Since none of the column values is `3F` (that is, the question mark character, `?`), we know that every conversion worked.

#### A.11.13 Why do CJK strings sort incorrectly in Unicode? (I)

CJK sorting problems that occurred in older MySQL versions can be solved as of MySQL 8.0 by using the `utf8mb4` character set and the `utf8mb4_ja_0900_as_cs` collation.

#### A.11.14 Why do CJK strings sort incorrectly in Unicode? (II)

CJK sorting problems that occurred in older MySQL versions can be solved as of MySQL 8.0 by using the `utf8mb4` character set and the `utf8mb4_ja_0900_as_cs` collation.

#### A.11.15 Why are my supplementary characters rejected by MySQL?

Supplementary characters lie outside the Unicode *Basic Multilingual Plane / Plane 0*. BMP characters have code point values between `U+0000` and `U+FFFF`. Supplementary characters have code point values between `U+10000` and `U+10FFFF`.

To store supplementary characters, you must use a character set that permits them:

- The `utf8` and `ucs2` character sets support BMP characters only.

The `utf8` character set permits only `UTF-8` characters that take up to three bytes. This has led to reports such as that found in Bug #12600, which we rejected as “not a bug”. With `utf8`, MySQL must truncate an input string when it encounters bytes that it does not understand. Otherwise, it is unknown how long the bad multibyte character is.

One possible workaround is to use `ucs2` instead of `utf8`, in which case the “bad” characters are changed to question marks. However, no truncation takes place. You can also change the data type to `BLOB` or `BINARY`, which perform no validity checking.

- The `utf8mb4`, `utf16`, `utf16le`, and `utf32` character sets support BMP characters, as well as supplementary characters outside the BMP.

#### A.11.16 Should “CJK” be “CJKV”?

No. The term “CJKV” (*Chinese Japanese Korean Vietnamese*) refers to Vietnamese character sets which contain Han (originally Chinese) characters. MySQL supports the modern Vietnamese script with Western characters, but does not support the old Vietnamese script using Han characters.

As of MySQL 5.6, there are Vietnamese collations for Unicode character sets, as described in [Section 10.10.1, “Unicode Character Sets”](#).

#### A.11.17 Does MySQL permit CJK characters to be used in database and table names?

Yes.

#### A.11.18 Where can I find translations of the MySQL Manual into Chinese, Japanese, and Korean?

The Japanese translation of the MySQL 5.6 manual can be downloaded from <https://dev.mysql.com/doc/>.

#### A.11.19 Where can I get help with CJK and related issues in MySQL?

The following resources are available:

- A listing of MySQL user groups can be found at <https://wikis.oracle.com/display/mysql/List+of+MySQL+User+Groups>.
- View feature requests relating to character set issues at <http://tinyurl.com/y6xcuf>.
- Visit the MySQL [Character Sets, Collation, Unicode Forum](#). <http://forums.mysql.com/> also provides foreign-language forums.

## A.12 MySQL 8.0 FAQ: Connectors & APIs

For common questions, issues, and answers relating to the MySQL Connectors and other APIs, see the following areas of the Manual:

- [Section 28.7.25, “C API Common Issues”](#)
- [Common Problems with MySQL and PHP](#)
- [Connector/ODBC Notes and Tips](#)
- [Connector/NET Programming](#)
- [MySQL Connector/J 8.0 Developer Guide](#)

## A.13 MySQL 8.0 FAQ: Replication

In the following section, we provide answers to questions that are most frequently asked about MySQL Replication.

A.13.1 Must the slave be connected to the master all the time? .....	4543
A.13.2 Must I enable networking on my master and slave to enable replication? .....	4543
A.13.3 How do I know how late a slave is compared to the master? In other words, how do I know the date of the last statement replicated by the slave? .....	4543
A.13.4 How do I force the master to block updates until the slave catches up? .....	4543
A.13.5 What issues should I be aware of when setting up two-way replication? .....	4544

A.13.6 How can I use replication to improve performance of my system? .....	4544
A.13.7 What should I do to prepare client code in my own applications to use performance-enhancing replication? .....	4544
A.13.8 When and how much can MySQL replication improve the performance of my system? .....	4544
A.13.9 How can I use replication to provide redundancy or high availability? .....	4545
A.13.10 How do I tell whether a master server is using statement-based or row-based binary logging format? .....	4546
A.13.11 How do I tell a slave to use row-based replication? .....	4546
A.13.12 How do I prevent <a href="#">GRANT</a> and <a href="#">REVOKE</a> statements from replicating to slave machines? ....	4546
A.13.13 Does replication work on mixed operating systems (for example, the master runs on Linux while slaves run on OS X and Windows)? .....	4546
A.13.14 Does replication work on mixed hardware architectures (for example, the master runs on a 64-bit machine while slaves run on 32-bit machines)? .....	4546

**A.13.1** Must the slave be connected to the master all the time?

No, it does not. The slave can go down or stay disconnected for hours or even days, and then reconnect and catch up on updates. For example, you can set up a master/slave relationship over a dial-up link where the link is up only sporadically and for short periods of time. The implication of this is that, at any given time, the slave is not guaranteed to be in synchrony with the master unless you take some special measures.

To ensure that catchup can occur for a slave that has been disconnected, you must not remove binary log files from the master that contain information that has not yet been replicated to the slaves. Asynchronous replication can work only if the slave is able to continue reading the binary log from the point where it last read events.

**A.13.2** Must I enable networking on my master and slave to enable replication?

Yes, networking must be enabled on the master and slave. If networking is not enabled, the slave cannot connect to the master and transfer the binary log. Check that the [skip-networking](#) option has not been enabled in the configuration file for either server.

**A.13.3** How do I know how late a slave is compared to the master? In other words, how do I know the date of the last statement replicated by the slave?

Check the [Seconds\\_Behind\\_Master](#) column in the output from [SHOW SLAVE STATUS](#). See [Section 17.1.7.1, “Checking Replication Status”](#).

When the slave SQL thread executes an event read from the master, it modifies its own time to the event timestamp. (This is why [TIMESTAMP](#) is well replicated.) In the [Time](#) column in the output of [SHOW PROCESSLIST](#), the number of seconds displayed for the slave SQL thread is the number of seconds between the timestamp of the last replicated event and the real time of the slave machine. You can use this to determine the date of the last replicated event. Note that if your slave has been disconnected from the master for one hour, and then reconnects, you may immediately see large [Time](#) values such as 3600 for the slave SQL thread in [SHOW PROCESSLIST](#). This is because the slave is executing statements that are one hour old. See [Section 17.2.2, “Replication Implementation Details”](#).

**A.13.4** How do I force the master to block updates until the slave catches up?

Use the following procedure:

1. On the master, execute these statements:

```
mysql> FLUSH TABLES WITH READ LOCK;
mysql> SHOW MASTER STATUS;
```

Record the replication coordinates (the current binary log file name and position) from the output of the [SHOW](#) statement.

2. On the slave, issue the following statement, where the arguments to the `MASTER_POS_WAIT( )` function are the replication coordinate values obtained in the previous step:

```
mysql> SELECT MASTER_POS_WAIT('log_name', log_pos);
```

The `SELECT` statement blocks until the slave reaches the specified log file and position. At that point, the slave is in synchrony with the master and the statement returns.

3. On the master, issue the following statement to enable the master to begin processing updates again:

```
mysql> UNLOCK TABLES;
```

#### A.13.5 What issues should I be aware of when setting up two-way replication?

MySQL replication currently does not support any locking protocol between master and slave to guarantee the atomicity of a distributed (cross-server) update. In other words, it is possible for client A to make an update to co-master 1, and in the meantime, before it propagates to co-master 2, client B could make an update to co-master 2 that makes the update of client A work differently than it did on co-master 1. Thus, when the update of client A makes it to co-master 2, it produces tables that are different from what you have on co-master 1, even after all the updates from co-master 2 have also propagated. This means that you should not chain two servers together in a two-way replication relationship unless you are sure that your updates can safely happen in any order, or unless you take care of mis-ordered updates somehow in the client code.

You should also realize that two-way replication actually does not improve performance very much (if at all) as far as updates are concerned. Each server must do the same number of updates, just as you would have a single server do. The only difference is that there is a little less lock contention because the updates originating on another server are serialized in one slave thread. Even this benefit might be offset by network delays.

#### A.13.6 How can I use replication to improve performance of my system?

Set up one server as the master and direct all writes to it. Then configure as many slaves as you have the budget and rackspace for, and distribute the reads among the master and the slaves. You can also start the slaves with the `--skip-innodb`, `--low-priority-updates`, and `--delay-key-write=ALL` options to get speed improvements on the slave end. In this case, the slave uses nontransactional `MyISAM` tables instead of `InnoDB` tables to get more speed by eliminating transactional overhead.

#### A.13.7 What should I do to prepare client code in my own applications to use performance-enhancing replication?

See the guide to using replication as a scale-out solution, [Section 17.3.5, “Using Replication for Scale-Out”](#).

#### A.13.8 When and how much can MySQL replication improve the performance of my system?

MySQL replication is most beneficial for a system that processes frequent reads and infrequent writes. In theory, by using a single-master/multiple-slave setup, you can scale the system by adding more slaves until you either run out of network bandwidth, or your update load grows to the point that the master cannot handle it.

To determine how many slaves you can use before the added benefits begin to level out, and how much you can improve performance of your site, you must know your query patterns, and determine empirically by benchmarking the relationship between the throughput for reads and writes on a typical master and a typical slave. The example here shows a rather simplified

calculation of what you can get with replication for a hypothetical system. Let `reads` and `writes` denote the number of reads and writes per second, respectively.

Let's say that system load consists of 10% writes and 90% reads, and we have determined by benchmarking that `reads` is `1200 - 2 * writes`. In other words, the system can do 1,200 reads per second with no writes, the average write is twice as slow as the average read, and the relationship is linear. Suppose that the master and each slave have the same capacity, and that we have one master and `N` slaves. Then we have for each server (master or slave):

$$\text{reads} = 1200 - 2 * \text{writes}$$

$$\text{reads} = 9 * \text{writes} / (N + 1) \text{ (reads are split, but writes replicated to all slaves)}$$

$$9 * \text{writes} / (N + 1) + 2 * \text{writes} = 1200$$

$$\text{writes} = 1200 / (2 + 9/(N + 1))$$

The last equation indicates the maximum number of writes for `N` slaves, given a maximum possible read rate of 1,200 per second and a ratio of nine reads per write.

This analysis yields the following conclusions:

- If `N` = 0 (which means we have no replication), our system can handle about  $1200/11 = 109$  writes per second.
- If `N` = 1, we get up to 184 writes per second.
- If `N` = 8, we get up to 400 writes per second.
- If `N` = 17, we get up to 480 writes per second.
- Eventually, as `N` approaches infinity (and our budget negative infinity), we can get very close to 600 writes per second, increasing system throughput about 5.5 times. However, with only eight servers, we increase it nearly four times.

These computations assume infinite network bandwidth and neglect several other factors that could be significant on your system. In many cases, you may not be able to perform a computation similar to the one just shown that accurately predicts what will happen on your system if you add `N` replication slaves. However, answering the following questions should help you decide whether and by how much replication will improve the performance of your system:

- What is the read/write ratio on your system?
- How much more write load can one server handle if you reduce the reads?
- For how many slaves do you have bandwidth available on your network?

#### **A.13.9**How can I use replication to provide redundancy or high availability?

How you implement redundancy is entirely dependent on your application and circumstances. High-availability solutions (with automatic failover) require active monitoring and either custom scripts or third party tools to provide the failover support from the original MySQL server to the slave.

To handle the process manually, you should be able to switch from a failed master to a pre-configured slave by altering your application to talk to the new server or by adjusting the DNS for the MySQL server from the failed server to the new server.

For more information and some example solutions, see [Section 17.3.8, “Switching Masters During Failover”](#).

**A.13.10** How do I tell whether a master server is using statement-based or row-based binary logging format?

Check the value of the `binlog_format` system variable:

```
mysql> SHOW VARIABLES LIKE 'binlog_format';
```

The value shown will be one of `STATEMENT`, `ROW`, or `MIXED`. For `MIXED` mode, statement-based logging is used by default but replication switches automatically to row-based logging under certain conditions, such as unsafe statements. For information about when this may occur, see [Section 5.4.4.3, “Mixed Binary Logging Format”](#).

**A.13.11** How do I tell a slave to use row-based replication?

Slaves automatically know which format to use.

**A.13.12** How do I prevent `GRANT` and `REVOKE` statements from replicating to slave machines?

Start the server with the `--replicate-wild-ignore-table=mysql.%` option to ignore replication for tables in the `mysql` database.

**A.13.13** Does replication work on mixed operating systems (for example, the master runs on Linux while slaves run on OS X and Windows)?

Yes.

**A.13.14** Does replication work on mixed hardware architectures (for example, the master runs on a 64-bit machine while slaves run on 32-bit machines)?

Yes.

## A.14 MySQL 8.0 FAQ: MySQL Enterprise Thread Pool

A.14.1 What is the Thread Pool and what problem does it solve? .....	4546
A.14.2 How does the Thread Pool limit and manage concurrent sessions and transactions for optimal performance and throughput? .....	4546
A.14.3 How is the Thread Pool different from the client side Connection Pool? .....	4547
A.14.4 When should I use the Thread Pool? .....	4547
A.14.5 Are there recommended Thread Pool configurations? .....	4547

**A.14.1** What is the Thread Pool and what problem does it solve?

The MySQL Thread Pool is a MySQL server plugin that extends the default connection-handling capabilities of the MySQL server to limit the number of concurrently executing statements/queries and transactions to ensure that each has sufficient CPU and memory resources to fulfill its task. For MySQL 8.0, the Thread Pool plugin is included in MySQL Enterprise Edition, a commercial product.

The default thread-handling model in MySQL Server executes statements using one thread per client connection. As more clients connect to the server and execute statements, overall performance degrades. The Thread Pool plugin provides an alternative thread-handling model designed to reduce overhead and improve performance. The Thread Pool plugin increases server performance by efficiently managing statement execution threads for large numbers of client connections, especially on modern multi-CPU/Core systems.

For more information, see [Section 5.6.3, “MySQL Enterprise Thread Pool”](#).

**A.14.2** How does the Thread Pool limit and manage concurrent sessions and transactions for optimal performance and throughput?

The Thread Pool uses a “divide and conquer” approach to limiting and balancing concurrency. Unlike the default connection handling of the MySQL Server, the Thread Pool separates

connections and threads, so there is no fixed relationship between connections and the threads that execute statements received from those connections. The Thread Pool then manages client connections within configurable thread groups, where they are prioritized and queued based on the nature of the work they were submitted to accomplish.

For more information, see [Section 5.6.3.3, “Thread Pool Operation”](#).

#### **A.14.3**How is the Thread Pool different from the client side Connection Pool?

The MySQL Connection Pool operates on the client side to ensure that a MySQL client does not constantly connect to and disconnect from the MySQL server. It is designed to cache idle connections in the MySQL client for use by other users as they are needed. This minimizes the overhead and expense of establishing and tearing down connections as queries are submitted to the MySQL server. The MySQL Connection Pool has no visibility as to the query handling capabilities or load of the back-end MySQL server. By contrast, the Thread Pool operates on the MySQL server side and is designed to manage the execution of inbound concurrent connections and queries as they are received from the client connections accessing the back-end MySQL database. Because of the separation of duties, the MySQL Connection Pool and Thread Pool are orthogonal and can be used independent of each other.

MySQL Connection Pooling via the MySQL Connectors is covered in [Chapter 28, Connectors and APIs](#).

#### **A.14.4**When should I use the Thread Pool?

There are a few rules of thumb to consider for optimal Thread Pool use cases:

The MySQL `Threads_running` variable keeps track of the number of concurrent statements currently executing in the MySQL Server. If this variable consistently exceeds a region where the server won't operate optimally (usually going beyond 40 for InnoDB workloads), the Thread Pool will be beneficial, especially in extreme parallel overload situations.

If you are using the `innodb_thread_concurrency` to limit the number of concurrently executing statements, you will find the Thread Pool solves the same problem, only better, by assigning connections to thread groups, then queuing executions based on transactional content, user defined designations, and so forth.

Lastly, if your workload comprises mainly short queries, the Thread Pool will be beneficial.

To learn more, see [Section 5.6.3.4, “Thread Pool Tuning”](#).

#### **A.14.5**Are there recommended Thread Pool configurations?

The Thread Pool has a number of user case driven configuration parameters that affect its performance. To learn about these and tips on tuning, see [Section 5.6.3.4, “Thread Pool Tuning”](#).

## **A.15 MySQL 8.0 FAQ: InnoDB Change Buffer**

A.15.1 What types of operations modify secondary indexes and result in change buffering? .....	4547
A.15.2 What is the benefit of the <code>InnoDB</code> change buffer? .....	4548
A.15.3 Does the change buffer support other types of indexes? .....	4548
A.15.4 How much space does <code>InnoDB</code> use for the change buffer? .....	4548
A.15.5 How do I determine the current size of the change buffer? .....	4548
A.15.6 When does change buffer merging occur? .....	4548
A.15.7 When is the change buffer flushed? .....	4549
A.15.8 When should the change buffer be used? .....	4549
A.15.9 When should the change buffer not be used? .....	4549
A.15.10 Where can I find additional information about the change buffer? .....	4549

#### **A.15.1**What types of operations modify secondary indexes and result in change buffering?

`INSERT`, `UPDATE`, and `DELETE` operations can modify secondary indexes. If an affected index page is not in the buffer pool, the changes can be buffered in the change buffer.

#### A.15.2 What is the benefit of the InnoDB change buffer?

Buffering secondary index changes when secondary index pages are not in the buffer pool avoids expensive random access I/O operations that would be required to immediately read in affected index pages from disk. Buffered changes can be applied later, in batches, as pages are read into the buffer pool by other read operations.

#### A.15.3 Does the change buffer support other types of indexes?

No. The change buffer only supports secondary indexes. Clustered indexes, full-text indexes, and spatial indexes are not supported. Full-text indexes have their own caching mechanism.

#### A.15.4 How much space does InnoDB use for the change buffer?

Prior to the introduction of the `innodb_change_buffer_max_size` configuration option in MySQL 5.6, the maximum size of the on-disk change buffer in the system tablespace was 1/3 of the InnoDB buffer pool size.

In MySQL 5.6 and later, the `innodb_change_buffer_max_size` configuration option defines the maximum size of the change buffer as a percentage of the total buffer pool size. By default, `innodb_change_buffer_max_size` is set to 25. The maximum setting is 50.

InnoDB does not buffer an operation if it would cause the on-disk change buffer to exceed the defined limit.

Change buffer pages are not required to persist in the buffer pool and may be evicted by LRU operations.

