idate) VALUES ('97-05-05');
INSERT INTO t1 (idate) VALUES ('1997.05.05');
INSERT INTO t1 (idate) VALUES ('1997 05 05');
INSERT INTO t1 (idate) VALUES ('0000-00-00');

SELECT idate FROM t1 WHERE idate >= '1997-05-05';
SELECT idate FROM t1 WHERE idate >= 19970505;
SELECT MOD(idate,100) FROM t1 WHERE idate >= 19970505;
SELECT idate FROM t1 WHERE idate >= '19970505';
```

However, the following statement does not work:

```
SELECT idate FROM t1 WHERE STRCMP(idate,'20030505')=0;
```

[STRCMP\(\)](#) is a string function, so it converts `idate` to a string in `'YYYY-MM-DD'` format and performs a string comparison. It does not convert `'20030505'` to the date `'2003-05-05'` and perform a date comparison.

If you enable the [ALLOW_INVALID_DATES](#) SQL mode, MySQL permits you to store dates that are given only limited checking: MySQL requires only that the day is in the range from 1 to 31 and the month is in the range from 1 to 12. This makes MySQL very convenient for Web applications where you obtain year, month, and day in three different fields and you want to store exactly what the user inserted (without date validation).

MySQL permits you to store dates where the day or month and day are zero. This is convenient if you want to store a birthdate in a [DATE](#) column and you know only part of the date. To disallow zero month or day parts in dates, enable the [NO_ZERO_IN_DATE](#) mode.

MySQL permits you to store a “zero” value of `'0000-00-00'` as a “dummy date.” This is in some cases more convenient than using [NULL](#) values. If a date to be stored in a [DATE](#) column cannot be converted to any reasonable value, MySQL stores `'0000-00-00'`. To disallow `'0000-00-00'`, enable the [NO_ZERO_DATE](#) mode.

To have MySQL check all dates and accept only legal dates (unless overridden by [IGNORE](#)), set the `sql_mode` system variable to `"NO_ZERO_IN_DATE,NO_ZERO_DATE"`.

B.5.4.3 Problems with NULL Values

The concept of the `NULL` value is a common source of confusion for newcomers to SQL, who often think that `NULL` is the same thing as an empty string `' '`. This is not the case. For example, the following statements are completely different:

```
mysql> INSERT INTO my_table (phone) VALUES (NULL);
mysql> INSERT INTO my_table (phone) VALUES ('');
```

Both statements insert a value into the `phone` column, but the first inserts a `NULL` value and the second inserts an empty string. The meaning of the first can be regarded as “phone number is not known” and the meaning of the second can be regarded as “the person is known to have no phone, and thus no phone number.”

To help with `NULL` handling, you can use the `IS NULL` and `IS NOT NULL` operators and the `IFNULL()` function.

In SQL, the `NULL` value is never true in comparison to any other value, even `NULL`. An expression that contains `NULL` always produces a `NULL` value unless otherwise indicated in the documentation for the operators and functions involved in the expression. All columns in the following example return `NULL`:

```
mysql> SELECT NULL, 1+NULL, CONCAT('Invisible',NULL);
```

To search for column values that are `NULL`, you cannot use an `expr = NULL` test. The following statement returns no rows, because `expr = NULL` is never true for any expression:

```
mysql> SELECT * FROM my_table WHERE phone = NULL;
```

To look for `NULL` values, you must use the `IS NULL` test. The following statements show how to find the `NULL` phone number and the empty phone number:

```
mysql> SELECT * FROM my_table WHERE phone IS NULL;
mysql> SELECT * FROM my_table WHERE phone = '';
```

See [Section 3.3.4.6, “Working with NULL Values”](#), for additional information and examples.

You can add an index on a column that can have `NULL` values if you are using the `MyISAM`, `InnoDB`, or `MEMORY` storage engine. Otherwise, you must declare an indexed column `NOT NULL`, and you cannot insert `NULL` into the column.

When reading data with `LOAD DATA INFILE`, empty or missing columns are updated with `' '`. To load a `NULL` value into a column, use `\N` in the data file. The literal word `NULL` may also be used under some circumstances. See [Section 13.2.7, “LOAD DATA INFILE Syntax”](#).

When using `DISTINCT`, `GROUP BY`, or `ORDER BY`, all `NULL` values are regarded as equal.

When using `ORDER BY`, `NULL` values are presented first, or last if you specify `DESC` to sort in descending order.

Aggregate (summary) functions such as `COUNT()`, `MIN()`, and `SUM()` ignore `NULL` values. The exception to this is `COUNT(*)`, which counts rows and not individual column values. For example, the following statement produces two counts. The first is a count of the number of rows in the table, and the second is a count of the number of non-`NULL` values in the `age` column:

```
mysql> SELECT COUNT(*), COUNT(age) FROM person;
```

For some data types, MySQL handles `NULL` values specially. If you insert `NULL` into a `TIMESTAMP` column, the current date and time is inserted. If you insert `NULL` into an integer or floating-point column that has the `AUTO_INCREMENT` attribute, the next number in the sequence is inserted.

B.5.4.4 Problems with Column Aliases

An alias can be used in a query select list to give a column a different name. You can use the alias in `GROUP BY`, `ORDER BY`, or `HAVING` clauses to refer to the column:

```
SELECT SQRT(a*b) AS root FROM tbl_name
  GROUP BY root HAVING root > 0;
SELECT id, COUNT(*) AS cnt FROM tbl_name
  GROUP BY id HAVING cnt > 0;
SELECT id AS 'Customer identity' FROM tbl_name;
```

Standard SQL disallows references to column aliases in a `WHERE` clause. This restriction is imposed because when the `WHERE` clause is evaluated, the column value may not yet have been determined. For example, the following query is illegal:

```
SELECT id, COUNT(*) AS cnt FROM tbl_name
  WHERE cnt > 0 GROUP BY id;
```

The `WHERE` clause determines which rows should be included in the `GROUP BY` clause, but it refers to the alias of a column value that is not known until after the rows have been selected, and grouped by the `GROUP BY`.

In the select list of a query, a quoted column alias can be specified using identifier or string quoting characters:

```
SELECT 1 AS `one`, 2 AS 'two';
```

Elsewhere in the statement, quoted references to the alias must use identifier quoting or the reference is treated as a string literal. For example, this statement groups by the values in column `id`, referenced using the alias ``a``:

```
SELECT id AS 'a', COUNT(*) AS cnt FROM tbl_name
  GROUP BY `a`;
```

But this statement groups by the literal string `'a'` and will not work as expected:

```
SELECT id AS 'a', COUNT(*) AS cnt FROM tbl_name
  GROUP BY 'a';
```

B.5.4.5 Rollback Failure for Nontransactional Tables

If you receive the following message when trying to perform a `ROLLBACK`, it means that one or more of the tables you used in the transaction do not support transactions:

```
Warning: Some non-transactional changed tables couldn't be rolled back
```

These nontransactional tables are not affected by the `ROLLBACK` statement.

If you were not deliberately mixing transactional and nontransactional tables within the transaction, the most likely cause for this message is that a table you thought was transactional actually is not. This can happen if you try to create a table using a transactional storage engine that is not supported by your

`mysqld` server (or that was disabled with a startup option). If `mysqld` does not support a storage engine, it instead creates the table as a `MyISAM` table, which is nontransactional.

You can check the storage engine for a table by using either of these statements:

```
SHOW TABLE STATUS LIKE 'tbl_name';
SHOW CREATE TABLE tbl_name;
```

See [Section 13.7.6.36, “SHOW TABLE STATUS Syntax”](#), and [Section 13.7.6.10, “SHOW CREATE TABLE Syntax”](#).

To check which storage engines your `mysqld` server supports, use this statement:

```
SHOW ENGINES;
```

See [Section 13.7.6.16, “SHOW ENGINES Syntax”](#) for full details.

B.5.4.6 Deleting Rows from Related Tables

If the total length of the `DELETE` statement for `related_table` is more than the default value of the `max_allowed_packet` system variable, you should split it into smaller parts and execute multiple `DELETE` statements. You probably get the fastest `DELETE` by specifying only 100 to 1,000 `related_column` values per statement if the `related_column` is indexed. If the `related_column` isn't indexed, the speed is independent of the number of arguments in the `IN` clause.

B.5.4.7 Solving Problems with No Matching Rows

If you have a complicated query that uses many tables but that returns no rows, you should use the following procedure to find out what is wrong:

1. Test the query with `EXPLAIN` to check whether you can find something that is obviously wrong. See [Section 13.8.2, “EXPLAIN Syntax”](#).
2. Select only those columns that are used in the `WHERE` clause.
3. Remove one table at a time from the query until it returns some rows. If the tables are large, it is a good idea to use `LIMIT 10` with the query.
4. Issue a `SELECT` for the column that should have matched a row against the table that was last removed from the query.
5. If you are comparing `FLOAT` or `DOUBLE` columns with numbers that have decimals, you cannot use equality (`=`) comparisons. This problem is common in most computer languages because not all floating-point values can be stored with exact precision. In some cases, changing the `FLOAT` to a `DOUBLE` fixes this. See [Section B.5.4.8, “Problems with Floating-Point Values”](#).
6. If you still cannot figure out what is wrong, create a minimal test that can be run with `mysql test < query.sql` that shows your problems. You can create a test file by dumping the tables with `mysqldump --quick db_name tbl_name_1 ... tbl_name_n > query.sql`. Open the file in an editor, remove some insert lines (if there are more than needed to demonstrate the problem), and add your `SELECT` statement at the end of the file.

Verify that the test file demonstrates the problem by executing these commands:

```
shell> mysqladmin create test2
shell> mysql test2 < query.sql
```

Attach the test file to a bug report, which you can file using the instructions in [Section 1.7, “How to Report Bugs or Problems”](#).

B.5.4.8 Problems with Floating-Point Values

Floating-point numbers sometimes cause confusion because they are approximate and not stored as exact values. A floating-point value as written in an SQL statement may not be the same as the value represented internally. Attempts to treat floating-point values as exact in comparisons may lead to problems. They are also subject to platform or implementation dependencies. The `FLOAT` and `DOUBLE` data types are subject to these issues. For `DECIMAL` columns, MySQL performs operations with a precision of 65 decimal digits, which should solve most common inaccuracy problems.

The following example uses `DOUBLE` to demonstrate how calculations that are done using floating-point operations are subject to floating-point error.

```
mysql> CREATE TABLE t1 (i INT, d1 DOUBLE, d2 DOUBLE);
mysql> INSERT INTO t1 VALUES (1, 101.40, 21.40), (1, -80.00, 0.00),
-> (2, 0.00, 0.00), (2, -13.20, 0.00), (2, 59.60, 46.40),
-> (2, 30.40, 30.40), (3, 37.00, 7.40), (3, -29.60, 0.00),
-> (4, 60.00, 15.40), (4, -10.60, 0.00), (4, -34.00, 0.00),
-> (5, 33.00, 0.00), (5, -25.80, 0.00), (5, 0.00, 7.20),
-> (6, 0.00, 0.00), (6, -51.40, 0.00);

mysql> SELECT i, SUM(d1) AS a, SUM(d2) AS b
-> FROM t1 GROUP BY i HAVING a <> b;
```

i	a	b
1	21.4	21.4
2	76.8	76.8
3	7.4	7.4
4	15.4	15.4
5	7.2	7.2
6	-51.4	0

The result is correct. Although the first five records look like they should not satisfy the comparison (the values of `a` and `b` do not appear to be different), they may do so because the difference between the numbers shows up around the tenth decimal or so, depending on factors such as computer architecture or the compiler version or optimization level. For example, different CPUs may evaluate floating-point numbers differently.

If columns `d1` and `d2` had been defined as `DECIMAL` rather than `DOUBLE`, the result of the `SELECT` query would have contained only one row—the last one shown above.

The correct way to do floating-point number comparison is to first decide on an acceptable tolerance for differences between the numbers and then do the comparison against the tolerance value. For example, if we agree that floating-point numbers should be regarded the same if they are same within a precision of one in ten thousand (0.0001), the comparison should be written to find differences larger than the tolerance value:

```
mysql> SELECT i, SUM(d1) AS a, SUM(d2) AS b FROM t1
-> GROUP BY i HAVING ABS(a - b) > 0.0001;
```

i	a	b
6	-51.4	0

```
1 row in set (0.00 sec)
```

Conversely, to get rows where the numbers are the same, the test should find differences within the tolerance value:

```
mysql> SELECT i, SUM(d1) AS a, SUM(d2) AS b FROM t1
-> GROUP BY i HAVING ABS(a - b) <= 0.0001;
+-----+-----+-----+
| i | a | b |
+-----+-----+-----+
| 1 | 21.4 | 21.4 |
| 2 | 76.8 | 76.8 |
| 3 | 7.4 | 7.4 |
| 4 | 15.4 | 15.4 |
| 5 | 7.2 | 7.2 |
+-----+-----+-----+
5 rows in set (0.03 sec)
```

Floating-point values are subject to platform or implementation dependencies. Suppose that you execute the following statements:

```
CREATE TABLE t1(c1 FLOAT(53,0), c2 FLOAT(53,0));
INSERT INTO t1 VALUES('1e+52', '-1e+52');
SELECT * FROM t1;
```

On some platforms, the `SELECT` statement returns `inf` and `-inf`. On others, it returns `0` and `-0`.

An implication of the preceding issues is that if you attempt to create a replication slave by dumping table contents with `mysqldump` on the master and reloading the dump file into the slave, tables containing floating-point columns might differ between the two hosts.

B.5.5 Optimizer-Related Issues

MySQL uses a cost-based optimizer to determine the best way to resolve a query. In many cases, MySQL can calculate the best possible query plan, but sometimes MySQL does not have enough information about the data at hand and has to make “educated” guesses about the data.

For the cases when MySQL does not do the “right” thing, tools that you have available to help MySQL are:

- Use the `EXPLAIN` statement to get information about how MySQL processes a query. To use it, just add the keyword `EXPLAIN` to the front of your `SELECT` statement:

```
mysql> EXPLAIN SELECT * FROM t1, t2 WHERE t1.i = t2.i;
```

`EXPLAIN` is discussed in more detail in [Section 13.8.2, “EXPLAIN Syntax”](#).

- Use `ANALYZE TABLE tbl_name` to update the key distributions for the scanned table. See [Section 13.7.3.1, “ANALYZE TABLE Syntax”](#).
- Use `FORCE INDEX` for the scanned table to tell MySQL that table scans are very expensive compared to using the given index:

```
SELECT * FROM t1, t2 FORCE INDEX (index_for_column)
WHERE t1.col_name=t2.col_name;
```

`USE INDEX` and `IGNORE INDEX` may also be useful. See [Section 8.9.4, “Index Hints”](#).

- Global and table-level `STRAIGHT_JOIN`. See [Section 13.2.10, “SELECT Syntax”](#).

- You can tune global or thread-specific system variables. For example, start `mysqld` with the `--max-seeks-for-key=1000` option or use `SET max_seeks_for_key=1000` to tell the optimizer to assume that no key scan causes more than 1,000 key seeks. See [Section 5.1.7, “Server System Variables”](#).

B.5.6 Table Definition-Related Issues

B.5.6.1 Problems with ALTER TABLE

If you get a duplicate-key error when using `ALTER TABLE` to change the character set or collation of a character column, the cause is either that the new column collation maps two keys to the same value or that the table is corrupted. In the latter case, you should run `REPAIR TABLE` on the table. `REPAIR TABLE` works for `MyISAM`, `ARCHIVE`, and `CSV` tables.

If you use `ALTER TABLE` on a transactional table or if you are using Windows, `ALTER TABLE` unlocks the table if you had done a `LOCK TABLE` on it. This is done because `InnoDB` and these operating systems cannot drop a table that is in use.

B.5.6.2 TEMPORARY Table Problems

Temporary tables created with `CREATE TEMPORARY TABLE` have the following limitations:

- `TEMPORARY` tables are supported only by the `InnoDB`, `MEMORY`, `MyISAM`, and `MERGE` storage engines.
- The `SHOW TABLES` statement does not list `TEMPORARY` tables.
- To rename `TEMPORARY` tables, `RENAME TABLE` does not work. Use `ALTER TABLE` instead:

```
ALTER TABLE old_name RENAME new_name;
```

- You cannot refer to a `TEMPORARY` table more than once in the same query. For example, the following does not work:

```
SELECT * FROM temp_table JOIN temp_table AS t2;
```

The statement produces this error:

```
ERROR 1137: Can't reopen table: 'temp_table'
```

You can work around this issue if your query permits use of a common table expression (CTE) rather than a `TEMPORARY` table. For example, this fails with the `Can't reopen table` error:

```
CREATE TEMPORARY TABLE t SELECT 1 AS col_a, 2 AS col_b;
SELECT * FROM t AS t1 JOIN t AS t2;
```

To avoid the error, use a `WITH` clause that defines a CTE, rather than the `TEMPORARY` table:

```
WITH cte AS (SELECT 1 AS col_a, 2 AS col_b)
SELECT * FROM cte AS t1 JOIN cte AS t2;
```

- The `Can't reopen table` error also occurs if you refer to a temporary table multiple times in a stored function under different aliases, even if the references occur in different statements within the function. It may occur for temporary tables created outside stored functions and referred to across multiple calling and callee functions.

- There are known issues in using temporary tables with replication. See [Section 17.4.1.31, “Replication and Temporary Tables”](#), for more information.

B.5.7 Known Issues in MySQL

This section lists known issues in recent versions of MySQL.

For information about platform-specific issues, see the installation and porting instructions in [Section 2.1, “General Installation Guidance”](#), and [Section 28.5, “Debugging and Porting MySQL”](#).

The following problems are known:

- Subquery optimization for `IN` is not as effective as for `=`.
- Even if you use `lower_case_table_names=2` (which enables MySQL to remember the case used for databases and table names), MySQL does not remember the case used for database names for the function `DATABASE()` or within the various logs (on case-insensitive systems).
- Dropping a `FOREIGN KEY` constraint does not work in replication because the constraint may have another name on the slave.
- `REPLACE` (and `LOAD DATA` with the `REPLACE` option) does not trigger `ON DELETE CASCADE`.
- `DISTINCT` with `ORDER BY` does not work inside `GROUP_CONCAT()` if you do not use all and only those columns that are in the `DISTINCT` list.
- When inserting a big integer value (between 2^{63} and $2^{64}-1$) into a decimal or string column, it is inserted as a negative value because the number is evaluated in a signed integer context.
- With statement-based binary logging, the master writes the executed queries to the binary log. This is a very fast, compact, and efficient logging method that works perfectly in most cases. However, it is possible for the data on the master and slave to become different if a query is designed in such a way that the data modification is nondeterministic (generally not a recommended practice, even outside of replication).

For example:

- `CREATE TABLE ... SELECT` or `INSERT ... SELECT` statements that insert zero or `NULL` values into an `AUTO_INCREMENT` column.
- `DELETE` if you are deleting rows from a table that has foreign keys with `ON DELETE CASCADE` properties.
- `REPLACE ... SELECT`, `INSERT IGNORE ... SELECT` if you have duplicate key values in the inserted data.

If and only if the preceding queries have no `ORDER BY` clause guaranteeing a deterministic order.

For example, for `INSERT ... SELECT` with no `ORDER BY`, the `SELECT` may return rows in a different order (which results in a row having different ranks, hence getting a different number in the `AUTO_INCREMENT` column), depending on the choices made by the optimizers on the master and slave.

A query is optimized differently on the master and slave only if:

- The table is stored using a different storage engine on the master than on the slave. (It is possible to use different storage engines on the master and slave. For example, you can use `InnoDB` on the master, but `MyISAM` on the slave if the slave has less available disk space.)

- MySQL buffer sizes (`key_buffer_size`, and so on) are different on the master and slave.
- The master and slave run different MySQL versions, and the optimizer code differs between these versions.

This problem may also affect database restoration using `mysqlbinlog|mysql`.

The easiest way to avoid this problem is to add an `ORDER BY` clause to the aforementioned nondeterministic queries to ensure that the rows are always stored or modified in the same order. Using row-based or mixed logging format also avoids the problem.

- Log file names are based on the server host name if you do not specify a file name with the startup option. To retain the same log file names if you change your host name to something else, you must explicitly use options such as `--log-bin=old_host_name-bin`. See [Section 5.1.6, “Server Command Options”](#). Alternatively, rename the old files to reflect your host name change. If these are binary logs, you must edit the binary log index file and fix the binary log file names there as well. (The same is true for the relay logs on a slave server.)
- `mysqlbinlog` does not delete temporary files left after a `LOAD DATA INFILE` statement. See [Section 4.6.8, “mysqlbinlog — Utility for Processing Binary Log Files”](#).
- `RENAME` does not work with `TEMPORARY` tables or tables used in a `MERGE` table.
- When using `SET CHARACTER SET`, you cannot use translated characters in database, table, and column names.
- You cannot use `_` or `%` with `ESCAPE` in `LIKE ... ESCAPE`.
- The server uses only the first `max_sort_length` bytes when comparing data values. This means that values cannot reliably be used in `GROUP BY`, `ORDER BY`, or `DISTINCT` if they differ only after the first `max_sort_length` bytes. To work around this, increase the variable value. The default value of `max_sort_length` is 1024 and can be changed at server startup time or at runtime.
- Numeric calculations are done with `BIGINT` or `DOUBLE` (both are normally 64 bits long). Which precision you get depends on the function. The general rule is that bit functions are performed with `BIGINT` precision, `IF()` and `ELT()` with `BIGINT` or `DOUBLE` precision, and the rest with `DOUBLE` precision. You should try to avoid using unsigned long long values if they resolve to be larger than 63 bits (9223372036854775807) for anything other than bit fields.
- You can have up to 255 `ENUM` and `SET` columns in one table.
- In `MIN()`, `MAX()`, and other aggregate functions, MySQL currently compares `ENUM` and `SET` columns by their string value rather than by the string's relative position in the set.
- In an `UPDATE` statement, columns are updated from left to right. If you refer to an updated column, you get the updated value instead of the original value. For example, the following statement increments `KEY` by 2, not 1:

```
mysql> UPDATE tbl_name SET KEY=KEY+1,KEY=KEY+1;
```

- You can refer to multiple temporary tables in the same query, but you cannot refer to any given temporary table more than once. For example, the following does not work:

```
mysql> SELECT * FROM temp_table, temp_table AS t2;  
ERROR 1137: Can't reopen table: 'temp_table'
```

- The optimizer may handle `DISTINCT` differently when you are using “hidden” columns in a join than when you are not. In a join, hidden columns are counted as part of the result (even if they are not shown), whereas in normal queries, hidden columns do not participate in the `DISTINCT` comparison.

An example of this is:

```
SELECT DISTINCT mp3id FROM band_downloads
WHERE userid = 9 ORDER BY id DESC;
```

and

```
SELECT DISTINCT band_downloads.mp3id
FROM band_downloads,band_mp3
WHERE band_downloads.userid = 9
AND band_mp3.id = band_downloads.mp3id
ORDER BY band_downloads.id DESC;
```

In the second case, you may get two identical rows in the result set (because the values in the hidden `id` column may differ).

Note that this happens only for queries that do not have the `ORDER BY` columns in the result.

- If you execute a `PROCEDURE` on a query that returns an empty set, in some cases the `PROCEDURE` does not transform the columns.
- Creation of a table of type `MERGE` does not check whether the underlying tables are compatible types.
- If you use `ALTER TABLE` to add a `UNIQUE` index to a table used in a `MERGE` table and then add a normal index on the `MERGE` table, the key order is different for the tables if there was an old, non-`UNIQUE` key in the table. This is because `ALTER TABLE` puts `UNIQUE` indexes before normal indexes to be able to detect duplicate keys as early as possible.

The discussion here describes restrictions that apply to the use of MySQL features such as subqueries or views.

C.1 Restrictions on Stored Programs

These restrictions apply to the features described in [Chapter 23, *Stored Programs and Views*](#).

Some of the restrictions noted here apply to all stored routines; that is, both to stored procedures and stored functions. There are also some [restrictions specific to stored functions](#) but not to stored procedures.

The restrictions for stored functions also apply to triggers. There are also some [restrictions specific to triggers](#).

The restrictions for stored procedures also apply to the `DO` clause of Event Scheduler event definitions. There are also some [restrictions specific to events](#).

SQL Statements Not Permitted in Stored Routines

Stored routines cannot contain arbitrary SQL statements. The following statements are not permitted:

- The locking statements `LOCK TABLES` and `UNLOCK TABLES`.
- `ALTER VIEW`.
- `LOAD DATA` and `LOAD TABLE`.
- SQL prepared statements (`PREPARE`, `EXECUTE`, `DEALLOCATE PREPARE`) can be used in stored procedures, but not stored functions or triggers. Thus, stored functions and triggers cannot use dynamic SQL (where you construct statements as strings and then execute them).
- Generally, statements not permitted in SQL prepared statements are also not permitted in stored programs. For a list of statements supported as prepared statements, see [Section 13.5, “Prepared SQL Statement Syntax”](#). Exceptions are `SIGNAL`, `RESIGNAL`, and `GET DIAGNOSTICS`, which are not permissible as prepared statements but are permitted in stored programs.

- Because local variables are in scope only during stored program execution, references to them are not permitted in prepared statements created within a stored program. Prepared statement scope is the current session, not the stored program, so the statement could be executed after the program ends, at which point the variables would no longer be in scope. For example, `SELECT ... INTO local_var` cannot be used as a prepared statement. This restriction also applies to stored procedure and function parameters. See [Section 13.5.1, “PREPARE Syntax”](#).
- Within all stored programs (stored procedures and functions, triggers, and events), the parser treats `BEGIN [WORK]` as the beginning of a `BEGIN ... END` block. To begin a transaction in this context, use `START TRANSACTION` instead.

Restrictions for Stored Functions

The following additional statements or operations are not permitted within stored functions. They are permitted within stored procedures, except stored procedures that are invoked from within a stored function or trigger. For example, if you use `FLUSH` in a stored procedure, that stored procedure cannot be called from a stored function or trigger.

- Statements that perform explicit or implicit commit or rollback. Support for these statements is not required by the SQL standard, which states that each DBMS vendor may decide whether to permit them.
- Statements that return a result set. This includes `SELECT` statements that do not have an `INTO var_list` clause and other statements such as `SHOW`, `EXPLAIN`, and `CHECK TABLE`. A function can process a result set either with `SELECT ... INTO var_list` or by using a cursor and `FETCH` statements. See [Section 13.2.10.1, “SELECT ... INTO Syntax”](#), and [Section 13.6.6, “Cursors”](#).
- `FLUSH` statements.
- Stored functions cannot be used recursively.
- A stored function or trigger cannot modify a table that is already being used (for reading or writing) by the statement that invoked the function or trigger.
- If you refer to a temporary table multiple times in a stored function under different aliases, a `Can't reopen table: 'tbl_name'` error occurs, even if the references occur in different statements within the function.
- `HANDLER ... READ` statements that invoke stored functions can cause replication errors and are disallowed.

Restrictions for Triggers

For triggers, the following additional restrictions apply:

- Triggers are not activated by foreign key actions.
- When using row-based replication, triggers on the slave are not activated by statements originating on the master. The triggers on the slave are activated when using statement-based replication. For more information, see [Section 17.4.1.36, “Replication and Triggers”](#).
- The `RETURN` statement is not permitted in triggers, which cannot return a value. To exit a trigger immediately, use the `LEAVE` statement.
- Triggers are not permitted on tables in the `mysql` database. Nor are they permitted on `INFORMATION_SCHEMA` or `performance_schema` tables. Those tables are actually views and triggers are not permitted on views.

- The trigger cache does not detect when metadata of the underlying objects has changed. If a trigger uses a table and the table has changed since the trigger was loaded into the cache, the trigger operates using the outdated metadata.

Name Conflicts within Stored Routines

The same identifier might be used for a routine parameter, a local variable, and a table column. Also, the same local variable name can be used in nested blocks. For example:

```
CREATE PROCEDURE p (i INT)
BEGIN
  DECLARE i INT DEFAULT 0;
  SELECT i FROM t;
  BEGIN
    DECLARE i INT DEFAULT 1;
    SELECT i FROM t;
  END;
END;
```

In such cases, the identifier is ambiguous and the following precedence rules apply:

- A local variable takes precedence over a routine parameter or table column.
- A routine parameter takes precedence over a table column.
- A local variable in an inner block takes precedence over a local variable in an outer block.

The behavior that variables take precedence over table columns is nonstandard.

Replication Considerations

Use of stored routines can cause replication problems. This issue is discussed further in [Section 23.7, “Binary Logging of Stored Programs”](#).

The `--replicate-wild-do-table=db_name.tbl_name` option applies to tables, views, and triggers. It does not apply to stored procedures and functions, or events. To filter statements operating on the latter objects, use one or more of the `--replicate-*-db` options.

Debugging Considerations

There are no stored routine debugging facilities.

Unsupported Syntax from the SQL:2003 Standard

The MySQL stored routine syntax is based on the SQL:2003 standard. The following items from that standard are not currently supported:

- [UNDO](#) handlers
- [FOR](#) loops

Concurrency Considerations

To prevent problems of interaction between sessions, when a client issues a statement, the server uses a snapshot of routines and triggers available for execution of the statement. That is, the server calculates a list of procedures, functions, and triggers that may be used during execution of the statement, loads them, and then proceeds to execute the statement. While the statement executes, it does not see changes to routines performed by other sessions.

For maximum concurrency, stored functions should minimize their side-effects; in particular, updating a table within a stored function can reduce concurrent operations on that table. A stored function acquires table locks before executing, to avoid inconsistency in the binary log due to mismatch of the order in which statements execute and when they appear in the log. When statement-based binary logging is used, statements that invoke a function are recorded rather than the statements executed within the function. Consequently, stored functions that update the same underlying tables do not execute in parallel. In contrast, stored procedures do not acquire table-level locks. All statements executed within stored procedures are written to the binary log, even for statement-based binary logging. See [Section 23.7, “Binary Logging of Stored Programs”](#).

Event Scheduler Restrictions

The following limitations are specific to the Event Scheduler:

- Event names are handled in case-insensitive fashion. For example, you cannot have two events in the same database with the names `anEvent` and `AnEvent`.
- An event may not be created, altered, or dropped by a stored routine, trigger, or another event. An event also may not create, alter, or drop stored routines or triggers. (Bug #16409, Bug #18896)
- DDL statements on events are prohibited while a `LOCK TABLES` statement is in effect.
- Event timings using the intervals `YEAR`, `QUARTER`, `MONTH`, and `YEAR_MONTH` are resolved in months; those using any other interval are resolved in seconds. There is no way to cause events scheduled to occur at the same second to execute in a given order. In addition—due to rounding, the nature of threaded applications, and the fact that a nonzero length of time is required to create events and to signal their execution—events may be delayed by as much as 1 or 2 seconds. However, the time shown in the `INFORMATION_SCHEMA.EVENTS` table's `LAST_EXECUTED` column or the `mysql.event` table's `last_executed` column is always accurate to within one second of the actual event execution time. (See also Bug #16522.)
- Each execution of the statements contained in the body of an event takes place in a new connection; thus, these statements has no effect in a given user session on the server's statement counts such as `Com_select` and `Com_insert` that are displayed by `SHOW STATUS`. However, such counts *are* updated in the global scope. (Bug #16422)
- Events do not support times later than the end of the Unix Epoch; this is approximately the beginning of the year 2038. Such dates are specifically not permitted by the Event Scheduler. (Bug #16396)
- References to stored functions, user-defined functions, and tables in the `ON SCHEDULE` clauses of `CREATE EVENT` and `ALTER EVENT` statements are not supported. These sorts of references are not permitted. (See Bug #22830 for more information.)

C.2 Restrictions on Condition Handling

`SIGNAL`, `RESIGNAL`, and `GET DIAGNOSTICS` are not permissible as prepared statements. For example, this statement is invalid:

```
PREPARE stmt1 FROM 'SIGNAL SQLSTATE "02000"';
```

`SQLSTATE` values in class `'04'` are not treated specially. They are handled the same as other exceptions.

In standard SQL, the first condition relates to the `SQLSTATE` value returned for the previous SQL statement. In MySQL, this is not guaranteed, so to get the main error, you cannot do this:

```
GET DIAGNOSTICS CONDITION 1 @errno = MYSQL_ERRNO;
```

Instead, do this:

```
GET DIAGNOSTICS @cno = NUMBER;
GET DIAGNOSTICS CONDITION @cno @errno = MYSQL_ERRNO;
```

C.3 Restrictions on Server-Side Cursors

Server-side cursors are implemented in the C API using the `mysql_stmt_attr_set()` function. The same implementation is used for cursors in stored routines. A server-side cursor enables a result set to be generated on the server side, but not transferred to the client except for those rows that the client requests. For example, if a client executes a query but is only interested in the first row, the remaining rows are not transferred.

In MySQL, a server-side cursor is materialized into an internal temporary table. Initially, this is a `MEMORY` table, but is converted to a `MyISAM` table when its size exceeds the minimum value of the `max_heap_table_size` and `tmp_table_size` system variables. The same restrictions apply to internal temporary tables created to hold the result set for a cursor as for other uses of internal temporary tables. See [Section 8.4.4, “Internal Temporary Table Use in MySQL”](#). One limitation of the implementation is that for a large result set, retrieving its rows through a cursor might be slow.

Cursors are read only; you cannot use a cursor to update rows.

`UPDATE WHERE CURRENT OF` and `DELETE WHERE CURRENT OF` are not implemented, because updatable cursors are not supported.

Cursors are nonholdable (not held open after a commit).

Cursors are asensitive.

Cursors are nonscrollable.

Cursors are not named. The statement handler acts as the cursor ID.

You can have open only a single cursor per prepared statement. If you need several cursors, you must prepare several statements.

You cannot use a cursor for a statement that generates a result set if the statement is not supported in prepared mode. This includes statements such as `CHECK TABLE`, `HANDLER READ`, and `SHOW BINLOG EVENTS`.

C.4 Restrictions on Subqueries

- In general, you cannot modify a table and select from the same table in a subquery. For example, this limitation applies to statements of the following forms:

```
DELETE FROM t WHERE ... (SELECT ... FROM t ...);
UPDATE t ... WHERE col = (SELECT ... FROM t ...);
{INSERT|REPLACE} INTO t (SELECT ... FROM t ...);
```

Exception: The preceding prohibition does not apply if for the modified table you are using a derived table and that derived table is materialized rather than merged into the outer query. (See [Section 8.2.2.3, “Optimizing Derived Tables, View References, and Common Table Expressions”](#).) Example:

```
UPDATE t ... WHERE col = (SELECT * FROM (SELECT ... FROM t...) AS dt ...);
```

Here the result from the derived table is materialized as a temporary table, so the relevant rows in `t` have already been selected by the time the update to `t` takes place.

In general, you may be able to influence the optimizer to materialize a derived table by adding a `NO_MERGE` optimizer hint. See [Section 8.9.2, “Optimizer Hints”](#).

- Row comparison operations are only partially supported:
 - For `expr [NOT] IN subquery`, `expr` can be an *n*-tuple (specified using row constructor syntax) and the subquery can return rows of *n*-tuples. The permitted syntax is therefore more specifically expressed as `row_constructor [NOT] IN table_subquery`
 - For `expr op {ALL|ANY|SOME} subquery`, `expr` must be a scalar value and the subquery must be a column subquery; it cannot return multiple-column rows.

In other words, for a subquery that returns rows of *n*-tuples, this is supported:

```
(expr_1, ..., expr_n) [NOT] IN table_subquery
```

But this is not supported:

```
(expr_1, ..., expr_n) op {ALL|ANY|SOME} subquery
```

The reason for supporting row comparisons for `IN` but not for the others is that `IN` is implemented by rewriting it as a sequence of `=` comparisons and `AND` operations. This approach cannot be used for `ALL`, `ANY`, or `SOME`.

- Subqueries in the `FROM` clause cannot be correlated subqueries. They are materialized in whole (evaluated to produce a result set) during query execution, so they cannot be evaluated per row of the outer query. The optimizer delays materialization until the result is needed, which may permit materialization to be avoided. See [Section 8.2.2.3, “Optimizing Derived Tables, View References, and Common Table Expressions”](#).
- MySQL does not support `LIMIT` in subqueries for certain subquery operators:

```
mysql> SELECT * FROM t1
      WHERE s1 IN (SELECT s2 FROM t2 ORDER BY s1 LIMIT 1);
ERROR 1235 (42000): This version of MySQL doesn't yet support
'LIMIT & IN/ALL/ANY/SOME subquery'
```

- MySQL permits a subquery to refer to a stored function that has data-modifying side effects such as inserting rows into a table. For example, if `f()` inserts rows, the following query can modify data:

```
SELECT ... WHERE x IN (SELECT f() ...);
```

This behavior is an extension to the SQL standard. In MySQL, it can produce nondeterministic results because `f()` might be executed a different number of times for different executions of a given query depending on how the optimizer chooses to handle it.

For statement-based or mixed-format replication, one implication of this indeterminism is that such a query can produce different results on the master and its slaves.

C.5 Restrictions on Views

View processing is not optimized:

- It is not possible to create an index on a view.
- Indexes can be used for views processed using the merge algorithm. However, a view that is processed with the temptable algorithm is unable to take advantage of indexes on its underlying tables (although indexes can be used during generation of the temporary tables).

There is a general principle that you cannot modify a table and select from the same table in a subquery. See [Section C.4, “Restrictions on Subqueries”](#).

The same principle also applies if you select from a view that selects from the table, if the view selects from the table in a subquery and the view is evaluated using the merge algorithm. Example:

```
CREATE VIEW v1 AS
SELECT * FROM t2 WHERE EXISTS (SELECT 1 FROM t1 WHERE t1.a = t2.a);

UPDATE t1, v2 SET t1.a = 1 WHERE t1.b = v2.b;
```

If the view is evaluated using a temporary table, you *can* select from the table in the view subquery and still modify that table in the outer query. In this case the view will be stored in a temporary table and thus you are not really selecting from the table in a subquery and modifying it “at the same time.” (This is another reason you might wish to force MySQL to use the temptable algorithm by specifying `ALGORITHM = TEMPTABLE` in the view definition.)

You can use `DROP TABLE` or `ALTER TABLE` to drop or alter a table that is used in a view definition. No warning results from the `DROP` or `ALTER` operation, even though this invalidates the view. Instead, an error occurs later, when the view is used. `CHECK TABLE` can be used to check for views that have been invalidated by `DROP` or `ALTER` operations.

With regard to view updatability, the overall goal for views is that if any view is theoretically updatable, it should be updatable in practice. MySQL as quickly as possible. Many theoretically updatable views can be updated now, but limitations still exist. For details, see [Section 23.5.3, “Updatable and Insertable Views”](#).

There exists a shortcoming with the current implementation of views. If a user is granted the basic privileges necessary to create a view (the `CREATE VIEW` and `SELECT` privileges), that user will be unable to call `SHOW CREATE VIEW` on that object unless the user is also granted the `SHOW VIEW` privilege.

That shortcoming can lead to problems backing up a database with `mysqldump`, which may fail due to insufficient privileges. This problem is described in Bug #22062.

The workaround to the problem is for the administrator to manually grant the `SHOW VIEW` privilege to users who are granted `CREATE VIEW`, since MySQL doesn't grant it implicitly when views are created.

Views do not have indexes, so index hints do not apply. Use of index hints when selecting from a view is not permitted.

`SHOW CREATE VIEW` displays view definitions using an `AS alias_name` clause for each column. If a column is created from an expression, the default alias is the expression text, which can be quite long. Aliases for column names in `CREATE VIEW` statements are checked against the maximum column length of 64 characters (not the maximum alias length of 256 characters). As a result, views created from the output of `SHOW CREATE VIEW` fail if any column alias exceeds 64 characters. This can cause problems in the following circumstances for views with too-long aliases:

- View definitions fail to replicate to newer slaves that enforce the column-length restriction.
- Dump files created with `mysqldump` cannot be loaded into servers that enforce the column-length restriction.

A workaround for either problem is to modify each problematic view definition to use aliases that provide shorter column names. Then the view will replicate properly, and can be dumped and reloaded without causing an error. To modify the definition, drop and create the view again with `DROP VIEW` and `CREATE VIEW`, or replace the definition with `CREATE OR REPLACE VIEW`.

For problems that occur when reloading view definitions in dump files, another workaround is to edit the dump file to modify its `CREATE VIEW` statements. However, this does not change the original view definitions, which may cause problems for subsequent dump operations.

C.6 Restrictions on XA Transactions

XA transaction support is limited to the `InnoDB` storage engine.

For “external XA,” a MySQL server acts as a Resource Manager and client programs act as Transaction Managers. For “internal XA,” storage engines within a MySQL server act as RMs, and the server itself acts as a TM. Internal XA support is limited by the capabilities of individual storage engines. Internal XA is required for handling XA transactions that involve more than one storage engine. The implementation of internal XA requires that a storage engine support two-phase commit at the table handler level, and currently this is true only for `InnoDB`.

For `XA START`, the `JOIN` and `RESUME` clauses are not supported.

For `XA END`, the `SUSPEND [FOR MIGRATE]` clause is not supported.

The requirement that the `bqual` part of the `xid` value be different for each XA transaction within a global transaction is a limitation of the current MySQL XA implementation. It is not part of the XA specification.

An XA transaction is written to the binary log in two parts. When `XA PREPARE` is issued, the first part of the transaction up to `XA PREPARE` is written using an initial GTID. A `XA_prepare_log_event` is used to identify such transactions in the binary log. When `XA COMMIT` or `XA ROLLBACK` is issued, a second part of the transaction containing only the `XA COMMIT` or `XA ROLLBACK` statement is written using a second GTID. Note that the initial part of the transaction, identified by `XA_prepare_log_event`, is not necessarily followed by its `XA COMMIT` or `XA ROLLBACK`, which can cause interleaved binary logging of any two XA transactions. The two parts of the XA transaction can even appear in different binary log files. This means that an XA transaction in `PREPARED` state is now persistent until an explicit `XA COMMIT` or `XA ROLLBACK` statement is issued, ensuring that XA transactions are compatible with replication.

On a replication slave, immediately after the XA transaction is prepared, it is detached from the slave applier thread, and can be committed or rolled back by any thread on the slave. This means that the same XA transaction can appear in the `events_transactions_current` table with different states on different threads. The `events_transactions_current` table displays the current status of the most recent monitored transaction event on the thread, and does not update this status when the thread is idle. So the XA transaction can still be displayed in the `PREPARED` state for the original applier thread, after it has been processed by another thread. To positively identify XA transactions that are still in the `PREPARED` state and need to be recovered, use the `XA RECOVER` statement rather than the Performance Schema transaction tables.

The following restrictions exist for using XA transactions:

- XA transactions are not fully resilient to an unexpected halt with respect to the binary log. If there is an unexpected halt while the server is in the middle of executing an `XA PREPARE`, `XA COMMIT`, `XA ROLLBACK`, or `XA COMMIT ... ONE PHASE` statement, the server might not be able to recover to a correct state, leaving the server and the binary log in an inconsistent state. In this situation, the binary log might either contain extra XA transactions that are not applied, or miss XA transactions that are applied. Also, if GTIDs are enabled, after recovery `@@GLOBAL.GTID_EXECUTED` might not correctly

describe the transactions that have been applied. Note that if an unexpected halt occurs before `XA PREPARE`, between `XA PREPARE` and `XA COMMIT` (or `XA ROLLBACK`), or after `XA COMMIT` (or `XA ROLLBACK`), the server and binary log are correctly recovered and taken to a consistent state.

- The use of replication filters or binary log filters in combination with XA transactions is not supported. Filtering of tables could cause an XA transaction to be empty on a replication slave, and empty XA transactions are not supported. Also, with the settings `master_info_repository=TABLE` and `relay_log_info_repository=TABLE` on a replication slave, which became the defaults in MySQL 8.0, the internal state of the data engine transaction is changed following a filtered XA transaction, and can become inconsistent with the replication transaction context state.

The error `ER_XA_REPLICATION_FILTERS` is logged whenever an XA transaction is impacted by a replication filter, whether or not the transaction was empty as a result. If the transaction is not empty, the replication slave is able to continue running, but you should take steps to discontinue the use of replication filters with XA transactions in order to avoid potential issues. If the transaction is empty, the replication slave stops. In that event, the replication slave might be in an undetermined state in which the consistency of the replication process might be compromised. In particular, the `gtid_executed` set on a slave of the slave might be inconsistent with that on the master. To resolve this situation, isolate the master and stop all replication, then check GTID consistency across the replication topology. Undo the XA transaction that generated the error message, then restart replication.

- XA transactions are considered unsafe for statement-based replication. If two XA transactions committed in parallel on the master are being prepared on the slave in the inverse order, locking dependencies can occur that cannot be safely resolved, and it is possible for replication to fail with deadlock on the slave. This situation can occur for a single-threaded or multithreaded replication slave. When `binlog_format=STATEMENT` is set, a warning is issued for DML statements inside XA transactions. When `binlog_format=MIXED` or `binlog_format=ROW` is set, DML statements inside XA transactions are logged using row-based replication, and the potential issue is not present.

**Note**

Prior to MySQL 5.7.7, XA transactions were not compatible with replication at all. This was because an XA transaction that was in `PREPARED` state would be rolled back on clean server shutdown or client disconnect. Similarly, an XA transaction that was in `PREPARED` state would still exist in `PREPARED` state in case the server was shutdown abnormally and then started again, but the contents of the transaction could not be written to the binary log. In both of these situations the XA transaction could not be replicated correctly.

C.7 Restrictions on Character Sets

- Identifiers are stored in `mysql` database tables (`user`, `db`, and so forth) using `utf8`, but identifiers can contain only characters in the Basic Multilingual Plane (BMP). Supplementary characters are not permitted in identifiers.
- The `ucs2`, `utf16`, `utf16le`, and `utf32` character sets have the following restrictions:
 - None of them can be used as the client character set. See [Impermissible Client Character Sets](#).
 - It is currently not possible to use `LOAD DATA INFILE` to load data files that use these character sets.
 - `FULLTEXT` indexes cannot be created on a column that uses any of these character sets. However, you can perform `IN BOOLEAN MODE` searches on the column without an index.
- The `REGEXP` and `RLIKE` operators work in byte-wise fashion, so they are not multibyte safe and may produce unexpected results with multibyte character sets. In addition, these operators compare

characters by their byte values and accented characters may not compare as equal even if a given collation treats them as equal.

C.8 Restrictions on Performance Schema

The Performance Schema avoids using mutexes to collect or produce data, so there are no guarantees of consistency and results can sometimes be incorrect. Event values in `performance_schema` tables are nondeterministic and nonrepeatable.

If you save event information in another table, you should not assume that the original events will still be available later. For example, if you select events from a `performance_schema` table into a temporary table, intending to join that table with the original table later, there might be no matches.

`mysqldump` and `BACKUP DATABASE` ignore tables in the `performance_schema` database.

Tables in the `performance_schema` database cannot be locked with `LOCK TABLES`, except the `setup_XXX` tables.

Tables in the `performance_schema` database cannot be indexed.

Tables in the `performance_schema` database are not replicated.

The types of timers might vary per platform. The `performance_timers` table shows which event timers are available. If the values in this table for a given timer name are `NULL`, that timer is not supported on your platform.

Instruments that apply to storage engines might not be implemented for all storage engines. Instrumentation of each third-party engine is the responsibility of the engine maintainer.

C.9 Restrictions on Pluggable Authentication

The first part of this section describes general restrictions on the applicability of the pluggable authentication framework described at [Section 6.3.10, “Pluggable Authentication”](#). The second part describes how third-party connector developers can determine the extent to which a connector can take advantage of pluggable authentication capabilities and what steps to take to become more compliant.

The term “native authentication” used here refers to authentication against passwords stored in the `mysql.user` table. This is the same authentication method provided by older MySQL servers, before pluggable authentication was implemented. “Windows native authentication” refers to authentication using the credentials of a user who has already logged in to Windows, as implemented by the Windows Native Authentication plugin (“Windows plugin” for short).

General Pluggable Authentication Restrictions

- **Connector/C, Connector/C++:** Clients that use these connectors can connect to the server only through accounts that use native authentication.

Exception: A connector supports pluggable authentication if it was built to link to `libmysqlclient` dynamically (rather than statically) and it loads the current version of `libmysqlclient` if that version is installed, or if the connector is recompiled from source to link against the current `libmysqlclient`.

For information about writing connectors to handle information from the server about the default server-side authentication plugin, see [Authentication Plugin Connector-Writing Considerations](#).

- **Connector/NET:** Clients that use Connector/NET can connect to the server through accounts that use native authentication or Windows native authentication.

- **Connector/PHP:** Clients that use this connector can connect to the server only through accounts that use native authentication, when compiled using the MySQL native driver for PHP (`mysqlnd`).
- **Windows native authentication:** Connecting through an account that uses the Windows plugin requires Windows Domain setup. Without it, NTLM authentication is used and then only local connections are possible; that is, the client and server must run on the same computer.
- **Proxy users:** Proxy user support is available to the extent that clients can connect through accounts authenticated with plugins that implement proxy user capability (that is, plugins that can return a user name different from that of the connecting user). For example, the PAM and Windows plugins support proxy users. The `mysql_native_password` and `sha256_password` authentication plugins do not support proxy users by default, but can be configured to do so; see [Server Support for Proxy User Mapping](#).
- **Replication:** Replication slaves can employ not only master accounts using native authentication, but can also connect through master accounts that use nonnative authentication if the required client-side plugin is available. If the plugin is built into `libmysqlclient`, it is available by default. Otherwise, the plugin must be installed on the slave side in the directory named by the slave `plugin_dir` system variable.
- **FEDERATED tables:** A `FEDERATED` table can access the remote table only through accounts on the remote server that use native authentication.

Pluggable Authentication and Third-Party Connectors

Third-party connector developers can use the following guidelines to determine readiness of a connector to take advantage of pluggable authentication capabilities and what steps to take to become more compliant:

- An existing connector to which no changes have been made uses native authentication and clients that use the connector can connect to the server only through accounts that use native authentication. *However, you should test the connector against a recent version of the server to verify that such connections still work without problem.*

Exception: A connector might work with pluggable authentication without any changes if it links to `libmysqlclient` dynamically (rather than statically) and it loads the current version of `libmysqlclient` if that version is installed.

- To take advantage of pluggable authentication capabilities, a connector that is `libmysqlclient`-based should be relinked against the current version of `libmysqlclient`. This enables the connector to support connections through accounts that require client-side plugins now built into `libmysqlclient` (such as the cleartext plugin needed for PAM authentication and the Windows plugin needed for Windows native authentication). Linking with a current `libmysqlclient` also enables the connector to access client-side plugins installed in the default MySQL plugin directory (typically the directory named by the default value of the local server's `plugin_dir` system variable).

If a connector links to `libmysqlclient` dynamically, it must be ensured that the newer version of `libmysqlclient` is installed on the client host and that the connector loads it at runtime.

- Another way for a connector to support a given authentication method is to implement it directly in the client/server protocol. Connector/NET uses this approach to provide support for Windows native authentication.
- If a connector should be able to load client-side plugins from a directory different from the default plugin directory, it must implement some means for client users to specify the directory. Possibilities for this include a command-line option or environment variable from which the connector can obtain the directory name. Standard MySQL client programs such as `mysql` and `mysqladmin` implement a `--plugin-dir` option. See also [Section 27.7.13, “C API Client Plugin Functions”](#).

- Proxy user support by a connector depends, as described earlier in this section, on whether the authentication methods that it supports permit proxy users.

C.10 Limits in MySQL

This section lists current limits in MySQL 8.0.

C.10.1 Limits on Joins

The maximum number of tables that can be referenced in a single join is 61. This includes a join handled by merging derived tables and views in the `FROM` clause into the outer query block (see [Section 8.2.2.3, “Optimizing Derived Tables, View References, and Common Table Expressions”](#)). It also applies to the number of tables that can be referenced in the definition of a view.

C.10.2 Limits on Number of Databases and Tables

MySQL has no limit on the number of databases. The underlying file system may have a limit on the number of directories.

MySQL has no limit on the number of tables. The underlying file system may have a limit on the number of files that represent tables. Individual storage engines may impose engine-specific constraints. [InnoDB](#) permits up to 4 billion tables.

C.10.3 Limits on Table Size

The effective maximum table size for MySQL databases is usually determined by operating system constraints on file sizes, not by MySQL internal limits. For up-to-date information operating system file size limits, refer to the documentation specific to your operating system.

Windows users, please note that FAT and VFAT (FAT32) are *not* considered suitable for production use with MySQL. Use NTFS instead.

If you encounter a full-table error, there are several reasons why it might have occurred:

- The disk might be full.
- You are using [InnoDB](#) tables and have run out of room in an [InnoDB](#) tablespace file. The maximum tablespace size is also the maximum size for a table. For tablespace size limits, see [Section 15.8.1.7, “Limits on InnoDB Tables”](#).

Generally, partitioning of tables into multiple tablespace files is recommended for tables larger than 1TB in size.

- You have hit an operating system file size limit. For example, you are using [MyISAM](#) tables on an operating system that supports files only up to 2GB in size and you have hit this limit for the data file or index file.
- You are using a [MyISAM](#) table and the space required for the table exceeds what is permitted by the internal pointer size. [MyISAM](#) permits data and index files to grow up to 256TB by default, but this limit can be changed up to the maximum permissible size of 65,536TB ($256^7 - 1$ bytes).

If you need a [MyISAM](#) table that is larger than the default limit and your operating system supports large files, the `CREATE TABLE` statement supports `AVG_ROW_LENGTH` and `MAX_ROWS` options. See [Section 13.1.18, “CREATE TABLE Syntax”](#). The server uses these options to determine how large a table to permit.

If the pointer size is too small for an existing table, you can change the options with `ALTER TABLE` to increase a table's maximum permissible size. See [Section 13.1.8, “ALTER TABLE Syntax”](#).

```
ALTER TABLE tbl_name MAX_ROWS=1000000000 AVG_ROW_LENGTH=nnn;
```

You have to specify `AVG_ROW_LENGTH` only for tables with `BLOB` or `TEXT` columns; in this case, MySQL can't optimize the space required based only on the number of rows.

To change the default size limit for `MyISAM` tables, set the `myisam_data_pointer_size`, which sets the number of bytes used for internal row pointers. The value is used to set the pointer size for new tables if you do not specify the `MAX_ROWS` option. The value of `myisam_data_pointer_size` can be from 2 to 7. A value of 4 permits tables up to 4GB; a value of 6 permits tables up to 256TB.

You can check the maximum data and index sizes by using this statement:

```
SHOW TABLE STATUS FROM db_name LIKE 'tbl_name';
```

You also can use `myisamchk -dv /path/to/table-index-file`. See [Section 13.7.6, “SHOW Syntax”](#), or [Section 4.6.4, “myisamchk — MyISAM Table-Maintenance Utility”](#).

Other ways to work around file-size limits for `MyISAM` tables are as follows:

- If your large table is read only, you can use `myisampack` to compress it. `myisampack` usually compresses a table by at least 50%, so you can have, in effect, much bigger tables. `myisampack` also can merge multiple tables into a single table. See [Section 4.6.6, “myisampack — Generate Compressed, Read-Only MyISAM Tables”](#).
- MySQL includes a `MERGE` library that enables you to handle a collection of `MyISAM` tables that have identical structure as a single `MERGE` table. See [Section 16.7, “The MERGE Storage Engine”](#).
- You are using the `MEMORY (HEAP)` storage engine; in this case you need to increase the value of the `max_heap_table_size` system variable. See [Section 5.1.7, “Server System Variables”](#).

C.10.4 Limits on Table Column Count and Row Size

Column Count Limits

MySQL has hard limit of 4096 columns per table, but the effective maximum may be less for a given table. The exact column limit depends on several factors:

- The maximum row size for a table constrains the number (and possibly size) of columns because the total length of all columns cannot exceed this size. See [Row Size Limits](#).
- The storage requirements of individual columns constrain the number of columns that fit within a given maximum row size. Storage requirements for some data types depend on factors such as storage engine, storage format, and character set. See [Section 11.8, “Data Type Storage Requirements”](#).
- Storage engines may impose additional restrictions that limit table column count. For example, `InnoDB` has a limit of 1017 columns per table. See [Section 15.8.1.7, “Limits on InnoDB Tables”](#). For information about other storage engines, see [Chapter 16, Alternative Storage Engines](#).
- Functional key parts (see [Section 13.1.14, “CREATE INDEX Syntax”](#)) are implemented as hidden virtual generated stored columns, so each functional key part in a table index counts against the table total column limit.

Row Size Limits

The maximum row size for a given table is determined by several factors:

- The internal representation of a MySQL table has a maximum row size limit of 65,535 bytes, even if the storage engine is capable of supporting larger rows. [BLOB](#) and [TEXT](#) columns only contribute 9 to 12 bytes toward the row size limit because their contents are stored separately from the rest of the row.
- The maximum row size for an [InnoDB](#) table, which applies to data stored locally within a database page, is slightly less than half a page for 4KB, 8KB, 16KB, and 32KB [innodb_page_size](#) settings. For example, the maximum row size is slightly less than 8KB for the default 16KB [InnoDB](#) page size. For 64KB pages, the maximum row size is slightly less than 16KB. See [Section 15.8.1.7, “Limits on InnoDB Tables”](#).

If a row containing [variable-length columns](#) exceeds the [InnoDB](#) maximum row size, [InnoDB](#) selects variable-length columns for external off-page storage until the row fits within the [InnoDB](#) row size limit. The amount of data stored locally for variable-length columns that are stored off-page differs by row format. For more information, see [Section 15.10, “InnoDB Row Storage and Row Formats”](#).

- Different storage formats use different amounts of page header and trailer data, which affects the amount of storage available for rows.
- For information about [InnoDB](#) row formats, see [Section 15.10, “InnoDB Row Storage and Row Formats”](#), and [Section 15.8.1.2, “The Physical Row Structure of an InnoDB Table”](#).
- For information about [MyISAM](#) storage formats, see [Section 16.2.3, “MyISAM Table Storage Formats”](#).

Row Size Limit Examples

- The MySQL maximum row size limit of 65,535 bytes is demonstrated in the following [InnoDB](#) and [MyISAM](#) examples. The limit is enforced regardless of storage engine, even though the storage engine may be capable of supporting larger rows.

```
mysql> CREATE TABLE t (a VARCHAR(10000), b VARCHAR(10000),
    c VARCHAR(10000), d VARCHAR(10000), e VARCHAR(10000),
    f VARCHAR(10000), g VARCHAR(6000)) ENGINE=InnoDB CHARACTER SET latin1;
ERROR 1118 (42000): Row size too large. The maximum row size for the used
table type, not counting BLOBs, is 65535. This includes storage overhead,
check the manual. You have to change some columns to TEXT or BLOBs
```

```
mysql> CREATE TABLE t (a VARCHAR(10000), b VARCHAR(10000),
    c VARCHAR(10000), d VARCHAR(10000), e VARCHAR(10000),
    f VARCHAR(10000), g VARCHAR(6000)) ENGINE=MyISAM CHARACTER SET latin1;
ERROR 1118 (42000): Row size too large. The maximum row size for the used
table type, not counting BLOBs, is 65535. This includes storage overhead,
check the manual. You have to change some columns to TEXT or BLOBs
```

In the following [MyISAM](#) example, changing a column to [TEXT](#) avoids the 65,535-byte row size limit and permits the operation to succeed because [BLOB](#) and [TEXT](#) columns only contribute 9 to 12 bytes toward the row size.

```
mysql> CREATE TABLE t (a VARCHAR(10000), b VARCHAR(10000),
    c VARCHAR(10000), d VARCHAR(10000), e VARCHAR(10000),
    f VARCHAR(10000), g TEXT(6000)) ENGINE=MyISAM CHARACTER SET latin1;
Query OK, 0 rows affected (0.02 sec)
```

The operation succeeds for an [InnoDB](#) table because changing a column to [TEXT](#) avoids the MySQL 65,535-byte row size limit, and [InnoDB](#) off-page storage of variable-length columns avoids the [InnoDB](#) row size limit.