#### A.15.5 How do I determine the current size of the change buffer?

The current size of the change buffer is reported by `SHOW ENGINE INNODB STATUS \G`, under the `INSERT BUFFER AND ADAPTIVE HASH INDEX` heading. For example:

```
-----
INSERT BUFFER AND ADAPTIVE HASH INDEX
-----
Ibuf: size 1, free list len 0, seg size 2, 0 merges
```

Relevant data points include:

- `size`: The number of pages used within the change buffer. Change buffer size is equal to `seg size - (1 + free list len)`. The `1 +` value represents the change buffer header page.
- `seg size`: The size of the change buffer, in pages.

For information about monitoring change buffer status, see [Section 15.5.2, “Change Buffer”](#).

#### A.15.6 When does change buffer merging occur?

- When a page is read into the buffer pool, buffered changes are merged upon completion of the read, before the page is made available.
- Change buffer merging is performed as a background task. The `innodb_io_capacity` parameter sets an upper limit on the I/O activity performed by InnoDB background tasks such as merging data from the change buffer.
- A change buffer merge is performed during crash recovery. Changes are applied from the change buffer (in the system tablespace) to leaf pages of secondary indexes as index pages are read into the buffer pool.

- The change buffer is fully durable and will survive a system crash. Upon restart, change buffer merge operations resume as part of normal operations.
- A full merge of the change buffer can be forced as part of a slow server shutdown using `--innodb-fast-shutdown=0`.

**A.15.7** When is the change buffer flushed?

Updated pages are flushed by the same flushing mechanism that flushes the other pages that occupy the buffer pool.

**A.15.8** When should the change buffer be used?

The change buffer is a feature designed to reduce random I/O to secondary indexes as indexes grow larger and no longer fit in the [InnoDB](#) buffer pool. Generally, the change buffer should be used when the entire data set does not fit into the buffer pool, when there is substantial DML activity that modifies secondary index pages, or when there are lots of secondary indexes that are regularly changed by DML activity.

**A.15.9** When should the change buffer not be used?

You might consider disabling the change buffer if the entire data set fits within the [InnoDB](#) buffer pool, if you have relatively few secondary indexes, or if you are using solid-state storage, where random reads are about as fast as sequential reads. Before making configuration changes, it is recommended that you run tests using a representative workload to determine if disabling the change buffer provides any benefit.

**A.15.10** Where can I find additional information about the change buffer?

See [Section 15.5.2, “Change Buffer”](#).

## A.16 MySQL 8.0 FAQ: InnoDB Tablespace Encryption

A.16.1 Is data decrypted for users who are authorized to see it? .....	4549
A.16.2 What is the overhead associated with <a href="#">InnoDB</a> tablespace encryption? .....	4550
A.16.3 What are the encryption algorithms used with <a href="#">InnoDB</a> tablespace encryption? .....	4550
A.16.4 Is it possible to use 3rd party encryption algorithms in place of the one provided by the <a href="#">InnoDB</a> tablespace encryption feature? .....	4550
A.16.5 Can indexed columns be encrypted? .....	4550
A.16.6 What data types and data lengths does <a href="#">InnoDB</a> tablespace encryption support? .....	4550
A.16.7 Does data remain encrypted on the network? .....	4550
A.16.8 Does database memory contain clear-text or encrypted data? .....	4550
A.16.9 How do I know which data to encrypt? .....	4550
A.16.10 How is <a href="#">InnoDB</a> tablespace encryption different from encryption functions MySQL already provides? .....	4550
A.16.11 Does the transportable tablespaces feature work with <a href="#">InnoDB</a> tablespace encryption? ...	4550
A.16.12 Does compression work with <a href="#">InnoDB</a> tablespace encryption? .....	4551
A.16.13 Can I use <a href="#">mysqldump</a> or <a href="#">mysqlpump</a> with encrypted tables? .....	4551
A.16.14 How do I change (rotate, re-key) the master encryption key? .....	4551
A.16.15 How do I migrate data from a clear-text <a href="#">InnoDB</a> tablespace to an encrypted <a href="#">InnoDB</a> tablespace? .....	4551

**A.16.1** Is data decrypted for users who are authorized to see it?

Yes. [InnoDB](#) tablespace encryption is designed to transparently apply encryption within the database without impacting existing applications. Returning data in encrypted format would break most existing applications. [InnoDB](#) tablespace encryption provides the benefit of encryption without the overhead associated with traditional database encryption solutions, which would typically require expensive and substantial changes to applications, database triggers, and views.

**A.16.2**What is the overhead associated with [InnoDB](#) tablespace encryption?

There is no additional storage overhead. According to internal benchmarks, performance overhead amounts to a single digit percentage difference.

**A.16.3**What are the encryption algorithms used with [InnoDB](#) tablespace encryption?

[InnoDB](#) tablespace encryption supports the Advanced Encryption Standard (AES256) block-based encryption algorithm. It uses Electronic Codebook (ECB) block encryption mode for tablespace key encryption and Cipher Block Chaining (CBC) block encryption mode for data encryption.

**A.16.4**Is it possible to use 3rd party encryption algorithms in place of the one provided by the [InnoDB](#) tablespace encryption feature?

No, it is not possible to use other encryption algorithms. The provided encryption algorithm is broadly accepted.

**A.16.5**Can indexed columns be encrypted?

[InnoDB](#) tablespace encryption supports all indexes transparently.

**A.16.6**What data types and data lengths does [InnoDB](#) tablespace encryption support?

[InnoDB](#) tablespace encryption supports all supported data types. There is no data length limitation.

**A.16.7**Does data remain encrypted on the network?

Data encrypted by the [InnoDB](#) tablespace encryption feature is decrypted when it is read from the tablespace file. Thus, if the data is on the network, it is in clear-text form. However, data on the network can be encrypted using MySQL network encryption, which encrypts data traveling to and from a database using SSL/TLS.

**A.16.8**Does database memory contain clear-text or encrypted data?

With [InnoDB](#) tablespace encryption, in-memory data is decrypted, which provides complete transparency.

**A.16.9**How do I know which data to encrypt?

Compliance with the PCI-DSS standard requires that credit card numbers (Primary Account Number, or 'PAN') be stored in encrypted form. Breach Notification Laws (for example, CA SB 1386, CA AB 1950, and similar laws in 43+ more US states) require encryption of first name, last name, driver license number, and other PII data. In early 2008, CA AB 1298 added medical and health insurance information to PII data. Additionally, industry specific privacy and security standards may require encryption of certain assets. For example, assets such as pharmaceutical research results, oil field exploration results, financial contracts, or personal data of law enforcement informants may require encryption. In the health care industry, the privacy of patient data, health records and X-ray images is of the highest importance.

**A.16.10**How is [InnoDB](#) tablespace encryption different from encryption functions MySQL already provides?

There are symmetric and asymmetric encryption APIs in MySQL that can be used to manually encrypt data within the database. However, the application must manage encryption keys and perform required encryption and decryption operations by calling API functions. [InnoDB](#) tablespace encryption requires no application changes, is transparent to end users, and provides automated, built-in key management.

**A.16.11**Does the transportable tablespaces feature work with [InnoDB](#) tablespace encryption?

Yes. It is supported for encrypted file-per-table tablespaces. For more information, see [Exporting Encrypted Tablespaces](#).

**A.16.12** Does compression work with [InnoDB](#) tablespace encryption?

Customers using [InnoDB](#) tablespace encryption receive the full benefit of compression because compression is applied before data blocks are encrypted.

**A.16.13** Can I use [mysqldump](#) or [mysqlpump](#) with encrypted tables?

Yes. Because these utilities create logical backups, the data dumped from encrypted tables is not encrypted.

**A.16.14** How do I change (rotate, re-key) the master encryption key?

[InnoDB](#) tablespace encryption uses a two tier key mechanism. When tablespace encryption is used, individual tablespace keys are stored in the header of the underlying tablespace data file. Tablespace keys are encrypted using the master encryption key. The master encryption key is generated when tablespace encryption is enabled, and is stored outside the database. The master encryption key is rotated using the [ALTER INSTANCE ROTATE INNODB MASTER KEY](#) statement, which generates a new master encryption key, stores the key, and rotates the key into use.

**A.16.15** How do I migrate data from a clear-text [InnoDB](#) tablespace to an encrypted [InnoDB](#) tablespace?

Transferring data from one tablespace to another is not required. To encrypt data in an [InnoDB](#) file-per-table tablespace, run [ALTER TABLE \*tbl\\_name\* ENCRYPTION = 'Y'](#). To encrypt a general tablespace or the [mysql](#) tablespace, run [ALTER TABLESPACE \*tablespace\\_name\* ENCRYPTION = 'Y'](#). Encryption support for general tablespaces was introduced in MySQL 8.0.13. Encryption support for the [mysql](#) system tablespace is available as of MySQL 8.0.16.

## A.17 MySQL 8.0 FAQ: Virtualization Support

**A.17.1** Is MySQL supported on virtualized environments such as Oracle VM, VMWare, Docker, Microsoft Hyper-V, or others? ..... 4551**A.17.1** Is MySQL supported on virtualized environments such as Oracle VM, VMWare, Docker, Microsoft Hyper-V, or others?

MySQL is supported on virtualized environments, but is certified only for [Oracle VM](#). Contact Oracle Support for more information.

Be aware of potential problems when using virtualization software. The usual ones are related to performance, performance degradations, slowness, or unpredictability of disk, I/O, network, and memory.

---

## Appendix B Errors, Error Codes, and Common Problems

B.6.4 Query-Related Issues .....	5047
B.6.5 Optimizer-Related Issues .....	5054
B.6.6 Table Definition-Related Issues .....	5054
B.6.7 Known Issues in MySQL .....	5055

This appendix describes the types of error information MySQL provides and how to obtain information about them. It also lists the error messages that the MySQL server and MySQL client programs generate. The final section is for troubleshooting. It describes common problems and errors that may occur and potential resolutions.

### Additional Resources

Other sections that discuss error-related topics include:

- Information about configuring where and how the server writes the error log: [Section 5.4.2, “The Error Log”](#)
- Information about the character set used for error messages: [Section 10.6, “Error Message Character Set”](#)
- Information about the language used for error messages: [Section 10.11, “Setting the Error Message Language”](#)
- Information about errors related to [InnoDB](#): [Section 15.20.4, “InnoDB Error Handling”](#)

### B.1 Error Message Sources and Components

This section discusses how error messages originate within MySQL and the components they contain.

- [Error Message Sources](#)
- [Error Message Components](#)
- [Error Code Ranges](#)

#### Error Message Sources

Error messages can originate on the server side or the client side:

- On the server side, error messages may occur during the startup and shutdown processes, as a result of issues that occur during SQL statement execution, and so forth.
- The MySQL server writes some error messages to its error log. These indicate issues of interest to database administrators or that require DBA action.

- The server sends other error messages to client programs. These indicate issues pertaining only to a particular client. The MySQL client library takes errors received from the server and makes them available to the host client program.
- Client-side error messages are generated from within the MySQL client library, usually involving problems communicating with the server.

Example server-side error messages written to the error log:

- This message produced during the startup process provides a status or progress indicator:

```
2018-10-28T13:01:32.735983Z 0 [Note] [MY-010303] [Server] Skipping
generation of SSL certificates as options related to SSL are specified.
```

- This message indicates an issue that requires DBA action:

```
2018-10-02T03:20:39.410387Z 768 [ERROR] [MY-010045] [Server] Event Scheduler:
[evtuser@localhost][myschema.e_daily] Unknown database 'mydb'
```

Example server-side error message sent to client programs, as displayed by the `mysql` client:

```
mysql> SELECT * FROM no_such_table;
ERROR 1146 (42S02): Table 'test.no_such_table' doesn't exist
```

Example client-side error message originating from within the client library, as displayed by the `mysql` client:

```
shell> mysql -h no-such-host
ERROR 2005 (HY000): Unknown MySQL server host 'no-such-host' (0)
```

Whether an error originates from within the client library or is received from the server, a MySQL client program may respond in varying ways. As just illustrated, the client may display the error message so the user can take corrective measures. The client may instead internally attempt to resolve or retry a failed operation, or take other action.

## Error Message Components

When an error occurs, error information includes several components: an error code, SQLSTATE value, and message string. These components have the following characteristics:

- Error code: This value is numeric. It is MySQL-specific and is not portable to other database systems.

Each error number has a corresponding symbolic value. Examples:

- The symbol for server error number 1146 is `ER_NO_SUCH_TABLE`.
- The symbol for client error number 2005 is `CR_UNKNOWN_HOST`.

The set of error codes used in error messages is partitioned into distinct ranges; see [Error Code Ranges](#).

Error codes are stable across General Availability (GA) releases of a given MySQL series. Before a series reaches GA status, new codes may still be under development and are subject to change.

- SQLSTATE value: This value is a five-character string (for example, '42S02'). SQLSTATE values are taken from ANSI SQL and ODBC and are more standardized than the numeric error codes. The first two characters of an SQLSTATE value indicate the error class:
  - Class = '00' indicates success.

- Class = '01' indicates a warning.
- Class = '02' indicates “not found.” This is relevant within the context of cursors and is used to control what happens when a cursor reaches the end of a data set. This condition also occurs for `SELECT ... INTO var_list` statements that retrieve no rows.
- Class > '02' indicates an exception.

For server-side errors, not all MySQL error numbers have corresponding SQLSTATE values. In these cases, 'HY000' (general error) is used.

For client-side errors, the SQLSTATE value is always 'HY000' (general error), so it is not meaningful for distinguishing one client error from another.

- Message string: This string provides a textual description of the error.

## Error Code Ranges

The set of error codes used in error messages is partitioned into distinct ranges, each with its own purpose:

- 1 to 999: Global error codes. This error code range is called “global” because it is a shared range that is used by the server as well as by clients.

When an error in this range originates on the server side, the server writes it to the error log, padding the error code with leading zeros to six digits and adding a prefix of `MY-`.

When an error in this range originates on the client side, the client library makes it available to the client program with no zero-padding or prefix.

- 1,000 to 1,999: Server error codes reserved for messages sent to clients.
- 2,000 to 2,999: Client error codes reserved for use by the client library.
- 3,000 to 4,999: Server error codes reserved for messages sent to clients.
- 5,000 to 5,999: Error codes reserved for use by X Plugin for messages sent to clients.
- 10,000 to 49,999: Server error codes reserved for messages to be written to the error log (not sent to clients).

When an error in this range occurs, the server writes it to the error log, padding the error code with leading zeros to six digits and adding a prefix of `MY-`.

- 50,000 to 51,999: Error codes reserved for use by third parties.

The server handles error messages written to the error log differently from error messages sent to clients:

- When the server writes a message to the error log, it pads the error code with leading zeros to six digits and adds a prefix of `MY-` (examples: `MY-000022`, `MY-010048`).
- When the server sends a message to a client program, it adds no zero-padding or prefix to the error code (examples: `1036`, `3013`).

## B.2 Error Information Interfaces

Error messages can originate on the server side or the client side, and each error message includes an error code, SQLSTATE value, and message string, as described in [Section B.1, “Error Message Sources and Components”](#). For lists of server-side, client-side, and global (shared between server and

clients) error, see [Section B.3, “Server Error Message Reference”](#), [Section B.4, “Client Error Message Reference”](#), and [Section B.5, “Global Error Message Reference”](#).

For error checking from within programs, use error code numbers or symbols, not error message strings. Message strings do not change often, but it is possible. Also, if the database administrator changes the language setting, that affects the language of message strings; see [Section 10.11, “Setting the Error Message Language”](#).

Error information in MySQL is available in the server error log, at the SQL level, from within client programs, and at the command line.

- [Error Log](#)
- [SQL Error Message Interface](#)
- [Client Error Message Interface](#)
- [Command-Line Error Message Interface](#)

## Error Log

On the server side, some messages are intended for the error log. For information about configuring where and how the server writes the log, see [Section 5.4.2, “The Error Log”](#).

Other server error messages are intended to be sent to client programs and are available as described in [Client Error Message Interface](#).

The range within which a particular error code lies determines whether the server writes an error message to the error log or sends it to clients. For information about these ranges, see [Error Code Ranges](#).

## SQL Error Message Interface

At the SQL level, there are several sources of error information in MySQL:

- SQL statement warning and error information is available through the [SHOW WARNINGS](#) and [SHOW ERRORS](#) statements. The [warning\\_count](#) system variable indicates the number of errors, warnings, and notes (with notes excluded if the [sql\\_notes](#) system variable is disabled). The [error\\_count](#) system variable indicates the number of errors. Its value excludes warnings and notes.
- The [GET DIAGNOSTICS](#) statement may be used to inspect the diagnostic information in the diagnostics area. See [Section 13.6.7.3, “GET DIAGNOSTICS Syntax”](#).
- [SHOW SLAVE STATUS](#) statement output includes information about replication errors occurring on replication slave servers.
- [SHOW ENGINE INNODB STATUS](#) statement output includes information about the most recent foreign key error if a [CREATE TABLE](#) statement for an [InnoDB](#) table fails.

## Client Error Message Interface

Client programs receive errors from two sources:

- Errors that originate on the client side from within the MySQL client library.
- Errors that originate on the server side and are sent to the client by the server. These are received within the client library, which makes them available to the host client program.

The range within which a particular error code lies determines whether it originated from within the client library or was received by the client from the server. For information about these ranges, see [Error Code Ranges](#).

Regardless of whether an error originates from within the client library or is received from the server, a MySQL client program obtains the error code, SQLSTATE value, message string, and other related information by calling C API functions in the client library:

- `mysql_errno()` returns the MySQL error code.
- `mysql_sqlstate()` returns the SQLSTATE value.
- `mysql_error()` returns the message string.
- `mysql_stmt_errno()`, `mysql_stmt_sqlstate()`, and `mysql_stmt_error()` are the corresponding error functions for prepared statements.
- `mysql_warning_count()` returns the number of errors, warnings, and notes for the most recent statement.

For descriptions of the client library error functions, see [Section 28.7, “MySQL C API”](#).

A MySQL client program may respond to an error in varying ways. The client may display the error message so the user can take corrective measures, internally attempt to resolve or retry a failed operation, or take other action. For example, (using the `mysql` client), a failure to connect to the server might result in this message:

```
shell> mysql -h no-such-host
ERROR 2005 (HY000): Unknown MySQL server host 'no-such-host' (0)
```

## Command-Line Error Message Interface

The `pererror` program provides information from the command line about error numbers. See [Section 4.8.2, “pererror — Display MySQL Error Message Information”](#).

```
shell> pererror 1231
MySQL error code MY-001231 (ER_WRONG_VALUE_FOR_VAR): Variable '%-.64s'
can't be set to the value of '%-.200s'
```

For MySQL NDB Cluster errors, use `ndb_pererror`. See [Section 22.4.16, “ndb\\_pererror — Obtain NDB Error Message Information”](#).

```
shell> ndb_pererror 323
NDB error code 323: Invalid nodegroup id, nodegroup already existing:
Permanent error: Application error
```

## B.3 Server Error Message Reference

The MySQL server writes some error messages to its error log, and sends others to client programs.