```
mysql> CREATE TABLE t (a VARCHAR(10000), b VARCHAR(10000),
    c VARCHAR(10000), d VARCHAR(10000), e VARCHAR(10000),
    f VARCHAR(10000), g TEXT(6000)) ENGINE=InnoDB CHARACTER SET latin1;
Query OK, 0 rows affected (0.02 sec)
```

- Storage for variable-length columns includes length bytes, which are counted toward the row size. For example, a [VARCHAR\(255\) CHARACTER SET utf8mb3](#) column takes two bytes to store the length of the value, so each value can take up to 767 bytes.

The statement to create table `t1` succeeds because the columns require 32,765 + 2 bytes and 32,766 + 2 bytes, which falls within the maximum row size of 65,535 bytes:

```
mysql> CREATE TABLE t1
    (c1 VARCHAR(32765) NOT NULL, c2 VARCHAR(32766) NOT NULL)
    ENGINE = InnoDB CHARACTER SET latin1;
Query OK, 0 rows affected (0.02 sec)
```

The statement to create table `t2` fails because, although the column length is within the maximum length of 65,535 bytes, two additional bytes are required to record the length, which causes the row size to exceed 65,535 bytes:

```
mysql> CREATE TABLE t2
    (c1 VARCHAR(65535) NOT NULL)
    ENGINE = InnoDB CHARACTER SET latin1;
ERROR 1118 (42000): Row size too large. The maximum row size for the used
table type, not counting BLOBs, is 65535. This includes storage overhead,
check the manual. You have to change some columns to TEXT or BLOBs
```

Reducing the column length to 65,533 or less permits the statement to succeed.

```
mysql> CREATE TABLE t2
    (c1 VARCHAR(65533) NOT NULL)
    ENGINE = InnoDB CHARACTER SET latin1;
Query OK, 0 rows affected (0.01 sec)
```

- For [MyISAM](#) tables, [NULL](#) columns require additional space in the row to record whether their values are [NULL](#). Each [NULL](#) column takes one bit extra, rounded up to the nearest byte.

The statement to create table `t3` fails because [MyISAM](#) requires space for [NULL](#) columns in addition to the space required for variable-length column length bytes, causing the row size to exceed 65,535 bytes:

```
mysql> CREATE TABLE t3
    (c1 VARCHAR(32765) NULL, c2 VARCHAR(32766) NULL)
    ENGINE = MyISAM CHARACTER SET latin1;
ERROR 1118 (42000): Row size too large. The maximum row size for the used
table type, not counting BLOBs, is 65535. This includes storage overhead,
check the manual. You have to change some columns to TEXT or BLOBs
```

For information about [InnoDB NULL](#) column storage, see [Section 15.8.1.2, “The Physical Row Structure of an InnoDB Table”](#).

- **InnoDB** restricts row size (for data stored locally within the database page) to slightly less than half a database page for 4KB, 8KB, 16KB, and 32KB `innodb_page_size` settings, and to slightly less than 16KB for 64KB pages.

The statement to create table `t4` fails because the defined columns exceed the row size limit for a 16KB **InnoDB** page.

```
mysql> CREATE TABLE t4 (  
  c1 CHAR(255),c2 CHAR(255),c3 CHAR(255),  
  c4 CHAR(255),c5 CHAR(255),c6 CHAR(255),  
  c7 CHAR(255),c8 CHAR(255),c9 CHAR(255),  
  c10 CHAR(255),c11 CHAR(255),c12 CHAR(255),  
  c13 CHAR(255),c14 CHAR(255),c15 CHAR(255),  
  c16 CHAR(255),c17 CHAR(255),c18 CHAR(255),  
  c19 CHAR(255),c20 CHAR(255),c21 CHAR(255),  
  c22 CHAR(255),c23 CHAR(255),c24 CHAR(255),  
  c25 CHAR(255),c26 CHAR(255),c27 CHAR(255),  
  c28 CHAR(255),c29 CHAR(255),c30 CHAR(255),  
  c31 CHAR(255),c32 CHAR(255),c33 CHAR(255)  
  ) ENGINE=InnoDB ROW_FORMAT=DYNAMIC DEFAULT CHARSET latin1;  
ERROR 1118 (42000): Row size too large (> 8126). Changing some columns to TEXT or BLOB may help.  
In current row format, BLOB prefix of 0 bytes is stored inline.
```

C.10.5 Windows Platform Limitations

The following limitations apply to use of MySQL on the Windows platform:

- **Process memory**

On Windows 32-bit platforms, it is not possible by default to use more than 2GB of RAM within a single process, including MySQL. This is because the physical address limit on Windows 32-bit is 4GB and the default setting within Windows is to split the virtual address space between kernel (2GB) and user/applications (2GB).

Some versions of Windows have a boot time setting to enable larger applications by reducing the kernel application. Alternatively, to use more than 2GB, use a 64-bit version of Windows.

- **File system aliases**

When using **MyISAM** tables, you cannot use aliases within Windows link to the data files on another volume and then link back to the main MySQL `datadir` location.

This facility is often used to move the data and index files to a RAID or other fast solution.

- **Limited number of ports**

Windows systems have about 4,000 ports available for client connections, and after a connection on a port closes, it takes two to four minutes before the port can be reused. In situations where clients connect to and disconnect from the server at a high rate, it is possible for all available ports to be used up before closed ports become available again. If this happens, the MySQL server appears to be unresponsive even though it is running. Ports may be used by other applications running on the machine as well, in which case the number of ports available to MySQL is lower.

For more information about this problem, see <http://support.microsoft.com/default.aspx?scid=kb;en-us;196271>.

- **DATA DIRECTORY and INDEX DIRECTORY**

The `DATA DIRECTORY` option for `CREATE TABLE` is supported on Windows only for InnoDB tables, as described in [Section 15.7.5, “Creating a Tablespace Outside of the Data Directory”](#). For MyISAM and other storage engines, the `DATA DIRECTORY` and `INDEX DIRECTORY` options for `CREATE TABLE` are ignored on Windows and any other platforms with a nonfunctional `realpath()` call.

- **DROP DATABASE**

You cannot drop a database that is in use by another session.

- **Case-insensitive names**

File names are not case-sensitive on Windows, so MySQL database and table names are also not case-sensitive on Windows. The only restriction is that database and table names must be specified using the same case throughout a given statement. See [Section 9.2.2, “Identifier Case Sensitivity”](#).

- **Directory and file names**

On Windows, MySQL Server supports only directory and file names that are compatible with the current ANSI code pages. For example, the following Japanese directory name will not work in the Western locale (code page 1252):

```
datadir="C:/私たちのプロジェクトのデータ"
```

The same limitation applies to directory and file names referred to in SQL statements, such as the data file path name in `LOAD DATA INFILE`.

- **The \ path name separator character**

Path name components in Windows are separated by the `\` character, which is also the escape character in MySQL. If you are using `LOAD DATA INFILE` or `SELECT ... INTO OUTFILE`, use Unix-style file names with `/` characters:

```
mysql> LOAD DATA INFILE 'C:/tmp/skr.txt' INTO TABLE skr;  
mysql> SELECT * INTO OUTFILE 'C:/tmp/skr.txt' FROM skr;
```

Alternatively, you must double the `\` character:

```
mysql> LOAD DATA INFILE 'C:\\tmp\\skr.txt' INTO TABLE skr;  
mysql> SELECT * INTO OUTFILE 'C:\\tmp\\skr.txt' FROM skr;
```

- **Problems with pipes**

Pipes do not work reliably from the Windows command-line prompt. If the pipe includes the character `^Z` / `CHAR(24)`, Windows thinks that it has encountered end-of-file and aborts the program.

This is mainly a problem when you try to apply a binary log as follows:

```
C:\> mysqlbinlog binary_log_file | mysql --user=root
```

If you have a problem applying the log and suspect that it is because of a `^Z` / `CHAR(24)` character, you can use the following workaround:

```
C:\> mysqlbinlog binary_log_file --result-file=/tmp/bin.sql  
C:\> mysql --user=root --execute "source /tmp/bin.sql"
```

The latter command also can be used to reliably read in any SQL file that may contain binary data.

MySQL Glossary

These terms are commonly used in information about the MySQL database server. This glossary originated as a reference for terminology about the InnoDB storage engine, and the majority of definitions are InnoDB-related.

A

.ARM file

Metadata for [ARCHIVE](#) tables. Contrast with **.ARZ file**. Files with this extension are always included in backups produced by the [mysqlbackup](#) command of the **MySQL Enterprise Backup** product.

See Also [.ARZ file](#), [MySQL Enterprise Backup](#), [mysqlbackup command](#).

.ARZ file

Data for ARCHIVE tables. Contrast with **.ARM file**. Files with this extension are always included in backups produced by the [mysqlbackup](#) command of the **MySQL Enterprise Backup** product.

See Also [.ARM file](#), [MySQL Enterprise Backup](#), [mysqlbackup command](#).

ACID

An acronym standing for atomicity, consistency, isolation, and durability. These properties are all desirable in a database system, and are all closely tied to the notion of a **transaction**. The transactional features of [InnoDB](#) adhere to the ACID principles.

Transactions are **atomic** units of work that can be **committed** or **rolled back**. When a transaction makes multiple changes to the database, either all the changes succeed when the transaction is committed, or all the changes are undone when the transaction is rolled back.

The database remains in a consistent state at all times — after each commit or rollback, and while transactions are in progress. If related data is being updated across multiple tables, queries see either all old values or all new values, not a mix of old and new values.

Transactions are protected (isolated) from each other while they are in progress; they cannot interfere with each other or see each other's uncommitted data. This isolation is achieved through the **locking** mechanism. Experienced users can adjust the **isolation level**, trading off less protection in favor of increased performance and **concurrency**, when they can be sure that the transactions really do not interfere with each other.

The results of transactions are durable: once a commit operation succeeds, the changes made by that transaction are safe from power failures, system crashes, race conditions, or other potential dangers that many non-database applications are vulnerable to. Durability typically involves writing to disk storage, with a certain amount of redundancy to protect against power failures or software crashes during write operations. (In [InnoDB](#), the **doublewrite buffer** assists with durability.)

See Also [atomic](#), [commit](#), [concurrency](#), [doublewrite buffer](#), [isolation level](#), [locking](#), [rollback](#), [transaction](#).

adaptive flushing

An algorithm for **InnoDB** tables that smooths out the I/O overhead introduced by **checkpoints**. Instead of **flushing** all modified **pages** from the **buffer pool** to the **data files** at once, MySQL periodically flushes small sets of modified pages. The adaptive flushing algorithm extends this process by estimating the optimal rate to perform these periodic flushes, based on the rate of flushing and how fast **redo** information is generated.

See Also [buffer pool](#), [checkpoint](#), [data files](#), [flush](#), [InnoDB](#), [page](#), [redo log](#).

adaptive hash index

An optimization for [InnoDB](#) tables that can speed up lookups using **=** and **IN** operators, by constructing a **hash index** in memory. MySQL monitors index searches for [InnoDB](#) tables, and if queries could benefit from a hash index, it builds one automatically for index **pages** that are frequently accessed. In a sense, the adaptive hash index configures MySQL at runtime to take advantage of ample main memory, coming closer to the architecture of main-memory databases. This feature is controlled by the [innodb_adaptive_hash_index](#) configuration

option. Because this feature benefits some workloads and not others, and the memory used for the hash index is reserved in the **buffer pool**, typically you should benchmark with this feature both enabled and disabled.

The hash index is always built based on an existing **B-tree** index on the table. MySQL can build a hash index on a prefix of any length of the key defined for the B-tree, depending on the pattern of searches against the index. A hash index can be partial; the whole B-tree index does not need to be cached in the buffer pool.

In MySQL 5.6 and higher, another way to take advantage of fast single-value lookups with [InnoDB](#) tables is to use the [InnoDB memcached](#) plugin. See [Section 15.19, “InnoDB memcached Plugin”](#) for details. See Also [B-tree](#), [buffer pool](#), [hash index](#), [memcached](#), [page](#), [secondary index](#).

AHI

Acronym for **adaptive hash index**.
See Also [adaptive hash index](#).

AIO

Acronym for **asynchronous I/O**. You might see this acronym in [InnoDB](#) messages or keywords.
See Also [asynchronous I/O](#).

application programming interface (API)

A set of functions or procedures. An API provides a stable set of names and types for functions, procedures, parameters, and return values.

apply

When a backup produced by the **MySQL Enterprise Backup** product does not include the most recent changes that occurred while the backup was underway, the process of updating the backup files to include those changes is known as the **apply** step. It is specified by the [apply-log](#) option of the [mysqlbackup](#) command.

Before the changes are applied, we refer to the files as a **raw backup**. After the changes are applied, we refer to the files as a **prepared backup**. The changes are recorded in the [ibbackup_logfile](#) file; once the apply step is finished, this file is no longer necessary.

See Also [hot backup](#), [ibbackup_logfile](#), [MySQL Enterprise Backup](#), [prepared backup](#), [raw backup](#).

asynchronous I/O

A type of I/O operation that allows other processing to proceed before the I/O is completed. Also known as **nonblocking I/O** and abbreviated as **AIO**. [InnoDB](#) uses this type of I/O for certain operations that can run in parallel without affecting the reliability of the database, such as reading pages into the **buffer pool** that have not actually been requested, but might be needed soon.

Historically, [InnoDB](#) used asynchronous I/O on Windows systems only. Starting with the [InnoDB Plugin 1.1](#) and MySQL 5.5, [InnoDB](#) uses asynchronous I/O on Linux systems. This change introduces a dependency on [libaio](#). Asynchronous I/O on Linux systems is configured using the [innodb_use_native_aio](#) option, which is enabled by default. On other Unix-like systems, [InnoDB](#) uses synchronous I/O only.

See Also [buffer pool](#), [nonblocking I/O](#).

atomic

In the SQL context, **transactions** are units of work that either succeed entirely (when **committed**) or have no effect at all (when **rolled back**). The indivisible ("atomic") property of transactions is the "A" in the acronym **ACID**.
See Also [ACID](#), [commit](#), [rollback](#), [transaction](#).

atomic DDL

An atomic *DDL* statement is one that combines the *data dictionary* updates, *storage engine* operations, and *binary log* writes associated with a DDL operation into a single, atomic transaction. The transaction is either fully committed or rolled back, even if the server halts during the operation. Atomic DDL support was added in MySQL 8.0. For more information, see [Section 13.1.1, “Atomic Data Definition Statement Support”](#).

See Also [binary log](#), [data dictionary](#), [DDL](#), [storage engine](#).

atomic instruction

Special instructions provided by the CPU, to ensure that critical low-level operations cannot be interrupted.

auto-increment

A property of a table column (specified by the [AUTO_INCREMENT](#) keyword) that automatically adds an ascending sequence of values in the column.

It saves work for the developer, not to have to produce new unique values when inserting new rows. It provides useful information for the query optimizer, because the column is known to be not null and with unique values. The values from such a column can be used as lookup keys in various contexts, and because they are auto-generated there is no reason to ever change them; for this reason, primary key columns are often specified as auto-incrementing.

Auto-increment columns can be problematic with statement-based replication, because replaying the statements on a slave might not produce the same set of column values as on the master, due to timing issues. When you have an auto-incrementing primary key, you can use statement-based replication only with the setting [innodb_autoinc_lock_mode=1](#). If you have [innodb_autoinc_lock_mode=2](#), which allows higher concurrency for insert operations, use **row-based replication** rather than **statement-based replication**. The setting [innodb_autoinc_lock_mode=0](#) should not be used except for compatibility purposes.

Consecutive lock mode ([innodb_autoinc_lock_mode=1](#)) is the default setting prior to MySQL 8.0.3. As of MySQL 8.0.3, interleaved lock mode ([innodb_autoinc_lock_mode=2](#)) is the default, which reflects the change from statement-based to row-based replication as the default replication type.

See Also [auto-increment locking](#), [innodb_autoinc_lock_mode](#), [primary key](#), [row-based replication](#), [statement-based replication](#).

auto-increment locking

The convenience of an **auto-increment** primary key involves some tradeoff with concurrency. In the simplest case, if one transaction is inserting values into the table, any other transactions must wait to do their own inserts into that table, so that rows inserted by the first transaction receive consecutive primary key values.

[InnoDB](#) includes optimizations and the [innodb_autoinc_lock_mode](#) option so that you can configure and optimal balance between predictable sequences of auto-increment values and maximum **concurrency** for insert operations.

See Also [auto-increment](#), [concurrency](#), [innodb_autoinc_lock_mode](#).

autocommit

A setting that causes a **commit** operation after each **SQL** statement. This mode is not recommended for working with [InnoDB](#) tables with **transactions** that span several statements. It can help performance for **read-only transactions** on [InnoDB](#) tables, where it minimizes overhead from **locking** and generation of **undo** data, especially in MySQL 5.6.4 and up. It is also appropriate for working with [MyISAM](#) tables, where transactions are not applicable.

See Also [commit](#), [locking](#), [read-only transaction](#), [SQL](#), [transaction](#), [undo](#).

availability

The ability to cope with, and if necessary recover from, failures on the host, including failures of MySQL, the operating system, or the hardware and maintenance activity that may otherwise cause downtime. Often paired with **scalability** as critical aspects of a large-scale deployment.

See Also [scalability](#).

B

B-tree

A tree data structure that is popular for use in database indexes. The structure is kept sorted at all times, enabling fast lookup for exact matches (equals operator) and ranges (for example, greater than, less than, and [BETWEEN](#) operators). This type of index is available for most storage engines, such as [InnoDB](#) and [MyISAM](#).

Because B-tree nodes can have many children, a B-tree is not the same as a binary tree, which is limited to 2 children per node.

Contrast with **hash index**, which is only available in the [MEMORY](#) storage engine. The [MEMORY](#) storage engine can also use B-tree indexes, and you should choose B-tree indexes for [MEMORY](#) tables if some queries use range operators.

The use of the term B-tree is intended as a reference to the general class of index design. B-tree structures used by MySQL storage engines may be regarded as variants due to sophistications not present in a classic B-tree design. For related information, refer to the [InnoDB](#) Page Structure [Fil Header](#) section of the [MySQL Internals Manual](#).

See Also [hash index](#).

backticks

Identifiers within MySQL SQL statements must be quoted using the backtick character (```) if they contain special characters or reserved words. For example, to refer to a table named `FOO#BAR` or a column named `SELECT`, you would specify the identifiers as ``FOO#BAR`` and ``SELECT``. Since the backticks provide an extra level of safety, they are used extensively in program-generated SQL statements, where the identifier names might not be known in advance.

Many other database systems use double quotation marks (`"`) around such special names. For portability, you can enable [ANSI_QUOTES](#) mode in MySQL and use double quotation marks instead of backticks to qualify identifier names.

See Also [SQL](#).

backup

The process of copying some or all table data and metadata from a MySQL instance, for safekeeping. Can also refer to the set of copied files. This is a crucial task for DBAs. The reverse of this process is the **restore** operation.

With MySQL, **physical backups** are performed by the **MySQL Enterprise Backup** product, and **logical backups** are performed by the `mysqldump` command. These techniques have different characteristics in terms of size and representation of the backup data, and speed (especially speed of the restore operation).

Backups are further classified as **hot**, **warm**, or **cold** depending on how much they interfere with normal database operation. (Hot backups have the least interference, cold backups the most.)

See Also [cold backup](#), [hot backup](#), [logical backup](#), [MySQL Enterprise Backup](#), [mysqldump](#), [physical backup](#), [warm backup](#).

base column

A non-generated table column upon which a stored generated column or virtual generated column is based. In other words, a base column is a non-generated table column that is part of a generated column definition.

See Also [generated column](#), [stored generated column](#), [virtual generated column](#).

beta

An early stage in the life of a software product, when it is available only for evaluation, typically without a definite release number or a number less than 1. [InnoDB](#) does not use the beta designation, preferring an **early adopter** phase that can extend over several point releases, leading to a **GA** release.

See Also [early adopter](#), [GA](#).

binary log

A file containing a record of all statements that attempt to change table data. These statements can be replayed to bring slave servers up to date in a **replication** scenario, or to bring a database up to date after restoring table data from a backup. The binary logging feature can be turned on and off, although Oracle recommends always enabling it if you use replication or perform backups.

You can examine the contents of the binary log, or replay those statements during replication or recovery, by using the `mysqlbinlog` command. For full information about the binary log, see [Section 5.4.4, “The Binary Log”](#).

For MySQL configuration options related to the binary log, see [Section 17.1.6.4, “Binary Logging Options and Variables”](#).

For the **MySQL Enterprise Backup** product, the file name of the binary log and the current position within the file are important details. To record this information for the master server when taking a backup in a replication context, you can specify the `--slave-info` option.

Prior to MySQL 5.0, a similar capability was available, known as the update log. In MySQL 5.0 and higher, the binary log replaces the update log.

See Also [binlog](#), [MySQL Enterprise Backup](#), [replication](#).

binlog

An informal name for the **binary log** file. For example, you might see this abbreviation used in e-mail messages or forum discussions.

See Also [binary log](#).

blind query expansion

A special mode of **full-text search** enabled by the `WITH QUERY EXPANSION` clause. It performs the search twice, where the search phrase for the second search is the original search phrase concatenated with the few most highly relevant documents from the first search. This technique is mainly applicable for short search phrases, perhaps only a single word. It can uncover relevant matches where the precise search term does not occur in the document.

See Also [full-text search](#).

bottleneck

A portion of a system that is constrained in size or capacity, that has the effect of limiting overall throughput. For example, a memory area might be smaller than necessary; access to a single required resource might prevent multiple CPU cores from running simultaneously; or waiting for disk I/O to complete might prevent the CPU from running at full capacity. Removing bottlenecks tends to improve **concurrency**. For example, the ability to have multiple **InnoDB buffer pool** instances reduces contention when multiple sessions read from and write to the buffer pool simultaneously.

See Also [buffer pool](#), [concurrency](#).

bounce

A **shutdown** operation immediately followed by a restart. Ideally with a relatively short **warmup** period so that performance and throughput quickly return to a high level.

See Also [shutdown](#).

buddy allocator

A mechanism for managing different-sized **pages** in the **InnoDB buffer pool**.

See Also [buffer pool](#), [page](#), [page size](#).

buffer

A memory or disk area used for temporary storage. Data is buffered in memory so that it can be written to disk efficiently, with a few large I/O operations rather than many small ones. Data is buffered on disk for greater reliability, so that it can be recovered even when a **crash** or other failure occurs at the worst possible time. The main types of buffers used by InnoDB are the **buffer pool**, the **doublewrite buffer**, and the **change buffer**.

See Also [buffer pool](#), [change buffer](#), [crash](#), [doublewrite buffer](#).

buffer pool

The memory area that holds cached **InnoDB** data for both tables and indexes. For efficiency of high-volume read operations, the buffer pool is divided into **pages** that can potentially hold multiple rows. For efficiency of cache management, the buffer pool is implemented as a linked list of pages; data that is rarely used is aged out of the cache, using a variation of the **LRU** algorithm. On systems with large memory, you can improve concurrency by dividing the buffer pool into multiple **buffer pool instances**.

Several [InnoDB](#) status variables, [INFORMATION_SCHEMA](#) tables, and [performance_schema](#) tables help to monitor the internal workings of the buffer pool. Starting in MySQL 5.6, you can avoid a lengthy warmup period after restarting the server, particularly for instances with large buffer pools, by saving the buffer pool state at server shutdown and restoring the buffer pool to the same state at server startup. See [Section 15.6.3.8, “Saving and Restoring the Buffer Pool State”](#).

See Also [buffer pool instance](#), [LRU](#), [page](#), [warm up](#).

buffer pool instance

Any of the multiple regions into which the **buffer pool** can be divided, controlled by the [innodb_buffer_pool_instances](#) configuration option. The total memory size specified by [innodb_buffer_pool_size](#) is divided among all buffer pool instances. Typically, having multiple buffer pool instances is appropriate for systems that allocate multiple gigabytes to the [InnoDB](#) buffer pool, with each instance being one gigabyte or larger. On systems loading or looking up large amounts of data in the buffer pool from many concurrent sessions, having multiple buffer pool instances reduces contention for exclusive access to data structures that manage the buffer pool.

See Also [buffer pool](#).

built-in

The built-in [InnoDB](#) storage engine within MySQL is the original form of distribution for the storage engine. Contrast with the **InnoDB Plugin**. Starting with MySQL 5.5, the InnoDB Plugin is merged back into the MySQL code base as the built-in [InnoDB](#) storage engine (known as InnoDB 1.1).

This distinction is important mainly in MySQL 5.1, where a feature or bug fix might apply to the InnoDB Plugin but not the built-in [InnoDB](#), or vice versa.

See Also [InnoDB](#).

business rules

The relationships and sequences of actions that form the basis of business software, used to run a commercial company. Sometimes these rules are dictated by law, other times by company policy. Careful planning ensures that the relationships encoded and enforced by the database, and the actions performed through application logic, accurately reflect the real policies of the company and can handle real-life situations.

For example, an employee leaving a company might trigger a sequence of actions from the human resources department. The human resources database might also need the flexibility to represent data about a person who has been hired, but not yet started work. Closing an account at an online service might result in data being removed from a database, or the data might be moved or flagged so that it could be recovered if the account is re-opened. A company might establish policies regarding salary maximums, minimums, and adjustments, in addition to basic sanity checks such as the salary not being a negative number. A retail database might not allow a purchase with the same serial number to be returned more than once, or might not allow credit card purchases above a certain value, while a database used to detect fraud might allow these kinds of things.

See Also [relational](#).

C

.cfg file

A metadata file used with the [InnoDB transportable tablespace](#) feature. It is produced by the command [FLUSH TABLES ... FOR EXPORT](#), puts one or more tables in a consistent state that can be copied to another server. The [.cfg](#) file is copied along with the corresponding [.ibd file](#), and used to adjust the internal values of the [.ibd](#) file, such as the **space ID**, during the [ALTER TABLE ... IMPORT TABLESPACE](#) step.

See Also [.ibd file](#), [space ID](#), [transportable tablespace](#).

cache

The general term for any memory area that stores copies of data for frequent or high-speed retrieval. In [InnoDB](#), the primary kind of cache structure is the **buffer pool**.

See Also [buffer](#), [buffer pool](#).

cardinality

The number of different values in a table **column**. When queries refer to columns that have an associated **index**, the cardinality of each column influences which access method is most efficient. For example, for a column with a **unique constraint**, the number of different values is equal to the number of rows in the table. If a table has a million rows but only 10 different values for a particular column, each value occurs (on average) 100,000 times. A query such as `SELECT c1 FROM t1 WHERE c1 = 50;` thus might return 1 row or a huge number of rows, and the database server might process the query differently depending on the cardinality of `c1`.

If the values in a column have a very uneven distribution, the cardinality might not be a good way to determine the best query plan. For example, `SELECT c1 FROM t1 WHERE c1 = x;` might return 1 row when `x=50` and a million rows when `x=30`. In such a case, you might need to use **index hints** to pass along advice about which lookup method is more efficient for a particular query.

Cardinality can also apply to the number of distinct values present in multiple columns, as in a **composite index**. See Also [column](#), [composite index](#), [index](#), [index hint](#), [random dive](#), [selectivity](#), [unique constraint](#).

change buffer

A special data structure that records changes to **pages** in **secondary indexes**. These values could result from SQL `INSERT`, `UPDATE`, or `DELETE` statements (**DML**). The set of features involving the change buffer is known collectively as **change buffering**, consisting of **insert buffering**, **delete buffering**, and **purge buffering**.

Changes are only recorded in the change buffer when the relevant page from the secondary index is not in the **buffer pool**. When the relevant index page is brought into the buffer pool while associated changes are still in the change buffer, the changes for that page are applied in the buffer pool (**merged**) using the data from the change buffer. Periodically, the **purge** operation that runs during times when the system is mostly idle, or during a slow shutdown, writes the new index pages to disk. The purge operation can write the disk blocks for a series of index values more efficiently than if each value were written to disk immediately.

Physically, the change buffer is part of the **system tablespace**, so that the index changes remain buffered across database restarts. The changes are only applied (**merged**) when the pages are brought into the buffer pool due to some other read operation.

The kinds and amount of data stored in the change buffer are governed by the `innodb_change_buffering` and `innodb_change_buffer_max_size` configuration options. To see information about the current data in the change buffer, issue the `SHOW ENGINE INNODB STATUS` command.

Formerly known as the **insert buffer**.

See Also [buffer pool](#), [change buffering](#), [delete buffering](#), [DML](#), [insert buffer](#), [insert buffering](#), [merge](#), [page](#), [purge](#), [purge buffering](#), [secondary index](#), [system tablespace](#).

change buffering

The general term for the features involving the **change buffer**, consisting of **insert buffering**, **delete buffering**, and **purge buffering**. Index changes resulting from SQL statements, which could normally involve random I/O operations, are held back and performed periodically by a background **thread**. This sequence of operations can write the disk blocks for a series of index values more efficiently than if each value were written to disk immediately. Controlled by the `innodb_change_buffering` and `innodb_change_buffer_max_size` configuration options.

See Also [change buffer](#), [delete buffering](#), [insert buffering](#), [purge buffering](#).

checkpoint

As changes are made to data pages that are cached in the **buffer pool**, those changes are written to the **data files** sometime later, a process known as **flushing**. The checkpoint is a record of the latest changes (represented by an **LSN** value) that have been successfully written to the data files.

See Also [buffer pool](#), [data files](#), [flush](#), [fuzzy checkpointing](#), [LSN](#).

checksum

In **InnoDB**, a validation mechanism to detect corruption when a **page** in a **tablespace** is read from disk into the **InnoDB buffer pool**. This feature is controlled by the `innodb_checksums` configuration option in MySQL 5.5. `innodb_checksums` is deprecated in MySQL 5.6.3, replaced by `innodb_checksum_algorithm`.

The `innochecksum` command helps diagnose corruption problems by testing the checksum values for a specified **tablespace** file while the MySQL server is shut down.

MySQL also uses checksums for replication purposes. For details, see the configuration options `binlog_checksum`, `master_verify_checksum`, and `slave_sql_verify_checksum`.
See Also [buffer pool](#), [page](#), [tablespace](#).

child table

In a **foreign key** relationship, a child table is one whose rows refer (or point) to rows in another table with an identical value for a specific column. This is the table that contains the `FOREIGN KEY ... REFERENCES` clause and optionally `ON UPDATE` and `ON DELETE` clauses. The corresponding row in the **parent table** must exist before the row can be created in the child table. The values in the child table can prevent delete or update operations on the parent table, or can cause automatic deletion or updates in the child table, based on the `ON CASCADE` option used when creating the foreign key.

See Also [foreign key](#), [parent table](#).

clean page

A **page** in the **InnoDB buffer pool** where all changes made in memory have also been written (**flushed**) to the **data files**. The opposite of a **dirty page**.

See Also [buffer pool](#), [data files](#), [dirty page](#), [flush](#), [page](#).

clean shutdown

A **shutdown** that completes without errors and applies all changes to **InnoDB** tables before finishing, as opposed to a **crash** or a **fast shutdown**. Synonym for **slow shutdown**.

See Also [crash](#), [fast shutdown](#), [shutdown](#), [slow shutdown](#).

client

A type of program that sends requests to a **server**, and interprets or processes the results. The client software might run only some of the time (such as a mail or chat program), and might run interactively (such as the `mysql` command processor).

See Also [mysql](#), [server](#).

clustered index

The **InnoDB** term for a **primary key** index. **InnoDB** table storage is organized based on the values of the primary key columns, to speed up queries and sorts involving the primary key columns. For best performance, choose the primary key columns carefully based on the most performance-critical queries. Because modifying the columns of the clustered index is an expensive operation, choose primary columns that are rarely or never updated.

In the Oracle Database product, this type of table is known as an **index-organized table**.

See Also [index](#), [primary key](#), [secondary index](#).

cold backup

A **backup** taken while the database is shut down. For busy applications and websites, this might not be practical, and you might prefer a **warm backup** or a **hot backup**.

See Also [backup](#), [hot backup](#), [warm backup](#).

column

A data item within a **row**, whose storage and semantics are defined by a data type. Each **table** and **index** is largely defined by the set of columns it contains.

Each column has a **cardinality** value. A column can be the **primary key** for its table, or part of the primary key. A column can be subject to a **unique constraint**, a **NOT NULL constraint**, or both. Values in different columns, even across different tables, can be linked by a **foreign key** relationship.

In discussions of MySQL internal operations, sometimes **field** is used as a synonym.

See Also [cardinality](#), [foreign key](#), [index](#), [NOT NULL constraint](#), [primary key](#), [row](#), [table](#), [unique constraint](#).

column index

An **index** on a single column.

See Also [composite index](#), [index](#).

column prefix

When an **index** is created with a length specification, such as `CREATE INDEX idx ON t1 (c1(N))`, only the first N characters of the column value are stored in the index. Keeping the index prefix small makes the index compact, and the memory and disk I/O savings help performance. (Although making the index prefix too small can hinder query optimization by making rows with different values appear to the query optimizer to be duplicates.)

For columns containing binary values or long text strings, where sorting is not a major consideration and storing the entire value in the index would waste space, the index automatically uses the first N (typically 768) characters of the value to do lookups and sorts.

See Also [index](#).

commit

A **SQL** statement that ends a **transaction**, making permanent any changes made by the transaction. It is the opposite of **rollback**, which undoes any changes made in the transaction.

[InnoDB](#) uses an **optimistic** mechanism for commits, so that changes can be written to the data files before the commit actually occurs. This technique makes the commit itself faster, with the tradeoff that more work is required in case of a rollback.

By default, MySQL uses the **autocommit** setting, which automatically issues a commit following each SQL statement.

See Also [autocommit](#), [optimistic](#), [rollback](#), [SQL](#), [transaction](#).

compact row format

A **row format** for InnoDB tables. It was the default row format from MySQL 5.0.3 to MySQL 5.7.8. In MySQL 8.0, the default row format is defined by the `innodb_default_row_format` configuration option, which has a default setting of **DYNAMIC**. The **COMPACT** row format provides a more compact representation for nulls and variable-length columns than the **REDUNDANT** row format.

For additional information about [InnoDB COMPACT](#) row format, see [Section 15.10.4, “COMPACT and REDUNDANT Row Formats”](#).

See Also [dynamic row format](#), [file format](#), [redundant row format](#), [row format](#).

composite index

An **index** that includes multiple columns.

See Also [index](#).

compressed backup

The compression feature of the **MySQL Enterprise Backup** product makes a compressed copy of each tablespace, changing the extension from `.ibd` to `.ibz`. Compressing backup data allows you to keep more backups on hand, and reduces the time to transfer backups to a different server. The data is uncompressed during the restore operation. When a compressed backup operation processes a table that is already

compressed, it skips the compression step for that table, because compressing again would result in little or no space savings.

A set of files produced by the **MySQL Enterprise Backup** product, where each **tablespace** is compressed. The compressed files are renamed with a `.ibz` file extension.

Applying **compression** at the start of the backup process helps to avoid storage overhead during the compression process, and to avoid network overhead when transferring the backup files to another server. The process of **applying** the **binary log** takes longer, and requires uncompressing the backup files.
See Also [apply](#), [binary log](#), [compression](#), [hot backup](#), [MySQL Enterprise Backup](#), [tablespace](#).

compressed row format

A **row format** that enables data and index **compression** for [InnoDB](#) tables. Large fields are stored away from the page that holds the rest of the row data, as in **dynamic row format**. Both index pages and the large fields are compressed, yielding memory and disk savings. Depending on the structure of the data, the decrease in memory and disk usage might or might not outweigh the performance overhead of uncompressing the data as it is used. See [Section 15.9, “InnoDB Table and Page Compression”](#) for usage details.

For additional information about [InnoDB COMPRESSED](#) row format, see [Section 15.10.3, “DYNAMIC and COMPRESSED Row Formats”](#).

See Also [compression](#), [dynamic row format](#), [row format](#).

compressed table

A table for which the data is stored in compressed form. For [InnoDB](#), it is a table created with `ROW_FORMAT=COMPRESSED`. See [Section 15.9, “InnoDB Table and Page Compression”](#) for more information.
See Also [compressed row format](#), [compression](#).

compression

A feature with wide-ranging benefits from using less disk space, performing less I/O, and using less memory for caching.

[InnoDB](#) supports both table-level and page-level compression. [InnoDB](#) page compression is also referred to as **transparent page compression**. For more information about [InnoDB](#) compression, see [Section 15.9, “InnoDB Table and Page Compression”](#).

Another type of compression is the **compressed backup** feature of the **MySQL Enterprise Backup** product. See Also [buffer pool](#), [compressed backup](#), [compressed row format](#), [DML](#), [transparent page compression](#).

compression failure

Not actually an error, rather an expensive operation that can occur when using **compression** in combination with **DML** operations. It occurs when: updates to a compressed **page** overflow the area on the page reserved for recording modifications; the page is compressed again, with all changes applied to the table data; the re-compressed data does not fit on the original page, requiring MySQL to split the data into two new pages and compress each one separately. To check the frequency of this condition, query the `INFORMATION_SCHEMA.INNODB_CMP` table and check how much the value of the `COMPRESS_OPS` column exceeds the value of the `COMPRESS_OPS_OK` column. Ideally, compression failures do not occur often; when they do, you can adjust the `innodb_compression_level`, `innodb_compression_failure_threshold_pct`, and `innodb_compression_pad_pct_max` configuration options.
See Also [compression](#), [DML](#), [page](#).

concatenated index

See [composite index](#).

concurrency

The ability of multiple operations (in database terminology, **transactions**) to run simultaneously, without interfering with each other. Concurrency is also involved with performance, because ideally the protection for

multiple simultaneous transactions works with a minimum of performance overhead, using efficient mechanisms for **locking**.
See Also [ACID](#), [locking](#), [transaction](#).

configuration file

The file that holds the **option** values used by MySQL at startup. Traditionally, on Linux and Unix this file is named `my.cnf`, and on Windows it is named `my.ini`. You can set a number of options related to InnoDB under the `[mysqld]` section of the file.

See [Section 4.2.7, “Using Option Files”](#) for information about where MySQL searches for configuration files.

When you use the **MySQL Enterprise Backup** product, you typically use two configuration files: one that specifies where the data comes from and how it is structured (which could be the original configuration file for your server), and a stripped-down one containing only a small set of options that specify where the backup data goes and how it is structured. The configuration files used with the **MySQL Enterprise Backup** product must contain certain options that are typically left out of regular configuration files, so you might need to add options to your existing configuration file for use with **MySQL Enterprise Backup**.

See Also [my.cnf](#), [MySQL Enterprise Backup](#), [option](#), [option file](#).

consistent read

A read operation that uses **snapshot** information to present query results based on a point in time, regardless of changes performed by other transactions running at the same time. If queried data has been changed by another transaction, the original data is reconstructed based on the contents of the **undo log**. This technique avoids some of the **locking** issues that can reduce **concurrency** by forcing transactions to wait for other transactions to finish.

With **REPEATABLE READ isolation level**, the snapshot is based on the time when the first read operation is performed. With **READ COMMITTED** isolation level, the snapshot is reset to the time of each consistent read operation.

Consistent read is the default mode in which [InnoDB](#) processes `SELECT` statements in **READ COMMITTED** and **REPEATABLE READ** isolation levels. Because a consistent read does not set any locks on the tables it accesses, other sessions are free to modify those tables while a consistent read is being performed on the table.

For technical details about the applicable isolation levels, see [Section 15.5.2.3, “Consistent Nonlocking Reads”](#).
See Also [concurrency](#), [isolation level](#), [locking](#), [READ COMMITTED](#), [REPEATABLE READ](#), [snapshot](#), [transaction](#), [undo log](#).

constraint

An automatic test that can block database changes to prevent data from becoming inconsistent. (In computer science terms, a kind of assertion related to an invariant condition.) Constraints are a crucial component of the **ACID** philosophy, to maintain data consistency. Constraints supported by MySQL include **FOREIGN KEY constraints** and **unique constraints**.

See Also [ACID](#), [foreign key](#), [unique constraint](#).

counter

A value that is incremented by a particular kind of [InnoDB](#) operation. Useful for measuring how busy a server is, troubleshooting the sources of performance issues, and testing whether changes (for example, to configuration settings or indexes used by queries) have the desired low-level effects. Different kinds of counters are available through **Performance Schema** tables and **INFORMATION_SCHEMA** tables, particularly [INFORMATION_SCHEMA.INNODB_METRICS](#).

See Also [INFORMATION_SCHEMA](#), [metrics counter](#), [Performance Schema](#).

covering index

An **index** that includes all the columns retrieved by a query. Instead of using the index values as pointers to find the full table rows, the query returns values from the index structure, saving disk I/O. [InnoDB](#) can apply this optimization technique to more indexes than MyISAM can, because [InnoDB secondary indexes](#) also include the

primary key columns. [InnoDB](#) cannot apply this technique for queries against tables modified by a transaction, until that transaction ends.

Any **column index** or **composite index** could act as a covering index, given the right query. Design your indexes and queries to take advantage of this optimization technique wherever possible.

See Also [column index](#), [composite index](#), [index](#), [primary key](#), [secondary index](#).

CPU-bound

A type of **workload** where the primary **bottleneck** is CPU operations in memory. Typically involves read-intensive operations where the results can all be cached in the **buffer pool**.

See Also [bottleneck](#), [buffer pool](#), [workload](#).

crash

MySQL uses the term “crash” to refer generally to any unexpected **shutdown** operation where the server cannot do its normal cleanup. For example, a crash could happen due to a hardware fault on the database server machine or storage device; a power failure; a potential data mismatch that causes the MySQL server to halt; a **fast shutdown** initiated by the DBA; or many other reasons. The robust, automatic **crash recovery** for **InnoDB** tables ensures that data is made consistent when the server is restarted, without any extra work for the DBA.

See Also [crash recovery](#), [fast shutdown](#), [InnoDB](#), [shutdown](#).

crash recovery

The cleanup activities that occur when MySQL is started again after a **crash**. For **InnoDB** tables, changes from incomplete transactions are replayed using data from the **redo log**. Changes that were **committed** before the crash, but not yet written into the **data files**, are reconstructed from the **doublewrite buffer**. When the database is shut down normally, this type of activity is performed during shutdown by the **purge** operation.

During normal operation, committed data can be stored in the **change buffer** for a period of time before being written to the data files. There is always a tradeoff between keeping the data files up-to-date, which introduces performance overhead during normal operation, and buffering the data, which can make shutdown and crash recovery take longer.

See Also [change buffer](#), [commit](#), [crash](#), [data files](#), [doublewrite buffer](#), [InnoDB](#), [purge](#), [redo log](#).

CRUD

Acronym for “create, read, update, delete”, a common sequence of operations in database applications. Often denotes a class of applications with relatively simple database usage (basic **DDL**, **DML** and **query** statements in **SQL**) that can be implemented quickly in any language.

See Also [DDL](#), [DML](#), [query](#), [SQL](#).

cursor

An internal data structure that is used to represent the result set of a **query**, or other operation that performs a search using an SQL [WHERE](#) clause. It works like an iterator in other high-level languages, producing each value from the result set as requested.

Although SQL usually handles the processing of cursors for you, you might delve into the inner workings when dealing with performance-critical code.

See Also [query](#).

D

data definition language

See [DDL](#).

data dictionary

Metadata that keeps track of database objects such as **tables**, **indexes**, and table **columns**. For the MySQL data dictionary, introduced in MySQL 8.0, metadata is physically located in [InnoDB file-per-table](#) tablespace files

in the [mysql](#) database directory. For the [InnoDB](#) data dictionary, metadata is physically located in the [InnoDB system tablespace](#).

Because the **MySQL Enterprise Backup** product always backs up the [InnoDB](#) system tablespace, all backups include the contents of the [InnoDB](#) data dictionary.

See Also [column](#), [file-per-table](#), [.frm file](#), [index](#), [MySQL Enterprise Backup](#), [system tablespace](#), [table](#).

data directory

The directory under which each MySQL **instance** keeps the **data files** for [InnoDB](#) and the directories representing individual databases. Controlled by the [datadir](#) configuration option.

See Also [data files](#), [instance](#).

data files

The files that physically contain **table** and **index** data.

The [InnoDB system tablespace](#), which holds the [InnoDB data dictionary](#) and is capable of holding data for multiple [InnoDB](#) tables, is represented by one or more [.ibdata](#) data files.

File-per-table tablespaces, which hold data for a single [InnoDB](#) table, are represented by a [.ibd](#) data file.

General tablespaces (introduced in MySQL 5.7.6), which can hold data for multiple [InnoDB](#) tables, are also represented by a [.ibd](#) data file.

See Also [data dictionary](#), [file-per-table](#), [general tablespace](#), [.ibd file](#), [ibdata file](#), [index](#), [system tablespace](#), [table](#), [tablespace](#).

data manipulation language

See [DML](#).

data warehouse

A database system or application that primarily runs large **queries**. The read-only or read-mostly data might be organized in **denormalized** form for query efficiency. Can benefit from the optimizations for **read-only transactions** in MySQL 5.6 and higher. Contrast with **OLTP**.

See Also [denormalized](#), [OLTP](#), [query](#), [read-only transaction](#).

database

Within the MySQL **data directory**, each database is represented by a separate directory. The [InnoDB system tablespace](#), which can hold table data from multiple databases within a MySQL **instance**, is kept in **data files** that reside outside of individual database directories. When **file-per-table** mode is enabled, the **.ibd files** representing individual [InnoDB](#) tables are stored inside the database directories unless created elsewhere using the [DATA DIRECTORY](#) clause. General tablespaces, introduced in MySQL 5.7.6, also hold table data in **.ibd files**. Unlike file-per-table **.ibd files**, general tablespace **.ibd files** can hold table data from multiple databases within a MySQL **instance**, and can be assigned to directories relative to or independent of the MySQL data directory.

For long-time MySQL users, a database is a familiar notion. Users coming from an Oracle Database background will find that the MySQL meaning of a database is closer to what Oracle Database calls a **schema**.

See Also [data files](#), [file-per-table](#), [.ibd file](#), [instance](#), [schema](#), [system tablespace](#).

DCL

Data control language, a set of **SQL** statements for managing privileges. In MySQL, consists of the [GRANT](#) and [REVOKE](#) statements. Contrast with **DDL** and **DML**.

See Also [DDL](#), [DML](#), [SQL](#).

DDL

Data definition language, a set of **SQL** statements for manipulating the database itself rather than individual table rows. Includes all forms of the [CREATE](#), [ALTER](#), and [DROP](#) statements. Also includes the [TRUNCATE](#) statement,

because it works differently than a `DELETE FROM table_name` statement, even though the ultimate effect is similar.

DDL statements automatically **commit** the current **transaction**; they cannot be **rolled back**.

The [InnoDB online DDL](#) feature enhances performance for `CREATE INDEX`, `DROP INDEX`, and many types of `ALTER TABLE` operations. See [Section 15.12, “InnoDB and Online DDL”](#) for more information. Also, the [InnoDB file-per-table](#) setting can affect the behavior of `DROP TABLE` and `TRUNCATE TABLE` operations.

Contrast with **DML** and **DCL**.

See Also [commit](#), [DCL](#), [DML](#), [file-per-table](#), [rollback](#), [SQL](#), [transaction](#).

deadlock

A situation where different **transactions** are unable to proceed, because each holds a **lock** that the other needs. Because both transactions are waiting for a resource to become available, neither will ever release the locks it holds.

A deadlock can occur when the transactions lock rows in multiple tables (through statements such as `UPDATE` or `SELECT ... FOR UPDATE`), but in the opposite order. A deadlock can also occur when such statements lock ranges of index records and **gaps**, with each transaction acquiring some locks but not others due to a timing issue.

For background information on how deadlocks are automatically detected and handled, see [Section 15.5.5.2, “Deadlock Detection and Rollback”](#). For tips on avoiding and recovering from deadlock conditions, see [Section 15.5.5.3, “How to Minimize and Handle Deadlocks”](#).

See Also [gap](#), [lock](#), [transaction](#).

deadlock detection

A mechanism that automatically detects when a **deadlock** occurs, and automatically **rolls back** one of the **transactions** involved (the **victim**). Deadlock detection can be disabled using the `innodb_deadlock_detect` configuration option.

See Also [deadlock](#), [rollback](#), [transaction](#), [victim](#).

delete

When [InnoDB](#) processes a `DELETE` statement, the rows are immediately marked for deletion and no longer are returned by queries. The storage is reclaimed sometime later, during the periodic garbage collection known as the **purge** operation. For removing large quantities of data, related operations with their own performance characteristics are **TRUNCATE** and **DROP**.

See Also [drop](#), [purge](#), [truncate](#).

delete buffering

The technique of storing changes to secondary index pages, resulting from `DELETE` operations, in the **change buffer** rather than writing the changes immediately, so that the physical writes can be performed to minimize random I/O. (Because delete operations are a two-step process, this operation buffers the write that normally marks an index record for deletion.) It is one of the types of **change buffering**; the others are **insert buffering** and **purge buffering**.

See Also [change buffer](#), [change buffering](#), [insert buffer](#), [insert buffering](#), [purge buffering](#).

denormalized

A data storage strategy that duplicates data across different tables, rather than linking the tables with **foreign keys** and **join** queries. Typically used in **data warehouse** applications, where the data is not updated after loading. In such applications, query performance is more important than making it simple to maintain consistent data during updates. Contrast with **normalized**.

See Also [data warehouse](#), [foreign key](#), [join](#), [normalized](#).

descending index

A type of **index** where index storage is optimized to process `ORDER BY column DESC` clauses.

See Also [index](#).

dictionary object cache

The dictionary object cache stores previously accessed **data dictionary** objects in memory to enable object reuse and minimize disk I/O. An **LRU**-based eviction strategy is used to evict least recently used objects from memory. The cache is comprised of several partitions that store different object types.

For more information, see [Section 14.4, “Dictionary Object Cache”](#).

See Also [data dictionary](#), [LRU](#).

dirty page

A **page** in the [InnoDB buffer pool](#) that has been updated in memory, where the changes are not yet written (**flushed**) to the **data files**. The opposite of a **clean page**.

See Also [buffer pool](#), [clean page](#), [data files](#), [flush](#), [page](#).

dirty read

An operation that retrieves unreliable data, data that was updated by another transaction but not yet **committed**. It is only possible with the **isolation level** known as **read uncommitted**.

This kind of operation does not adhere to the **ACID** principle of database design. It is considered very risky, because the data could be **rolled back**, or updated further before being committed; then, the transaction doing the dirty read would be using data that was never confirmed as accurate.

Its opposite is **consistent read**, where [InnoDB](#) ensures that a transaction does not read information updated by another transaction, even if the other transaction commits in the meantime.

See Also [ACID](#), [commit](#), [consistent read](#), [isolation level](#), [READ UNCOMMITTED](#), [rollback](#).

disk-based

A kind of database that primarily organizes data on disk storage (hard drives or equivalent). Data is brought back and forth between disk and memory to be operated upon. It is the opposite of an **in-memory database**. Although [InnoDB](#) is disk-based, it also contains features such as the **buffer pool**, multiple buffer pool instances, and the **adaptive hash index** that allow certain kinds of workloads to work primarily from memory.

See Also [adaptive hash index](#), [buffer pool](#), [in-memory database](#).

disk-bound

A type of **workload** where the primary **bottleneck** is disk I/O. (Also known as **I/O-bound**.) Typically involves frequent writes to disk, or random reads of more data than can fit into the **buffer pool**.

See Also [bottleneck](#), [buffer pool](#), [workload](#).

DML

Data manipulation language, a set of **SQL** statements for performing [INSERT](#), [UPDATE](#), and [DELETE](#) operations. The [SELECT](#) statement is sometimes considered as a DML statement, because the [SELECT ... FOR UPDATE](#) form is subject to the same considerations for **locking** as [INSERT](#), [UPDATE](#), and [DELETE](#).

DML statements for an [InnoDB](#) table operate in the context of a **transaction**, so their effects can be **committed** or **rolled back** as a single unit.

Contrast with **DDL** and **DCL**.

See Also [commit](#), [DCL](#), [DDL](#), [locking](#), [rollback](#), [SQL](#), [transaction](#).

document id

In the [InnoDB full-text search](#) feature, a special column in the table containing the **FULLTEXT index**, to uniquely identify the document associated with each **ilist** value. Its name is [FTS_DOC_ID](#) (uppercase required). The column itself must be of [BIGINT UNSIGNED NOT NULL](#) type, with a unique index named [FTS_DOC_ID_INDEX](#). Preferably, you define this column when creating the table. If [InnoDB](#) must add the column to the table while creating a [FULLTEXT](#) index, the indexing operation is considerably more expensive.

See Also [full-text search](#), [FULLTEXT index](#), [ilist](#).

doublewrite buffer

[InnoDB](#) uses a file flush technique called doublewrite. Before writing **pages** to the **data files**, [InnoDB](#) first writes them to a contiguous area called the doublewrite buffer. Only after the write and the flush to the doublewrite buffer have completed, does [InnoDB](#) write the pages to their proper positions in the data file. If there is an operating system, storage subsystem, or [mysqld](#) process crash in the middle of a page write, [InnoDB](#) can later find a good copy of the page from the doublewrite buffer during **crash recovery**.

Although data is always written twice, the doublewrite buffer does not require twice as much I/O overhead or twice as many I/O operations. Data is written to the buffer itself as a large sequential chunk, with a single [fsync\(\)](#) call to the operating system.

To turn off the doublewrite buffer, specify the option [innodb_doublewrite=0](#).

See Also [crash recovery](#), [data files](#), [page](#), [purge](#).

drop

A kind of **DDL** operation that removes a schema object, through a statement such as [DROP TABLE](#) or [DROP INDEX](#). It maps internally to an [ALTER TABLE](#) statement. From an [InnoDB](#) perspective, the performance considerations of such operations involve the time that the **data dictionary** is locked to ensure that interrelated objects are all updated, and the time to update memory structures such as the **buffer pool**. For a **table**, the drop operation has somewhat different characteristics than a **truncate** operation ([TRUNCATE TABLE](#) statement).

See Also [buffer pool](#), [data dictionary](#), [DDL](#), [table](#), [truncate](#).

dynamic row format

An [InnoDB](#) row format. Because long variable-length column values are stored outside of the page that holds the row data, it is very efficient for rows that include large objects. Since the large fields are typically not accessed to evaluate query conditions, they are not brought into the **buffer pool** as often, resulting in fewer I/O operations and better utilization of cache memory.

As of MySQL 5.7.9, the default row format is defined by [innodb_default_row_format](#), which has a default value of [DYNAMIC](#).

For additional information about [InnoDB DYNAMIC](#) row format, see [Section 15.10.3, “DYNAMIC and COMPRESSED Row Formats”](#).

See Also [buffer pool](#), [file format](#), [row format](#).

E

early adopter

A stage similar to **beta**, when a software product is typically evaluated for performance, functionality, and compatibility in a non-mission-critical setting.

See Also [beta](#).

error log

A type of **log** showing information about MySQL startup and critical runtime errors and **crash** information. For details, see [Section 5.4.2, “The Error Log”](#).

See Also [crash](#), [log](#).

eviction

The process of removing an item from a cache or other temporary storage area, such as the [InnoDB buffer pool](#). Often, but not always, uses the **LRU** algorithm to determine which item to remove. When a **dirty page** is evicted, its contents are **flushed** to disk, and any dirty **neighbor pages** might be flushed also.

See Also [buffer pool](#), [dirty page](#), [flush](#), [LRU](#), [neighbor page](#).

exclusive lock

A kind of **lock** that prevents any other **transaction** from locking the same row. Depending on the transaction **isolation level**, this kind of lock might block other transactions from writing to the same row, or might also block other transactions from reading the same row. The default **InnoDB** isolation level, **REPEATABLE READ**, enables higher **concurrency** by allowing transactions to read rows that have exclusive locks, a technique known as **consistent read**.

See Also [concurrency](#), [consistent read](#), [isolation level](#), [lock](#), [REPEATABLE READ](#), [shared lock](#), [transaction](#).

extent

A group of **pages** within a **tablespace**. For the default **page size** of 16KB, an extent contains 64 pages. In MySQL 5.6, the page size for an **InnoDB** instance can be 4KB, 8KB, or 16KB, controlled by the [innodb_page_size](#) configuration option. For 4KB, 8KB, and 16KB pages sizes, the extent size is always 1MB (or 1048576 bytes).

Support for 32KB and 64KB **InnoDB** page sizes was added in MySQL 5.7.6. For a 32KB page size, the extent size is 2MB. For a 64KB page size, the extent size is 4MB.

InnoDB features such as **segments**, **read-ahead** requests and the **doublewrite buffer** use I/O operations that read, write, allocate, or free data one extent at a time.

See Also [doublewrite buffer](#), [page](#), [page size](#), [read-ahead](#), [segment](#), [tablespace](#).

F

.frm file

A file containing the metadata, such as the table definition, of a MySQL table. [.frm](#) files were removed in MySQL 8.0 but are still used in earlier MySQL releases. In MySQL 8.0, data previously stored in [.frm](#) files is stored in **data dictionary** tables.

See Also [data dictionary](#), [MySQL Enterprise Backup](#), [system tablespace](#).

Fast Index Creation

A capability first introduced in the InnoDB Plugin, now part of MySQL in 5.5 and higher, that speeds up creation of **InnoDB secondary indexes** by avoiding the need to completely rewrite the associated table. The speedup applies to dropping secondary indexes also.

Because index maintenance can add performance overhead to many data transfer operations, consider doing operations such as `ALTER TABLE ... ENGINE=INNODB` or `INSERT INTO ... SELECT * FROM ...` without any secondary indexes in place, and creating the indexes afterward.

In MySQL 5.6, this feature becomes more general. You can read and write to tables while an index is being created, and many more kinds of `ALTER TABLE` operations can be performed without copying the table, without blocking **DML** operations, or both. Thus in MySQL 5.6 and higher, this set of features is referred to as **online DDL** rather than Fast Index Creation.

For related information, see [InnoDB Fast Index Creation](#), and [Section 15.12, “InnoDB and Online DDL”](#).

See Also [DML](#), [index](#), [online DDL](#), [secondary index](#).

fast shutdown

The default **shutdown** procedure for **InnoDB**, based on the configuration setting `innodb_fast_shutdown=1`. To save time, certain **flush** operations are skipped. This type of shutdown is safe during normal usage, because the flush operations are performed during the next startup, using the same mechanism as in **crash recovery**.

In cases where the database is being shut down for an upgrade or downgrade, do a **slow shutdown** instead to ensure that all relevant changes are applied to the **data files** during the shutdown.

See Also [crash recovery](#), [data files](#), [flush](#), [shutdown](#), [slow shutdown](#).

file format

The file format for **InnoDB** tables.

See Also [file-per-table](#), [.ibd file](#), [ibdata file](#), [row format](#).

file-per-table

A general name for the setting controlled by the [innodb_file_per_table](#) option, which is an important configuration option that affects aspects of InnoDB file storage, availability of features, and I/O characteristics. As of MySQL 5.6.7, [innodb_file_per_table](#) is enabled by default.

With the [innodb_file_per_table](#) option enabled, you can create a table in its own **.ibd file** rather than in the shared **ibdata files** of the **system tablespace**. When table data is stored in an individual **.ibd file**, you have more flexibility to choose **row formats** required for features such as data **compression**. The [TRUNCATE TABLE](#) operation is also faster, and reclaimed space can be used by the operating system rather than remaining reserved for InnoDB.

The **MySQL Enterprise Backup** product is more flexible for tables that are in their own files. For example, tables can be excluded from a backup, but only if they are in separate files. Thus, this setting is suitable for tables that are backed up less frequently or on a different schedule.

See Also [compressed row format](#), [compression](#), [file format](#), [.ibd file](#), [ibdata file](#), [innodb_file_per_table](#), [MySQL Enterprise Backup](#), [row format](#), [system tablespace](#).

fill factor

In an [InnoDB index](#), the proportion of a **page** that is taken up by index data before the page is split. The unused space when index data is first divided between pages allows for rows to be updated with longer string values without requiring expensive index maintenance operations. If the fill factor is too low, the index consumes more space than needed, causing extra I/O overhead when reading the index. If the fill factor is too high, any update that increases the length of column values can cause extra I/O overhead for index maintenance. See [Section 15.8.2.2, “The Physical Structure of an InnoDB Index”](#) for more information.

See Also [index](#), [page](#).

fixed row format

This row format is used by the [MyISAM](#) storage engine, not by InnoDB. If you create an InnoDB table with the option [ROW_FORMAT=FIXED](#) in MySQL 5.7.6 or earlier, InnoDB uses the **compact row format** instead, although the [FIXED](#) value might still show up in output such as [SHOW TABLE STATUS](#) reports. As of MySQL 5.7.7, InnoDB returns an error if [ROW_FORMAT=FIXED](#) is specified.

See Also [compact row format](#), [row format](#).

flush

To write changes to the database files, that had been buffered in a memory area or a temporary disk storage area. The InnoDB storage structures that are periodically flushed include the **redo log**, the **undo log**, and the **buffer pool**.

Flushing can happen because a memory area becomes full and the system needs to free some space, because a **commit** operation means the changes from a transaction can be finalized, or because a **slow shutdown** operation means that all outstanding work should be finalized. When it is not critical to flush all the buffered data at once, InnoDB can use a technique called **fuzzy checkpointing** to flush small batches of pages to spread out the I/O overhead.

See Also [buffer pool](#), [commit](#), [fuzzy checkpointing](#), [redo log](#), [slow shutdown](#), [undo log](#).

flush list

An internal InnoDB data structure that tracks **dirty pages** in the **buffer pool**: that is, **pages** that have been changed and need to be written back out to disk. This data structure is updated frequently by InnoDB internal **mini-transactions**, and so is protected by its own **mutex** to allow concurrent access to the buffer pool.

See Also [buffer pool](#), [dirty page](#), [LRU](#), [mini-transaction](#), [mutex](#), [page](#), [page cleaner](#).

foreign key

A type of pointer relationship, between rows in separate InnoDB tables. The foreign key relationship is defined on one column in both the **parent table** and the **child table**.

In addition to enabling fast lookup of related information, foreign keys help to enforce **referential integrity**, by preventing any of these pointers from becoming invalid as data is inserted, updated, and deleted. This enforcement mechanism is a type of **constraint**. A row that points to another table cannot be inserted if the associated foreign key value does not exist in the other table. If a row is deleted or its foreign key value changed, and rows in another table point to that foreign key value, the foreign key can be set up to prevent the deletion, cause the corresponding column values in the other table to become **null**, or automatically delete the corresponding rows in the other table.

One of the stages in designing a **normalized** database is to identify data that is duplicated, separate that data into a new table, and set up a foreign key relationship so that the multiple tables can be queried like a single table, using a **join** operation.

See Also [child table](#), [FOREIGN KEY constraint](#), [join](#), [normalized](#), [NULL](#), [parent table](#), [referential integrity](#), [relational](#).

FOREIGN KEY constraint

The type of **constraint** that maintains database consistency through a **foreign key** relationship. Like other kinds of constraints, it can prevent data from being inserted or updated if data would become inconsistent; in this case, the inconsistency being prevented is between data in multiple tables. Alternatively, when a **DML** operation is performed, [FOREIGN KEY](#) constraints can cause data in **child rows** to be deleted, changed to different values, or set to **null**, based on the [ON CASCADE](#) option specified when creating the foreign key.

See Also [child table](#), [constraint](#), [DML](#), [foreign key](#), [NULL](#).

FTS

In most contexts, an acronym for **full-text search**. Sometimes in performance discussions, an acronym for **full table scan**.

See Also [full table scan](#), [full-text search](#).

full backup

A **backup** that includes all the **tables** in each MySQL **database**, and all the databases in a MySQL **instance**. Contrast with **partial backup**.

See Also [backup](#), [database](#), [instance](#), [partial backup](#), [table](#).

full table scan

An operation that requires reading the entire contents of a table, rather than just selected portions using an **index**. Typically performed either with small lookup tables, or in data warehousing situations with large tables where all available data is aggregated and analyzed. How frequently these operations occur, and the sizes of the tables relative to available memory, have implications for the algorithms used in query optimization and managing the **buffer pool**.

The purpose of indexes is to allow lookups for specific values or ranges of values within a large table, thus avoiding full table scans when practical.

See Also [buffer pool](#), [index](#).

full-text search

The MySQL feature for finding words, phrases, Boolean combinations of words, and so on within table data, in a faster, more convenient, and more flexible way than using the SQL [LIKE](#) operator or writing your own application-level search algorithm. It uses the SQL function [MATCH\(\)](#) and **FULLTEXT indexes**.

See Also [FULLTEXT index](#).

FULLTEXT index

The special kind of **index** that holds the **search index** in the MySQL **full-text search** mechanism. Represents the words from values of a column, omitting any that are specified as **stopwords**. Originally, only available for [MyISAM](#) tables. Starting in MySQL 5.6.4, it is also available for **InnoDB** tables.

See Also [full-text search](#), [index](#), [InnoDB](#), [search index](#), [stopword](#).

fuzzy checkpointing

A technique that **flushes** small batches of **dirty pages** from the **buffer pool**, rather than flushing all dirty pages at once which would disrupt database processing.

See Also [buffer pool](#), [dirty page](#), [flush](#).

G

GA

“Generally available”, the stage when a software product leaves **beta** and is available for sale, official support, and production use.

See Also [beta](#).

gap

A place in an [InnoDB index](#) data structure where new values could be inserted. When you lock a set of rows with a statement such as `SELECT ... FOR UPDATE`, [InnoDB](#) can create locks that apply to the gaps as well as the actual values in the index. For example, if you select all values greater than 10 for update, a gap lock prevents another transaction from inserting a new value that is greater than 10. The **supremum record** and **infimum record** represent the gaps containing all values greater than or less than all the current index values.

See Also [concurrency](#), [gap lock](#), [index](#), [infimum record](#), [isolation level](#), [supremum record](#).

gap lock

A **lock** on a **gap** between index records, or a lock on the gap before the first or after the last index record. For example, `SELECT c1 FROM t WHERE c1 BETWEEN 10 and 20 FOR UPDATE;` prevents other transactions from inserting a value of 15 into the column `t.c1`, whether or not there was already any such value in the column, because the gaps between all existing values in the range are locked. Contrast with **record lock** and **next-key lock**.

Gap locks are part of the tradeoff between performance and **concurrency**, and are used in some transaction **isolation levels** and not others.

See Also [gap](#), [infimum record](#), [lock](#), [next-key lock](#), [record lock](#), [supremum record](#).

general log

See [general query log](#).

general query log

A type of **log** used for diagnosis and troubleshooting of SQL statements processed by the MySQL server. Can be stored in a file or in a database table. You must enable this feature through the [general_log](#) configuration option to use it. You can disable it for a specific connection through the [sql_log_off](#) configuration option.

Records a broader range of queries than the **slow query log**. Unlike the **binary log**, which is used for replication, the general query log contains `SELECT` statements and does not maintain strict ordering. For more information, see [Section 5.4.3, “The General Query Log”](#).

See Also [binary log](#), [log](#), [slow query log](#).

general tablespace

A shared [InnoDB tablespace](#) created using `CREATE TABLESPACE` syntax. General tablespaces can be created outside of the MySQL data directory, are capable of holding multiple **tables**, and support tables of all row formats. General tablespaces were introduced in MySQL 5.7.6.

Tables are added to a general tablespace using `CREATE TABLE tbl_name ... TABLESPACE [=] tablespace_name` or `ALTER TABLE tbl_name TABLESPACE [=] tablespace_name` syntax.

Contrast with **system tablespace** and **file-per-table** tablespace.

For more information, see [Section 15.7.10, “InnoDB General Tablespaces”](#).

See Also [file-per-table](#), [system tablespace](#), [table](#), [tablespace](#).

generated column

A column whose values are computed from an expression included in the column definition. A generated column can be **virtual** or **stored**.

See Also [base column](#), [stored generated column](#), [virtual generated column](#).

generated stored column

See [stored generated column](#).

generated virtual column

See [virtual generated column](#).

global transaction

A type of **transaction** involved in **XA** operations. It consists of several actions that are transactional in themselves, but that all must either complete successfully as a group, or all be rolled back as a group. In essence, this extends **ACID** properties “up a level” so that multiple ACID transactions can be executed in concert as components of a global operation that also has ACID properties.

See Also [ACID](#), [transaction](#), [XA](#).

group commit

An [InnoDB](#) optimization that performs some low-level I/O operations (log write) once for a set of **commit** operations, rather than flushing and syncing separately for each commit.

See Also [binary log](#), [commit](#).

H

hash index

A type of **index** intended for queries that use equality operators, rather than range operators such as greater-than or [BETWEEN](#). It is available for [MEMORY](#) tables. Although hash indexes are the default for [MEMORY](#) tables for historic reasons, that storage engine also supports **B-tree** indexes, which are often a better choice for general-purpose queries.

MySQL includes a variant of this index type, the **adaptive hash index**, that is constructed automatically for [InnoDB](#) tables if needed based on runtime conditions.

See Also [adaptive hash index](#), [B-tree](#), [index](#), [InnoDB](#).

HDD

Acronym for “hard disk drive”. Refers to storage media using spinning platters, usually when comparing and contrasting with **SSD**. Its performance characteristics can influence the throughput of a **disk-based** workload.

See Also [disk-based](#), [SSD](#).

heartbeat

A periodic message that is sent to indicate that a system is functioning properly. In a **replication** context, if the **master** stops sending such messages, one of the **slaves** can take its place. Similar techniques can be used between the servers in a cluster environment, to confirm that all of them are operating properly.

See Also [master server](#), [replication](#).

high-water mark

A value representing an upper limit, either a hard limit that should not be exceeded at runtime, or a record of the maximum value that was actually reached. Contrast with **low-water mark**.

See Also [low-water mark](#).

history list

A list of **transactions** with delete-marked records scheduled to be processed by the [InnoDB](#) **purge** operation. Recorded in the **undo log**. The length of the history list is reported by the command [SHOW ENGINE INNODB STATUS](#). If the history list grows longer than the value of the [innodb_max_purge_lag](#) configuration option, each **DML** operation is delayed slightly to allow the purge operation to finish **flushing** the deleted records.

Also known as **purge lag**.

See Also [DML](#), [flush](#), [purge](#), [purge lag](#), [rollback segment](#), [transaction](#), [undo log](#).

hole punching

Releasing empty blocks from a page. The [InnoDB transparent page compression](#) feature relies on hole punching support. For more information, see [Section 15.9.2, “InnoDB Page Compression”](#).

See Also [sparse file](#), [transparent page compression](#).

hot

A condition where a row, table, or internal data structure is accessed so frequently, requiring some form of locking or mutual exclusion, that it results in a performance or scalability issue.

Although “hot” typically indicates an undesirable condition, a **hot backup** is the preferred type of backup.

See Also [hot backup](#).

hot backup

A backup taken while the database is running and applications are reading and writing to it. The backup involves more than simply copying data files: it must include any data that was inserted or updated while the backup was in process; it must exclude any data that was deleted while the backup was in process; and it must ignore any changes that were not committed.

The Oracle product that performs hot backups, of [InnoDB](#) tables especially but also tables from [MyISAM](#) and other storage engines, is known as **MySQL Enterprise Backup**.

The hot backup process consists of two stages. The initial copying of the data files produces a **raw backup**. The **apply** step incorporates any changes to the database that happened while the backup was running. Applying the changes produces a **prepared** backup; these files are ready to be restored whenever necessary.

See Also [apply](#), [MySQL Enterprise Backup](#), [prepared backup](#), [raw backup](#).

I

.ibd file

The data file for **file-per-table** tablespaces and general tablespaces. File-per-table tablespace [.ibd](#) files contain a single table and associated index data. **General tablespace** [.ibd](#) files may contain table and index data for multiple tables.

The [.ibd](#) file extension does not apply to the **system tablespace**, which consists of one or more **ibdata files**.

If a file-per-table tablespace or general tablespace is created with the [DATA DIRECTORY =](#) clause, the [.ibd](#) file is located at the specified path, outside the normal data directory.

When a [.ibd](#) file is included in a compressed backup by the **MySQL Enterprise Backup** product, the compressed equivalent is a [.ibz](#) file.

See Also [database](#), [file-per-table](#), [general tablespace](#), [ibdata file](#), [.ibz file](#), [innodb_file_per_table](#), [MySQL Enterprise Backup](#), [system tablespace](#).

.ibz file

When the **MySQL Enterprise Backup** product performs a **compressed backup**, it transforms each **tablespace** file that is created using the **file-per-table** setting from a [.ibd](#) extension to a [.ibz](#) extension.

The compression applied during backup is distinct from the **compressed row format** that keeps table data compressed during normal operation. A compressed backup operation skips the compression step for a tablespace that is already in compressed row format, as compressing a second time would slow down the backup but produce little or no space savings.

See Also [compressed backup](#), [compressed row format](#), [file-per-table](#), [.ibd file](#), [MySQL Enterprise Backup](#), [tablespace](#).

I/O-bound

See [disk-bound](#).

ib-file set

The set of files managed by [InnoDB](#) within a MySQL database: the **system tablespace**, **file-per-table** tablespace files, and **redo log** files. Depending on MySQL version and [InnoDB](#) configuration, may also include **general tablespace**, **temporary tablespace**, and **undo tablespace** files. This term is sometimes used in detailed discussions of [InnoDB](#) file structures and formats to refer to the set of files managed by [InnoDB](#) within a MySQL database.

See Also [database](#), [file-per-table](#), [general tablespace](#), [redo log](#), [system tablespace](#), [temporary tablespace](#), [undo tablespace](#).

ibbackup_logfile

A supplemental backup file created by the **MySQL Enterprise Backup** product during a **hot backup** operation. It contains information about any data changes that occurred while the backup was running. The initial backup files, including [ibbackup_logfile](#), are known as a **raw backup**, because the changes that occurred during the backup operation are not yet incorporated. After you perform the **apply** step to the raw backup files, the resulting files do include those final data changes, and are known as a **prepared backup**. At this stage, the [ibbackup_logfile](#) file is no longer necessary.

See Also [apply](#), [hot backup](#), [MySQL Enterprise Backup](#), [prepared backup](#), [raw backup](#).

ibdata file

A set of files with names such as [ibdata1](#), [ibdata2](#), and so on, that make up the [InnoDB system tablespace](#). These files contain metadata about [InnoDB](#) tables, (the [InnoDB data dictionary](#)), and the storage areas for one or more **undo logs**, the **change buffer**, and the **doublewrite buffer**. They also can contain some or all of the table data also (depending on whether the **file-per-table** mode is in effect when each table is created). When the [innodb_file_per_table](#) option is enabled, data and indexes for newly created tables are stored in separate **.ibd files** rather than in the system tablespace.

The growth of the [ibdata](#) files is influenced by the [innodb_autoextend_increment](#) configuration option.

See Also [change buffer](#), [data dictionary](#), [doublewrite buffer](#), [file-per-table](#), [.ibd file](#), [innodb_file_per_table](#), [system tablespace](#), [undo log](#).

ibtmp file

The [InnoDB temporary tablespace data file](#) for non-compressed [InnoDB temporary tables](#) and related objects. The configuration file option, [innodb_temp_data_file_path](#), allows users to define a relative path for the temporary tablespace data file. If [innodb_temp_data_file_path](#) is not specified, the default behavior is to create a single auto-extending 12MB data file named [ibtmp1](#) in the data directory, alongside [ibdata1](#).

See Also [data files](#), [temporary table](#), [temporary tablespace](#).

ib_logfile

A set of files, typically named [ib_logfile0](#) and [ib_logfile1](#), that form the **redo log**. Also sometimes referred to as the **log group**. These files record statements that attempt to change data in [InnoDB](#) tables. These statements are replayed automatically to correct data written by incomplete transactions, on startup following a crash.

This data cannot be used for manual recovery; for that type of operation, use the **binary log**.

See Also [binary log](#), [log group](#), [redo log](#).

ilist

Within an [InnoDB FULLTEXT index](#), the data structure consisting of a document ID and positional information for a token (that is, a particular word).

See Also [FULLTEXT index](#).

implicit row lock