Example server-side error messages written to the error log:

```
2018-10-28T13:01:32.735983Z 0 [Note] [MY-010303] [Server] Skipping
generation of SSL certificates as options related to SSL are specified.

2018-10-02T03:20:39.410387Z 768 [ERROR] [MY-010045] [Server] Event Scheduler:
[evtuser@localhost][myschema.e_daily] Unknown database 'mydb'
```

Example server-side error message sent to client programs, as displayed by the `mysql` client:

```
mysql> SELECT * FROM no_such_table;
ERROR 1146 (42S02): Table 'test.no_such_table' doesn't exist
```

Each server error message includes an error code, SQLSTATE value, and message string, as described in [Section B.1, “Error Message Sources and Components”](#). These components are available as described in [Section B.2, “Error Information Interfaces”](#).

In addition to the errors in the following list, the server can also produce error messages that have error codes in the range from 1 to 999. See [Section B.5, “Global Error Message Reference”](#)

- Error number: [1002](#); Symbol: [ER\\_NO](#); SQLSTATE: [HY000](#)

Message: NO

Used in the construction of other messages.

- Error number: [1003](#); Symbol: [ER\\_YES](#); SQLSTATE: [HY000](#)

Message: YES

Used in the construction of other messages.

Extended [EXPLAIN](#) format generates Note messages. [ER\\_YES](#) is used in the [Code](#) column for these messages in subsequent [SHOW WARNINGS](#) output.

- Error number: [1004](#); Symbol: [ER\\_CANT\\_CREATE\\_FILE](#); SQLSTATE: [HY000](#)

Message: Can't create file '%s' (errno: %d - %s)

Occurs for failure to create or copy a file needed for some operation.

Possible causes: Permissions problem for source file; destination file already exists but is not writeable.

- Error number: [1005](#); Symbol: [ER\\_CANT\\_CREATE\\_TABLE](#); SQLSTATE: [HY000](#)

Message: Can't create table '%s' (errno: %d - %s)

[InnoDB](#) reports this error when a table cannot be created. If the error message refers to error 150, table creation failed because a [foreign key constraint](#) was not correctly formed. If the error message refers to error -1, table creation probably failed because the table includes a column name that matched the name of an internal [InnoDB](#) table.

- Error number: [1006](#); Symbol: [ER\\_CANT\\_CREATE\\_DB](#); SQLSTATE: [HY000](#)

Message: Can't create database '%s' (errno: %d - %s)

- Error number: [1007](#); Symbol: [ER\\_DB\\_CREATE\\_EXISTS](#); SQLSTATE: [HY000](#)

Message: Can't create database '%s'; database exists

An attempt to create a database failed because the database already exists.

Drop the database first if you really want to replace an existing database, or add an [IF NOT EXISTS](#) clause to the [CREATE DATABASE](#) statement if to retain an existing database without having the statement produce an error.

- Error number: [1008](#); Symbol: [ER\\_DB\\_DROP\\_EXISTS](#); SQLSTATE: [HY000](#)

Message: Can't drop database '%s'; database doesn't exist

- Error number: [1010](#); Symbol: [ER\\_DB\\_DROP\\_RMDIR](#); SQLSTATE: [HY000](#)

Message: Error dropping database (can't rmdir '%s', errno: %d - %s)

- Error number: [1012](#); Symbol: [ER\\_CANT\\_FIND\\_SYSTEM\\_REC](#); SQLSTATE: [HY000](#)

Message: Can't read record in system table

Returned by [InnoDB](#) for attempts to access [InnoDB INFORMATION\\_SCHEMA](#) tables when [InnoDB](#) is unavailable.

- Error number: [1013](#); Symbol: [ER\\_CANT\\_GET\\_STAT](#); SQLSTATE: [HY000](#)

Message: Can't get status of '%s' (errno: %d - %s)

- Error number: [1015](#); Symbol: [ER\\_CANT\\_LOCK](#); SQLSTATE: [HY000](#)

Message: Can't lock file (errno: %d - %s)

- Error number: [1016](#); Symbol: [ER\\_CANT\\_OPEN\\_FILE](#); SQLSTATE: [HY000](#)

Message: Can't open file: '%s' (errno: %d - %s)

[InnoDB](#) reports this error when the table from the [InnoDB data files](#) cannot be found.

- Error number: [1017](#); Symbol: [ER\\_FILE\\_NOT\\_FOUND](#); SQLSTATE: [HY000](#)

Message: Can't find file: '%s' (errno: %d - %s)

- Error number: [1018](#); Symbol: [ER\\_CANT\\_READ\\_DIR](#); SQLSTATE: [HY000](#)

Message: Can't read dir of '%s' (errno: %d - %s)

- Error number: [1020](#); Symbol: [ER\\_CHECKREAD](#); SQLSTATE: [HY000](#)

Message: Record has changed since last read in table '%s'

- Error number: [1022](#); Symbol: [ER\\_DUP\\_KEY](#); SQLSTATE: [23000](#)

Message: Can't write; duplicate key in table '%s'

- Error number: [1024](#); Symbol: [ER\\_ERROR\\_ON\\_READ](#); SQLSTATE: [HY000](#)

Message: Error reading file '%s' (errno: %d - %s)

- Error number: [1025](#); Symbol: [ER\\_ERROR\\_ON\\_RENAME](#); SQLSTATE: [HY000](#)

Message: Error on rename of '%s' to '%s' (errno: %d - %s)

- Error number: [1026](#); Symbol: [ER\\_ERROR\\_ON\\_WRITE](#); SQLSTATE: [HY000](#)

Message: Error writing file '%s' (errno: %d - %s)

- Error number: [1027](#); Symbol: [ER\\_FILE\\_USED](#); SQLSTATE: [HY000](#)

Message: '%s' is locked against change

- Error number: [1028](#); Symbol: [ER\\_FILSORT\\_ABORT](#); SQLSTATE: [HY000](#)

Message: Sort aborted

- Error number: [1030](#); Symbol: [ER\\_GET\\_ERRNO](#); SQLSTATE: [HY000](#)

Message: Got error %d - '%s' from storage engine

Check the %d value to see what the OS error means. For example, 28 indicates that you have run out of disk space.

- Error number: [1031](#); Symbol: [ER\\_ILLEGAL\\_HA](#); SQLSTATE: [HY000](#)

Message: Table storage engine for '%s' doesn't have this option

- Error number: 1032; Symbol: [ER\\_KEY\\_NOT\\_FOUND](#); SQLSTATE: [HY000](#)

Message: Can't find record in '%s'

- Error number: 1033; Symbol: [ER\\_NOT\\_FORM\\_FILE](#); SQLSTATE: [HY000](#)

Message: Incorrect information in file: '%s'

- Error number: 1034; Symbol: [ER\\_NOT\\_KEYFILE](#); SQLSTATE: [HY000](#)

Message: Incorrect key file for table '%s'; try to repair it

- Error number: 1035; Symbol: [ER\\_OLD\\_KEYFILE](#); SQLSTATE: [HY000](#)

Message: Old key file for table '%s'; repair it!

- Error number: 1036; Symbol: [ER\\_OPEN\\_AS\\_READONLY](#); SQLSTATE: [HY000](#)

Message: Table '%s' is read only

- Error number: 1037; Symbol: [ER\\_OUTOFMEMORY](#); SQLSTATE: [HY001](#)

Message: Out of memory; restart server and try again (needed %d bytes)

- Error number: 1038; Symbol: [ER\\_OUT\\_OF\\_SORTMEMORY](#); SQLSTATE: [HY001](#)

Message: Out of sort memory, consider increasing server sort buffer size

- Error number: 1040; Symbol: [ER\\_CON\\_COUNT\\_ERROR](#); SQLSTATE: [08004](#)

Message: Too many connections

- Error number: 1041; Symbol: [ER\\_OUT\\_OF\\_RESOURCES](#); SQLSTATE: [HY000](#)

Message: Out of memory; check if mysqld or some other process uses all available memory; if not, you may have to use 'ulimit' to allow mysqld to use more memory or you can add more swap space

- Error number: 1042; Symbol: [ER\\_BAD\\_HOST\\_ERROR](#); SQLSTATE: [08S01](#)

Message: Can't get hostname for your address

- Error number: 1043; Symbol: [ER\\_HANDSHAKE\\_ERROR](#); SQLSTATE: [08S01](#)

Message: Bad handshake

- Error number: 1044; Symbol: [ER\\_DBACCESS\\_DENIED\\_ERROR](#); SQLSTATE: [42000](#)

Message: Access denied for user '%s'@'%s' to database '%s'

- Error number: 1045; Symbol: [ER\\_ACCESS\\_DENIED\\_ERROR](#); SQLSTATE: [28000](#)

Message: Access denied for user '%s'@'%s' (using password: %s)

- Error number: 1046; Symbol: [ER\\_NO\\_DB\\_ERROR](#); SQLSTATE: [3D000](#)

Message: No database selected

- Error number: 1047; Symbol: [ER\\_UNKNOWN\\_COM\\_ERROR](#); SQLSTATE: [08S01](#)

Message: Unknown command

- Error number: 1048; Symbol: [ER\\_BAD\\_NULL\\_ERROR](#); SQLSTATE: [23000](#)

Message: Column '%s' cannot be null

- Error number: [1049](#); Symbol: [ER\\_BAD\\_DB\\_ERROR](#); SQLSTATE: [42000](#)

Message: Unknown database '%s'

- Error number: [1050](#); Symbol: [ER\\_TABLE\\_EXISTS\\_ERROR](#); SQLSTATE: [42S01](#)

Message: Table '%s' already exists

- Error number: [1051](#); Symbol: [ER\\_BAD\\_TABLE\\_ERROR](#); SQLSTATE: [42S02](#)

Message: Unknown table '%s'

- Error number: [1052](#); Symbol: [ER\\_NON\\_UNIQ\\_ERROR](#); SQLSTATE: [23000](#)

Message: Column '%s' in %s is ambiguous

```
%s = column name
%s = location of column (for example, "field list")
```

Likely cause: A column appears in a query without appropriate qualification, such as in a select list or ON clause.

Examples:

```
mysql> SELECT i FROM t INNER JOIN t AS t2;
ERROR 1052 (23000): Column 'i' in field list is ambiguous

mysql> SELECT * FROM t LEFT JOIN t AS t2 ON i = i;
ERROR 1052 (23000): Column 'i' in on clause is ambiguous
```

Resolution:

- Qualify the column with the appropriate table name:

```
mysql> SELECT t2.i FROM t INNER JOIN t AS t2;
```

- Modify the query to avoid the need for qualification:

```
mysql> SELECT * FROM t LEFT JOIN t AS t2 USING (i);
```

- Error number: [1053](#); Symbol: [ER\\_SERVER\\_SHUTDOWN](#); SQLSTATE: [08S01](#)

Message: Server shutdown in progress

- Error number: [1054](#); Symbol: [ER\\_BAD\\_FIELD\\_ERROR](#); SQLSTATE: [42S22](#)

Message: Unknown column '%s' in '%s'

- Error number: [1055](#); Symbol: [ER\\_WRONG\\_FIELD\\_WITH\\_GROUP](#); SQLSTATE: [42000](#)

Message: '%s' isn't in GROUP BY

- Error number: [1056](#); Symbol: [ER\\_WRONG\\_GROUP\\_FIELD](#); SQLSTATE: [42000](#)

Message: Can't group on '%s'

- Error number: [1057](#); Symbol: [ER\\_WRONG\\_SUM\\_SELECT](#); SQLSTATE: [42000](#)

Message: Statement has sum functions and columns in same statement

- Error number: [1058](#); Symbol: [ER\\_WRONG\\_VALUE\\_COUNT](#); SQLSTATE: [21S01](#)  
Message: Column count doesn't match value count
- Error number: [1059](#); Symbol: [ER\\_TOO\\_LONG\\_IDENT](#); SQLSTATE: [42000](#)  
Message: Identifier name '%s' is too long
- Error number: [1060](#); Symbol: [ER\\_DUP\\_FIELDNAME](#); SQLSTATE: [42S21](#)  
Message: Duplicate column name '%s'
- Error number: [1061](#); Symbol: [ER\\_DUP\\_KEYNAME](#); SQLSTATE: [42000](#)  
Message: Duplicate key name '%s'
- Error number: [1062](#); Symbol: [ER\\_DUP\\_ENTRY](#); SQLSTATE: [23000](#)  
Message: Duplicate entry '%s' for key %d  
The message returned with this error uses the format string for [ER\\_DUP\\_ENTRY\\_WITH\\_KEY\\_NAME](#).
- Error number: [1063](#); Symbol: [ER\\_WRONG\\_FIELD\\_SPEC](#); SQLSTATE: [42000](#)  
Message: Incorrect column specifier for column '%s'
- Error number: [1064](#); Symbol: [ER\\_PARSE\\_ERROR](#); SQLSTATE: [42000](#)  
Message: %s near '%s' at line %d
- Error number: [1065](#); Symbol: [ER\\_EMPTY\\_QUERY](#); SQLSTATE: [42000](#)  
Message: Query was empty
- Error number: [1066](#); Symbol: [ER\\_NONUNIQ\\_TABLE](#); SQLSTATE: [42000](#)  
Message: Not unique table/alias: '%s'
- Error number: [1067](#); Symbol: [ER\\_INVALID\\_DEFAULT](#); SQLSTATE: [42000](#)  
Message: Invalid default value for '%s'
- Error number: [1068](#); Symbol: [ER\\_MULTIPLE\\_PRI\\_KEY](#); SQLSTATE: [42000](#)  
Message: Multiple primary key defined
- Error number: [1069](#); Symbol: [ER\\_TOO\\_MANY\\_KEYS](#); SQLSTATE: [42000](#)  
Message: Too many keys specified; max %d keys allowed
- Error number: [1070](#); Symbol: [ER\\_TOO\\_MANY\\_KEY\\_PARTS](#); SQLSTATE: [42000](#)  
Message: Too many key parts specified; max %d parts allowed
- Error number: [1071](#); Symbol: [ER\\_TOO\\_LONG\\_KEY](#); SQLSTATE: [42000](#)  
Message: Specified key was too long; max key length is %d bytes
- Error number: [1072](#); Symbol: [ER\\_KEY\\_COLUMN\\_DOES\\_NOT\\_EXITS](#); SQLSTATE: [42000](#)  
Message: Key column '%s' doesn't exist in table
- Error number: [1073](#); Symbol: [ER\\_BLOB\\_USED\\_AS\\_KEY](#); SQLSTATE: [42000](#)  
Message: BLOB column '%s' can't be used in key specification with the used table type

- Error number: [1074](#); Symbol: [ER\\_TOO\\_BIG\\_FIELDLENGTH](#); SQLSTATE: [42000](#)  
Message: Column length too big for column '%s' (max = %lu); use BLOB or TEXT instead
- Error number: [1075](#); Symbol: [ER\\_WRONG\\_AUTO\\_KEY](#); SQLSTATE: [42000](#)  
Message: Incorrect table definition; there can be only one auto column and it must be defined as a key
- Error number: [1076](#); Symbol: [ER\\_READY](#); SQLSTATE: [HY000](#)  
Message: %s: ready for connections. Version: '%s' socket: '%s' port: %d
- Error number: [1077](#); Symbol: [ER\\_NORMAL\\_SHUTDOWN](#); SQLSTATE: [HY000](#)  
Message: %s: Normal shutdown  
[ER\\_NORMAL\\_SHUTDOWN](#) was removed after 8.0.4.
- Error number: [1079](#); Symbol: [ER\\_SHUTDOWN\\_COMPLETE](#); SQLSTATE: [HY000](#)  
Message: %s: Shutdown complete

Message: You can't specify target table '%s' for update in FROM clause

This error occurs for attempts to select from and modify the same table within a single statement. If the select attempt occurs within a derived table, you can avoid this error by setting the [derived\\_merge](#) flag of the [optimizer\\_switch](#) system variable to force the subquery to be materialized into a temporary table, which effectively causes it to be a different table from the one modified. See [Section 8.2.2.4, “Optimizing Derived Tables, View References, and Common Table Expressions with Merging or Materialization”](#).

- Error number: 1203; Symbol: `ER_TOO_MANY_USER_CONNECTIONS`; SQLSTATE: 42000

Message: User %s already has more than 'max\_user\_connections' active connections

- Error number: 1204; Symbol: `ER_SET_CONSTANTS_ONLY`; SQLSTATE: HY000

Message: You may only use constant expressions with SET

- Error number: 1205; Symbol: `ER_LOCK_WAIT_TIMEOUT`; SQLSTATE: HY000

Message: Lock wait timeout exceeded; try restarting transaction

InnoDB reports this error when lock wait timeout expires. The statement that waited too long was **rolled back** (not the entire **transaction**). You can increase the value of the `innodb_lock_wait_timeout` configuration option if SQL statements should wait longer for other transactions to complete, or decrease it if too many long-running transactions are causing **locking** problems and reducing **concurrency** on a busy system.

- Error number: 1206; Symbol: `ER_LOCK_TABLE_FULL`; SQLSTATE: HY000

Message: The total number of locks exceeds the lock table size

InnoDB reports this error when the total number of locks exceeds the amount of memory devoted to managing locks. To avoid this error, increase the value of `innodb_buffer_pool_size`. Within an individual application, a workaround may be to break a large operation into smaller pieces. For example, if the error occurs for a large **INSERT**, perform several smaller **INSERT** operations.

- Error number: 1207; Symbol: `ER_READ_ONLY_TRANSACTION`; SQLSTATE: 25000

Message: Update locks cannot be acquired during a READ UNCOMMITTED transaction

- Error number: 1210; Symbol: `ER_WRONG_ARGUMENTS`; SQLSTATE: HY000

Message: Incorrect arguments to %s

- Error number: 1211; Symbol: `ER_NO_PERMISSION_TO_CREATE_USER`; SQLSTATE: 42000

Message: '%s'@'%s' is not allowed to create new users

- Error number: 1213; Symbol: `ER_LOCK_DEADLOCK`; SQLSTATE: 40001

Message: Deadlock found when trying to get lock; try restarting transaction

InnoDB reports this error when a **transaction** encounters a **deadlock** and is automatically **rolled back** so that your application can take corrective action. To recover from this error, run all the operations in this transaction again. A deadlock occurs when requests for locks arrive in inconsistent order between transactions. The transaction that was rolled back released all its locks, and the other transaction can now get all the locks it requested. Thus, when you re-run the transaction that was rolled back, it might have to wait for other transactions to complete, but typically the deadlock does not recur. If you encounter frequent deadlocks, make the sequence of locking operations (**LOCK TABLES**, **SELECT ... FOR UPDATE**, and so on) consistent between the different transactions or applications that experience the issue. See [Section 15.7.5, "Deadlocks in InnoDB"](#) for details.