A row lock that [InnoDB](#) acquires to ensure consistency, without you specifically requesting it.

See Also [row lock](#).

in-memory database

A type of database system that maintains data in memory, to avoid overhead due to disk I/O and translation between disk blocks and memory areas. Some in-memory databases sacrifice durability (the “D” in the **ACID** design philosophy) and are vulnerable to hardware, power, and other types of failures, making them more suitable for read-only operations. Other in-memory databases do use durability mechanisms such as logging changes to disk or using non-volatile memory.

MySQL features that address the same kinds of memory-intensive processing include the [InnoDB buffer pool](#), **adaptive hash index**, and **read-only transaction** optimization, the [MEMORY](#) storage engine, the [MyISAM](#) key cache, and the MySQL query cache.

See Also [ACID](#), [adaptive hash index](#), [buffer pool](#), [disk-based](#), [read-only transaction](#).

incremental backup

A type of **hot backup**, performed by the **MySQL Enterprise Backup** product, that only saves data changed since some point in time. Having a full backup and a succession of incremental backups lets you reconstruct backup data over a long period, without the storage overhead of keeping several full backups on hand. You can restore the full backup and then apply each of the incremental backups in succession, or you can keep the full backup up-to-date by applying each incremental backup to it, then perform a single restore operation.

The granularity of changed data is at the **page** level. A page might actually cover more than one row. Each changed page is included in the backup.

See Also [hot backup](#), [MySQL Enterprise Backup](#), [page](#).

index

A data structure that provides a fast lookup capability for **rows** of a **table**, typically by forming a tree structure (**B-tree**) representing all the values of a particular **column** or set of columns.

[InnoDB](#) tables always have a **clustered index** representing the **primary key**. They can also have one or more **secondary indexes** defined on one or more columns. Depending on their structure, secondary indexes can be classified as **partial**, **column**, or **composite** indexes.

Indexes are a crucial aspect of **query** performance. Database architects design tables, queries, and indexes to allow fast lookups for data needed by applications. The ideal database design uses a **covering index** where practical; the query results are computed entirely from the index, without reading the actual table data. Each **foreign key** constraint also requires an index, to efficiently check whether values exist in both the **parent** and **child** tables.

Although a B-tree index is the most common, a different kind of data structure is used for **hash indexes**, as in the [MEMORY](#) storage engine and the [InnoDB adaptive hash index](#). **R-tree** indexes are used for spatial indexing of multi-dimensional information.

See Also [adaptive hash index](#), [B-tree](#), [child table](#), [clustered index](#), [column index](#), [composite index](#), [covering index](#), [foreign key](#), [hash index](#), [parent table](#), [partial index](#), [primary key](#), [query](#), [R-tree](#), [row](#), [secondary index](#), [table](#).

index cache

A memory area that holds the token data for [InnoDB full-text search](#). It buffers the data to minimize disk I/O when data is inserted or updated in columns that are part of a **FULLTEXT index**. The token data is written to disk when the index cache becomes full. Each [InnoDB FULLTEXT](#) index has its own separate index cache, whose size is controlled by the configuration option `innodb_ft_cache_size`.

See Also [full-text search](#), [FULLTEXT index](#).

index condition pushdown

Index condition pushdown (ICP) is an optimization that pushes part of a [WHERE](#) condition down to the storage engine if parts of the condition can be evaluated using fields from the **index**. ICP can reduce the number of times the **storage engine** must access the base table and the number of times the MySQL server must access the storage engine. For more information, see [Section 8.2.1.5, “Index Condition Pushdown Optimization”](#).

See Also [index](#), [storage engine](#).

index hint

Extended SQL syntax for overriding the **indexes** recommended by the optimizer. For example, the [FORCE INDEX](#), [USE INDEX](#), and [IGNORE INDEX](#) clauses. Typically used when indexed columns have unevenly distributed values, resulting in inaccurate **cardinality** estimates.

See Also [cardinality](#), [index](#).

index prefix

In an **index** that applies to multiple columns (known as a **composite index**), the initial or leading columns of the index. A query that references the first 1, 2, 3, and so on columns of a composite index can use the index, even if the query does not reference all the columns in the index.

See Also [composite index](#), [index](#).

index statistics

See [statistics](#).

infimum record

A **pseudo-record** in an **index**, representing the **gap** below the smallest value in that index. If a transaction has a statement such as `SELECT ... FROM ... WHERE col < 10 FOR UPDATE;`, and the smallest value in the column is 5, it is a lock on the infimum record that prevents other transactions from inserting even smaller values such as 0, -10, and so on.

See Also [gap](#), [index](#), [pseudo-record](#), [supremum record](#).

INFORMATION_SCHEMA

The name of the **database** that provides a query interface to the MySQL **data dictionary**. (This name is defined by the ANSI SQL standard.) To examine information (metadata) about the database, you can query tables such as [INFORMATION_SCHEMA.TABLES](#) and [INFORMATION_SCHEMA.COLUMNS](#), rather than using [SHOW](#) commands that produce unstructured output.

The [INFORMATION_SCHEMA](#) database also contains tables specific to **InnoDB** that provide a query interface to the **InnoDB** data dictionary. You use these tables not to see how the database is structured, but to get real-time information about the workings of **InnoDB** tables to help with performance monitoring, tuning, and troubleshooting.

See Also [data dictionary](#), [database](#), [InnoDB](#).

InnoDB

A MySQL component that combines high performance with **transactional** capability for reliability, robustness, and concurrent access. It embodies the **ACID** design philosophy. Represented as a **storage engine**; it handles tables created or altered with the [ENGINE=INNODB](#) clause. See [Chapter 15, The InnoDB Storage Engine](#) for architectural details and administration procedures, and [Section 8.5, “Optimizing for InnoDB Tables”](#) for performance advice.

In MySQL 5.5 and higher, **InnoDB** is the default storage engine for new tables and the [ENGINE=INNODB](#) clause is not required.

InnoDB tables are ideally suited for **hot backups**. See [Section 29.2, “MySQL Enterprise Backup Overview”](#) for information about the **MySQL Enterprise Backup** product for backing up MySQL servers without interrupting normal processing.

See Also [ACID](#), [hot backup](#), [MySQL Enterprise Backup](#), [storage engine](#), [transaction](#).

innodb_autoinc_lock_mode

The [innodb_autoinc_lock_mode](#) option controls the algorithm used for **auto-increment locking**. When you have an auto-incrementing **primary key**, you can use statement-based replication only with the setting [innodb_autoinc_lock_mode=1](#). This setting is known as *consecutive* lock mode, because multi-row inserts within a transaction receive consecutive auto-increment values. If you have [innodb_autoinc_lock_mode=2](#),

which allows higher concurrency for insert operations, use row-based replication rather than statement-based replication. This setting is known as *interleaved* lock mode, because multiple multi-row insert statements running at the same time can receive **auto-increment** values that are interleaved. The setting `innodb_autoinc_lock_mode=0` should not be used except for compatibility purposes.

Consecutive lock mode (`innodb_autoinc_lock_mode=1`) is the default setting prior to MySQL 8.0.3. As of MySQL 8.0.3, interleaved lock mode (`innodb_autoinc_lock_mode=2`) is the default, which reflects the change from statement-based to row-based replication as the default replication type.

See Also [auto-increment](#), [auto-increment locking](#), [mixed-mode insert](#), [primary key](#).

`innodb_file_per_table`

An important configuration option that affects many aspects of **InnoDB** file storage, availability of features, and I/O characteristics. In MySQL 5.6.7 and higher, it is enabled by default. The `innodb_file_per_table` option turns on **file-per-table** mode. With this mode enabled, a newly created **InnoDB** table and associated indexes can be stored in a file-per-table **.ibd file**, outside the **system tablespace**.

This option affects the performance and storage considerations for a number of SQL statements, such as `DROP TABLE` and `TRUNCATE TABLE`.

Enabling the `innodb_file_per_table` option allows you to take advantage of features such as table **compression** and named-table backups in **MySQL Enterprise Backup**.

For more information, see `innodb_file_per_table`, and [Section 15.7.4, “InnoDB File-Per-Table Tablespaces”](#).

See Also [compression](#), [file-per-table](#), [.ibd file](#), [MySQL Enterprise Backup](#), [system tablespace](#).

`innodb_lock_wait_timeout`

The `innodb_lock_wait_timeout` option sets the balance between **waiting** for shared resources to become available, or giving up and handling the error, retrying, or doing alternative processing in your application. Rolls back any **InnoDB** transaction that waits more than a specified time to acquire a **lock**. Especially useful if **deadlocks** are caused by updates to multiple tables controlled by different storage engines; such deadlocks are not **detected** automatically.

See Also [deadlock](#), [deadlock detection](#), [lock](#), [wait](#).

`innodb_strict_mode`

The `innodb_strict_mode` option controls whether **InnoDB** operates in **strict mode**, where conditions that are normally treated as warnings, cause errors instead (and the underlying statements fail).

See Also [strict mode](#).

`insert`

One of the primary **DML** operations in **SQL**. The performance of inserts is a key factor in **data warehouse** systems that load millions of rows into tables, and **OLTP** systems where many concurrent connections might insert rows into the same table, in arbitrary order. If insert performance is important to you, you should learn about **InnoDB** features such as the **insert buffer** used in **change buffering**, and **auto-increment** columns.

See Also [auto-increment](#), [change buffering](#), [data warehouse](#), [DML](#), [InnoDB](#), [insert buffer](#), [OLTP](#), [SQL](#).

`insert buffer`

The former name of the **change buffer**. In MySQL 5.5, support was added for buffering changes to secondary index pages for `DELETE` and `UPDATE` operations. Previously, only changes resulting from `INSERT` operations were buffered. The preferred term is now *change buffer*.

See Also [change buffer](#), [change buffering](#).

`insert buffering`

The technique of storing changes to secondary index pages, resulting from `INSERT` operations, in the **change buffer** rather than writing the changes immediately, so that the physical writes can be performed to minimize random I/O. It is one of the types of **change buffering**; the others are **delete buffering** and **purge buffering**.

Insert buffering is not used if the secondary index is **unique**, because the uniqueness of new values cannot be verified before the new entries are written out. Other kinds of change buffering do work for unique indexes. See Also [change buffer](#), [change buffering](#), [delete buffering](#), [insert buffer](#), [purge buffering](#), [unique index](#).

insert intention lock

A type of **gap lock** that is set by [INSERT](#) operations prior to row insertion. This type of **lock** signals the intent to insert in such a way that multiple transactions inserting into the same index gap need not wait for each other if they are not inserting at the same position within the gap. For more information, see [Section 15.5.1, “InnoDB Locking”](#).

See Also [gap lock](#), [lock](#), [next-key lock](#).

instance

A single **mysqld** daemon managing a **data directory** representing one or more **databases** with a set of **tables**. It is common in development, testing, and some **replication** scenarios to have multiple instances on the same **server** machine, each managing its own data directory and listening on its own port or socket. With one instance running a **disk-bound** workload, the server might still have extra CPU and memory capacity to run additional instances.

See Also [data directory](#), [database](#), [disk-bound](#), [mysqld](#), [replication](#), [server](#), [table](#).

instrumentation

Modifications at the source code level to collect performance data for tuning and debugging. In MySQL, data collected by instrumentation is exposed through an SQL interface using the [INFORMATION_SCHEMA](#) and [PERFORMANCE_SCHEMA](#) databases.

See Also [INFORMATION_SCHEMA](#), [Performance Schema](#).

intention exclusive lock

See [intention lock](#).

intention lock

A kind of **lock** that applies to the table, used to indicate the kind of lock the **transaction** intends to acquire on rows in the table. Different transactions can acquire different kinds of intention locks on the same table, but the first transaction to acquire an *intention exclusive* (IX) lock on a table prevents other transactions from acquiring any S or X locks on the table. Conversely, the first transaction to acquire an *intention shared* (IS) lock on a table prevents other transactions from acquiring any X locks on the table. The two-phase process allows the lock requests to be resolved in order, without blocking locks and corresponding operations that are compatible. For more information about this locking mechanism, see [Section 15.5.1, “InnoDB Locking”](#).

See Also [lock](#), [lock mode](#), [locking](#), [transaction](#).

intention shared lock

See [intention lock](#).

intrinsic temporary table

An optimized internal [InnoDB](#) temporary table used by the *optimizer*.

See Also [optimizer](#).

inverted index

A data structure optimized for document retrieval systems, used in the implementation of [InnoDB full-text search](#). The [InnoDB FULLTEXT index](#), implemented as an inverted index, records the position of each word within a document, rather than the location of a table row. A single column value (a document stored as a text string) is represented by many entries in the inverted index.

See Also [full-text search](#), [FULLTEXT index](#), [ilist](#).

IOPS

Acronym for **I/O operations per second**. A common measurement for busy systems, particularly **OLTP** applications. If this value is near the maximum that the storage devices can handle, the application can become **disk-bound**, limiting **scalability**.

See Also [disk-bound](#), [OLTP](#), [scalability](#).

isolation level

One of the foundations of database processing. Isolation is the **I** in the acronym **ACID**; the isolation level is the setting that fine-tunes the balance between performance and reliability, consistency, and reproducibility of results when multiple **transactions** are making changes and performing queries at the same time.

From highest amount of consistency and protection to the least, the isolation levels supported by InnoDB are: **SERIALIZABLE**, **REPEATABLE READ**, **READ COMMITTED**, and **READ UNCOMMITTED**.

With [InnoDB](#) tables, many users can keep the default isolation level (*REPEATABLE READ*) for all operations. Expert users might choose the **READ COMMITTED** level as they push the boundaries of scalability with **OLTP** processing, or during data warehousing operations where minor inconsistencies do not affect the aggregate results of large amounts of data. The levels on the edges (**SERIALIZABLE** and **READ UNCOMMITTED**) change the processing behavior to such an extent that they are rarely used.

See Also [ACID](#), [OLTP](#), [READ COMMITTED](#), [READ UNCOMMITTED](#), [REPEATABLE READ](#), [SERIALIZABLE](#), [transaction](#).

J

join

A **query** that retrieves data from more than one table, by referencing columns in the tables that hold identical values. Ideally, these columns are part of an [InnoDB foreign key](#) relationship, which ensures **referential integrity** and that the join columns are **indexed**. Often used to save space and improve query performance by replacing repeated strings with numeric IDs, in a **normalized** data design.

See Also [foreign key](#), [index](#), [normalized](#), [query](#), [referential integrity](#).

K

KEY_BLOCK_SIZE

An option to specify the size of data pages within an [InnoDB](#) table that uses **compressed row format**. The default is 8 kilobytes. Lower values risk hitting internal limits that depend on the combination of row size and compression percentage.

For [MyISAM](#) tables, [KEY_BLOCK_SIZE](#) optionally specifies the size in bytes to use for index key blocks. The value is treated as a hint; a different size could be used if necessary. A [KEY_BLOCK_SIZE](#) value specified for an individual index definition overrides a table-level [KEY_BLOCK_SIZE](#) value.

See Also [compressed row format](#).

L

latch

A lightweight structure used by [InnoDB](#) to implement a **lock** for its own internal memory structures, typically held for a brief time measured in milliseconds or microseconds. A general term that includes both **mutexes** (for exclusive access) and **rw-locks** (for shared access). Certain latches are the focus of [InnoDB](#) performance tuning. Statistics about latch use and contention are available through the **Performance Schema** interface.

See Also [lock](#), [locking](#), [mutex](#), [Performance Schema](#), [rw-lock](#).

list

The [InnoDB buffer pool](#) is represented as a list of memory **pages**. The list is reordered as new pages are accessed and enter the buffer pool, as pages within the buffer pool are accessed again and are considered newer, and as pages that are not accessed for a long time are **evicted** from the buffer pool. The buffer pool is divided into **sublists**, and the replacement policy is a variation of the familiar **LRU** technique.

See Also [buffer pool](#), [eviction](#), [LRU](#), [page](#), [sublist](#).

lock

The high-level notion of an object that controls access to a resource, such as a table, row, or internal data structure, as part of a **locking** strategy. For intensive performance tuning, you might delve into the actual structures that implement locks, such as **mutexes** and **latches**.

See Also [latch](#), [lock mode](#), [locking](#), [mutex](#).

lock escalation

An operation used in some database systems that converts many **row locks** into a single **table lock**, saving memory space but reducing concurrent access to the table. **InnoDB** uses a space-efficient representation for row locks, so that **lock** escalation is not needed.

See Also [locking](#), [row lock](#), [table lock](#).

lock mode

A shared (S) **lock** allows a **transaction** to read a row. Multiple transactions can acquire an S lock on that same row at the same time.

An exclusive (X) lock allows a transaction to update or delete a row. No other transaction can acquire any kind of lock on that same row at the same time.

Intention locks apply to the table, and are used to indicate what kind of lock the transaction intends to acquire on rows in the table. Different transactions can acquire different kinds of intention locks on the same table, but the first transaction to acquire an intention exclusive (IX) lock on a table prevents other transactions from acquiring any S or X locks on the table. Conversely, the first transaction to acquire an intention shared (IS) lock on a table prevents other transactions from acquiring any X locks on the table. The two-phase process allows the lock requests to be resolved in order, without blocking locks and corresponding operations that are compatible.

See Also [intention lock](#), [lock](#), [locking](#), [transaction](#).

locking

The system of protecting a **transaction** from seeing or changing data that is being queried or changed by other transactions. The **locking** strategy must balance reliability and consistency of database operations (the principles of the **ACID** philosophy) against the performance needed for good **concurrency**. Fine-tuning the locking strategy often involves choosing an **isolation level** and ensuring all your database operations are safe and reliable for that isolation level.

See Also [ACID](#), [concurrency](#), [isolation level](#), [locking](#), [transaction](#).

locking read

A **SELECT** statement that also performs a **locking** operation on an **InnoDB** table. Either **SELECT ... FOR UPDATE** or **SELECT ... LOCK IN SHARE MODE**. It has the potential to produce a **deadlock**, depending on the **isolation level** of the transaction. The opposite of a **non-locking read**. Not allowed for global tables in a **read-only transaction**.

SELECT ... FOR SHARE replaces **SELECT ... LOCK IN SHARE MODE** in MySQL 8.0.1, but **LOCK IN SHARE MODE** remains available for backward compatibility.

See [Section 15.5.2.4, “Locking Reads”](#).

See Also [deadlock](#), [isolation level](#), [locking](#), [non-locking read](#), [read-only transaction](#).

log

In the **InnoDB** context, “log” or “log files” typically refers to the **redo log** represented by the **ib_logfileN** files. Another type of **InnoDB** log is the **undo log**, which is a storage area that holds copies of data modified by active transactions.

Other kinds of logs that are important in MySQL are the **error log** (for diagnosing startup and runtime problems), **binary log** (for working with replication and performing point-in-time restores), the **general query log** (for diagnosing application problems), and the **slow query log** (for diagnosing performance problems).

See Also [binary log](#), [error log](#), [general query log](#), [ib_logfile](#), [redo log](#), [slow query log](#), [undo log](#).

log buffer

The memory area that holds data to be written to the **log files** that make up the **redo log**. It is controlled by the [innodb_log_buffer_size](#) configuration option.

See Also [log file](#), [redo log](#).

log file

One of the [ib_logfileN](#) files that make up the **redo log**. Data is written to these files from the **log buffer** memory area.

See Also [ib_logfile](#), [log buffer](#), [redo log](#).

log group

The set of files that make up the **redo log**, typically named [ib_logfile0](#) and [ib_logfile1](#). (For that reason, sometimes referred to collectively as **ib_logfile**.)

See Also [ib_logfile](#), [redo log](#).

logical

A type of operation that involves high-level, abstract aspects such as tables, queries, indexes, and other SQL concepts. Typically, logical aspects are important to make database administration and application development convenient and usable. Contrast with **physical**.

See Also [logical backup](#), [physical](#).

logical backup

A **backup** that reproduces table structure and data, without copying the actual data files. For example, the [mysqldump](#) command produces a logical backup, because its output contains statements such as [CREATE TABLE](#) and [INSERT](#) that can re-create the data. Contrast with **physical backup**. A logical backup offers flexibility (for example, you could edit table definitions or insert statements before restoring), but can take substantially longer to **restore** than a physical backup.

See Also [backup](#), [mysqldump](#), [physical backup](#), [restore](#).

loose_

A prefix added to [InnoDB](#) configuration options after server **startup**, so any new configuration options not recognized by the current level of MySQL do not cause a startup failure. MySQL processes configuration options that start with this prefix, but gives a warning rather than a failure if the part after the prefix is not a recognized option.

See Also [startup](#).

low-water mark

A value representing a lower limit, typically a threshold value at which some corrective action begins or becomes more aggressive. Contrast with **high-water mark**.

See Also [high-water mark](#).

LRU

An acronym for “least recently used”, a common method for managing storage areas. The items that have not been used recently are **evicted** when space is needed to cache newer items. [InnoDB](#) uses the LRU mechanism by default to manage the **pages** within the **buffer pool**, but makes exceptions in cases where a page might be read only a single time, such as during a **full table scan**. This variation of the LRU algorithm is called the **midpoint insertion strategy**. For more information, see [Section 15.6.3.1, “The InnoDB Buffer Pool”](#).

See Also [buffer pool](#), [eviction](#), [full table scan](#), [midpoint insertion strategy](#), [page](#).

LSN

Acronym for “log sequence number”. This arbitrary, ever-increasing value represents a point in time corresponding to operations recorded in the **redo log**. (This point in time is regardless of **transaction** boundaries; it can fall in the middle of one or more transactions.) It is used internally by [InnoDB](#) during **crash recovery** and for managing the **buffer pool**.

Prior to MySQL 5.6.3, the LSN was a 4-byte unsigned integer. The LSN became an 8-byte unsigned integer in MySQL 5.6.3 when the redo log file size limit increased from 4GB to 512GB, as additional bytes were required to store extra size information. Applications built on MySQL 5.6.3 or later that use LSN values should use 64-bit rather than 32-bit variables to store and compare LSN values.

In the **MySQL Enterprise Backup** product, you can specify an LSN to represent the point in time from which to take an **incremental backup**. The relevant LSN is displayed by the output of the `mysqlbackup` command. Once you have the LSN corresponding to the time of a full backup, you can specify that value to take a subsequent incremental backup, whose output contains another LSN for the next incremental backup.

See Also [buffer pool](#), [crash recovery](#), [incremental backup](#), [MySQL Enterprise Backup](#), [redo log](#), [transaction](#).

M

.MRG file

A file containing references to other tables, used by the `MERGE` storage engine. Files with this extension are always included in backups produced by the `mysqlbackup` command of the **MySQL Enterprise Backup** product.

See Also [MySQL Enterprise Backup](#), [mysqlbackup command](#).

.MYD file

A file that MySQL uses to store data for a `MyISAM` table.

See Also [.MYI file](#), [MySQL Enterprise Backup](#), [mysqlbackup command](#).

.MYI file

A file that MySQL uses to store indexes for a `MyISAM` table.

See Also [.MYD file](#), [MySQL Enterprise Backup](#), [mysqlbackup command](#).

master server

Frequently shortened to “master”. A database server machine in a **replication** scenario that processes the initial insert, update, and delete requests for data. These changes are propagated to, and repeated on, other servers known as **slave servers**.

See Also [replication](#), [slave server](#).

master thread

An `InnoDB` **thread** that performs various tasks in the background. Most of these tasks are I/O related, such as writing changes from the **change buffer** to the appropriate secondary indexes.

To improve **concurrency**, sometimes actions are moved from the master thread to separate background threads. For example, in MySQL 5.6 and higher, **dirty pages** are **flushed** from the **buffer pool** by the **page cleaner** thread rather than the master thread.

See Also [buffer pool](#), [change buffer](#), [concurrency](#), [dirty page](#), [flush](#), [page cleaner](#), [thread](#).

MDL

Acronym for “metadata lock”.

See Also [metadata lock](#).

memcached

A popular component of many MySQL and **NoSQL** software stacks, allowing fast reads and writes for single values and caching the results entirely in memory. Traditionally, applications required extra logic to write the same data to a MySQL database for permanent storage, or to read data from a MySQL database when it was not cached yet in memory. Now, applications can use the simple `memcached` protocol, supported by client libraries for many languages, to communicate directly with MySQL servers using `InnoDB` or `NDB` tables. These NoSQL interfaces to MySQL tables allow applications to achieve higher read and write performance than by issuing SQL statements directly, and can simplify application logic and deployment configurations for systems that already incorporate `memcached` for in-memory caching.

The [memcached](#) interface to [InnoDB](#) tables is available in MySQL 5.6 and higher; see [Section 15.19, “InnoDB memcached Plugin”](#) for details. The [memcached](#) interface to [NDB](#) tables is available in NDB Cluster 7.2 and later; see <http://dev.mysql.com/doc/ndbapi/en/ndbmemcache.html> for details. See Also [InnoDB](#), [NoSQL](#).

merge

To apply changes to data cached in memory, such as when a page is brought into the **buffer pool**, and any applicable changes recorded in the **change buffer** are incorporated into the page in the buffer pool. The updated data is eventually written to the **tablespace** by the **flush** mechanism. See Also [buffer pool](#), [change buffer](#), [flush](#), [tablespace](#).

metadata lock

A type of **lock** that prevents **DDL** operations on a table that is being used at the same time by another **transaction**. For details, see [Section 8.11.4, “Metadata Locking”](#).

Enhancements to **online** operations, particularly in MySQL 5.6 and higher, are focused on reducing the amount of metadata locking. The objective is for DDL operations that do not change the table structure (such as [CREATE INDEX](#) and [DROP INDEX](#) for [InnoDB](#) tables) to proceed while the table is being queried, updated, and so on by other transactions.

See Also [DDL](#), [lock](#), [online](#), [transaction](#).

metrics counter

A feature implemented by the [INNODB_METRICS](#) table in the **INFORMATION_SCHEMA**, in MySQL 5.6 and higher. You can query **counts** and totals for low-level [InnoDB](#) operations, and use the results for performance tuning in combination with data from the **Performance Schema**.

See Also [counter](#), [INFORMATION_SCHEMA](#), [Performance Schema](#).

midpoint insertion strategy

The technique of initially bringing **pages** into the [InnoDB buffer pool](#) not at the “newest” end of the list, but instead somewhere in the middle. The exact location of this point can vary, based on the setting of the [innodb_old_blocks_pct](#) option. The intent is that pages that are only read once, such as during a **full table scan**, can be aged out of the buffer pool sooner than with a strict **LRU** algorithm. For more information, see [Section 15.6.3.1, “The InnoDB Buffer Pool”](#).

See Also [buffer pool](#), [full table scan](#), [LRU](#), [page](#).

mini-transaction

An internal phase of [InnoDB](#) processing, when making changes at the **physical** level to internal data structures during **DML** operations. A mini-transaction (mtr) has no notion of **rollback**; multiple mini-transactions can occur within a single **transaction**. Mini-transactions write information to the **redo log** that is used during **crash recovery**. A mini-transaction can also happen outside the context of a regular transaction, for example during **purge** processing by background threads.

See Also [commit](#), [crash recovery](#), [DML](#), [physical](#), [purge](#), [redo log](#), [rollback](#), [transaction](#).

mixed-mode insert

An [INSERT](#) statement where **auto-increment** values are specified for some but not all of the new rows. For example, a multi-value [INSERT](#) could specify a value for the auto-increment column in some cases and [NULL](#) in other cases. [InnoDB](#) generates auto-increment values for the rows where the column value was specified as [NULL](#). Another example is an [INSERT ... ON DUPLICATE KEY UPDATE](#) statement, where auto-increment values might be generated but not used, for any duplicate rows that are processed as [UPDATE](#) rather than [INSERT](#) statements.

Can cause consistency issues between **master** and **slave** servers in a **replication** configuration. Can require adjusting the value of the [innodb_autoinc_lock_mode](#) configuration option.

See Also [auto-increment](#), [innodb_autoinc_lock_mode](#), [master server](#), [replication](#), [slave server](#).

mtr

See [mini-transaction](#).

multi-core

A type of processor that can take advantage of multithreaded programs, such as the MySQL server.

multiversion concurrency control

See [MVCC](#).

mutex

Informal abbreviation for “mutex variable”. (Mutex itself is short for “mutual exclusion”.) The low-level object that [InnoDB](#) uses to represent and enforce exclusive-access **locks** to internal in-memory data structures. Once the lock is acquired, any other process, thread, and so on is prevented from acquiring the same lock. Contrast with **rw-locks**, which [InnoDB](#) uses to represent and enforce shared-access **locks** to internal in-memory data structures. Mutexes and rw-locks are known collectively as **latches**.

See Also [latch](#), [lock](#), [Performance Schema](#), [Pthreads](#), [rw-lock](#).

MVCC

Acronym for “multiversion concurrency control”. This technique lets [InnoDB](#) **transactions** with certain **isolation levels** perform **consistent read** operations; that is, to query rows that are being updated by other transactions, and see the values from before those updates occurred. This is a powerful technique to increase **concurrency**, by allowing queries to proceed without waiting due to **locks** held by the other transactions.

This technique is not universal in the database world. Some other database products, and some other MySQL storage engines, do not support it.

See Also [ACID](#), [concurrency](#), [consistent read](#), [isolation level](#), [lock](#), [transaction](#).

my.cnf

The name, on Unix or Linux systems, of the MySQL **option file**.

See Also [my.ini](#), [option file](#).

my.ini

The name, on Windows systems, of the MySQL **option file**.

See Also [my.cnf](#), [option file](#).

mysql

The [mysql](#) program is the command-line interpreter for the MySQL database. It processes **SQL** statements, and also MySQL-specific commands such as [SHOW TABLES](#), by passing requests to the [mysqld](#) daemon.

See Also [mysqld](#), [SQL](#).

MySQL Enterprise Backup

A licensed product that performs **hot backups** of MySQL databases. It offers the most efficiency and flexibility when backing up [InnoDB](#) tables, but can also back up [MyISAM](#) and other kinds of tables.

See Also [hot backup](#), [InnoDB](#).

mysqlbackup command

A command-line tool of the **MySQL Enterprise Backup** product. It performs a **hot backup** operation for [InnoDB](#) tables, and a **warm backup** for [MyISAM](#) and other kinds of tables. See [Section 29.2, “MySQL Enterprise Backup Overview”](#) for more information about this command.

See Also [hot backup](#), [MySQL Enterprise Backup](#), [warm backup](#).

mysqld

The [mysqld](#) program is the database engine for the MySQL database. It runs as a Unix daemon or Windows service, constantly waiting for requests and performing maintenance work in the background.

See Also [mysql](#).

mysqldump

A command that performs a **logical backup** of some combination of databases, tables, and table data. The results are SQL statements that reproduce the original schema objects, data, or both. For substantial amounts

of data, a **physical backup** solution such as **MySQL Enterprise Backup** is faster, particularly for the **restore** operation.

See Also [logical backup](#), [MySQL Enterprise Backup](#), [physical backup](#), [restore](#).

N

natural key

An indexed column, typically a **primary key**, where the values have some real-world significance. Usually advised against because:

- If the value should ever change, there is potentially a lot of index maintenance to re-sort the **clustered index** and update the copies of the primary key value that are repeated in each **secondary index**.
- Even seemingly stable values can change in unpredictable ways that are difficult to represent correctly in the database. For example, one country can change into two or several, making the original country code obsolete. Or, rules about unique values might have exceptions. For example, even if taxpayer IDs are intended to be unique to a single person, a database might have to handle records that violate that rule, such as in cases of identity theft. Taxpayer IDs and other sensitive ID numbers also make poor primary keys, because they may need to be secured, encrypted, and otherwise treated differently than other columns.

Thus, it is typically better to use arbitrary numeric values to form a **synthetic key**, for example using an **auto-increment** column.

See Also [auto-increment](#), [clustered index](#), [primary key](#), [secondary index](#), [synthetic key](#).

neighbor page

Any **page** in the same **extent** as a particular page. When a page is selected to be **flushed**, any neighbor pages that are **dirty** are typically flushed as well, as an I/O optimization for traditional hard disks. In MySQL 5.6 and up, this behavior can be controlled by the configuration variable `innodb_flush_neighbors`; you might turn that setting off for SSD drives, which do not have the same overhead for writing smaller batches of data at random locations.

See Also [dirty page](#), [extent](#), [flush](#), [page](#).

next-key lock

A combination of a **record lock** on the index record and a [gap lock](#) on the gap before the index record.

See Also [gap lock](#), [locking](#), [record lock](#).

non-locking read

A **query** that does not use the `SELECT ... FOR UPDATE` or `SELECT ... LOCK IN SHARE MODE` clauses. The only kind of query allowed for global tables in a **read-only transaction**. The opposite of a **locking read**. See [Section 15.5.2.3, “Consistent Nonlocking Reads”](#).

`SELECT ... FOR SHARE` replaces `SELECT ... LOCK IN SHARE MODE` in MySQL 8.0.1, but `LOCK IN SHARE MODE` remains available for backward compatibility.

See Also [locking read](#), [query](#), [read-only transaction](#).

non-repeatable read

The situation when a query retrieves data, and a later query within the same **transaction** retrieves what should be the same data, but the queries return different results (changed by another transaction committing in the meantime).

This kind of operation goes against the **ACID** principle of database design. Within a transaction, data should be consistent, with predictable and stable relationships.

Among different **isolation levels**, non-repeatable reads are prevented by the **serializable read** and **repeatable read** levels, and allowed by the **consistent read**, and **read uncommitted** levels.

See Also [ACID](#), [consistent read](#), [isolation level](#), [READ UNCOMMITTED](#), [REPEATABLE READ](#), [SERIALIZABLE](#), [transaction](#).

nonblocking I/O

An industry term that means the same as **asynchronous I/O**.

See Also [asynchronous I/O](#).

normalized

A database design strategy where data is split into multiple tables, and duplicate values condensed into single rows represented by an ID, to avoid storing, querying, and updating redundant or lengthy values. It is typically used in **OLTP** applications.

For example, an address might be given a unique ID, so that a census database could represent the relationship **lives at this address** by associating that ID with each member of a family, rather than storing multiple copies of a complex value such as **123 Main Street, Anytown, USA**.

For another example, although a simple address book application might store each phone number in the same table as a person's name and address, a phone company database might give each phone number a special ID, and store the numbers and IDs in a separate table. This normalized representation could simplify large-scale updates when area codes split apart.

Normalization is not always recommended. Data that is primarily queried, and only updated by deleting entirely and reloading, is often kept in fewer, larger tables with redundant copies of duplicate values. This data representation is referred to as **denormalized**, and is frequently found in data warehousing applications.

See Also [denormalized](#), [foreign key](#), [OLTP](#), [relational](#).

NoSQL

A broad term for a set of data access technologies that do not use the **SQL** language as their primary mechanism for reading and writing data. Some NoSQL technologies act as key-value stores, only accepting single-value reads and writes; some relax the restrictions of the **ACID** methodology; still others do not require a pre-planned **schema**. MySQL users can combine NoSQL-style processing for speed and simplicity with SQL operations for flexibility and convenience, by using the **memcached** API to directly access some kinds of MySQL tables. The [memcached](#) interface to [InnoDB](#) tables is available in MySQL 5.6 and higher; see [Section 15.19, “InnoDB memcached Plugin”](#) for details. The [memcached](#) interface to [NDB](#) tables is available in NDB Cluster 7.2 and later; see [ndbmemcache—Memcache API for NDB Cluster](#).

See Also [ACID](#), [InnoDB](#), [memcached](#), [schema](#), [SQL](#).

NOT NULL constraint

A type of **constraint** that specifies that a **column** cannot contain any **NULL** values. It helps to preserve **referential integrity**, as the database server can identify data with erroneous missing values. It also helps in the arithmetic involved in query optimization, allowing the optimizer to predict the number of entries in an index on that column.

See Also [column](#), [constraint](#), [NULL](#), [primary key](#), [referential integrity](#).

NULL

A special value in **SQL**, indicating the absence of data. Any arithmetic operation or equality test involving a [NULL](#) value, in turn produces a [NULL](#) result. (Thus it is similar to the IEEE floating-point concept of NaN, “not a number”.) Any aggregate calculation such as [AVG\(\)](#) ignores rows with [NULL](#) values, when determining how many rows to divide by. The only test that works with [NULL](#) values uses the SQL idioms [IS NULL](#) or [IS NOT NULL](#).

[NULL](#) values play a part in **index** operations, because for performance a database must minimize the overhead of keeping track of missing data values. Typically, [NULL](#) values are not stored in an index, because a query that tests an indexed column using a standard comparison operator could never match a row with a [NULL](#) value for that column. For the same reason, unique indexes do not prevent [NULL](#) values; those values simply are not represented in the index. Declaring a [NOT NULL](#) constraint on a column provides reassurance that there are

no rows left out of the index, allowing for better query optimization (accurate counting of rows and estimation of whether to use the index).

Because the **primary key** must be able to uniquely identify every row in the table, a single-column primary key cannot contain any [NULL](#) values, and a multi-column primary key cannot contain any rows with [NULL](#) values in all columns.

Although the Oracle database allows a [NULL](#) value to be concatenated with a string, [InnoDB](#) treats the result of such an operation as [NULL](#).

See Also [index](#), [primary key](#), [SQL](#).

O

.OPT file

A file containing database configuration information. Files with this extension are included in backups produced by the [mysqlbackup](#) command of the **MySQL Enterprise Backup** product.

See Also [MySQL Enterprise Backup](#), [mysqlbackup command](#).

off-page column

A column containing variable-length data (such as [BLOB](#) and [VARCHAR](#)) that is too long to fit on a **B-tree** page. The data is stored in **overflow pages**. The **DYNAMIC** row format is more efficient for such storage than the older **COMPACT** row format.

See Also [B-tree](#), [compact row format](#), [dynamic row format](#), [overflow page](#).

OLTP

Acronym for “Online Transaction Processing”. A database system, or a database application, that runs a workload with many **transactions**, with frequent writes as well as reads, typically affecting small amounts of data at a time. For example, an airline reservation system or an application that processes bank deposits. The data might be organized in **normalized** form for a balance between **DML** (insert/update/delete) efficiency and **query** efficiency. Contrast with **data warehouse**.

With its **row-level locking** and **transactional** capability, **InnoDB** is the ideal storage engine for MySQL tables used in OLTP applications.

See Also [data warehouse](#), [DML](#), [InnoDB](#), [query](#), [row lock](#), [transaction](#).

online

A type of operation that involves no downtime, blocking, or restricted operation for the database. Typically applied to **DDL**. Operations that shorten the periods of restricted operation, such as **fast index creation**, have evolved into a wider set of **online DDL** operations in MySQL 5.6.

In the context of backups, a **hot backup** is an online operation and a **warm backup** is partially an online operation.

See Also [DDL](#), [Fast Index Creation](#), [hot backup](#), [online DDL](#), [warm backup](#).

online DDL

A feature that improves the performance, concurrency, and availability of [InnoDB](#) tables during **DDL** (primarily [ALTER TABLE](#)) operations. See [Section 15.12, “InnoDB and Online DDL”](#) for details.

The details vary according to the type of operation. In some cases, the table can be modified concurrently while the [ALTER TABLE](#) is in progress. The operation might be able to be performed without a table copy, or using a specially optimized type of table copy. DML log space usage for in-place operations is controlled by the [innodb_online_alter_log_max_size](#) configuration option.

This feature is an enhancement of the **Fast Index Creation** feature in MySQL 5.5.

See Also [DDL](#), [Fast Index Creation](#), [online](#).

optimistic

A methodology that guides low-level implementation decisions for a relational database system. The requirements of performance and **concurrency** in a relational database mean that operations must be started or dispatched quickly. The requirements of consistency and **referential integrity** mean that any operation could fail: a transaction might be rolled back, a **DML** operation could violate a constraint, a request for a lock could cause a deadlock, a network error could cause a timeout. An optimistic strategy is one that assumes most requests or attempts will succeed, so that relatively little work is done to prepare for the failure case. When this assumption is true, the database does little unnecessary work; when requests do fail, extra work must be done to clean up and undo changes.

[InnoDB](#) uses optimistic strategies for operations such as **locking** and **commits**. For example, data changed by a transaction can be written to the data files before the commit occurs, making the commit itself very fast, but requiring more work to undo the changes if the transaction is rolled back.

The opposite of an optimistic strategy is a **pessimistic** one, where a system is optimized to deal with operations that are unreliable and frequently unsuccessful. This methodology is rare in a database system, because so much care goes into choosing reliable hardware, networks, and algorithms.

See Also [commit](#), [concurrency](#), [DML](#), [locking](#), [pessimistic](#), [referential integrity](#).

optimizer

The MySQL component that determines the best **indexes** and **join** order to use for a **query**, based on characteristics and data distribution of the relevant **tables**.

See Also [index](#), [join](#), [query](#), [table](#).

option

A configuration parameter for MySQL, either stored in the **option file** or passed on the command line.

For the **options** that apply to **InnoDB** tables, each option name starts with the prefix [innodb_](#).

See Also [InnoDB](#), [option](#), [option file](#).

option file

The file that holds the configuration **options** for the MySQL instance. Traditionally, on Linux and Unix this file is named [my.cnf](#), and on Windows it is named [my.ini](#).

See Also [configuration file](#), [my.cnf](#), [my.ini](#), [option](#).

overflow page

Separately allocated disk **pages** that hold variable-length columns (such as [BLOB](#) and [VARCHAR](#)) that are too long to fit on a **B-tree** page. The associated columns are known as **off-page columns**.

See Also [B-tree](#), [off-page column](#), [page](#).

P

.par file

A file containing partition definitions. Files with this extension are included in backups produced by the [mysqlbackup](#) command of the **MySQL Enterprise Backup** product.

With the introduction of native partitioning support for [InnoDB](#) tables in MySQL 5.7.6, [.par](#) files are no longer created for partitioned [InnoDB](#) tables. Partitioned [MyISAM](#) tables continue to use [.par](#) files in MySQL 5.7. In MySQL 8.0, partitioning support is only provided by the [InnoDB](#) storage engine. As such, [.par](#) files are no longer used as of MySQL 8.0.

See Also [MySQL Enterprise Backup](#), [mysqlbackup command](#).

page

A unit representing how much data [InnoDB](#) transfers at any one time between disk (the **data files**) and memory (the **buffer pool**). A page can contain one or more **rows**, depending on how much data is in each row. If a

row does not fit entirely into a single page, [InnoDB](#) sets up additional pointer-style data structures so that the information about the row can be stored in one page.

One way to fit more data in each page is to use **compressed row format**. For tables that use BLOBs or large text fields, **compact row format** allows those large columns to be stored separately from the rest of the row, reducing I/O overhead and memory usage for queries that do not reference those columns.

When [InnoDB](#) reads or writes sets of pages as a batch to increase I/O throughput, it reads or writes an **extent** at a time.

All the [InnoDB](#) disk data structures within a MySQL instance share the same **page size**.

See Also [buffer pool](#), [compact row format](#), [compressed row format](#), [data files](#), [extent](#), [page size](#), [row](#).

page cleaner

An [InnoDB](#) background **thread** that **flushes dirty pages** from the **buffer pool**. Prior to MySQL 5.6, this activity was performed by the **master thread**. The number of page cleaner threads is controlled by the [innodb_page_cleaners](#) configuration option, introduced in MySQL 5.7.4.

See Also [buffer pool](#), [dirty page](#), [flush](#), [master thread](#), [thread](#).

page size

For releases up to and including MySQL 5.5, the size of each [InnoDB](#) **page** is fixed at 16 kilobytes. This value represents a balance: large enough to hold the data for most rows, yet small enough to minimize the performance overhead of transferring unneeded data to memory. Other values are not tested or supported.

Starting in MySQL 5.6, the page size for an [InnoDB](#) **instance** can be either 4KB, 8KB, or 16KB, controlled by the [innodb_page_size](#) configuration option. As of MySQL 5.7.6, [InnoDB](#) also supports 32KB and 64KB page sizes. For 32KB and 64KB page sizes, [ROW_FORMAT=COMPRESSED](#) is not supported and the maximum record size is 16KB.

Page size is set when creating the MySQL instance, and it remains constant afterward. The same page size applies to all [InnoDB](#) **tablespaces**, including the **system tablespace**, **file-per-table** tablespaces, and **general tablespaces**.

Smaller page sizes can help performance with storage devices that use small block sizes, particularly for **SSD** devices in **disk-bound** workloads, such as for **OLTP** applications. As individual rows are updated, less data is copied into memory, written to disk, reorganized, locked, and so on.

See Also [disk-bound](#), [file-per-table](#), [general tablespace](#), [instance](#), [OLTP](#), [page](#), [SSD](#), [system tablespace](#), [tablespace](#).

parent table

The table in a **foreign key** relationship that holds the initial column values pointed to from the **child table**. The consequences of deleting, or updating rows in the parent table depend on the [ON UPDATE](#) and [ON DELETE](#) clauses in the foreign key definition. Rows with corresponding values in the child table could be automatically deleted or updated in turn, or those columns could be set to [NULL](#), or the operation could be prevented.

See Also [child table](#), [foreign key](#).

partial backup

A **backup** that contains some of the **tables** in a MySQL database, or some of the databases in a MySQL instance. Contrast with **full backup**.

See Also [backup](#), [full backup](#), [table](#).

partial index

An **index** that represents only part of a column value, typically the first N characters (the **prefix**) of a long [VARCHAR](#) value.

See Also [index](#), [index prefix](#).

Performance Schema

The [performance_schema](#) schema, in MySQL 5.5 and up, presents a set of tables that you can query to get detailed information about the performance characteristics of many internal parts of the MySQL server. See [Chapter 25, MySQL Performance Schema](#).

See Also [INFORMATION_SCHEMA](#), [latch](#), [mutex](#), [rw-lock](#).

pessimistic

A methodology that sacrifices performance or concurrency in favor of safety. It is appropriate if a high proportion of requests or attempts might fail, or if the consequences of a failed request are severe. [InnoDB](#) uses what is known as a pessimistic **locking** strategy, to minimize the chance of **deadlocks**. At the application level, you might avoid deadlocks by using a pessimistic strategy of acquiring all locks needed by a transaction at the very beginning.

Many built-in database mechanisms use the opposite **optimistic** methodology.

See Also [deadlock](#), [locking](#), [optimistic](#).

phantom

A row that appears in the result set of a query, but not in the result set of an earlier query. For example, if a query is run twice within a **transaction**, and in the meantime, another transaction commits after inserting a new row or updating a row so that it matches the [WHERE](#) clause of the query.

This occurrence is known as a phantom read. It is harder to guard against than a **non-repeatable read**, because locking all the rows from the first query result set does not prevent the changes that cause the phantom to appear.

Among different **isolation levels**, phantom reads are prevented by the **serializable read** level, and allowed by the **repeatable read**, **consistent read**, and **read uncommitted** levels.

See Also [consistent read](#), [isolation level](#), [non-repeatable read](#), [READ UNCOMMITTED](#), [REPEATABLE READ](#), [SERIALIZABLE](#), [transaction](#).

physical

A type of operation that involves hardware-related aspects such as disk blocks, memory pages, files, bits, disk reads, and so on. Typically, physical aspects are important during expert-level performance tuning and problem diagnosis. Contrast with **logical**.

See Also [logical](#), [physical backup](#).

physical backup

A **backup** that copies the actual data files. For example, the [mysqlbackup](#) command of the **MySQL Enterprise Backup** product produces a physical backup, because its output contains data files that can be used directly by the [mysqld](#) server, resulting in a faster **restore** operation. Contrast with **logical backup**.

See Also [backup](#), [logical backup](#), [MySQL Enterprise Backup](#), [restore](#).

PITR

Acronym for **point-in-time recovery**.

See Also [point-in-time recovery](#).

plan stability

A property of a **query execution plan**, where the optimizer makes the same choices each time for a given **query**, so that performance is consistent and predictable.

See Also [query](#), [query execution plan](#).

point-in-time recovery

The process of restoring a **backup** to recreate the state of the database at a specific date and time. Commonly abbreviated “PITR”. Because it is unlikely that the specified time corresponds exactly to the time of a backup, this technique usually requires a combination of a **physical backup** and a **logical backup**. For example, with the **MySQL Enterprise Backup** product, you restore the last backup that you took before the specified point in time, then replay changes from the **binary log** between the time of the backup and the PITR time.

See Also [backup](#), [binary log](#), [logical backup](#), [MySQL Enterprise Backup](#), [physical backup](#).

prefix

See [index prefix](#).

prepared backup

A set of backup files, produced by the **MySQL Enterprise Backup** product, after all the stages of applying **binary logs** and **incremental backups** are finished. The resulting files are ready to be **restored**. Prior to the apply steps, the files are known as a **raw backup**.

See Also [binary log](#), [hot backup](#), [incremental backup](#), [MySQL Enterprise Backup](#), [raw backup](#), [restore](#).

primary key

A set of columns—and by implication, the index based on this set of columns—that can uniquely identify every row in a table. As such, it must be a unique index that does not contain any [NULL](#) values.

[InnoDB](#) requires that every table has such an index (also called the **clustered index** or **cluster index**), and organizes the table storage based on the column values of the primary key.

When choosing primary key values, consider using arbitrary values (a **synthetic key**) rather than relying on values derived from some other source (a **natural key**).

See Also [clustered index](#), [index](#), [natural key](#), [synthetic key](#).

process

An instance of an executing program. The operating system switches between multiple running processes, allowing for a certain degree of **concurrency**. On most operating systems, processes can contain multiple **threads** of execution that share resources. Context-switching between threads is faster than the equivalent switching between processes.

See Also [concurrency](#), [thread](#).

pseudo-record

An artificial record in an index, used for **locking** key values or ranges that do not currently exist.

See Also [infimum record](#), [locking](#), [supremum record](#).

Pthreads

The POSIX threads standard, which defines an API for threading and locking operations on Unix and Linux systems. On Unix and Linux systems, [InnoDB](#) uses this implementation for **mutexes**.

See Also [mutex](#).

purge

A type of garbage collection performed by one or more separate background threads (controlled by [innodb_purge_threads](#)) that runs on a periodic schedule. Purge parses and processes **undo log** pages from the **history list** for the purpose of removing clustered and secondary index records that were marked for deletion (by previous [DELETE](#) statements) and are no longer required for **MVCC** or **rollback**. Purge frees undo log pages from the history list after processing them.

See Also [history list](#), [MVCC](#), [rollback](#), [undo log](#).

purge buffering

The technique of storing changes to secondary index pages, resulting from [DELETE](#) operations, in the **change buffer** rather than writing the changes immediately, so that the physical writes can be performed to minimize random I/O. (Because delete operations are a two-step process, this operation buffers the write that normally purges an index record that was previously marked for deletion.) It is one of the types of **change buffering**; the others are **insert buffering** and **delete buffering**.

See Also [change buffer](#), [change buffering](#), [delete buffering](#), [insert buffer](#), [insert buffering](#).

purge lag

Another name for the [InnoDB history list](#). Related to the [innodb_max_purge_lag](#) configuration option.

See Also [history list](#), [purge](#).

purge thread

A **thread** within the [InnoDB](#) process that is dedicated to performing the periodic **purge** operation. In MySQL 5.6 and higher, multiple purge threads are enabled by the [innodb_purge_threads](#) configuration option.

See Also [purge](#), [thread](#).

Q

query

In **SQL**, an operation that reads information from one or more **tables**. Depending on the organization of data and the parameters of the query, the lookup might be optimized by consulting an **index**. If multiple tables are involved, the query is known as a **join**.

For historical reasons, sometimes discussions of internal processing for statements use “query” in a broader sense, including other types of MySQL statements such as **DDL** and **DML** statements.

See Also [DDL](#), [DML](#), [index](#), [join](#), [SQL](#), [table](#).

query execution plan

The set of decisions made by the optimizer about how to perform a **query** most efficiently, including which **index** or indexes to use, and the order in which to **join** tables. **Plan stability** involves the same choices being made consistently for a given query.

See Also [index](#), [join](#), [plan stability](#), [query](#).

query log

See [general query log](#).

quiesce

To reduce the amount of database activity, often in preparation for an operation such as an [ALTER TABLE](#), a **backup**, or a **shutdown**. Might or might not involve doing as much **flushing** as possible, so that **InnoDB** does not continue doing background I/O.

In MySQL 5.6 and higher, the syntax [FLUSH TABLES . . . FOR EXPORT](#) writes some data to disk for [InnoDB](#) tables that make it simpler to back up those tables by copying the data files.

See Also [backup](#), [flush](#), [InnoDB](#), [shutdown](#).

R

R-tree

A tree data structure used for spatial indexing of multi-dimensional data such as geographical coordinates, rectangles or polygons.

See Also [B-tree](#).

RAID

Acronym for “Redundant Array of Inexpensive Drives”. Spreading I/O operations across multiple drives enables greater **concurrency** at the hardware level, and improves the efficiency of low-level write operations that otherwise would be performed in sequence.

See Also [concurrency](#).

random dive

A technique for quickly estimating the number of different values in a column (the column's **cardinality**). [InnoDB](#) samples pages at random from the index and uses that data to estimate the number of different values.

See Also [cardinality](#).

raw backup

The initial set of backup files produced by the **MySQL Enterprise Backup** product, before the changes reflected in the **binary log** and any **incremental backups** are applied. At this stage, the files are not ready to **restore**. After these changes are applied, the files are known as a **prepared backup**.

See Also [binary log](#), [hot backup](#), [ibbackup_logfile](#), [incremental backup](#), [MySQL Enterprise Backup](#), [prepared backup](#), [restore](#).

READ COMMITTED

An **isolation level** that uses a **locking** strategy that relaxes some of the protection between **transactions**, in the interest of performance. Transactions cannot see uncommitted data from other transactions, but they can see data that is committed by another transaction after the current transaction started. Thus, a transaction never sees any bad data, but the data that it does see may depend to some extent on the timing of other transactions.

When a transaction with this isolation level performs `UPDATE ... WHERE` or `DELETE ... WHERE` operations, other transactions might have to wait. The transaction can perform `SELECT ... FOR UPDATE`, and `LOCK IN SHARE MODE` operations without making other transactions wait.

`SELECT ... FOR SHARE` replaces `SELECT ... LOCK IN SHARE MODE` in MySQL 8.0.1, but `LOCK IN SHARE MODE` remains available for backward compatibility.

See Also [ACID](#), [isolation level](#), [locking](#), [REPEATABLE READ](#), [SERIALIZABLE](#), [transaction](#).

read phenomena

Phenomena such as **dirty reads**, **non-repeatable reads**, and **phantom** reads which can occur when a transaction reads data that another transaction has modified.

See Also [dirty read](#), [non-repeatable read](#), [phantom](#).

READ UNCOMMITTED

The **isolation level** that provides the least amount of protection between transactions. Queries employ a **locking** strategy that allows them to proceed in situations where they would normally wait for another transaction. However, this extra performance comes at the cost of less reliable results, including data that has been changed by other transactions and not committed yet (known as **dirty read**). Use this isolation level with great caution, and be aware that the results might not be consistent or reproducible, depending on what other transactions are doing at the same time. Typically, transactions with this isolation level only do queries, not insert, update, or delete operations.

See Also [ACID](#), [dirty read](#), [isolation level](#), [locking](#), [transaction](#).

read view

An internal snapshot used by the **MVCC** mechanism of [InnoDB](#). Certain **transactions**, depending on their **isolation level**, see the data values as they were at the time the transaction (or in some cases, the statement) started. Isolation levels that use a read view are **REPEATABLE READ**, **READ COMMITTED**, and **READ UNCOMMITTED**.

See Also [isolation level](#), [MVCC](#), [READ COMMITTED](#), [READ UNCOMMITTED](#), [REPEATABLE READ](#), [transaction](#).

read-ahead

A type of I/O request that prefetches a group of **pages** (an entire **extent**) into the **buffer pool** asynchronously, in anticipation that these pages will be needed soon. The linear read-ahead technique prefetches all the pages of one extent based on access patterns for pages in the preceding extent. The random read-ahead technique prefetches all the pages for an extent once a certain number of pages from the same extent are in the buffer pool. Random read-ahead is not part of MySQL 5.5, but is re-introduced in MySQL 5.6 under the control of the [innodb_random_read_ahead](#) configuration option.

See Also [buffer pool](#), [extent](#), [page](#).

read-only transaction

A type of **transaction** that can be optimized for [InnoDB](#) tables by eliminating some of the bookkeeping involved with creating a **read view** for each transaction. Can only perform **non-locking read** queries. It can be started

explicitly with the syntax `START TRANSACTION READ ONLY`, or automatically under certain conditions. See [Section 8.5.3, “Optimizing InnoDB Read-Only Transactions”](#) for details.
See Also [non-locking read](#), [read view](#), [transaction](#).

record lock

A **lock** on an index record. For example, `SELECT c1 FROM t WHERE c1 = 10 FOR UPDATE;` prevents any other transaction from inserting, updating, or deleting rows where the value of `t.c1` is 10. Contrast with **gap lock** and **next-key lock**.
See Also [gap lock](#), [lock](#), [next-key lock](#).

redo

The data, in units of records, recorded in the **redo log** when **DML** statements make changes to **InnoDB** tables. It is used during **crash recovery** to correct data written by incomplete **transactions**. The ever-increasing **LSN** value represents the cumulative amount of redo data that has passed through the redo log.
See Also [crash recovery](#), [DML](#), [LSN](#), [redo log](#), [transaction](#).

redo log

A disk-based data structure used during **crash recovery**, to correct data written by incomplete **transactions**. During normal operation, it encodes requests to change **InnoDB** table data, which result from SQL statements or low-level API calls through NoSQL interfaces. Modifications that did not finish updating the **data files** before an unexpected **shutdown** are replayed automatically.

The redo log is physically represented as a set of files, typically named `ib_logfile0` and `ib_logfile1`. The data in the redo log is encoded in terms of records affected; this data is collectively referred to as **redo**. The passage of data through the redo logs is represented by the ever-increasing **LSN** value. The original 4GB limit on maximum size for the redo log is raised to 512GB in MySQL 5.6.3.

The disk layout of the redo log is influenced by the configuration options `innodb_log_file_size`, `innodb_log_group_home_dir`, and (rarely) `innodb_log_files_in_group`. The performance of redo log operations is also affected by the **log buffer**, which is controlled by the `innodb_log_buffer_size` configuration option.

See Also [crash recovery](#), [data files](#), [ib_logfile](#), [log buffer](#), [LSN](#), [redo](#), [shutdown](#), [transaction](#).

redundant row format

The oldest **InnoDB row format**. Prior to MySQL 5.0.3, it was the only row format available in **InnoDB**. From MySQL 5.0.3 to MySQL 5.7.8, the default row format is **COMPACT**. As of MySQL 5.7.9, the default row format is defined by the `innodb_default_row_format` configuration option, which has a default setting of **DYNAMIC**. You can still specify the **REDUNDANT** row format for compatibility with older **InnoDB** tables.

For more information, see [Section 15.10.4, “COMPACT and REDUNDANT Row Formats”](#).
See Also [compact row format](#), [dynamic row format](#), [row format](#).

referential integrity

The technique of maintaining data always in a consistent format, part of the **ACID** philosophy. In particular, data in different tables is kept consistent through the use of **foreign key constraints**, which can prevent changes from happening or automatically propagate those changes to all related tables. Related mechanisms include the **unique constraint**, which prevents duplicate values from being inserted by mistake, and the **NOT NULL constraint**, which prevents blank values from being inserted by mistake.
See Also [ACID](#), [FOREIGN KEY constraint](#), [NOT NULL constraint](#), [unique constraint](#).

relational

An important aspect of modern database systems. The database server encodes and enforces relationships such as one-to-one, one-to-many, many-to-one, and uniqueness. For example, a person might have zero, one, or many phone numbers in an address database; a single phone number might be associated with several family members. In a financial database, a person might be required to have exactly one taxpayer ID, and any taxpayer ID could only be associated with one person.

The database server can use these relationships to prevent bad data from being inserted, and to find efficient ways to look up information. For example, if a value is declared to be unique, the server can stop searching as soon as the first match is found, and it can reject attempts to insert a second copy of the same value.

At the database level, these relationships are expressed through SQL features such as **columns** within a table, unique and **NOT NULL constraints**, **foreign keys**, and different kinds of join operations. Complex relationships typically involve data split between more than one table. Often, the data is **normalized**, so that duplicate values in one-to-many relationships are stored only once.

In a mathematical context, the relations within a database are derived from set theory. For example, the **OR** and **AND** operators of a **WHERE** clause represent the notions of union and intersection.

See Also [ACID](#), [column](#), [constraint](#), [foreign key](#), [normalized](#).

relevance

In the **full-text search** feature, a number signifying the similarity between the search string and the data in the **FULLTEXT index**. For example, when you search for a single word, that word is typically more relevant for a row where it occurs several times in the text than a row where it appears only once.

See Also [full-text search](#), [FULLTEXT index](#).

REPEATABLE READ

The default **isolation level** for **InnoDB**. It prevents any rows that are queried from being changed by other **transactions**, thus blocking **non-repeatable reads** but not **phantom** reads. It uses a moderately strict **locking** strategy so that all queries within a transaction see data from the same snapshot, that is, the data as it was at the time the transaction started.

When a transaction with this isolation level performs **UPDATE ... WHERE**, **DELETE ... WHERE**, **SELECT ... FOR UPDATE**, and **LOCK IN SHARE MODE** operations, other transactions might have to wait.

SELECT ... FOR SHARE replaces **SELECT ... LOCK IN SHARE MODE** in MySQL 8.0.1, but **LOCK IN SHARE MODE** remains available for backward compatibility.

See Also [ACID](#), [consistent read](#), [isolation level](#), [locking](#), [phantom](#), [transaction](#).

repertoire

Repertoire is a term applied to character sets. A character set repertoire is the collection of characters in the set.

See [Section 10.2.1, “Character Set Repertoire”](#).

replication

The practice of sending changes from a **master database**, to one or more **slave databases**, so that all databases have the same data. This technique has a wide range of uses, such as load-balancing for better scalability, disaster recovery, and testing software upgrades and configuration changes. The changes can be sent between the database by methods called **row-based replication** and **statement-based replication**.

See Also [master server](#), [row-based replication](#), [slave server](#), [statement-based replication](#).

restore

The process of putting a set of backup files from the **MySQL Enterprise Backup** product in place for use by MySQL. This operation can be performed to fix a corrupted database, to return to some earlier point in time, or (in a **replication** context) to set up a new **slave database**. In the **MySQL Enterprise Backup** product, this operation is performed by the **copy-back** option of the **mysqlbackup** command.

See Also [hot backup](#), [MySQL Enterprise Backup](#), [mysqlbackup command](#), [prepared backup](#), [replication](#), [slave server](#).

rollback

A **SQL** statement that ends a **transaction**, undoing any changes made by the transaction. It is the opposite of **commit**, which makes permanent any changes made in the transaction.

By default, MySQL uses the **autocommit** setting, which automatically issues a commit following each SQL statement. You must change this setting before you can use the rollback technique.

See Also [ACID](#), [autocommit](#), [commit](#), [SQL](#), [transaction](#).

rollback segment

The storage area containing the **undo log**. Rollback segments have traditionally resided in the **system tablespace**. As of MySQL 5.6, rollback segments can reside in **undo tablespaces**. As of MySQL 5.7, rollback segments are also allocated to the *temporary tablespace*.

See Also [system tablespace](#), [temporary tablespace](#), [undo log](#), [undo tablespace](#).

row

The logical data structure defined by a set of **columns**. A set of rows makes up a **table**. Within [InnoDB data files](#), each **page** can contain one or more rows.

Although [InnoDB](#) uses the term **row format** for consistency with MySQL syntax, the row format is a property of each table and applies to all rows in that table.

See Also [column](#), [data files](#), [page](#), [row format](#), [table](#).

row format

The disk storage format for **rows** of an [InnoDB table](#). As [InnoDB](#) gains new capabilities such as **compression**, new row formats are introduced to support the resulting improvements in storage efficiency and performance.

The row format of an [InnoDB table](#) is specified by the [ROW_FORMAT](#) option or by the [innodb_default_row_format](#) configuration option (introduced in MySQL 5.7.9). Row formats include [REDUNDANT](#), [COMPACT](#), [COMPRESSED](#), and [DYNAMIC](#). To view the row format of an [InnoDB table](#), issue the [SHOW TABLE STATUS](#) statement or query [InnoDB table metadata](#) in the [INFORMATION_SCHEMA](#).

See Also [compact row format](#), [compressed row format](#), [compression](#), [dynamic row format](#), [redundant row format](#), [row](#), [table](#).

row lock

A **lock** that prevents a row from being accessed in an incompatible way by another **transaction**. Other rows in the same table can be freely written to by other transactions. This is the type of **locking** done by **DML** operations on [InnoDB tables](#).

Contrast with **table locks** used by [MyISAM](#), or during **DDL** operations on [InnoDB tables](#) that cannot be done with **online DDL**; those locks block concurrent access to the table.

See Also [DDL](#), [DML](#), [InnoDB](#), [lock](#), [locking](#), [online DDL](#), [table lock](#), [transaction](#).

row-based replication

A form of **replication** where events are propagated from the **master server** specifying how to change individual rows on the **slave server**. It is safe to use for all settings of the [innodb_autoinc_lock_mode](#) option.

See Also [auto-increment locking](#), [innodb_autoinc_lock_mode](#), [master server](#), [replication](#), [slave server](#), [statement-based replication](#).

row-level locking

The **locking** mechanism used for [InnoDB tables](#), relying on **row locks** rather than **table locks**. Multiple **transactions** can modify the same table concurrently. Only if two transactions try to modify the same row does one of the transactions wait for the other to complete (and release its row locks).

See Also [InnoDB](#), [locking](#), [row lock](#), [table lock](#), [transaction](#).

rw-lock

The low-level object that [InnoDB](#) uses to represent and enforce shared-access **locks** to internal in-memory data structures following certain rules. Contrast with **mutexes**, which [InnoDB](#) uses to represent and enforce exclusive access to internal in-memory data structures. Mutexes and rw-locks are known collectively as **latches**.

[rw-lock](#) types include [s-locks](#) (shared locks), [x-locks](#) (exclusive locks), and [sx-locks](#) (shared-exclusive locks).

- An [s-lock](#) provides read access to a common resource.

- An [x-lock](#) provides write access to a common resource while not permitting inconsistent reads by other threads.
- An [sx-lock](#) provides write access to a common resource while permitting inconsistent reads by other threads. [sx-locks](#) were introduced in MySQL 5.7 to optimize concurrency and improve scalability for read-write workloads.

The following matrix summarizes rw-lock type compatibility.

	S	SX	X
S	Compatible	Compatible	Conflict
SX	Compatible	Conflict	Conflict
X	Conflict	Conflict	Conflict

See Also [latch](#), [lock](#), [mutex](#), [Performance Schema](#).

S

savepoint

Savepoints help to implement nested **transactions**. They can be used to provide scope to operations on tables that are part of a larger transaction. For example, scheduling a trip in a reservation system might involve booking several different flights; if a desired flight is unavailable, you might **roll back** the changes involved in booking that one leg, without rolling back the earlier flights that were successfully booked.

See Also [rollback](#), [transaction](#).

scalability

The ability to add more work and issue more simultaneous requests to a system, without a sudden drop in performance due to exceeding the limits of system capacity. Software architecture, hardware configuration, application coding, and type of workload all play a part in scalability. When the system reaches its maximum capacity, popular techniques for increasing scalability are **scale up** (increasing the capacity of existing hardware or software) and **scale out** (adding new servers and more instances of MySQL). Often paired with **availability** as critical aspects of a large-scale deployment.

See Also [availability](#), [scale out](#), [scale up](#).

scale out

A technique for increasing **scalability** by adding new servers and more instances of MySQL. For example, setting up replication, NDB Cluster, connection pooling, or other features that spread work across a group of servers. Contrast with **scale up**.

See Also [scalability](#), [scale up](#).

scale up

A technique for increasing **scalability** by increasing the capacity of existing hardware or software. For example, increasing the memory on a server and adjusting memory-related parameters such as [innodb_buffer_pool_size](#) and [innodb_buffer_pool_instances](#). Contrast with **scale out**.

See Also [scalability](#), [scale out](#).

schema

Conceptually, a schema is a set of interrelated database objects, such as tables, table columns, data types of the columns, indexes, foreign keys, and so on. These objects are connected through SQL syntax, because the columns make up the tables, the foreign keys refer to tables and columns, and so on. Ideally, they are also connected logically, working together as part of a unified application or flexible framework. For example, the **INFORMATION_SCHEMA** and **performance_schema** databases use “schema” in their names to emphasize the close relationships between the tables and columns they contain.

In MySQL, physically, a **schema** is synonymous with a **database**. You can substitute the keyword [SCHEMA](#) instead of [DATABASE](#) in MySQL SQL syntax, for example using [CREATE SCHEMA](#) instead of [CREATE DATABASE](#).

Some other database products draw a distinction. For example, in the Oracle Database product, a **schema** represents only a part of a database: the tables and other objects owned by a single user.

See Also [database](#), [INFORMATION_SCHEMA](#), [Performance Schema](#).

SDI

Acronym for “serialized dictionary information”.

See Also [Serialized Dictionary Information \(SDI\)](#).

search index

In MySQL, **full-text search** queries use a special kind of index, the **FULLTEXT index**. In MySQL 5.6.4 and up, [InnoDB](#) and [MyISAM](#) tables both support [FULLTEXT](#) indexes; formerly, these indexes were only available for [MyISAM](#) tables.

See Also [full-text search](#), [FULLTEXT index](#).

secondary index

A type of [InnoDB index](#) that represents a subset of table columns. An [InnoDB](#) table can have zero, one, or many secondary indexes. (Contrast with the **clustered index**, which is required for each [InnoDB](#) table, and stores the data for all the table columns.)