- Error number: 1214; Symbol: `ER_TABLE_CANT_HANDLE_FT`; SQLSTATE: HY000

Message: The used table type doesn't support FULLTEXT indexes

- Error number: 1215; Symbol: `ER_CANNOT_ADD_FOREIGN`; SQLSTATE: HY000

Message: Cannot add foreign key constraint

- Error number: 1216; Symbol: ER\_NO\_REFERENCED\_ROW; SQLSTATE: 23000  
Message: Cannot add or update a child row: a foreign key constraint fails  
[InnoDB](#) reports this error when you try to add a row but there is no parent row, and a [foreign key constraint](#) fails. Add the parent row first.
- Error number: 1217; Symbol: ER\_ROW\_IS\_REFERENCED; SQLSTATE: 23000  
Message: Cannot delete or update a parent row: a foreign key constraint fails  
[InnoDB](#) reports this error when you try to delete a parent row that has children, and a [foreign key constraint](#) fails. Delete the children first.

Message: Event execution time is in the past. Event has been disabled

- Error number: 1551; Symbol: `ER_EVENT_SAME_NAME`; SQLSTATE: HY000

Message: Same old and new event name

- Error number: 1553; Symbol: `ER_DROP_INDEX_FK`; SQLSTATE: HY000

Message: Cannot drop index '%s': needed in a foreign key constraint

InnoDB reports this error when you attempt to drop the last index that can enforce a particular referential constraint.

For optimal performance with DML statements, InnoDB requires an index to exist on [foreign key](#) columns, so that `UPDATE` and `DELETE` operations on a [parent table](#) can easily check whether corresponding rows exist in the [child table](#). MySQL creates or drops such indexes automatically when needed, as a side-effect of `CREATE TABLE`, `CREATE INDEX`, and `ALTER TABLE` statements.

When you drop an index, InnoDB checks if the index is used for checking a foreign key constraint. It is still OK to drop the index if there is another index that can be used to enforce the same constraint. InnoDB prevents you from dropping the last index that can enforce a particular referential constraint.

- Error number: 1554; Symbol: `ER_WARN_DEPRECATED_SYNTAX_WITH_VER`; SQLSTATE: HY000

Message: The syntax '%s' is deprecated and will be removed in MySQL %s. Please use %s instead

- Error number: 1556; Symbol: `ER_CANT_LOCK_LOG_TABLE`; SQLSTATE: HY000

Message: You can't use locks with log tables.

- Error number: 1557; Symbol: `ER_FOREIGN_DUPLICATE_KEY_OLD_UNUSED`; SQLSTATE: 23000

Message: Upholding foreign key constraints for table '%s', entry '%s', key %d would lead to a duplicate entry

- Error number: 1558; Symbol: `ER_COL_COUNT_DOESNT_MATCH_PLEASE_UPDATE`; SQLSTATE: HY000

Message: Column count of mysql.%s is wrong. Expected %d, found %d. Created with MySQL %d, now running %d. Please use mysql\_upgrade to fix this error.

- Error number: 1559; Symbol: `ER_TEMP_TABLE_PREVENTS_SWITCH_OUT_OF_RBR`; SQLSTATE: HY000

Message: Cannot switch out of the row-based binary log format when the session has open temporary tables

`ER_TEMP_TABLE_PREVENTS_SWITCH_OUT_OF_RBR` was removed after 8.0.12.

- Error number: 1560; Symbol: `ER_STORED_FUNCTION_PREVENTS_SWITCH_BINLOG_FORMAT`; SQLSTATE: HY000

Message: Cannot change the binary logging format inside a stored function or trigger

- Error number: 1562; Symbol: `ER_PARTITION_NO_TEMPORARY`; SQLSTATE: HY000

Message: Cannot create temporary table with partitions

- Error number: 1563; Symbol: [ER\\_PARTITION\\_CONST\\_DOMAIN\\_ERROR](#); SQLSTATE: HY000

Message: Partition constant is out of partition function domain

- Error number: 1564; Symbol: [ER\\_PARTITION\\_FUNCTION\\_IS\\_NOT\\_ALLOWED](#); SQLSTATE: HY000

Message: This partition function is not allowed

- Error number: 1565; Symbol: [ER\\_DDL\\_LOG\\_ERROR](#); SQLSTATE: HY000

Message: Error in DDL log

[ER\\_DDL\\_LOG\\_ERROR](#) was removed after 8.0.1.

- Error number: 1566; Symbol: [ER\\_NULL\\_IN\\_VALUES\\_LESS\\_THAN](#); SQLSTATE: HY000

Message: Not allowed to use NULL value in VALUES LESS THAN

- Error number: 1567; Symbol: [ER\\_WRONG\\_PARTITION\\_NAME](#); SQLSTATE: HY000

Message: Incorrect partition name

- Error number: 1568; Symbol: [ER\\_CANT\\_CHANGE\\_TX\\_CHARACTERISTICS](#); SQLSTATE: 25001

Message: Transaction characteristics can't be changed while a transaction is in progress

- Error number: 1569; Symbol: [ER\\_DUP\\_ENTRY\\_AUTOINCREMENT\\_CASE](#); SQLSTATE: HY000

Message: ALTER TABLE causes auto\_increment resequencing, resulting in duplicate entry '%s' for key '%s'

- Error number: 1571; Symbol: [ER\\_EVENT\\_SET\\_VAR\\_ERROR](#); SQLSTATE: HY000

Message: Error during starting/stopping of the scheduler. Error code %u

- Error number: 1748; Symbol: `ER_ROW_DOES_NOT_MATCH_GIVEN_PARTITION_SET`; SQLSTATE: HY000  
Message: Found a row not matching the given partition set
- Error number: 1750; Symbol: `ER_CHANGE_RPL_INFO_REPOSITORY_FAILURE`; SQLSTATE: HY000  
Message: Failure while changing the type of replication repository: %s.
- Error number: 1751; Symbol: `ER_WARNING_NOT_COMPLETE_ROLLBACK_WITH_CREATED_TEMP_TABLE`; SQLSTATE: HY000

Message: The creation of some temporary tables could not be rolled back.

- Error number: 1752; Symbol: `ER_WARNING_NOT_COMPLETE_ROLLBACK_WITH_DROPPED_TEMP_TABLE`; SQLSTATE: HY000

Message: Some temporary tables were dropped, but these operations could not be rolled back.

- Error number: 1753; Symbol: `ER_MTS_FEATURE_IS_NOT_SUPPORTED`; SQLSTATE: HY000

Message: %s is not supported in multi-threaded slave mode. %s

- Error number: 1754; Symbol: `ER_MTS_UPDATED_DBS_GREATER_MAX`; SQLSTATE: HY000

Message: The number of modified databases exceeds the maximum %d; the database names will not be included in the replication event metadata.

- Error number: 1755; Symbol: `ER_MTS_CANT_PARALLEL`; SQLSTATE: HY000

Message: Cannot execute the current event group in the parallel mode. Encountered event %s, relay-log name %s, position %s which prevents execution of this event group in parallel mode. Reason: %s.

- Error number: 1756; Symbol: `ER_MTS_INCONSISTENT_DATA`; SQLSTATE: HY000

Message: %s

- Error number: 1757; Symbol: `ER_FULLTEXT_NOT_SUPPORTED_WITH_PARTITIONING`; SQLSTATE: HY000

Message: FULLTEXT index is not supported for partitioned tables.

- Error number: 1758; Symbol: `ER_DA_INVALID_CONDITION_NUMBER`; SQLSTATE: 35000

Message: Invalid condition number

- Error number: 1759; Symbol: `ER_INSECURE_PLAIN_TEXT`; SQLSTATE: HY000

Message: Sending passwords in plain text without SSL/TLS is extremely insecure.

- Error number: 1760; Symbol: `ER_INSECURE_CHANGE_MASTER`; SQLSTATE: HY000

Message: Storing MySQL user name or password information in the master info repository is not secure and is therefore not recommended. Please consider using the USER and PASSWORD connection options for START SLAVE; see the 'START SLAVE Syntax' in the MySQL Manual for more information.

- Error number: 1761; Symbol: `ER_FOREIGN_DUPLICATE_KEY_WITH_CHILD_INFO`; SQLSTATE: 23000

Message: Foreign key constraint for table '%s', record '%s' would lead to a duplicate entry in table '%s', key '%s'

- Error number: 1762; Symbol: `ER_FOREIGN_DUPLICATE_KEY_WITHOUT_CHILD_INFO`; SQLSTATE: 23000

Message: Foreign key constraint for table '%s', record '%s' would lead to a duplicate entry in a child table

- Error number: 1763; Symbol: `ER_SQLTHREAD_WITH_SECURE_SLAVE`; SQLSTATE: HY000

Message: Setting authentication options is not possible when only the Slave SQL Thread is being started.

- Error number: 1764; Symbol: `ER_TABLE_HAS_NO_FT`; SQLSTATE: HY000

Message: The table does not have FULLTEXT index to support this query
- Error number: 1765; Symbol: `ER_VARIABLE_NOT_SETTABLE_IN_SF_OR_TRIGGER`; SQLSTATE: HY000

Message: The system variable %s cannot be set in stored functions or triggers.
- Error number: 1766; Symbol: `ER_VARIABLE_NOT_SETTABLE_IN_TRANSACTION`; SQLSTATE: HY000

Message: The system variable %s cannot be set when there is an ongoing transaction.
- Error number: 1769; Symbol: `ER_SET_STATEMENT_CANNOT_INVOKE_FUNCTION`; SQLSTATE: HY000

Message: The statement 'SET %s' cannot invoke a stored function.
- Error number: 1770; Symbol: `ER_GTID_NEXT_CANT_BE_AUTOMATIC_IF_GTID_NEXT_LIST_IS_NON_NULL`; SQLSTATE: HY000

Message: The system variable @@SESSION.GTID\_NEXT cannot be 'AUTOMATIC' when @@SESSION.GTID\_NEXT\_LIST is non-NULL.
- Error number: 1772; Symbol: `ER_MALFORMED_GTID_SET_SPECIFICATION`; SQLSTATE: HY000

Message: Malformed GTID set specification '%s'.
- Error number: 1773; Symbol: `ER_MALFORMED_GTID_SET_ENCODING`; SQLSTATE: HY000

Message: Malformed GTID set encoding.
- Error number: 1774; Symbol: `ER_MALFORMED_GTID_SPECIFICATION`; SQLSTATE: HY000

Message: Malformed GTID specification '%s'.
- Error number: 1775; Symbol: `ER_GNO_EXHAUSTED`; SQLSTATE: HY000

Message: Impossible to generate Global Transaction Identifier: the integer component reached the maximal value. Restart the server with a new server\_uuid.
- Error number: 1776; Symbol: `ER_BAD_SLAVE_AUTO_POSITION`; SQLSTATE: HY000

Message: Parameters MASTER\_LOG\_FILE, MASTER\_LOG\_POS, RELAY\_LOG\_FILE and RELAY\_LOG\_POS cannot be set when MASTER\_AUTO\_POSITION is active.
- Error number: 1777; Symbol: `ER_AUTO_POSITION_REQUIRES_GTID_MODE_NOT_OFF`; SQLSTATE: HY000

Message: CHANGE MASTER TO MASTER\_AUTO\_POSITION = 1 cannot be executed because @@GLOBAL.GTID\_MODE = OFF.
- Error number: 1778; Symbol: `ER_CANT_DO_IMPLICIT_COMMIT_IN_TRX_WHEN_GTID_NEXT_IS_SET`; SQLSTATE: HY000

Message: Cannot execute statements with implicit commit inside a transaction when @@SESSION.GTID\_NEXT == 'UUID:NUMBER'.
- Error number: 1779; Symbol: `ER_GTID_MODE_ON_REQUIRES_ENFORCE_GTID_CONSISTENCY_ON`; SQLSTATE: HY000

Message: GTID\_MODE = ON requires ENFORCE\_GTID\_CONSISTENCY = ON.

- Error number: 1781; Symbol: [ER\\_CANT\\_SET\\_GTID\\_NEXT\\_TO\\_GTID\\_WHEN\\_GTID\\_MODE\\_IS\\_OFF](#); SQLSTATE: [HY000](#)

Message: @@SESSION.GTID\_NEXT cannot be set to UUID:NUMBER when @@GLOBAL.GTID\_MODE = OFF.
- Error number: 1782; Symbol: [ER\\_CANT\\_SET\\_GTID\\_NEXT\\_TO\\_ANONYMOUS\\_WHEN\\_GTID\\_MODE\\_IS\\_ON](#); SQLSTATE: [HY000](#)

Message: @@SESSION.GTID\_NEXT cannot be set to ANONYMOUS when @@GLOBAL.GTID\_MODE = ON.
- Error number: 1783; Symbol: [ER\\_CANT\\_SET\\_GTID\\_NEXT\\_LIST\\_TO\\_NON\\_NULL\\_WHEN\\_GTID\\_MODE\\_IS\\_OFF](#); SQLSTATE: [HY000](#)

Message: @@SESSION.GTID\_NEXT\_LIST cannot be set to a non-NULL value when @@GLOBAL.GTID\_MODE = OFF.
- Error number: 1785; Symbol: [ER\\_GTID\\_UNSAFE\\_NON\\_TRANSACTIONAL\\_TABLE](#); SQLSTATE: [HY000](#)

Message: Statement violates GTID consistency: Updates to non-transactional tables can only be done in either autocommitted statements or single-statement transactions, and never in the same statement as updates to transactional tables.
- Error number: 1786; Symbol: [ER\\_GTID\\_UNSAFE\\_CREATE\\_SELECT](#); SQLSTATE: [HY000](#)

Message: Statement violates GTID consistency: CREATE TABLE ... SELECT.
- Error number: 1787; Symbol: [ER\\_GTID\\_UNSAFE\\_CREATE\\_DROP\\_TEMPORARY\\_TABLE\\_IN\\_TRANSACTION](#); SQLSTATE: [HY000](#)

Message: Statement violates GTID consistency: CREATE TEMPORARY TABLE and DROP TEMPORARY TABLE can only be executed outside transactional context. These statements are also not allowed in a function or trigger because functions and triggers are also considered to be multi-statement transactions.

[ER\\_GTID\\_UNSAFE\\_CREATE\\_DROP\\_TEMPORARY\\_TABLE\\_IN\\_TRANSACTION](#) was removed after 8.0.12.
- Error number: 1788; Symbol: [ER\\_GTID\\_MODE\\_CAN\\_ONLY\\_CHANGE\\_ONE\\_STEP\\_AT\\_A\\_TIME](#); SQLSTATE: [HY000](#)

Message: The value of @@GLOBAL.GTID\_MODE can only be changed one step at a time: OFF <-> OFF\_PERMISSIVE <-> ON\_PERMISSIVE <-> ON. Also note that this value must be stepped up or down simultaneously on all servers. See the Manual for instructions.
- Error number: 1789; Symbol: [ER\\_MASTER\\_HAS\\_PURGED\\_REQUIRED\\_GTIDS](#); SQLSTATE: [HY000](#)

Message: Cannot replicate because the master purged required binary logs. Replicate the missing transactions from elsewhere, or provision a new slave from backup. Consider increasing the master's binary log expiration period. To find the missing transactions, see the master's error log or the manual for GTID\_SUBTRACT.
- Error number: 1790; Symbol: [ER\\_CANT\\_SET\\_GTID\\_NEXT\\_WHEN\\_OWNING\\_GTID](#); SQLSTATE: [HY000](#)

Message: @@SESSION.GTID\_NEXT cannot be changed by a client that owns a GTID. The client owns %s. Ownership is released on COMMIT or ROLLBACK.
- Error number: 1791; Symbol: [ER\\_UNKNOWN\\_EXPLAIN\\_FORMAT](#); SQLSTATE: [HY000](#)

Message: Unknown EXPLAIN format name: '%s'

- Error number: 1792; Symbol: [ER\\_CANT\\_EXECUTE\\_IN\\_READ\\_ONLY\\_TRANSACTION](#); SQLSTATE: 25006

Message: Cannot execute statement in a READ ONLY transaction.

- Error number: 1793; Symbol: [ER\\_TOO\\_LONG\\_TABLE\\_PARTITION\\_COMMENT](#); SQLSTATE: HY000

Message: Comment for table partition '%s' is too long (max = %lu)

- Error number: 1794; Symbol: [ER\\_SLAVE\\_CONFIGURATION](#); SQLSTATE: HY000

Message: Slave is not configured or failed to initialize properly. You must at least set --server-id to enable either a master or a slave. Additional error messages can be found in the MySQL error log.

- Error number: 1795; Symbol: [ER\\_INNODB\\_FT\\_LIMIT](#); SQLSTATE: HY000

Message: InnoDB presently supports one FULLTEXT index creation at a time

- Error number: 1796; Symbol: [ER\\_INNODB\\_NO\\_FT\\_TEMP\\_TABLE](#); SQLSTATE: HY000

Message: Cannot create FULLTEXT index on temporary InnoDB table

- Error number: 1797; Symbol: [ER\\_INNODB\\_FT\\_WRONG\\_DOCID\\_COLUMN](#); SQLSTATE: HY000

Message: Column '%s' is of wrong type for an InnoDB FULLTEXT index

- Error number: 1798; Symbol: [ER\\_INNODB\\_FT\\_WRONG\\_DOCID\\_INDEX](#); SQLSTATE: HY000

Message: Index '%s' is of wrong type for an InnoDB FULLTEXT index

- Error number: 1799; Symbol: [ER\\_INNODB\\_ONLINE\\_LOG\\_TOO\\_BIG](#); SQLSTATE: HY000

Message: Creating index '%s' required more than 'innodb\_online\_alter\_log\_max\_size' bytes of modification log. Please try again.

- Error number: 1800; Symbol: [ER\\_UNKNOWN\\_ALTER\\_ALGORITHM](#); SQLSTATE: HY000

Message: Unknown ALGORITHM '%s'

- Error number: 1801; Symbol: [ER\\_UNKNOWN\\_ALTER\\_LOCK](#); SQLSTATE: HY000

Message: Unknown LOCK type '%s'

- Error number: 1802; Symbol: [ER\\_MTS\\_CHANGE\\_MASTER\\_CANT\\_RUN\\_WITH\\_GAPS](#); SQLSTATE: HY000

Message: CHANGE MASTER cannot be executed when the slave was stopped with an error or killed in MTS mode. Consider using RESET SLAVE or START SLAVE UNTIL.

- Error number: 1803; Symbol: [ER\\_MTS\\_RECOVERY\\_FAILURE](#); SQLSTATE: HY000

Message: Cannot recover after SLAVE errored out in parallel execution mode. Additional error messages can be found in the MySQL error log.

- Error number: 1804; Symbol: [ER\\_MTS\\_RESET\\_WORKERS](#); SQLSTATE: HY000

Message: Cannot clean up worker info tables. Additional error messages can be found in the MySQL error log.

- Error number: 1805; Symbol: [ER\\_COL\\_COUNT\\_DoesNT\\_MATCH\\_CORRUPTED\\_V2](#); SQLSTATE: HY000

Message: Column count of %s.%s is wrong. Expected %d, found %d. The table is probably corrupted

- Error number: 1806; Symbol: ER\_SLAVE\_SILENT\_RETRY\_TRANSACTION; SQLSTATE: HY000

Message: Slave must silently retry current transaction

- Error number: 1807; Symbol: ER\_DISCARD\_FK\_CHECKS\_RUNNING; SQLSTATE: HY000

Message: There is a foreign key check running on table '%s'. Cannot discard the table.

- Error number: 1808; Symbol: ER\_TABLE\_SCHEMA\_MISMATCH; SQLSTATE: HY000

Message: Schema mismatch (%s)

- Error number: 1809; Symbol: ER\_TABLE\_IN\_SYSTEM\_TABLESPACE; SQLSTATE: HY000

Message: Table '%s' in system tablespace

- Error number: 1810; Symbol: ER\_IO\_READ\_ERROR; SQLSTATE: HY000

Message: IO Read error: (%lu, %s) %s

- Error number: 1811; Symbol: ER\_IO\_WRITE\_ERROR; SQLSTATE: HY000

Message: IO Write error: (%lu, %s) %s

- Error number: 1812; Symbol: ER\_TABLESPACE\_MISSING; SQLSTATE: HY000

Message: Tablespace is missing for table %s.

- Error number: 1813; Symbol: ER\_TABLESPACE\_EXISTS; SQLSTATE: HY000

Message: Tablespace '%s' exists.

- Error number: 1814; Symbol: ER\_TABLESPACE\_DISCARDED; SQLSTATE: HY000

Message: Tablespace has been discarded for table '%s'

- Error number: 1815; Symbol: ER\_INTERNAL\_ERROR; SQLSTATE: HY000

Message: Internal error: %s

- Error number: 1816; Symbol: ER\_INNODB\_IMPORT\_ERROR; SQLSTATE: HY000

Message: ALTER TABLE %s IMPORT TABLESPACE failed with error %lu : '%s'

- Error number: 1817; Symbol: ER\_INNODB\_INDEX\_CORRUPT; SQLSTATE: HY000

Message: Index corrupt: %s

- Error number: 1818; Symbol: ER\_INVALID\_YEAR\_COLUMN\_LENGTH; SQLSTATE: HY000

Message: Supports only YEAR or YEAR(4) column.

- Error number: 1819; Symbol: ER\_NOT\_VALID\_PASSWORD; SQLSTATE: HY000

Message: Your password does not satisfy the current policy requirements

- Error number: 1820; Symbol: ER\_MUST\_CHANGE\_PASSWORD; SQLSTATE: HY000

Message: You must reset your password using ALTER USER statement before executing this statement.

- Error number: [1821](#); Symbol: [ER\\_FK\\_NO\\_INDEX\\_CHILD](#); SQLSTATE: [HY000](#)  
Message: Failed to add the foreign key constraint. Missing index for constraint '%s' in the foreign table '%s'
- Error number: [1822](#); Symbol: [ER\\_FK\\_NO\\_INDEX\\_PARENT](#); SQLSTATE: [HY000](#)  
Message: Failed to add the foreign key constraint. Missing index for constraint '%s' in the referenced table '%s'
- Error number: [1823](#); Symbol: [ER\\_FK\\_FAIL\\_ADD\\_SYSTEM](#); SQLSTATE: [HY000](#)  
Message: Failed to add the foreign key constraint '%s' to system tables
- Error number: [1824](#); Symbol: [ER\\_FK\\_CANNOT\\_OPEN\\_PARENT](#); SQLSTATE: [HY000](#)  
Message: Failed to open the referenced table '%s'
- Error number: [1825](#); Symbol: [ER\\_FK\\_INCORRECT\\_OPTION](#); SQLSTATE: [HY000](#)  
Message: Failed to add the foreign key constraint on table '%s'. Incorrect options in FOREIGN KEY constraint '%s'
- Error number: [1826](#); Symbol: [ER\\_FK\\_DUP\\_NAME](#); SQLSTATE: [HY000](#)  
Message: Duplicate foreign key constraint name '%s'
- Error number: [1827](#); Symbol: [ER\\_PASSWORD\\_FORMAT](#); SQLSTATE: [HY000](#)  
Message: The password hash doesn't have the expected format.
- Error number: [1828](#); Symbol: [ER\\_FK\\_COLUMN\\_CANNOT\\_DROP](#); SQLSTATE: [HY000](#)  
Message: Cannot drop column '%s': needed in a foreign key constraint '%s'
- Error number: [1829](#); Symbol: [ER\\_FK\\_COLUMN\\_CANNOT\\_DROP\\_CHILD](#); SQLSTATE: [HY000](#)  
Message: Cannot drop column '%s': needed in a foreign key constraint '%s' of table '%s'
- Error number: [1830](#); Symbol: [ER\\_FK\\_COLUMN\\_NOT\\_NULL](#); SQLSTATE: [HY000](#)  
Message: Column '%s' cannot be NOT NULL: needed in a foreign key constraint '%s' SET NULL
- Error number: [1831](#); Symbol: [ER\\_DUP\\_INDEX](#); SQLSTATE: [HY000](#)  
Message: Duplicate index '%s' defined on the table '%s.%s'. This is deprecated and will be disallowed in a future release.
- Error number: [1832](#); Symbol: [ER\\_FK\\_COLUMN\\_CANNOT\\_CHANGE](#); SQLSTATE: [HY000](#)  
Message: Cannot change column '%s': used in a foreign key constraint '%s'
- Error number: [1833](#); Symbol: [ER\\_FK\\_COLUMN\\_CANNOT\\_CHANGE\\_CHILD](#); SQLSTATE: [HY000](#)  
Message: Cannot change column '%s': used in a foreign key constraint '%s' of table '%s'
- Error number: [1835](#); Symbol: [ER\\_MALFORMED\\_PACKET](#); SQLSTATE: [HY000](#)  
Message: Malformed communication packet.
- Error number: [1836](#); Symbol: [ER\\_READ\\_ONLY\\_MODE](#); SQLSTATE: [HY000](#)  
Message: Running in read-only mode
- Error number: [1837](#); Symbol: [ER\\_GTID\\_NEXT\\_TYPE\\_UNDEFINED\\_GROUP](#); SQLSTATE: [HY000](#)

Message: When @@SESSION.GTID\_NEXT is set to a GTID, you must explicitly set it to a different value after a COMMIT or ROLLBACK. Please check GTID\_NEXT variable manual page for detailed explanation. Current @@SESSION.GTID\_NEXT is '%s'.

[ER\\_GTID\\_NEXT\\_TYPE\\_UNDEFINED\\_GROUP](#) was removed after 8.0.4.

- Error number: [1837](#); Symbol: [ER\\_GTID\\_NEXT\\_TYPE\\_UNDEFINED\\_GTID](#); SQLSTATE: [HY000](#)

Message: When @@SESSION.GTID\_NEXT is set to a GTID, you must explicitly set it to a different value after a COMMIT or ROLLBACK. Please check GTID\_NEXT variable manual page for detailed explanation. Current @@SESSION.GTID\_NEXT is '%s'.

[ER\\_GTID\\_NEXT\\_TYPE\\_UNDEFINED\\_GTID](#) was added in 8.0.11.

- Error number: [1838](#); Symbol: [ER\\_VARIABLE\\_NOT\\_SETTABLE\\_IN\\_SP](#); SQLSTATE: [HY000](#)

Message: The system variable %s cannot be set in stored procedures.

- Error number: [1840](#); Symbol: [ER\\_CANT\\_SET\\_GTID\\_PURGED\\_WHEN\\_GTID\\_EXECUTED\\_IS\\_NOT\\_EMPTY](#); SQLSTATE: [HY000](#)

Message: @@GLOBAL.GTID\_PURGED can only be set when @@GLOBAL.GTID\_EXECUTED is empty.

- Error number: [1841](#); Symbol: [ER\\_CANT\\_SET\\_GTID\\_PURGED\\_WHEN\\_OWNED\\_GTIDS\\_IS\\_NOT\\_EMPTY](#); SQLSTATE: [HY000](#)

Message: The initialization vector supplied to %s is too short. Must be at least %d bytes long

- Error number: 1883; Symbol: [ER\\_PLUGIN\\_CANNOT\\_BE\\_UNINSTALLED](#); SQLSTATE: HY000

Message: Plugin '%s' cannot be uninstalled now. %s

- Error number: 1884; Symbol: [ER\\_GTID\\_UNSAFE\\_BINLOG\\_SPLITTABLE\\_STATEMENT\\_AND\\_GTID\\_GROUP](#); SQLSTATE: HY000

Message: Cannot execute statement because it needs to be written to the binary log as multiple statements, and this is not allowed when @@SESSION.GTID\_NEXT == 'UUID:NUMBER'.

[ER\\_GTID\\_UNSAFE\\_BINLOG\\_SPLITTABLE\\_STATEMENT\\_AND\\_GTID\\_GROUP](#) was removed after 8.0.4.

- Error number: 1884; Symbol: [ER\\_GTID\\_UNSAFE\\_BINLOG\\_SPLITTABLE\\_STATEMENT\\_AND\\_ASSIGNED\\_GTID](#); SQLSTATE: HY000

Message: Cannot execute statement because it needs to be written to the binary log as multiple statements, and this is not allowed when @@SESSION.GTID\_NEXT == 'UUID:NUMBER'.

[ER\\_GTID\\_UNSAFE\\_BINLOG\\_SPLITTABLE\\_STATEMENT\\_AND\\_ASSIGNED\\_GTID](#) was added in 8.0.11.

- Error number: 1885; Symbol: [ER\\_SLAVE\\_HAS\\_MORE\\_GTIDS\\_THAN\\_MASTER](#); SQLSTATE: HY000

Message: Slave has more GTIDs than the master has, using the master's SERVER\_UUID. This may indicate that the end of the binary log was truncated or that the last binary log file was lost, e.g., after a power or disk failure when sync\_binlog != 1. The master may or may not have rolled back transactions that were already replicated to the slave. Suggest to replicate any transactions that master has rolled back from slave to master, and/or commit empty transactions on master to account for transactions that have been committed on master but are not included in GTID\_EXECUTED.

- Error number: 1886; Symbol: [ER\\_MISSING\\_KEY](#); SQLSTATE: HY000

Message: The table '%s.%s' does not have the necessary key(s) defined on it. Please check the table definition and create index(s) accordingly.

[ER\\_MISSING\\_KEY](#) was added in 8.0.4.

- Error number: [3000](#); Symbol: [ER\\_FILE\\_CORRUPT](#); SQLSTATE: [HY000](#)  
 Message: File %s is corrupted
- Error number: [3001](#); Symbol: [ER\\_ERROR\\_ON\\_MASTER](#); SQLSTATE: [HY000](#)  
 Message: Query partially completed on the master (error on master: %d) and was aborted. There is a chance that your master is inconsistent at this point. If you are sure that your master is ok, run this query manually on the slave and then restart the slave with SET GLOBAL SQL\_SLAVE\_SKIP\_COUNTER=1; START SLAVE;. Query:'%s'
- Error number: [3003](#); Symbol: [ER\\_STORAGE\\_ENGINE\\_NOT\\_LOADED](#); SQLSTATE: [HY000](#)  
 Message: Storage engine for table '%s'.'%s' is not loaded.
- Error number: [3004](#); Symbol: [ER\\_GET\\_STACKED\\_DA\\_WITHOUT\\_ACTIVE\\_HANDLER](#); SQLSTATE: [0Z002](#)  
 Message: GET STACKED DIAGNOSTICS when handler not active
- Error number: [3005](#); Symbol: [ER\\_WARN\\_LEGACY\\_SYNTAX\\_CONVERTED](#); SQLSTATE: [HY000](#)  
 Message: %s is no longer supported. The statement was converted to %s.
- Error number: [3006](#); Symbol: [ER\\_BINLOG\\_UNSAFE\\_FULLTEXT\\_PLUGIN](#); SQLSTATE: [HY000](#)  
 Message: Statement is unsafe because it uses a fulltext parser plugin which may not return the same value on the slave.
- Error number: [3007](#); Symbol: [ER\\_CANNOT\\_DISCARD\\_TEMPORARY\\_TABLE](#); SQLSTATE: [HY000](#)  
 Message: Cannot DISCARD/IMPORT tablespace associated with temporary table
- Error number: [3008](#); Symbol: [ER\\_FK\\_DEPTH\\_EXCEEDED](#); SQLSTATE: [HY000](#)  
 Message: Foreign key cascade delete/update exceeds max depth of %d.
- Error number: [3009](#); Symbol: [ER\\_COL\\_COUNT\\_DOESNT\\_MATCH\\_PLEASE\\_UPDATE\\_V2](#); SQLSTATE: [HY000](#)  
 Message: Column count of %s.%s is wrong. Expected %d, found %d. Created with MySQL %d, now running %d. Please use mysql\_upgrade to fix this error.
- Error number: [3010](#); Symbol: [ER\\_WARN\\_TRIGGER\\_DOESNT\\_HAVE\\_CREATED](#); SQLSTATE: [HY000](#)

- Error number: 3085; Symbol: [ER\\_SLAVE\\_CHANNEL\\_SQL\\_THREAD\\_MUST\\_STOP](#); SQLSTATE: HY000

Message: This operation cannot be performed with a running slave sql thread; run STOP SLAVE SQL\_THREAD FOR CHANNEL '%s' first.
- Error number: 3086; Symbol: [ER\\_SLAVE\\_CHANNEL\\_SQL\\_SKIP\\_COUNTER](#); SQLSTATE: HY000

Message: When sql\_slave\_skip\_counter > 0, it is not allowed to start more than one SQL thread by using 'START SLAVE [SQL\_THREAD]'. Value of sql\_slave\_skip\_counter can only be used by one

SQL thread at a time. Please use 'START SLAVE [SQL\_THREAD] FOR CHANNEL' to start the SQL thread which will use the value of sql\_slave\_skip\_counter.

- Error number: 3087; Symbol: [ER\\_WRONG\\_FIELD\\_WITH\\_GROUP\\_V2](#); SQLSTATE: HY000

Message: Expression #%u of %s is not in GROUP BY clause and contains nonaggregated column '%s' which is not functionally dependent on columns in GROUP BY clause; this is incompatible with sql\_mode=only\_full\_group\_by

- Error number: 3088; Symbol: [ER\\_MIX\\_OF\\_GROUP\\_FUNC\\_AND\\_FIELDS\\_V2](#); SQLSTATE: HY000

Message: In aggregated query without GROUP BY, expression #%u of %s contains nonaggregated column '%s'; this is incompatible with sql\_mode=only\_full\_group\_by

- Error number: 3089; Symbol: [ER\\_WARN\\_DEPRECATED\\_SYSVAR\\_UPDATE](#); SQLSTATE: HY000

Message: Updating '%s' is deprecated. It will be made read-only in a future release.

- Error number: 3090; Symbol: [ER\\_WARN\\_DEPRECATED\\_SQLMODE](#); SQLSTATE: HY000

Message: Changing sql mode '%s' is deprecated. It will be removed in a future release.

- Error number: 3091; Symbol: [ER\\_CANNOT\\_LOG\\_PARTIAL\\_DROP\\_DATABASE\\_WITH\\_GTID](#); SQLSTATE: HY000

Message: DROP DATABASE failed; some tables may have been dropped but the database directory remains. The GTID has not been added to GTID\_EXECUTED and the statement was not written to the binary log. Fix this as follows: (1) remove all files from the database directory %s; (2) SET GTID\_NEXT='%s'; (3) DROP DATABASE '%s'.

- Error number: 3092; Symbol: [ER\\_GROUP\\_REPLICATION\\_CONFIGURATION](#); SQLSTATE: HY000

Message: The server is not configured properly to be an active member of the group. Please see more details on error log.

- Error number: 3093; Symbol: [ER\\_GROUP\\_REPLICATION\\_RUNNING](#); SQLSTATE: HY000

Message: The START GROUP\_REPLICATION command failed since the group is already running.

- Error number: 3094; Symbol: [ER\\_GROUP\\_REPLICATION\\_APPLIER\\_INIT\\_ERROR](#); SQLSTATE: HY000

Message: The START GROUP\_REPLICATION command failed as the applier module failed to start.

- Error number: 3095; Symbol: [ER\\_GROUP\\_REPLICATION\\_STOP\\_APPLIER\\_THREAD\\_TIMEOUT](#); SQLSTATE: HY000

Message: The STOP GROUP\_REPLICATION command execution is incomplete: The applier thread got the stop signal while it was busy. The applier thread will stop once the current task is complete.

- Error number: 3096; Symbol: [ER\\_GROUP\\_REPLICATION\\_COMMUNICATION\\_LAYER\\_SESSION\\_ERROR](#); SQLSTATE: HY000

Message: The START GROUP\_REPLICATION command failed as there was an error when initializing the group communication layer.

- Error number: 3097; Symbol: [ER\\_GROUP\\_REPLICATION\\_COMMUNICATION\\_LAYER\\_JOIN\\_ERROR](#); SQLSTATE: HY000

Message: The START GROUP\_REPLICATION command failed as there was an error when joining the communication group.

- Error number: 3098; Symbol: [ER\\_BEFORE\\_DML\\_VALIDATION\\_ERROR](#); SQLSTATE: HY000

Message: The table does not comply with the requirements by an external plugin.

- Error number: 3099; Symbol: `ER_PREVENTS_VARIABLE_WITHOUT_RBR`; SQLSTATE: `HY000`

Message: Cannot change the value of variable %s without binary log format as ROW.

`transaction_write_set_extraction` option value is set and `binlog_format` is not ROW.

- Error number: 3100; Symbol: `ER_RUN_HOOK_ERROR`; SQLSTATE: `HY000`

Message: Error on observer while running replication hook '%s'.

- Error number: 3101; Symbol: `ER_TRANSACTION_ROLLBACK_DURING_COMMIT`; SQLSTATE: `40000`

Message: Plugin instructed the server to rollback the current transaction.

When using Group Replication, this means that a transaction failed the group certification process, due to one or more members detecting a potential conflict, and was thus rolled back. See [Chapter 18, Group Replication](#).

- Error number: 3102; Symbol: `ER_GENERATED_COLUMN_FUNCTION_IS_NOT_ALLOWED`; SQLSTATE: `HY000`

Message: Expression of generated column '%s' contains a disallowed function.

- Error number: 3103; Symbol: `ER_UNSUPPORTED_ALTER_INPLACE_ON_VIRTUAL_COLUMN`; SQLSTATE: `HY000`

Message: INPLACE ADD or DROP of virtual columns cannot be combined with other ALTER TABLE actions

- Error number: 3104; Symbol: `ER_WRONG_FK_OPTION_FOR_GENERATED_COLUMN`; SQLSTATE: `HY000`

Message: Cannot define foreign key with %s clause on a generated column.

- Error number: 3105; Symbol: `ER_NON_DEFAULT_VALUE_FOR_GENERATED_COLUMN`; SQLSTATE: `HY000`

Message: The value specified for generated column '%s' in table '%s' is not allowed.

- Error number: 3106; Symbol: `ER_UNSUPPORTED_ACTION_ON_GENERATED_COLUMN`; SQLSTATE: `HY000`

Message: '%s' is not supported for generated columns.

- Error number: 3107; Symbol: `ER_GENERATED_COLUMN_NON_PRIOR`; SQLSTATE: `HY000`

Message: Generated column can refer only to generated columns defined prior to it.