A secondary index can be used to satisfy queries that only require values from the indexed columns. For more complex queries, it can be used to identify the relevant rows in the table, which are then retrieved through lookups using the clustered index.

Creating and dropping secondary indexes has traditionally involved significant overhead from copying all the data in the [InnoDB](#) table. The **fast index creation** feature makes both [CREATE INDEX](#) and [DROP INDEX](#) statements much faster for [InnoDB](#) secondary indexes.

See Also [clustered index](#), [Fast Index Creation](#), [index](#).

segment

A division within an [InnoDB tablespace](#). If a tablespace is analogous to a directory, the segments are analogous to files within that directory. A segment can grow. New segments can be created.

For example, within a **file-per-table** tablespace, table data is in one segment and each associated index is in its own segment. The **system tablespace** contains many different segments, because it can hold many tables and their associated indexes. Prior to MySQL 8.0, the system tablespace also includes one or more **rollback segments** used for **undo logs**.

Segments grow and shrink as data is inserted and deleted. When a segment needs more room, it is extended by one **extent** (1 megabyte) at a time. Similarly, a segment releases one extent's worth of space when all the data in that extent is no longer needed.

See Also [extent](#), [file-per-table](#), [rollback segment](#), [system tablespace](#), [tablespace](#), [undo log](#).

selectivity

A property of data distribution, the number of distinct values in a column (its **cardinality**) divided by the number of records in the table. High selectivity means that the column values are relatively unique, and can be retrieved efficiently through an index. If you (or the query optimizer) can predict that a test in a [WHERE](#) clause only matches a small number (or proportion) of rows in a table, the overall **query** tends to be efficient if it evaluates that test first, using an index.

See Also [cardinality](#), [query](#).

semi-consistent read

A type of read operation used for [UPDATE](#) statements, that is a combination of **READ COMMITTED** and **consistent read**. When an [UPDATE](#) statement examines a row that is already locked, [InnoDB](#) returns the latest committed version to MySQL so that MySQL can determine whether the row matches the [WHERE](#) condition of

the [UPDATE](#). If the row matches (must be updated), MySQL reads the row again, and this time [InnoDB](#) either locks it or waits for a lock on it. This type of read operation can only happen when the transaction has the **READ COMMITTED isolation level**, or when the [innodb_locks_unsafe_for_binlog](#) option is enabled. [innodb_locks_unsafe_for_binlog](#) was removed in MySQL 8.0.
See Also [consistent read](#), [isolation level](#), [READ COMMITTED](#).

SERIALIZABLE

The **isolation level** that uses the most conservative locking strategy, to prevent any other **transactions** from inserting or changing data that was read by this transaction, until it is finished. This way, the same query can be run over and over within a transaction, and be certain to retrieve the same set of results each time. Any attempt to change data that was committed by another transaction since the start of the current transaction, cause the current transaction to wait.

This is the default isolation level specified by the SQL standard. In practice, this degree of strictness is rarely needed, so the default isolation level for [InnoDB](#) is the next most strict, **REPEATABLE READ**.
See Also [ACID](#), [consistent read](#), [isolation level](#), [locking](#), [REPEATABLE READ](#), [transaction](#).

Serialized Dictionary Information (SDI)

Dictionary object metadata in serialized form. SDI is stored in [JSON](#) format.

As of MySQL 8.0.3, SDI is present in all [InnoDB](#) tablespace files except for temporary tablespace and undo tablespace files. The presence of SDI in tablespace files provides metadata redundancy. For example, dictionary object metadata can be extracted from tablespace files using the [ibd2sdi](#) utility if the data dictionary becomes unavailable.

For a [MyISAM](#) table, SDI is stored in a [.sdi](#) metadata file in the schema directory. An SDI metadata file is required to perform an [IMPORT TABLE](#) operation.
See Also [file-per-table](#), [general tablespace](#), [system tablespace](#), [tablespace](#).

server

A type of program that runs continuously, waiting to receive and act upon requests from another program (the **client**). Because often an entire computer is dedicated to running one or more server programs (such as a database server, a web server, an application server, or some combination of these), the term **server** can also refer to the computer that runs the server software.
See Also [client](#), [mysqld](#).

session temporary tablespace

A *temporary tablespace* that stores user-created *temporary tables* and internal temporary tables created by the *optimizer* when [InnoDB](#) is configured as the on-disk storage engine for internal temporary tables.
See Also [optimizer](#), [temporary table](#), [temporary tablespace](#).

shared lock

A kind of **lock** that allows other **transactions** to read the locked object, and to also acquire other shared locks on it, but not to write to it. The opposite of **exclusive lock**.
See Also [exclusive lock](#), [lock](#), [transaction](#).

shared tablespace

Another way of referring to the **system tablespace** or a **general tablespace**. General tablespaces were introduced in MySQL 5.7. More than one table can reside in a shared tablespace. Only a single table can reside in a *file-per-table* tablespace.
See Also [general tablespace](#), [system tablespace](#).

sharp checkpoint

The process of **flushing** to disk all **dirty** buffer pool pages whose redo entries are contained in certain portion of the **redo log**. Occurs before [InnoDB](#) reuses a portion of a log file; the log files are used in a circular fashion. Typically occurs with write-intensive **workloads**.

See Also [dirty page](#), [flush](#), [redo log](#), [workload](#).

shutdown

The process of stopping the MySQL server. By default, this process cleans up operations for **InnoDB** tables, so **InnoDB** can be **slow** to shut down, but fast to start up later. If you skip the cleanup operations, it is **fast** to shut down but the cleanup must be performed during the next restart.

The shutdown mode for **InnoDB** is controlled by the `innodb_fast_shutdown` option.

See Also [fast shutdown](#), [InnoDB](#), [slow shutdown](#), [startup](#).

slave server

Frequently shortened to “slave”. A database **server** machine in a **replication** scenario that receives changes from another server (the **master**) and applies those same changes. Thus it maintains the same contents as the master, although it might lag somewhat behind.

In MySQL, slave servers are commonly used in disaster recovery, to take the place of a master servers that fails. They are also commonly used for testing software upgrades and new settings, to ensure that database configuration changes do not cause problems with performance or reliability.

Slave servers typically have high workloads, because they process all the **DML** (write) operations relayed from the master, as well as user queries. To ensure that slave servers can apply changes from the master fast enough, they frequently have fast I/O devices and sufficient CPU and memory to run multiple database instances on the same slave server. For example, the master server might use hard drive storage while the slave servers use **SSDs**.

See Also [DML](#), [master server](#), [replication](#), [server](#), [SSD](#).

slow query log

A type of **log** used for performance tuning of SQL statements processed by the MySQL server. The log information is stored in a file. You must enable this feature to use it. You control which categories of “slow” SQL statements are logged. For more information, see [Section 5.4.5, “The Slow Query Log”](#).

See Also [general query log](#), [log](#).

slow shutdown

A type of **shutdown** that does additional **InnoDB** flushing operations before completing. Also known as a **clean shutdown**. Specified by the configuration parameter `innodb_fast_shutdown=0` or the command `SET GLOBAL innodb_fast_shutdown=0;`. Although the shutdown itself can take longer, that time will be saved on the subsequent startup.

See Also [clean shutdown](#), [fast shutdown](#), [shutdown](#).

snapshot

A representation of data at a particular time, which remains the same even as changes are **committed** by other **transactions**. Used by certain **isolation levels** to allow **consistent reads**.

See Also [commit](#), [consistent read](#), [isolation level](#), [transaction](#).

sort buffer

The buffer used for sorting data during creation of an **InnoDB** index. Sort buffer size is configured using the `innodb_sort_buffer_size` configuration option.

space ID

An identifier used to uniquely identify an **InnoDB tablespace** within a MySQL instance. The space ID for the **system tablespace** is always zero; this same ID applies to all tables within the system tablespace or within a general tablespace. Each **file-per-table** tablespace and **general tablespace** has its own space ID.

Prior to MySQL 5.6, this hardcoded value presented difficulties in moving **InnoDB** tablespace files between MySQL instances. Starting in MySQL 5.6, you can copy tablespace files between instances by using the **transportable tablespace** feature involving the statements `FLUSH TABLES ... FOR EXPORT`, `ALTER`

`TABLE ... DISCARD TABLESPACE`, and `ALTER TABLE ... IMPORT TABLESPACE`. The information needed to adjust the space ID is conveyed in the **.cfg file** which you copy along with the tablespace. See [Section 15.7.6, “Copying File-Per-Table Tablespaces to Another Instance”](#) for details.

See Also [.cfg file](#), [file-per-table](#), [general tablespace](#), [.ibd file](#), [system tablespace](#), [tablespace](#), [transportable tablespace](#).

sparse file

A type of file that uses file system space more efficiently by writing metadata representing empty blocks to disk instead of writing the actual empty space. The [InnoDB transparent page compression](#) feature relies on sparse file support. For more information, see [Section 15.9.2, “InnoDB Page Compression”](#).

See Also [hole punching](#), [transparent page compression](#).

spin

A type of **wait** operation that continuously tests whether a resource becomes available. This technique is used for resources that are typically held only for brief periods, where it is more efficient to wait in a “busy loop” than to put the thread to sleep and perform a context switch. If the resource does not become available within a short time, the spin loop ceases and another wait technique is used.

See Also [latch](#), [lock](#), [mutex](#), [wait](#).

SQL

The Structured Query Language that is standard for performing database operations. Often divided into the categories **DDL**, **DML**, and **queries**. MySQL includes some additional statement categories such as **replication**. See [Chapter 9, Language Structure](#) for the building blocks of SQL syntax, [Chapter 11, Data Types](#) for the data types to use for MySQL table columns, [Chapter 13, SQL Statement Syntax](#) for details about SQL statements and their associated categories, and [Chapter 12, Functions and Operators](#) for standard and MySQL-specific functions to use in queries.

See Also [DDL](#), [DML](#), [query](#), [replication](#).

SSD

Acronym for “solid-state drive”. A type of storage device with different performance characteristics than a traditional hard disk drive (**HDD**): smaller storage capacity, faster for random reads, no moving parts, and with a number of considerations affecting write performance. Its performance characteristics can influence the throughput of a **disk-bound** workload.

See Also [disk-bound](#), [HDD](#).

startup

The process of starting the MySQL server. Typically done by one of the programs listed in [Section 4.3, “MySQL Server and Server-Startup Programs”](#). The opposite of **shutdown**.

See Also [shutdown](#).

statement-based replication

A form of **replication** where SQL statements are sent from the **master server** and replayed on the **slave server**. It requires some care with the setting for the `innodb_autoinc_lock_mode` option, to avoid potential timing problems with **auto-increment locking**.

See Also [auto-increment locking](#), [innodb_autoinc_lock_mode](#), [master server](#), [replication](#), [row-based replication](#), [slave server](#).

statistics

Estimated values relating to each [InnoDB table](#) and **index**, used to construct an efficient **query execution plan**. The main values are the **cardinality** (number of distinct values) and the total number of table rows or index entries. The statistics for the table represent the data in its **primary key** index. The statistics for a **secondary index** represent the rows covered by that index.

The values are estimated rather than counted precisely because at any moment, different **transactions** can be inserting and deleting rows from the same table. To keep the values from being recalculated frequently, you can

enable **persistent statistics**, where the values are stored in [InnoDB](#) system tables, and refreshed only when you issue an [ANALYZE TABLE](#) statement.

You can control how **NULL** values are treated when calculating statistics through the [innodb_stats_method](#) configuration option.

Other types of statistics are available for database objects and database activity through the **INFORMATION_SCHEMA** and **PERFORMANCE_SCHEMA** tables.

See Also [cardinality](#), [index](#), [INFORMATION_SCHEMA](#), [NULL](#), [Performance Schema](#), [primary key](#), [query execution plan](#), [secondary index](#), [table](#), [transaction](#).

stemming

The ability to search for different variations of a word based on a common root word, such as singular and plural, or past, present, and future verb tense. This feature is currently supported in [MyISAM full-text search](#) feature but not in **FULLTEXT indexes** for [InnoDB](#) tables.

See Also [full-text search](#), [FULLTEXT index](#).

stopword

In a **FULLTEXT index**, a word that is considered common or trivial enough that it is omitted from the **search index** and ignored in search queries. Different configuration settings control stopwords processing for [InnoDB](#) and [MyISAM](#) tables. See [Section 12.9.4, “Full-Text Stopwords”](#) for details.

See Also [FULLTEXT index](#), [search index](#).

storage engine

A component of the MySQL database that performs the low-level work of storing, updating, and querying data. In MySQL 5.5 and higher, **InnoDB** is the default storage engine for new tables, superseding [MyISAM](#). Different storage engines are designed with different tradeoffs between factors such as memory usage versus disk usage, read speed versus write speed, and speed versus robustness. Each storage engine manages specific tables, so we refer to [InnoDB](#) tables, [MyISAM](#) tables, and so on.

The **MySQL Enterprise Backup** product is optimized for backing up [InnoDB](#) tables. It can also back up tables handled by [MyISAM](#) and other storage engines.

See Also [InnoDB](#), [MySQL Enterprise Backup](#), [table type](#).

stored generated column

A column whose values are computed from an expression included in the column definition. Column values are evaluated and stored when rows are inserted or updated. A stored generated column requires storage space and can be indexed.

Contrast with **virtual generated column**.

See Also [base column](#), [generated column](#), [virtual generated column](#).

strict mode

The general name for the setting controlled by the [innodb_strict_mode](#) option. Turning on this setting causes certain conditions that are normally treated as warnings, to be considered errors. For example, certain invalid combinations of options related to **file format** and **row format**, that normally produce a warning and continue with default values, now cause the [CREATE TABLE](#) operation to fail. [innodb_strict_mode](#) is enabled by default in MySQL 5.7.

MySQL also has something called strict mode. See [Section 5.1.10, “Server SQL Modes”](#).

See Also [file format](#), [innodb_strict_mode](#), [row format](#).

sublist

Within the list structure that represents the **buffer pool**, pages that are relatively old and relatively new are represented by different portions of the **list**. A set of parameters control the size of these portions and the dividing point between the new and old pages.

See Also [buffer pool](#), [eviction](#), [list](#), [LRU](#).

supremum record

A **pseudo-record** in an index, representing the **gap** above the largest value in that index. If a transaction has a statement such as `SELECT ... FROM ... WHERE col > 10 FOR UPDATE;`, and the largest value in the column is 20, it is a lock on the supremum record that prevents other transactions from inserting even larger values such as 50, 100, and so on.

See Also [gap](#), [infimum record](#), [pseudo-record](#).

surrogate key

Synonym name for **synthetic key**.

See Also [synthetic key](#).

synthetic key

An indexed column, typically a **primary key**, where the values are assigned arbitrarily. Often done using an **auto-increment** column. By treating the value as completely arbitrary, you can avoid overly restrictive rules and faulty application assumptions. For example, a numeric sequence representing employee numbers might have a gap if an employee was approved for hiring but never actually joined. Or employee number 100 might have a later hiring date than employee number 500, if they left the company and later rejoined. Numeric values also produce shorter values of predictable length. For example, storing numeric codes meaning “Road”, “Boulevard”, “Expressway”, and so on is more space-efficient than repeating those strings over and over.

Also known as a **surrogate key**. Contrast with **natural key**.

See Also [auto-increment](#), [natural key](#), [primary key](#), [surrogate key](#).

system tablespace

One or more data files (**ibdata files**) containing the metadata for [InnoDB](#)-related objects, and the storage areas for the **change buffer**, and the **doublewrite buffer**. It may also contain table and index data for [InnoDB](#) tables if tables were created in the system tablespace instead of **file-per-table** or **general tablespaces**. The data and metadata in the system tablespace apply to all **databases** in a MySQL **instance**.

Prior to MySQL 5.6.7, the default was to keep all [InnoDB](#) tables and indexes inside the system tablespace, often causing this file to become very large. Because the system tablespace never shrinks, storage problems could arise if large amounts of temporary data were loaded and then deleted. In MySQL 8.0, the default is **file-per-table** mode, where each table and its associated indexes are stored in a separate **.ibd file**. This default makes it easier to use [InnoDB](#) features that rely on [DYNAMIC](#) and [COMPRESSED](#) row formats, such as table **compression**, efficient storage of **off-page columns**, and large index key prefixes.

Keeping all table data in the system tablespace or in separate **.ibd** files has implications for storage management in general. The **MySQL Enterprise Backup** product might back up a small set of large files, or many smaller files. On systems with thousands of tables, the file system operations to process thousands of **.ibd** files can cause bottlenecks.

[InnoDB](#) introduced general tablespaces in MySQL 5.7.6, which are also represented by **.ibd** files. General tablespaces are shared tablespaces created using [CREATE TABLESPACE](#) syntax. They can be created outside of the MySQL data directory, are capable of holding multiple tables, and support tables of all row formats.

See Also [change buffer](#), [compression](#), [data dictionary](#), [database](#), [doublewrite buffer](#), [dynamic row format](#), [file-per-table](#), [general tablespace](#), [.ibd file](#), [ibdata file](#), [innodb_file_per_table](#), [instance](#), [MySQL Enterprise Backup](#), [off-page column](#), [tablespace](#), [undo log](#).

T

table

Each MySQL table is associated with a particular **storage engine**. [InnoDB](#) tables have particular **physical** and **logical** characteristics that affect performance, **scalability**, **backup**, administration, and application development.

In terms of file storage, an [InnoDB](#) table belongs to one of the following tablespace types:

- The shared [InnoDB system tablespace](#), which is comprised of one or more **ibdata files**.
- A **file-per-table** tablespace, comprised of an individual **.ibd file**.
- A shared **general tablespace**, comprised of an individual **.ibd** file. General tablespaces were introduced in MySQL 5.7.6.

.ibd data files contain both table and **index** data.

[InnoDB](#) tables created in file-per-table tablespaces can use **DYNAMIC** or **COMPRESSED** row format. These row formats enable [InnoDB](#) features such as **compression**, efficient storage of **off-page columns**, and large index key prefixes. General tablespaces support all row formats.

The system tablespace supports tables that use **REDUNDANT**, **COMPACT**, and **DYNAMIC** row formats. System tablespace support for the **DYNAMIC** row format was added in MySQL 5.7.6.

The **rows** of an [InnoDB](#) table are organized into an index structure known as the **clustered index**, with entries sorted based on the **primary key** columns of the table. Data access is optimized for queries that filter and sort on the primary key columns, and each index contains a copy of the associated primary key columns for each entry. Modifying values for any of the primary key columns is an expensive operation. Thus an important aspect of [InnoDB](#) table design is choosing a primary key with columns that are used in the most important queries, and keeping the primary key short, with rarely changing values.

See Also [backup](#), [clustered index](#), [compact row format](#), [compressed row format](#), [compression](#), [dynamic row format](#), [Fast Index Creation](#), [file-per-table](#), [.ibd file](#), [index](#), [off-page column](#), [primary key](#), [redundant row format](#), [row](#), [system tablespace](#), [tablespace](#).

table lock

A lock that prevents any other **transaction** from accessing a table. [InnoDB](#) makes considerable effort to make such locks unnecessary, by using techniques such as **online DDL**, **row locks** and **consistent reads** for processing **DML** statements and **queries**. You can create such a lock through SQL using the [LOCK TABLE](#) statement; one of the steps in migrating from other database systems or MySQL storage engines is to remove such statements wherever practical.

See Also [consistent read](#), [DML](#), [lock](#), [locking](#), [online DDL](#), [query](#), [row lock](#), [table](#), [transaction](#).

table scan

See [full table scan](#).

table statistics

See [statistics](#).

table type

Obsolete synonym for **storage engine**. We refer to [InnoDB](#) tables, [MyISAM](#) tables, and so on.

See Also [InnoDB](#), [storage engine](#).

tablespace

A data file that can hold data for one or more [InnoDB tables](#) and associated **indexes**.

The **system tablespace** contains the [InnoDB data dictionary](#), and prior to MySQL 5.6 holds all other [InnoDB](#) tables by default.

The [innodb_file_per_table](#) option, enabled by default in MySQL 5.6 and higher, allows tables to be created in their own tablespaces. File-per-table tablespaces support features such as efficient storage of **off-page columns**, table compression, and transportable tablespaces. See [Section 15.7.4, “InnoDB File-Per-Table Tablespaces”](#) for details.

[InnoDB](#) introduced general tablespaces in MySQL 5.7.6. General tablespaces are shared tablespaces created using `CREATE TABLESPACE` syntax. They can be created outside of the MySQL data directory, are capable of holding multiple tables, and support tables of all row formats.

MySQL NDB Cluster also groups its tables into tablespaces. See [NDB Cluster Disk Data Objects](#) for details. See Also [compressed row format](#), [data dictionary](#), [data files](#), [file-per-table](#), [general tablespace](#), [index](#), [innodb_file_per_table](#), [system tablespace](#), [table](#).

temporary table

A **table** whose data does not need to be truly permanent. For example, temporary tables might be used as storage areas for intermediate results in complicated calculations or transformations; this intermediate data would not need to be recovered after a crash. Database products can take various shortcuts to improve the performance of operations on temporary tables, by being less scrupulous about writing data to disk and other measures to protect the data across restarts.

Sometimes, the data itself is removed automatically at a set time, such as when the transaction ends or when the session ends. With some database products, the table itself is removed automatically too. See Also [table](#).

temporary tablespace

The tablespace for non-compressed [InnoDB temporary tables](#) and related objects, introduced in MySQL 5.7. The [innodb_temp_data_file_path](#) configuration file option defines the relative path, name, size, and attributes for temporary tablespace data files. If [innodb_temp_data_file_path](#) is not specified, the default behavior is to create a single auto-extending 12MB data file named `ibtmp1` in the data directory. The temporary tablespace is recreated on each server start and receives a dynamically generated **space ID**. The temporary tablespace cannot reside on a raw device. Startup is refused if the temporary tablespace cannot be created.

The temporary tablespace is removed on normal shutdown or on an aborted initialization. The temporary tablespace is not removed when a crash occurs. In this case, the database administrator may remove the temporary tablespace manually or restart the server with the same configuration, which removes and recreates the temporary tablespace.

See Also [ibtmp file](#), [space ID](#), [system tablespace](#), [temporary table](#).

text collection

The set of columns included in a **FULLTEXT index**.

See Also [FULLTEXT index](#).

thread

A unit of processing that is typically more lightweight than a **process**, allowing for greater **concurrency**.

See Also [concurrency](#), [master thread](#), [process](#), [Pthreads](#).

torn page

An error condition that can occur due to a combination of I/O device configuration and hardware failure. If data is written out in chunks smaller than the [InnoDB page size](#) (by default, 16KB), a hardware failure while writing could result in only part of a page being stored to disk. The [InnoDB doublewrite buffer](#) guards against this possibility.

See Also [doublewrite buffer](#).

TPS

Acronym for “**transactions per second**”, a unit of measurement sometimes used in benchmarks. Its value depends on the **workload** represented by a particular benchmark test, combined with factors that you control such as the hardware capacity and database configuration.

See Also [transaction](#), [workload](#).

transaction

Transactions are atomic units of work that can be **committed** or **rolled back**. When a transaction makes multiple changes to the database, either all the changes succeed when the transaction is committed, or all the changes are undone when the transaction is rolled back.

Database transactions, as implemented by [InnoDB](#), have properties that are collectively known by the acronym **ACID**, for atomicity, consistency, isolation, and durability.
See Also [ACID](#), [commit](#), [isolation level](#), [lock](#), [rollback](#).

transaction ID

An internal field associated with each **row**. This field is physically changed by [INSERT](#), [UPDATE](#), and [DELETE](#) operations to record which **transaction** has locked the row.
See Also [implicit row lock](#), [row](#), [transaction](#).

transparent page compression

A feature added in MySQL 5.7.8 that permits page-level compression for [InnoDB](#) tables that reside in **file-per-table** tablespaces. Page compression is enabled by specifying the [COMPRESSION](#) attribute with [CREATE TABLE](#) or [ALTER TABLE](#). For more information, see [Section 15.9.2, “InnoDB Page Compression”](#).
See Also [file-per-table](#), [hole punching](#), [sparse file](#).

transportable tablespace

A feature that allows a **tablespace** to be moved from one instance to another. Traditionally, this has not been possible for [InnoDB](#) tablespaces because all table data was part of the **system tablespace**. In MySQL 5.6 and higher, the [FLUSH TABLES ... FOR EXPORT](#) syntax prepares an [InnoDB](#) table for copying to another server; running [ALTER TABLE ... DISCARD TABLESPACE](#) and [ALTER TABLE ... IMPORT TABLESPACE](#) on the other server brings the copied data file into the other instance. A separate **.cfg file**, copied along with the **.ibd file**, is used to update the table metadata (for example the **space ID**) as the tablespace is imported. See [Section 15.7.6, “Copying File-Per-Table Tablespaces to Another Instance”](#) for usage information.
See Also [.cfg file](#), [.ibd file](#), [space ID](#), [system tablespace](#), [tablespace](#).

troubleshooting

The process of determining the source of a problem. Some of the resources for troubleshooting MySQL problems include:

- [Section 2.10.2.1, “Troubleshooting Problems Starting the MySQL Server”](#)
- [Section 6.2.9, “Troubleshooting Problems Connecting to MySQL”](#)
- [Section B.5.3.2, “How to Reset the Root Password”](#)
- [Section B.5.2, “Common Errors When Using MySQL Programs”](#)
- [Section 15.20, “InnoDB Troubleshooting”](#).

truncate

A **DDL** operation that removes the entire contents of a table, while leaving the table and related indexes intact. Contrast with **drop**. Although conceptually it has the same result as a [DELETE](#) statement with no [WHERE](#) clause, it operates differently behind the scenes: [InnoDB](#) creates a new empty table, drops the old table, then renames the new table to take the place of the old one. Because this is a DDL operation, it cannot be **rolled back**.

If the table being truncated contains **foreign keys** that reference another table, the truncation operation uses a slower method of operation, deleting one row at a time so that corresponding rows in the referenced table can be deleted as needed by any [ON DELETE CASCADE](#) clause. (MySQL 5.5 and higher do not allow this slower form of truncate, and return an error instead if foreign keys are involved. In this case, use a [DELETE](#) statement instead.
See Also [DDL](#), [drop](#), [foreign key](#), [rollback](#).

tuple

A technical term designating an ordered set of elements. It is an abstract notion, used in formal discussions of database theory. In the database field, tuples are usually represented by the columns of a table row. They could also be represented by the result sets of queries, for example, queries that retrieved only some columns of a table, or columns from joined tables.

See Also [cursor](#).

two-phase commit

An operation that is part of a distributed **transaction**, under the **XA** specification. (Sometimes abbreviated as 2PC.) When multiple databases participate in the transaction, either all databases **commit** the changes, or all databases **roll back** the changes.

See Also [commit](#), [rollback](#), [transaction](#), [XA](#).

U

undo

Data that is maintained throughout the life of a **transaction**, recording all changes so that they can be undone in case of a **rollback** operation. It is stored in the **undo log** either within the **system tablespace** or in separate **undo tablespaces**. As of MySQL 8.0, undo logs reside in undo tablespaces by default.

See Also [rollback](#), [rollback segment](#), [system tablespace](#), [transaction](#), [undo log](#), [undo tablespace](#).

undo buffer

See [undo log](#).

undo log

A storage area that holds copies of data modified by active **transactions**. If another transaction needs to see the original data (as part of a **consistent read** operation), the unmodified data is retrieved from this storage area.

In MySQL 5.6 and higher, you can use the [innodb_undo_tablespaces](#) to create undo logs in **undo tablespaces**, optionally stored on another storage device such as an **SSD**. In MySQL 8.0, undo logs reside in undo tablespaces by default.

The undo log is split into separate portions, the **insert undo buffer** and the **update undo buffer**.

See Also [consistent read](#), [rollback segment](#), [SSD](#), [system tablespace](#), [transaction](#), [undo tablespace](#).

undo log segment

A collection of **undo logs**. Undo log segments exist within **rollback segments**. An undo log segment might contain undo logs from multiple transactions. An undo log segment can only be used by one transaction at a time but can be reused after it is released at transaction **commit** or **rollback**. May also be referred to as an “undo segment”.

See Also [commit](#), [rollback](#), [rollback segment](#), [undo log](#).

undo tablespace

An undo tablespace contains **undo logs**. Undo logs exist within **undo log segments**, which are contained within **rollback segments**. Rollback segments have traditionally resided in the system tablespace. As of MySQL 5.6, rollback segments can reside in undo tablespaces. The number of undo tablespaces is controlled by the [innodb_undo_tablespaces](#) configuration option.

For more information, see [Section 15.7.8, “Configuring Undo Tablespaces”](#).

See Also [rollback segment](#), [system tablespace](#), [undo log](#), [undo log segment](#).

unique constraint

A kind of **constraint** that asserts that a column cannot contain any duplicate values. In terms of **relational algebra**, it is used to specify 1-to-1 relationships. For efficiency in checking whether a value can be inserted (that is, the value does not already exist in the column), a unique constraint is supported by an underlying **unique index**.

See Also [constraint](#), [relational](#), [unique index](#).

unique index

An index on a column or set of columns that have a **unique constraint**. Because the index is known not to contain any duplicate values, certain kinds of lookups and count operations are more efficient than in the normal

kind of index. Most of the lookups against this type of index are simply to determine if a certain value exists or not. The number of values in the index is the same as the number of rows in the table, or at least the number of rows with non-null values for the associated columns.

Change buffering optimization does not apply to unique indexes. As a workaround, you can temporarily set `unique_checks=0` while doing a bulk data load into an `InnoDB` table. See Also [cardinality](#), [change buffering](#), [unique constraint](#), [unique key](#).

unique key

The set of columns (one or more) comprising a **unique index**. When you can define a `WHERE` condition that matches exactly one row, and the query can use an associated unique index, the lookup and error handling can be performed very efficiently. See Also [cardinality](#), [unique constraint](#), [unique index](#).

V

variable-length type

A data type of variable length. `VARCHAR`, `VARBINARY`, and `BLOB` and `TEXT` types are variable-length types.

`InnoDB` treats fixed-length fields greater than or equal to 768 bytes in length as variable-length fields, which can be stored **off-page**. For example, a `CHAR(255)` column can exceed 768 bytes if the maximum byte length of the character set is greater than 3, as it is with `utf8mb4`. See Also [off-page column](#), [overflow page](#).

victim

The **transaction** that is automatically chosen to be **rolled back** when a **deadlock** is detected. `InnoDB` rolls back the transaction that has updated the fewest rows.

Deadlock detection can be disabled using the `innodb_deadlock_detect` configuration option. See Also [deadlock](#), [deadlock detection](#), [innodb_lock_wait_timeout](#), [transaction](#).

virtual column

See [virtual generated column](#).

virtual generated column

A column whose values are computed from an expression included in the column definition. Column values are not stored, but are evaluated when rows are read, immediately after any `BEFORE` triggers. A virtual generated column takes no storage. `InnoDB` supports secondary indexes on virtual generated columns.

Contrast with **stored generated column**.

See Also [base column](#), [generated column](#), [stored generated column](#).

virtual index

A virtual index is a **secondary index** on one or more **virtual generated columns** or on a combination of virtual generated columns and regular columns or stored generated columns. For more information, see [Section 13.1.18.9, “Secondary Indexes and Generated Columns”](#).

See Also [secondary index](#), [stored generated column](#), [virtual generated column](#).

W

wait

When an operation, such as acquiring a **lock**, **mutex**, or **latch**, cannot be completed immediately, `InnoDB` pauses and tries again. The mechanism for pausing is elaborate enough that this operation has its own name,

the **wait**. Individual threads are paused using a combination of internal [InnoDB](#) scheduling, operating system [wait\(\)](#) calls, and short-duration **spin** loops.

On systems with heavy load and many transactions, you might use the output from the [SHOW INNODB STATUS](#) command or **Performance Schema** to determine whether threads are spending too much time waiting, and if so, how you can improve **concurrency**.

See Also [concurrency](#), [latch](#), [lock](#), [mutex](#), [Performance Schema](#), [spin](#).

warm backup

A **backup** taken while the database is running, but that restricts some database operations during the backup process. For example, tables might become read-only. For busy applications and websites, you might prefer a **hot backup**.

See Also [backup](#), [cold backup](#), [hot backup](#).

warm up

To run a system under a typical **workload** for some time after startup, so that the **buffer pool** and other memory regions are filled as they would be under normal conditions. This process happens naturally over time when a MySQL server is restarted or subjected to a new workload.

Typically, you run a workload for some time to warm up the buffer pool before running performance tests, to ensure consistent results across multiple runs; otherwise, performance might be artificially low during the first run.

In MySQL 5.6, you can speed up the warmup process by enabling the [innodb_buffer_pool_dump_at_shutdown](#) and [innodb_buffer_pool_load_at_startup](#) configuration options, to bring the contents of the buffer pool back into memory after a restart. These options are enabled by default in MySQL 5.7. See [Section 15.6.3.8, “Saving and Restoring the Buffer Pool State”](#).

See Also [buffer pool](#), [workload](#).

workload

The combination and volume of **SQL** and other database operations, performed by a database application during typical or peak usage. You can subject the database to a particular workload during performance testing to identify **bottlenecks**, or during capacity planning.

See Also [bottleneck](#), [CPU-bound](#), [disk-bound](#), [SQL](#).

write combining

An optimization technique that reduces write operations when **dirty pages** are **flushed** from the [InnoDB buffer pool](#). If a row in a page is updated multiple times, or multiple rows on the same page are updated, all of those changes are stored to the data files in a single write operation rather than one write for each change.

See Also [buffer pool](#), [dirty page](#), [flush](#).

X

XA

A standard interface for coordinating distributed **transactions**, allowing multiple databases to participate in a transaction while maintaining **ACID** compliance. For full details, see [Section 13.3.8, “XA Transactions”](#).

XA Distributed Transaction support is enabled by default. If you are not using this feature, you can disable the [innodb_support_xa](#) configuration option, avoiding the performance overhead of an extra fsync for each transaction.

As of MySQL 5.7.10, disabling [innodb_support_xa](#) is not permitted as it makes replication unsafe and prevents performance gains associated with **binary log** group commit. The [innodb_support_xa](#) configuration option is removed in MySQL 8.0.

See Also [ACID](#), [binary log](#), [commit](#), [transaction](#), [two-phase commit](#).

Y

young

A characteristic of a **page** in the [InnoDB buffer pool](#) meaning it has been accessed recently, and so is moved within the buffer pool data structure, so that it will not be **flushed** soon by the **LRU** algorithm. This term is used in some **INFORMATION_SCHEMA** column names of tables related to the buffer pool.

See Also [buffer pool](#), [flush](#), [INFORMATION_SCHEMA](#), [LRU](#), [page](#).