To address this issue, change the table definition to define each generated column later than any generated columns to which it refers.

- Error number: 3108; Symbol: `ER_DEPENDENT_BY_GENERATED_COLUMN`; SQLSTATE: `HY000`

Message: Column '%s' has a generated column dependency.

You cannot drop or rename a generated column if another column refers to it. You must either drop those columns as well, or redefine them not to refer to the generated column.

- Error number: 3109; Symbol: `ER_GENERATED_COLUMN_REF_AUTO_INC`; SQLSTATE: `HY000`

Message: Generated column '%s' cannot refer to auto-increment column.

- Error number: 3110; Symbol: `ER_FEATURE_NOT_AVAILABLE`; SQLSTATE: HY000

Message: The '%s' feature is not available; you need to remove '%s' or use MySQL built with '%s'

- Error number: 3111; Symbol: `ER_CANT_SET_GTID_MODE`; SQLSTATE: HY000

Message: SET @@GLOBAL.GTID\_MODE = %s is not allowed because %s.

- Error number: 3112; Symbol: `ER_CANT_USE_AUTO_POSITION_WITH_GTID_MODE_OFF`; SQLSTATE: HY000

Message: The replication receiver thread%s cannot start in AUTO\_POSITION mode: this server uses @@GLOBAL.GTID\_MODE = OFF.

- Error number: 3116; Symbol: `ER_CANT_ENFORCE_GTID_CONSISTENCY_WITH_ONGOING_GTID_VIOLATING_TX`; SQLSTATE: HY000

Message: Cannot set ENFORCE\_GTID\_CONSISTENCY = ON because there are ongoing transactions that violate GTID consistency.

`ER_CANT_SET_ENFORCE_GTID_CONSISTENCY_ON_WITH_ONGOING_GTID_VIOLATING_TRANSACTIONS` was renamed to `ER_CANT_ENFORCE_GTID_CONSISTENCY_WITH_ONGOING_GTID_VIOLATING_TX`.

- Error number: 3117; Symbol: `ER_ENFORCE_GTID_CONSISTENCY_WARN_WITH_ONGOING_GTID_VIOLATING_TX`; SQLSTATE: HY000

Message: There are ongoing transactions that violate GTID consistency.

`ER_SET_ENFORCE_GTID_CONSISTENCY_WARN_WITH_ONGOING_GTID_VIOLATING_TRANSACTIONS` was renamed to `ER_ENFORCE_GTID_CONSISTENCY_WARN_WITH_ONGOING_GTID_VIOLATING_TX`.

- Error number: 3118; Symbol: `ER_ACCOUNT_HAS_BEEN_LOCKED`; SQLSTATE: HY000

Message: Access denied for user '%s'@'%s'. Account is locked.

The account was locked with `CREATE USER ... ACCOUNT LOCK` or `ALTER USER ... ACCOUNT LOCK`. An administrator can unlock it with `ALTER USER ... ACCOUNT UNLOCK`.

- Error number: 3119; Symbol: `ER_WRONG_TABLESPACE_NAME`; SQLSTATE: 42000

Message: Incorrect tablespace name '%s'

- Error number: 3120; Symbol: `ER_TABLESPACE_IS_NOT_EMPTY`; SQLSTATE: HY000

Message: Tablespace '%s' is not empty.

- Error number: 3121; Symbol: `ER_WRONG_FILE_NAME`; SQLSTATE: HY000

Message: Incorrect File Name '%s'.

- Error number: 3122; Symbol: `ER_BOOST_GEOMETRY_INCONSISTENT_TURNS_EXCEPTION`; SQLSTATE: HY000

Message: Inconsistent intersection points.

- Error number: 3123; Symbol: `ER_WARN_OPTIMIZER_HINT_SYNTAX_ERROR`; SQLSTATE: HY000

Message: Optimizer hint syntax error

- Error number: 3124; Symbol: `ER_WARN_BAD_MAX_EXECUTION_TIME`; SQLSTATE: `HY000`

Message: Unsupported MAX\_EXECUTION\_TIME

- Error number: 3125; Symbol: `ER_WARN_UNSUPPORTED_MAX_EXECUTION_TIME`; SQLSTATE: `HY000`

Message: MAX\_EXECUTION\_TIME hint is supported by top-level standalone SELECT statements only

The `MAX_EXECUTION_TIME` optimizer hint is supported only for `SELECT` statements.

- Error number: 3126; Symbol: `ER_WARN_CONFLICTING_HINT`; SQLSTATE: `HY000`

Message: Hint %s is ignored as conflicting/duplicated

- Error number: 3127; Symbol: `ER_WARN_UNKNOWN_QB_NAME`; SQLSTATE: `HY000`

Message: Query block name %s is not found for %s hint

- Error number: 3128; Symbol: `ER_UNRESOLVED_HINT_NAME`; SQLSTATE: `HY000`

Message: Unresolved name %s for %s hint

- Error number: 3129; Symbol: `ER_WARN_ON_MODIFYING_GTID_EXECUTED_TABLE`; SQLSTATE: `HY000`

Message: Please do not modify the %s table. This is a mysql internal system table to store GTIDs for committed transactions. Modifying it can lead to an inconsistent GTID state.

- Error number: 3130; Symbol: `ER_PLUGGABLE_PROTOCOL_COMMAND_NOT_SUPPORTED`; SQLSTATE: `HY000`

Message: Command not supported by pluggable protocols

- Error number: 3131; Symbol: `ER_LOCKING_SERVICE_WRONG_NAME`; SQLSTATE: `42000`

Message: Incorrect locking service lock name '%s'.

A locking service name was specified as `NULL`, the empty string, or a string longer than 64 characters. Namespace and lock names must be non-`NULL`, nonempty, and no more than 64 characters long.

- Error number: 3132; Symbol: `ER_LOCKING_SERVICE_DEADLOCK`; SQLSTATE: `HY000`

Message: Deadlock found when trying to get locking service lock; try releasing locks and restarting lock acquisition.

- Error number: 3133; Symbol: `ER_LOCKING_SERVICE_TIMEOUT`; SQLSTATE: `HY000`

Message: Service lock wait timeout exceeded.

- Error number: 3134; Symbol: `ER_GIS_MAX_POINTS_IN_GEOMETRY_OVERFLOWED`; SQLSTATE: `HY000`

Message: Parameter %s exceeds the maximum number of points in a geometry (%lu) in function %s.

- Error number: 3135; Symbol: `ER_SQL_MODE_MERGED`; SQLSTATE: `HY000`

Message: 'NO\_ZERO\_DATE', 'NO\_ZERO\_IN\_DATE' and 'ERROR\_FOR\_DIVISION\_BY\_ZERO' sql modes should be used with strict mode. They will be merged with strict mode in a future release.

- Error number: [3136](#); Symbol: [ER\\_VTOKEN\\_PLUGIN\\_TOKEN\\_MISMATCH](#); SQLSTATE: [HY000](#)

Message: Version token mismatch for %.\*s. Correct value %.\*s

The client has set its [version\\_tokens\\_session](#) system variable to the list of tokens it requires the server to match, but the server token list has at least one matching token name that has a value different from what the client requires. See [Section 5.6.5, “Version Tokens”](#).
- Error number: [3137](#); Symbol: [ER\\_VTOKEN\\_PLUGIN\\_TOKEN\\_NOT\\_FOUND](#); SQLSTATE: [HY000](#)

Message: Version token %.\*s not found.

The client has set its [version\\_tokens\\_session](#) system variable to the list of tokens it requires the server to match, but the server token list is missing at least one of those tokens. See [Section 5.6.5, “Version Tokens”](#).
- Error number: [3138](#); Symbol: [ER\\_CANT\\_SET\\_VARIABLE\\_WHEN\\_OWNING\\_GTID](#); SQLSTATE: [HY000](#)

Message: Variable %s cannot be changed by a client that owns a GTID. The client owns %s. Ownership is released on COMMIT or ROLLBACK.
- Error number: [3139](#); Symbol: [ER\\_SLAVE\\_CHANNEL\\_OPERATION\\_NOT\\_ALLOWED](#); SQLSTATE: [HY000](#)

Message: %s cannot be performed on channel '%s'.
- Error number: [3140](#); Symbol: [ER\\_INVALID\\_JSON\\_TEXT](#); SQLSTATE: [22032](#)

Message: Invalid JSON text: "%s" at position %u in value for column '%s'.
- Error number: [3141](#); Symbol: [ER\\_INVALID\\_JSON\\_TEXT\\_IN\\_PARAM](#); SQLSTATE: [22032](#)

Message: Invalid JSON text in argument %u to function %s: "%s" at position %u.%s
- Error number: [3142](#); Symbol: [ER\\_INVALID\\_JSON\\_BINARY\\_DATA](#); SQLSTATE: [HY000](#)

Message: The JSON binary value contains invalid data.
- Error number: [3143](#); Symbol: [ER\\_INVALID\\_JSON\\_PATH](#); SQLSTATE: [42000](#)

Message: Invalid JSON path expression. The error is around character position %u.%s
- Error number: [3144](#); Symbol: [ER\\_INVALID\\_JSON\\_CHARSET](#); SQLSTATE: [22032](#)

Message: Cannot create a JSON value from a string with CHARACTER SET '%s'.
- Error number: [3145](#); Symbol: [ER\\_INVALID\\_JSON\\_CHARSET\\_IN\\_FUNCTION](#); SQLSTATE: [22032](#)

Message: Invalid JSON character data provided to function %s: '%s'; utf8 is required.
- Error number: [3146](#); Symbol: [ER\\_INVALID\\_TYPE\\_FOR\\_JSON](#); SQLSTATE: [22032](#)

Message: Invalid data type for JSON data in argument %u to function %s; a JSON string or JSON type is required.
- Error number: [3147](#); Symbol: [ER\\_INVALID\\_CAST\\_TO\\_JSON](#); SQLSTATE: [22032](#)

Message: Cannot CAST value to JSON.
- Error number: [3148](#); Symbol: [ER\\_INVALID\\_JSON\\_PATH\\_CHARSET](#); SQLSTATE: [42000](#)

Message: A path expression must be encoded in the utf8 character set. The path expression '%s' is encoded in character set '%s'.

- Error number: [3149](#); Symbol: [ER\\_INVALID\\_JSON\\_PATH\\_WILDCARD](#); SQLSTATE: [42000](#)

Message: In this situation, path expressions may not contain the \* and \*\* tokens or an array range.
- Error number: [3150](#); Symbol: [ER\\_JSON\\_VALUE\\_TOO\\_BIG](#); SQLSTATE: [22032](#)

Message: The JSON value is too big to be stored in a JSON column.
- Error number: [3151](#); Symbol: [ER\\_JSON\\_KEY\\_TOO\\_BIG](#); SQLSTATE: [22032](#)

Message: The JSON object contains a key name that is too long.
- Error number: [3152](#); Symbol: [ER\\_JSON\\_USED\\_AS\\_KEY](#); SQLSTATE: [42000](#)

Message: JSON column '%s' supports indexing only via generated columns on a specified JSON path.
- Error number: [3153](#); Symbol: [ER\\_JSON\\_VACUOUS\\_PATH](#); SQLSTATE: [42000](#)

Message: The path expression '\$' is not allowed in this context.
- Error number: [3154](#); Symbol: [ER\\_JSON\\_BAD\\_ONE\\_OR\\_ALL\\_ARG](#); SQLSTATE: [42000](#)

Message: The oneOrAll argument to %s may take these values: 'one' or 'all'.
- Error number: [3155](#); Symbol: [ER\\_NUMERIC\\_JSON\\_VALUE\\_OUT\\_OF\\_RANGE](#); SQLSTATE: [22003](#)

Message: Out of range JSON value for CAST to %s%s from column %s at row %ld
- Error number: [3156](#); Symbol: [ER\\_INVALID\\_JSON\\_VALUE\\_FOR\\_CAST](#); SQLSTATE: [22018](#)

Message: Invalid JSON value for CAST to %s%s from column %s at row %ld
- Error number: [3157](#); Symbol: [ER\\_JSON\\_DOCUMENT\\_TOO\\_DEEP](#); SQLSTATE: [22032](#)

Message: The JSON document exceeds the maximum depth.
- Error number: [3158](#); Symbol: [ER\\_JSON\\_DOCUMENT\\_NULL\\_KEY](#); SQLSTATE: [22032](#)

Message: JSON documents may not contain NULL member names.
- Error number: [3159](#); Symbol: [ER\\_SECURE\\_TRANSPORT\\_REQUIRED](#); SQLSTATE: [HY000](#)

Message: Connections using insecure transport are prohibited while --require\_secure\_transport=ON.

With the [require\\_secure\\_transport](#) system variable, clients can connect only using secure transports. Qualifying connections are those using SSL, a Unix socket file, or shared memory.
- Error number: [3160](#); Symbol: [ER\\_NO\\_SECURE\\_TRANSPORTS\\_CONFIGURED](#); SQLSTATE: [HY000](#)

Message: No secure transports (SSL or Shared Memory) are configured, unable to set --require\_secure\_transport=ON.

The [require\\_secure\\_transport](#) system variable cannot be enabled if the server does not support at least one secure transport. Configure the server with the required SSL keys/certificates to enable SSL connections, or enable the [shared\\_memory](#) system variable to enable shared-memory connections.
- Error number: [3161](#); Symbol: [ER\\_DISABLED\\_STORAGE\\_ENGINE](#); SQLSTATE: [HY000](#)

Message: Storage engine %s is disabled (Table creation is disallowed).

An attempt was made to create a table or tablespace using a storage engine listed in the value of the `disabled_storage_engines` system variable, or to change an existing table or tablespace to such an engine. Choose a different storage engine.

- Error number: 3162; Symbol: `ER_USER_DOES_NOT_EXIST`; SQLSTATE: HY000

Message: Authorization ID %s does not exist.

- Error number: 3163; Symbol: `ER_USER_ALREADY_EXISTS`; SQLSTATE: HY000

Message: Authorization ID %s already exists.

- Error number: 3164; Symbol: `ER_AUDIT_API_ABORT`; SQLSTATE: HY000

Message: Aborted by Audit API ('%s';%d).

This error indicates that an audit plugin terminated execution of an event. The message typically indicates the event subclass name and a numeric status value.

- Error number: 3165; Symbol: `ER_INVALID_JSON_PATH_ARRAY_CELL`; SQLSTATE: 42000

Message: A path expression is not a path to a cell in an array.

- Error number: 3166; Symbol: `ER_BUFPOOL_RESIZE_INPROGRESS`; SQLSTATE: HY000

Message: Another buffer pool resize is already in progress.

- Error number: 3167; Symbol: `ER_FEATURE_DISABLED_SEE_DOC`; SQLSTATE: HY000

Message: The '%s' feature is disabled; see the documentation for '%s'

- Error number: 3168; Symbol: `ER_SERVER_ISNT_AVAILABLE`; SQLSTATE: HY000

Message: Server isn't available

- Error number: 3169; Symbol: `ER_SESSION_WAS_KILLED`; SQLSTATE: HY000

Message: Session was killed

- Error number: 3170; Symbol: `ER_CAPACITY_EXCEEDED`; SQLSTATE: HY000

Message: Memory capacity of %llu bytes for '%s' exceeded. %s

- Error number: 3171; Symbol: `ER_CAPACITY_EXCEEDED_IN_RANGE_OPTIMIZER`; SQLSTATE: HY000

Message: Range optimization was not done for this query.

- Error number: 3173; Symbol: `ER_CANT_WAIT_FOR_EXECUTED_GTID_SET_WHILE_OWNING_A_GTID`; SQLSTATE: HY000

Message: The client holds ownership of the GTID %s. Therefore, WAIT\_FOR\_EXECUTED\_GTID\_SET cannot wait for this GTID.

- Error number: 3174; Symbol: `ER_CANNOT_ADD_FOREIGN_BASE_COL_VIRTUAL`; SQLSTATE: HY000

Message: Cannot add foreign key on the base column of indexed virtual column.

- Error number: 3175; Symbol: `ER_CANNOT_CREATE_VIRTUAL_INDEX_CONSTRAINT`; SQLSTATE: HY000

Message: Cannot create index on virtual column whose base column has foreign constraint.

- Error number: 3176; Symbol: `ER_ERROR_ON_MODIFYING_GTID_EXECUTED_TABLE`; SQLSTATE: `HY000`

Message: Please do not modify the %s table with an XA transaction. This is an internal system table used to store GTIDs for committed transactions. Although modifying it can lead to an inconsistent GTID state, if necessary you can modify it with a non-XA transaction.

- Error number: 3177; Symbol: `ER_LOCK_REFUSED_BY_ENGINE`; SQLSTATE: `HY000`

Message: Lock acquisition refused by storage engine.

- Error number: 3178; Symbol: `ER_UNSUPPORTED_ALTER_ONLINE_ON_VIRTUAL_COLUMN`; SQLSTATE: `HY000`

Message: ADD COLUMN col...VIRTUAL, ADD INDEX(col)

- Error number: 3179; Symbol: `ER_MASTER_KEY_ROTATION_NOT_SUPPORTED_BY_SE`; SQLSTATE: `HY000`

Message: Master key rotation is not supported by storage engine.

- Error number: 3181; Symbol: `ER_MASTER_KEY_ROTATION_BINLOG_FAILED`; SQLSTATE: `HY000`

Message: Write to binlog failed. However, master key rotation has been completed successfully.

- Error number: 3182; Symbol: `ER_MASTER_KEY_ROTATION_SE_UNAVAILABLE`; SQLSTATE: `HY000`

Message: Storage engine is not available.

- Error number: 3183; Symbol: `ER_TABLESPACE_CANNOT_ENCRYPT`; SQLSTATE: `HY000`

Message: This tablespace can't be encrypted.

- Error number: 3184; Symbol: `ER_INVALID_ENCRYPTION_OPTION`; SQLSTATE: `HY000`

Message: Invalid encryption option.

- Error number: 3185; Symbol: `ER_CANNOT_FIND_KEY_IN_KEYRING`; SQLSTATE: `HY000`

Message: Can't find master key from keyring, please check in the server log if a keyring plugin is loaded and initialized successfully.

- Error number: 3186; Symbol: `ER_CAPACITY_EXCEEDED_IN_PARSER`; SQLSTATE: `HY000`

Message: Parser bailed out for this query.

- Error number: 3187; Symbol: `ER_UNSUPPORTED_ALTER_ENCRYPTION_INPLACE`; SQLSTATE: `HY000`

Message: Cannot alter encryption attribute by inplace algorithm.

- Error number: 3188; Symbol: `ER_KEYRING_UDF_KEYRING_SERVICE_ERROR`; SQLSTATE: `HY000`

Message: Function '%s' failed because underlying keyring service returned an error. Please check if a keyring plugin is installed and that provided arguments are valid for the keyring you are using.

- Error number: 3189; Symbol: `ER_USER_COLUMN_OLD_LENGTH`; SQLSTATE: `HY000`

Message: It seems that your db schema is old. The %s column is 77 characters long and should be 93 characters long. Please run `mysql_upgrade`.

- Error number: [3190](#); Symbol: [ER\\_CANT\\_RESET\\_MASTER](#); SQLSTATE: [HY000](#)

Message: RESET MASTER is not allowed because %s.
- Error number: [3191](#); Symbol: [ER\\_GROUP\\_REPLICATION\\_MAX\\_GROUP\\_SIZE](#); SQLSTATE: [HY000](#)

Message: The START GROUP\_REPLICATION command failed since the group already has 9 members.
- Error number: [3192](#); Symbol: [ER\\_CANNOT\\_ADD\\_FOREIGN\\_BASE\\_COL\\_STORED](#); SQLSTATE: [HY000](#)

Message: Cannot add foreign key on the base column of stored column.
- Error number: [3193](#); Symbol: [ER\\_TABLE\\_REFERENCED](#); SQLSTATE: [HY000](#)

Message: Cannot complete the operation because table is referenced by another connection.
- Error number: [3197](#); Symbol: [ER\\_XA\\_RETRY](#); SQLSTATE: [HY000](#)

Message: The resource manager is not able to commit the transaction branch at this time. Please retry later.

[ER\\_XA\\_RETRY](#) was added in 8.0.2.
- Error number: [3198](#); Symbol: [ER\\_KEYRING\\_AWS\\_UDF\\_AWS\\_KMS\\_ERROR](#); SQLSTATE: [HY000](#)

Message: Function %s failed due to: %s.

[ER\\_KEYRING\\_AWS\\_UDF\\_AWS\\_KMS\\_ERROR](#) was added in 8.0.2.
- Error number: [3199](#); Symbol: [ER\\_BINLOG\\_UNSAFE\\_XA](#); SQLSTATE: [HY000](#)

Message: Statement is unsafe because it is being used inside a XA transaction. Concurrent XA transactions may deadlock on slaves when replicated using statements.

[ER\\_BINLOG\\_UNSAFE\\_XA](#) was added in 8.0.2.
- Error number: [3200](#); Symbol: [ER\\_UDF\\_ERROR](#); SQLSTATE: [HY000](#)

Message: %s UDF failed; %s

[ER\\_UDF\\_ERROR](#) was added in 8.0.4.
- Error number: [3201](#); Symbol: [ER\\_KEYRING\\_MIGRATION\\_FAILURE](#); SQLSTATE: [HY000](#)

Message: Can not perform keyring migration : %s

[ER\\_KEYRING\\_MIGRATION\\_FAILURE](#) was added in 8.0.4.
- Error number: [3202](#); Symbol: [ER\\_KEYRING\\_ACCESS\\_DENIED\\_ERROR](#); SQLSTATE: [42000](#)

Message: Access denied; you need %s privileges for this operation

[ER\\_KEYRING\\_ACCESS\\_DENIED\\_ERROR](#) was added in 8.0.4.
- Error number: [3203](#); Symbol: [ER\\_KEYRING\\_MIGRATION\\_STATUS](#); SQLSTATE: [HY000](#)

Message: Keyring migration %s.

[ER\\_KEYRING\\_MIGRATION\\_STATUS](#) was added in 8.0.4.
- Error number: [3212](#); Symbol: [ER\\_AUDIT\\_LOG\\_SUPER\\_PRIVILEGE\\_REQUIRED](#); SQLSTATE: [HY000](#)

Message: SUPER privilege required for '%s'@'%s' user.

[ER\\_AUDIT\\_LOG\\_SUPER\\_PRIVILEGE\\_REQUIRED](#) was added in 8.0.11.

- Error number: [3214](#); Symbol: [ER\\_AUDIT\\_LOG\\_UDF\\_INVALID\\_ARGUMENT\\_TYPE](#); SQLSTATE: [HY000](#)

Message: Invalid argument type

[ER\\_AUDIT\\_LOG\\_UDF\\_INVALID\\_ARGUMENT\\_TYPE](#) was added in 8.0.11.

- Error number: [3215](#); Symbol: [ER\\_AUDIT\\_LOG\\_UDF\\_INVALID\\_ARGUMENT\\_COUNT](#); SQLSTATE: [HY000](#)

Message: Invalid argument count

[ER\\_AUDIT\\_LOG\\_UDF\\_INVALID\\_ARGUMENT\\_COUNT](#) was added in 8.0.11.

- Error number: [3216](#); Symbol: [ER\\_AUDIT\\_LOG\\_HAS\\_NOT\\_BEEN\\_INSTALLED](#); SQLSTATE: [HY000](#)

Message: audit\_log plugin has not been installed using INSTALL PLUGIN syntax.

[ER\\_AUDIT\\_LOG\\_HAS\\_NOT\\_BEEN\\_INSTALLED](#) was added in 8.0.11.

- Error number: [3217](#); Symbol: [ER\\_AUDIT\\_LOG\\_UDF\\_READ\\_INVALID\\_MAX\\_ARRAY\\_LENGTH\\_ARG\\_TYPE](#); SQLSTATE: [HY000](#)

Message: Invalid "max\_array\_length" argument type.

[ER\\_AUDIT\\_LOG\\_UDF\\_READ\\_INVALID\\_MAX\\_ARRAY\\_LENGTH\\_ARG\\_TYPE](#) was added in 8.0.11.

- Error number: [3218](#); Symbol: [ER\\_AUDIT\\_LOG\\_UDF\\_READ\\_INVALID\\_MAX\\_ARRAY\\_LENGTH\\_ARG\\_VALUE](#); SQLSTATE: [HY000](#)

Message: Invalid "max\_array\_length" argument value.

[ER\\_AUDIT\\_LOG\\_UDF\\_READ\\_INVALID\\_MAX\\_ARRAY\\_LENGTH\\_ARG\\_VALUE](#) was added in 8.0.11.

- Error number: [3500](#); Symbol: [ER\\_UNSUPPORT\\_COMPRESSED\\_TEMPORARY\\_TABLE](#); SQLSTATE: [HY000](#)

Message: CREATE TEMPORARY TABLE is not allowed with ROW\_FORMAT=COMPRESSED or KEY\_BLOCK\_SIZE.

- Error number: [3501](#); Symbol: [ER\\_ACL\\_OPERATION\\_FAILED](#); SQLSTATE: [HY000](#)

Message: The ACL operation failed due to the following error from SE: errcode %d - %s

 Message: table  
[ER\\_NO\\_SYSTEM\\_TABLE\\_ACCESS\\_FOR\\_TABLE](#) was added in 8.0.1.
- Error number: 3558; Symbol: [ER\\_INVALID\\_OPTION\\_KEY](#); SQLSTATE: 22023  
 Message: Invalid option key '%s' in function %s.  
[ER\\_INVALID\\_OPTION\\_KEY](#) was added in 8.0.1.
- Error number: 3559; Symbol: [ER\\_INVALID\\_OPTION\\_VALUE](#); SQLSTATE: 22023  
 Message: Invalid value '%s' for option '%s' in function '%s'.  
[ER\\_INVALID\\_OPTION\\_VALUE](#) was added in 8.0.1.
- Error number: 3560; Symbol: [ER\\_INVALID\\_OPTION\\_KEY\\_VALUE\\_PAIR](#); SQLSTATE: 22023  
 Message: The string '%s' is not a valid key %c value pair in function %s.  
[ER\\_INVALID\\_OPTION\\_KEY\\_VALUE\\_PAIR](#) was added in 8.0.1.
- Error number: 3561; Symbol: [ER\\_INVALID\\_OPTION\\_START\\_CHARACTER](#); SQLSTATE: 22023  
 Message: The options argument in function %s starts with the invalid character '%c'.

[ER\\_INVALID\\_OPTION\\_START\\_CHARACTER](#) was added in 8.0.1.

- Error number: [3562](#); Symbol: [ER\\_INVALID\\_OPTION\\_END\\_CHARACTER](#); SQLSTATE: [22023](#)

Message: The options argument in function %s ends with the invalid character '%c'.

[ER\\_INVALID\\_OPTION\\_END\\_CHARACTER](#) was added in 8.0.1.

- Error number: [3563](#); Symbol: [ER\\_INVALID\\_OPTION\\_CHARACTERS](#); SQLSTATE: [22023](#)

Message: The options argument in function %s contains the invalid character sequence '%s'.

[ER\\_INVALID\\_OPTION\\_CHARACTERS](#) was added in 8.0.1.

- Error number: [3564](#); Symbol: [ER\\_DUPLICATE\\_OPTION\\_KEY](#); SQLSTATE: [22023](#)

Message: Duplicate option key '%s' in funtion '%s'.

[ER\\_DUPLICATE\\_OPTION\\_KEY](#) was added in 8.0.1.

- Error number: [3565](#); Symbol: [ER\\_WARN\\_SRS\\_NOT\\_FOUND\\_AXIS\\_ORDER](#); SQLSTATE: [01000](#)

Message: There's no spatial reference system with SRID %u. The axis order is unknown.

[ER\\_WARN\\_SRS\\_NOT\\_FOUND\\_AXIS\\_ORDER](#) was added in 8.0.1.

- Error number: [3566](#); Symbol: [ER\\_NO\\_ACCESS\\_TO\\_NATIVE\\_FCT](#); SQLSTATE: [HY000](#)

Message: Access to native function '%s' is rejected.

[ER\\_NO\\_ACCESS\\_TO\\_NATIVE\\_FCT](#) was added in 8.0.1.

- Error number: [3567](#); Symbol: [ER\\_RESET\\_MASTER\\_TO\\_VALUE\\_OUT\\_OF\\_RANGE](#); SQLSTATE: [HY000](#)

Message: The requested value '%lu' for the next binary log index is out of range. Please use a value between '1' and '%lu'.

[ER\\_RESET\\_MASTER\\_TO\\_VALUE\\_OUT\\_OF\\_RANGE](#) was added in 8.0.1.

- Error number: [3568](#); Symbol: [ER\\_UNRESOLVED\\_TABLE\\_LOCK](#); SQLSTATE: [HY000](#)

Message: Unresolved table name %s in locking clause.

[ER\\_UNRESOLVED\\_TABLE\\_LOCK](#) was added in 8.0.1.

- Error number: [3569](#); Symbol: [ER\\_DUPLICATE\\_TABLE\\_LOCK](#); SQLSTATE: [HY000](#)

Message: Table %s appears in multiple locking clauses.

[ER\\_DUPLICATE\\_TABLE\\_LOCK](#) was added in 8.0.1.

- Error number: [3570](#); Symbol: [ER\\_BINLOG\\_UNSAFE\\_SKIP\\_LOCKED](#); SQLSTATE: [HY000](#)

Message: Statement is unsafe because it uses SKIP LOCKED. The set of inserted values is non-deterministic.

[ER\\_BINLOG\\_UNSAFE\\_SKIP\\_LOCKED](#) was added in 8.0.1.

- Error number: [3571](#); Symbol: [ER\\_BINLOG\\_UNSAFE\\_NOWAIT](#); SQLSTATE: [HY000](#)

Message: Statement is unsafe because it uses NOWAIT. Whether the command will succeed or fail is not deterministic.

[ER\\_BINLOG\\_UNSAFE\\_NOWAIT](#) was added in 8.0.1.

- Error number: [3572](#); Symbol: [ER\\_LOCK\\_NOWAIT](#); SQLSTATE: [HY000](#)

Message: Statement aborted because lock(s) could not be acquired immediately and NOWAIT is set.

[ER\\_LOCK\\_NOWAIT](#) was added in 8.0.1.

- Error number: [3573](#); Symbol: [ER\\_CTE\\_RECURSIVE\\_REQUIRES\\_UNION](#); SQLSTATE: [HY000](#)

Message: Recursive Common Table Expression '%s' should contain a UNION

[ER\\_CTE\\_RECURSIVE\\_REQUIRES\\_UNION](#) was added in 8.0.1.

- Error number: [3574](#); Symbol: [ER\\_CTE\\_RECURSIVE\\_REQUIRES\\_NONRECURSIVE\\_FIRST](#); SQLSTATE: [HY000](#)

Message: Recursive Common Table Expression '%s' should have one or more non-recursive query blocks followed by one or more recursive ones

[ER\\_CTE\\_RECURSIVE\\_REQUIRES\\_NONRECURSIVE\\_FIRST](#) was added in 8.0.1.

- Error number: [3575](#); Symbol: [ER\\_CTE\\_RECURSIVE\\_FORBIDS\\_AGGREGATION](#); SQLSTATE: [HY000](#)

Message: Recursive Common Table Expression '%s' can contain neither aggregation nor window functions in recursive query block

[ER\\_CTE\\_RECURSIVE\\_FORBIDS\\_AGGREGATION](#) was added in 8.0.1.

- Error number: [3576](#); Symbol: [ER\\_CTE\\_RECURSIVE\\_FORBIDDEN\\_JOIN\\_ORDER](#); SQLSTATE: [HY000](#)

Message: In recursive query block of Recursive Common Table Expression '%s', the recursive table must neither be in the right argument of a LEFT JOIN, nor be forced to be non-first with join order hints

[ER\\_CTE\\_RECURSIVE\\_FORBIDDEN\\_JOIN\\_ORDER](#) was added in 8.0.1.

- Error number: [3577](#); Symbol: [ER\\_CTE\\_RECURSIVE\\_REQUIRES\\_SINGLE\\_REFERENCE](#); SQLSTATE: [HY000](#)

Message: In recursive query block of Recursive Common Table Expression '%s', the recursive table must be referenced only once, and not in any subquery

[ER\\_CTE\\_RECURSIVE\\_REQUIRES\\_SINGLE\\_REFERENCE](#) was added in 8.0.1.

- Error number: [3578](#); Symbol: [ER\\_SWITCH\\_TMP\\_ENGINE](#); SQLSTATE: [HY000](#)

Message: '%s' requires @@internal\_tmp\_disk\_storage\_engine=InnoDB

[ER\\_SWITCH\\_TMP\\_ENGINE](#) was added in 8.0.1.

- Error number: [3579](#); Symbol: [ER\\_WINDOW\\_NO\\_SUCH\\_WINDOW](#); SQLSTATE: [HY000](#)

Message: Window name '%s' is not defined.

[ER\\_WINDOW\\_NO\\_SUCH\\_WINDOW](#) was added in 8.0.2.

- Error number: [3580](#); Symbol: [ER\\_WINDOW\\_CIRCULARITY\\_IN\\_WINDOW\\_GRAPH](#); SQLSTATE: [HY000](#)

Message: There is a circularity in the window dependency graph.

[ER\\_WINDOW\\_CIRCULARITY\\_IN\\_WINDOW\\_GRAPH](#) was added in 8.0.2.

- Error number: 3581; Symbol: [ER\\_WINDOW\\_NO\\_CHILD\\_PARTITIONING](#); SQLSTATE: HY000

Message: A window which depends on another cannot define partitioning.

[ER\\_WINDOW\\_NO\\_CHILD\\_PARTITIONING](#) was added in 8.0.2.

- Error number: 3582; Symbol: [ER\\_WINDOW\\_NO\\_INHERIT\\_FRAME](#); SQLSTATE: HY000

Message: Window '%s' has a frame definition, so cannot be referenced by another window.

[ER\\_WINDOW\\_NO\\_INHERIT\\_FRAME](#) was added in 8.0.2.

- Error number: 3583; Symbol: [ER\\_WINDOW\\_NO\\_REDEFINE\\_ORDER\\_BY](#); SQLSTATE: HY000

Message: Window '%s' cannot inherit '%s' since both contain an ORDER BY clause.

[ER\\_WINDOW\\_NO\\_REDEFINE\\_ORDER\\_BY](#) was added in 8.0.2.

- Error number: 3584; Symbol: [ER\\_WINDOW\\_FRAME\\_START\\_ILLEGAL](#); SQLSTATE: HY000

Message: Window '%s': frame start cannot be UNBOUNDED FOLLOWING.

[ER\\_WINDOW\\_FRAME\\_START\\_ILLEGAL](#) was added in 8.0.2.

- Error number: 3585; Symbol: [ER\\_WINDOW\\_FRAME\\_END\\_ILLEGAL](#); SQLSTATE: HY000

Message: Window '%s': frame end cannot be UNBOUNDED PRECEDING.

[ER\\_WINDOW\\_FRAME\\_END\\_ILLEGAL](#) was added in 8.0.2.

- Error number: 3586; Symbol: [ER\\_WINDOW\\_FRAME\\_ILLEGAL](#); SQLSTATE: HY000

Message: Window '%s': frame start or end is negative, NULL or of non-integral type

[ER\\_WINDOW\\_FRAME\\_ILLEGAL](#) was added in 8.0.2.

- Error number: 3587; Symbol: [ER\\_WINDOW\\_RANGE\\_FRAME\\_ORDER\\_TYPE](#); SQLSTATE: HY000

Message: Window '%s' with RANGE N PRECEDING/FOLLOWING frame requires exactly one ORDER BY expression, of numeric or temporal type

[ER\\_WINDOW\\_RANGE\\_FRAME\\_ORDER\\_TYPE](#) was added in 8.0.2.

- Error number: 3588; Symbol: [ER\\_WINDOW\\_RANGE\\_FRAME\\_TEMPORAL\\_TYPE](#); SQLSTATE: HY000

Message: Window '%s' with RANGE frame has ORDER BY expression of datetime type. Only INTERVAL bound value allowed.

[ER\\_WINDOW\\_RANGE\\_FRAME\\_TEMPORAL\\_TYPE](#) was added in 8.0.2.

- Error number: 3589; Symbol: [ER\\_WINDOW\\_RANGE\\_FRAME\\_NUMERIC\\_TYPE](#); SQLSTATE: HY000

Message: Window '%s' with RANGE frame has ORDER BY expression of numeric type, INTERVAL bound value not allowed.

[ER\\_WINDOW\\_RANGE\\_FRAME\\_NUMERIC\\_TYPE](#) was added in 8.0.2.

- Error number: 3590; Symbol: [ER\\_WINDOW\\_RANGE\\_BOUND\\_NOT\\_CONSTANT](#); SQLSTATE: HY000

Message: Window '%s' has a non-constant frame bound.

[ER\\_WINDOW\\_RANGE\\_BOUND\\_NOT\\_CONSTANT](#) was added in 8.0.2.

- Error number: [3591](#); Symbol: [ER\\_WINDOW\\_DUPLICATE\\_NAME](#); SQLSTATE: [HY000](#)

Message: Window '%s' is defined twice.

[ER\\_WINDOW\\_DUPLICATE\\_NAME](#) was added in 8.0.2.

- Error number: [3592](#); Symbol: [ER\\_WINDOW\\_ILLEGAL\\_ORDER\\_BY](#); SQLSTATE: [HY000](#)

Message: Window '%s': ORDER BY or PARTITION BY uses legacy position indication which is not supported, use expression.

[ER\\_WINDOW\\_ILLEGAL\\_ORDER\\_BY](#) was added in 8.0.2.

- Error number: [3593](#); Symbol: [ER\\_WINDOW\\_INVALID\\_WINDOW\\_FUNC\\_USE](#); SQLSTATE: [HY000](#)

Message: You cannot use the window function '%s' in this context.'

[ER\\_WINDOW\\_INVALID\\_WINDOW\\_FUNC\\_USE](#) was added in 8.0.2.

- Error number: [3594](#); Symbol: [ER\\_WINDOW\\_INVALID\\_WINDOW\\_FUNC\\_ALIAS\\_USE](#); SQLSTATE: [HY000](#)

Message: You cannot use the alias '%s' of an expression containing a window function in this context.'

[ER\\_WINDOW\\_INVALID\\_WINDOW\\_FUNC\\_ALIAS\\_USE](#) was added in 8.0.2.

- Error number: [3595](#); Symbol: [ER\\_WINDOW\\_NESTED\\_WINDOW\\_FUNC\\_USE\\_IN\\_WINDOW\\_SPEC](#); SQLSTATE: [HY000](#)

Message: You cannot nest a window function in the specification of window '%s'.

[ER\\_WINDOW\\_NESTED\\_WINDOW\\_FUNC\\_USE\\_IN\\_WINDOW\\_SPEC](#) was added in 8.0.2.

- Error number: [3596](#); Symbol: [ER\\_WINDOW\\_ROWS\\_INTERVAL\\_USE](#); SQLSTATE: [HY000](#)

Message: Window '%s': INTERVAL can only be used with RANGE frames.

[ER\\_WINDOW\\_ROWS\\_INTERVAL\\_USE](#) was added in 8.0.2.

- Error number: [3597](#); Symbol: [ER\\_WINDOW\\_NO\\_GROUP\\_ORDER](#); SQLSTATE: [HY000](#)

Message: ASC or DESC with GROUP BY isn't allowed with window functions; put ASC or DESC in ORDER BY

[ER\\_WINDOW\\_NO\\_GROUP\\_ORDER](#) was added in 8.0.2, removed after 8.0.12.

- Error number: [3597](#); Symbol: [ER\\_WINDOW\\_NO\\_GROUP\\_ORDER\\_UNUSED](#); SQLSTATE: [HY000](#)

Message: ASC or DESC with GROUP BY isn't allowed with window functions; put ASC or DESC in ORDER BY

[ER\\_WINDOW\\_NO\\_GROUP\\_ORDER\\_UNUSED](#) was added in 8.0.13.

- Error number: [3598](#); Symbol: [ER\\_WINDOW\\_EXPLAIN\\_JSON](#); SQLSTATE: [HY000](#)

Message: To get information about window functions use EXPLAIN FORMAT=JSON

[ER\\_WINDOW\\_EXPLAIN\\_JSON](#) was added in 8.0.2.

- Error number: [3599](#); Symbol: [ER\\_WINDOW\\_FUNCTION\\_IGNORES\\_FRAME](#); SQLSTATE: [HY000](#)

Message: Window function '%s' ignores the frame clause of window '%s' and aggregates over the whole partition

[ER\\_WINDOW\\_FUNCTION\\_IGNORES\\_FRAME](#) was added in 8.0.2.

- Error number: [3600](#); Symbol: [ER\\_WINDOW\\_SE\\_NOT\\_ACCEPTABLE](#); SQLSTATE: [HY000](#)

Message: Windowing requires @@internal\_tmp\_mem\_storage\_engine=TempTable.

[ER\\_WINDOW\\_SE\\_NOT\\_ACCEPTABLE](#) was added in 8.0.2, removed after 8.0.3.

- Error number: [3600](#); Symbol: [ER\\_WL9236\\_NOW\\_UNUSED](#); SQLSTATE: [HY000](#)

Message: Windowing requires @@internal\_tmp\_mem\_storage\_engine=TempTable.

[ER\\_WL9236\\_NOW\\_UNUSED](#) was added in 8.0.4.

- Error number: [3601](#); Symbol: [ER\\_INVALID\\_NO\\_OF\\_ARGS](#); SQLSTATE: [HY000](#)

Message: Too many arguments for function %s: %lu; maximum allowed is %s.

[ER\\_INVALID\\_NO\\_OF\\_ARGS](#) was added in 8.0.1.

- Error number: [3602](#); Symbol: [ER\\_FIELD\\_IN\\_GROUPING\\_NOT\\_GROUP\\_BY](#); SQLSTATE: [HY000](#)

Message: Argument #%u of GROUPING function is not in GROUP BY

[ER\\_FIELD\\_IN\\_GROUPING\\_NOT\\_GROUP\\_BY](#) was added in 8.0.1.

- Error number: [3603](#); Symbol: [ER\\_TOO\\_LONG\\_TABLESPACE\\_COMMENT](#); SQLSTATE: [HY000](#)

Message: Comment for tablespace '%s' is too long (max = %lu)

[ER\\_TOO\\_LONG\\_TABLESPACE\\_COMMENT](#) was added in 8.0.1.

- Error number: [3604](#); Symbol: [ER\\_ENGINE\\_CANT\\_DROP\\_TABLE](#); SQLSTATE: [HY000](#)

Message: Storage engine can't drop table '%s'

[ER\\_ENGINE\\_CANT\\_DROP\\_TABLE](#) was added in 8.0.1.

- Error number: [3605](#); Symbol: [ER\\_ENGINE\\_CANT\\_DROP\\_MISSING\\_TABLE](#); SQLSTATE: [HY000](#)

Message: Storage engine can't drop table '%s' because it is missing. Use DROP TABLE IF EXISTS to remove it from data-dictionary.

[ER\\_ENGINE\\_CANT\\_DROP\\_MISSING\\_TABLE](#) was added in 8.0.1.

- Error number: [3606](#); Symbol: [ER\\_TABLESPACE\\_DUP\\_FILENAME](#); SQLSTATE: [HY000](#)

Message: Duplicate file name for tablespace '%s'

[ER\\_TABLESPACE\\_DUP\\_FILENAME](#) was added in 8.0.1.

- Error number: [3607](#); Symbol: [ER\\_DB\\_DROP\\_RMDIR2](#); SQLSTATE: [HY000](#)

Message: Problem while dropping database. Can't remove database directory (%s). Please remove it manually.

[ER\\_DB\\_DROP\\_RMDIR2](#) was added in 8.0.1.

- Error number: [3608](#); Symbol: [ER\\_IMP\\_NO\\_FILES\\_MATCHED](#); SQLSTATE: [HY000](#)

Message: No SDI files matched the pattern '%s'

[ER\\_IMP\\_NO\\_FILES\\_MATCHED](#) was added in 8.0.1.

- Error number: 3609; Symbol: [ER\\_IMP\\_SCHEMA\\_DOES\\_NOT\\_EXIST](#); SQLSTATE: HY000

Message: Schema '%s', referenced in SDI, does not exist.

[ER\\_IMP\\_SCHEMA\\_DOES\\_NOT\\_EXIST](#) was added in 8.0.1.

- Error number: 3610; Symbol: [ER\\_IMP\\_TABLE\\_ALREADY\\_EXISTS](#); SQLSTATE: HY000

Message: Table '%s.%s', referenced in SDI, already exists.

[ER\\_IMP\\_TABLE\\_ALREADY\\_EXISTS](#) was added in 8.0.1.

- Error number: 3611; Symbol: [ER\\_IMP\\_INCOMPATIBLE\\_MYSQLD\\_VERSION](#); SQLSTATE: HY000

Message: Imported mysqld\_version (%llu) is not compatible with current (%llu)

[ER\\_IMP\\_INCOMPATIBLE\\_MYSQLD\\_VERSION](#) was added in 8.0.1.

- Error number: 3612; Symbol: [ER\\_IMP\\_INCOMPATIBLE\\_DD\\_VERSION](#); SQLSTATE: HY000

Message: Imported dd version (%u) is not compatible with current (%u)

[ER\\_IMP\\_INCOMPATIBLE\\_DD\\_VERSION](#) was added in 8.0.1.

- Error number: 3613; Symbol: [ER\\_IMP\\_INCOMPATIBLE\\_SDI\\_VERSION](#); SQLSTATE: HY000

Message: Imported sdi version (%llu) is not compatible with current (%llu)

[ER\\_IMP\\_INCOMPATIBLE\\_SDI\\_VERSION](#) was added in 8.0.1.

- Error number: 3614; Symbol: [ER\\_WARN\\_INVALID\\_HINT](#); SQLSTATE: HY000

Message: Invalid number of arguments for hint %s

[ER\\_WARN\\_INVALID\\_HINT](#) was added in 8.0.1.

- Error number: 3615; Symbol: [ER\\_VAR\\_DOES\\_NOT\\_EXIST](#); SQLSTATE: HY000

Message: Variable %s does not exist in persisted config file

[ER\\_VAR\\_DOES\\_NOT\\_EXIST](#) was added in 8.0.1.

- Error number: 3616; Symbol: [ER\\_LONGITUDE\\_OUT\\_OF\\_RANGE](#); SQLSTATE: 22S02

Message: Longitude %f is out of range in function %s. It must be within (%f, %f].

[ER\\_LONGITUDE\\_OUT\\_OF\\_RANGE](#) was added in 8.0.1.

- Error number: 3617; Symbol: [ER\\_LATITUDE\\_OUT\\_OF\\_RANGE](#); SQLSTATE: 22S03

Message: Latitude %f is out of range in function %s. It must be within [%f, %f].

[ER\\_LATITUDE\\_OUT\\_OF\\_RANGE](#) was added in 8.0.1.

- Error number: 3618; Symbol: [ER\\_NOT\\_IMPLEMENTED\\_FOR\\_GEOGRAPHIC\\_SRS](#); SQLSTATE: 22S00

Message: %s(%s) has not been implemented for geographic spatial reference systems.

[ER\\_NOT\\_IMPLEMENTED\\_FOR\\_GEOGRAPHIC\\_SRS](#) was added in 8.0.1.

- Error number: 3619; Symbol: [ER\\_ILLEGAL\\_PRIVILEGE\\_LEVEL](#); SQLSTATE: HY000  
Message: Illegal privilege level specified for %s  
[ER\\_ILLEGAL\\_PRIVILEGE\\_LEVEL](#) was added in 8.0.1.
- Error number: 3620; Symbol: [ER\\_NO\\_SYSTEM\\_VIEW\\_ACCESS](#); SQLSTATE: HY000  
Message: Access to system view INFORMATION\_SCHEMA.'%s' is rejected.  
[ER\\_NO\\_SYSTEM\\_VIEW\\_ACCESS](#) was added in 8.0.2.
- Error number: 3621; Symbol: [ER\\_COMPONENT\\_FILTER\\_FLABBERGASTED](#); SQLSTATE: HY000  
Message: The log-filter component "%s" got confused at "%s" ...  
[ER\\_COMPONENT\\_FILTER\\_FLABBERGASTED](#) was added in 8.0.2.
- Error number: 3622; Symbol: [ER\\_PART\\_EXPR\\_TOO\\_LONG](#); SQLSTATE: HY000  
Message: Partitioning expression is too long.  
[ER\\_PART\\_EXPR\\_TOO\\_LONG](#) was added in 8.0.2.
- Error number: 3623; Symbol: [ER\\_UDF\\_DROP\\_DYNAMICALY\\_REGISTERED](#); SQLSTATE: HY000  
Message: DROP FUNCTION can't drop a dynamically registered user defined function  
[ER\\_UDF\\_DROP\\_DYNAMICALY\\_REGISTERED](#) was added in 8.0.2.
- Error number: 3624; Symbol: [ER\\_UNABLE\\_TO\\_STORE\\_COLUMN\\_STATISTICS](#); SQLSTATE: HY000  
Message: Unable to store column statistics for column '%s' in table '%s'. '%s'  
[ER\\_UNABLE\\_TO\\_STORE\\_COLUMN\\_STATISTICS](#) was added in 8.0.2.
- Error number: 3625; Symbol: [ER\\_UNABLE\\_TO\\_UPDATE\\_COLUMN\\_STATISTICS](#); SQLSTATE: HY000  
Message: Unable to update column statistics for column '%s' in table '%s'. '%s'  
[ER\\_UNABLE\\_TO\\_UPDATE\\_COLUMN\\_STATISTICS](#) was added in 8.0.2.
- Error number: 3626; Symbol: [ER\\_UNABLE\\_TO\\_DROP\\_COLUMN\\_STATISTICS](#); SQLSTATE: HY000  
Message: Unable to remove column statistics for column '%s' in table '%s'. '%s'  
[ER\\_UNABLE\\_TO\\_DROP\\_COLUMN\\_STATISTICS](#) was added in 8.0.2.
- Error number: 3627; Symbol: [ER\\_UNABLE\\_TO\\_BUILD\\_HISTOGRAM](#); SQLSTATE: HY000  
Message: Unable to build histogram statistics for column '%s' in table '%s'. '%s'  
[ER\\_UNABLE\\_TO\\_BUILD\\_HISTOGRAM](#) was added in 8.0.2.
- Error number: 3628; Symbol: [ER\\_MANDATORY\\_ROLE](#); SQLSTATE: HY000  
Message: The role %s is a mandatory role and can't be revoked or dropped. The restriction can be lifted by excluding the role identifier from the global variable mandatory\_roles.  
[ER\\_MANDATORY\\_ROLE](#) was added in 8.0.2.
- Error number: 3629; Symbol: [ER\\_MISSING\\_TABLESPACE\\_FILE](#); SQLSTATE: HY000

Message: Tablespace '%s' does not have a file named '%s'

[ER\\_MISSING\\_TABLESPACE\\_FILE](#) was added in 8.0.3.

- Error number: 3630; Symbol: [ER\\_PERSIST\\_ONLY\\_ACCESS\\_DENIED\\_ERROR](#); SQLSTATE: 42000

Message: Access denied; you need %s privileges for this operation

[ER\\_PERSIST\\_ONLY\\_ACCESS\\_DENIED\\_ERROR](#) was added in 8.0.3.

- Error number: 3631; Symbol: [ER\\_CMD\\_NEED\\_SUPER](#); SQLSTATE: HY000

Message: You need the SUPER privilege for command '%s'

[ER\\_CMD\\_NEED\\_SUPER](#) was added in 8.0.3.

- Error number: 3632; Symbol: [ER\\_PATH\\_IN\\_DATADIR](#); SQLSTATE: HY000

Message: Path is within the current data directory '%s'

[ER\\_PATH\\_IN\\_DATADIR](#) was added in 8.0.3.

- Error number: 3633; Symbol: [ER\\_DDL\\_IN\\_PROGRESS](#); SQLSTATE: HY000

Message: Concurrent DDL is performed during the operation. Please try again.

[ER\\_DDL\\_IN\\_PROGRESS](#) was added in 8.0.3.

- Error number: 3634; Symbol: [ER\\_TOO\\_MANY\\_CONCURRENT\\_CLONES](#); SQLSTATE: HY000

Message: Too many concurrent clone operations. Maximum allowed - %d.

[ER\\_TOO\\_MANY\\_CONCURRENT\\_CLONES](#) was added in 8.0.3.

- Error number: 3635; Symbol: [ER\\_APPLIER\\_LOG\\_EVENT\\_VALIDATION\\_ERROR](#); SQLSTATE: HY000

Message: The table in transaction %s does not comply with the requirements by an external plugin.

[ER\\_APPLIER\\_LOG\\_EVENT\\_VALIDATION\\_ERROR](#) was added in 8.0.3.

- Error number: 3636; Symbol: [ER\\_CTE\\_MAX\\_RECURSION\\_DEPTH](#); SQLSTATE: HY000

Message: Recursive query aborted after %u iterations. Try increasing @@cte\_max\_recursion\_depth to a larger value.

[ER\\_CTE\\_MAX\\_RECURSION\\_DEPTH](#) was added in 8.0.3.

- Error number: 3637; Symbol: [ER\\_NOT\\_HINT\\_UPDATABLE\\_VARIABLE](#); SQLSTATE: HY000

Message: Variable %s cannot be set using SET\_VAR hint.

[ER\\_NOT\\_HINT\\_UPDATABLE\\_VARIABLE](#) was added in 8.0.3.

- Error number: 3638; Symbol: [ER\\_CREDENTIALS\\_CONTRADICT\\_TO\\_HISTORY](#); SQLSTATE: HY000

Message: Cannot use these credentials for '%.\*s@%.\*s' because they contradict the password history policy

[ER\\_CREDENTIALS\\_CONTRADICT\\_TO\\_HISTORY](#) was added in 8.0.3.

- Error number: 3639; Symbol: `ER_WARNING_PASSWORD_HISTORY_CLAUSES_VOID`; SQLSTATE: HY000

Message: Non-zero password history clauses ignored for user '%s'@'%s' as its authentication plugin %s does not support password history

`ER_WARNING_PASSWORD_HISTORY_CLAUSES_VOID` was added in 8.0.3.

- Error number: 3640; Symbol: `ER_CLIENT_DOES_NOT_SUPPORT`; SQLSTATE: HY000

Message: The client doesn't support %s

`ER_CLIENT_DOES_NOT_SUPPORT` was added in 8.0.3.

- Error number: 3641; Symbol: `ER_I_S_SKIPPED_TABLESPACE`; SQLSTATE: HY000

Message: Tablespace '%s' was skipped since its definition is being modified by concurrent DDL statement

`ER_I_S_SKIPPED_TABLESPACE` was added in 8.0.3.

- Error number: 3642; Symbol: `ER_TABLESPACE_ENGINE_MISMATCH`; SQLSTATE: HY000

Message: Engine '%s' does not match stored engine '%s' for tablespace '%s'

`ER_TABLESPACE_ENGINE_MISMATCH` was added in 8.0.3.

- Error number: 3643; Symbol: `ER_WRONG_SRID_FOR_COLUMN`; SQLSTATE: HY000

Message: The SRID of the geometry does not match the SRID of the column '%s'. The SRID of the geometry is %lu, but the SRID of the column is %lu. Consider changing the SRID of the geometry or the SRID property of the column.

`ER_WRONG_SRID_FOR_COLUMN` was added in 8.0.3.

- Error number: 3644; Symbol: `ER_CANNOT_ALTER_SRID_DUE_TO_INDEX`; SQLSTATE: HY000

Message: The SRID specification on the column '%s' cannot be changed because there is a spatial index on the column. Please remove the spatial index before altering the SRID specification.

`ER_CANNOT_ALTER_SRID_DUE_TO_INDEX` was added in 8.0.3.

- Error number: 3645; Symbol: `ER_WARN_BINLOG_PARTIAL_UPDATES_DISABLED`; SQLSTATE: HY000

Message: When %s, the option `binlog_row_value_options=%s` will be ignored and updates will be written in full format to binary log.

`ER_WARN_BINLOG_PARTIAL_UPDATES_DISABLED` was added in 8.0.3.

- Error number: 3646; Symbol: `ER_WARN_BINLOG_V1_ROW_EVENTS_DISABLED`; SQLSTATE: HY000

Message: When %s, the option `log_bin_use_v1_row_events=1` will be ignored and row events will be written in new format to binary log.

`ER_WARN_BINLOG_V1_ROW_EVENTS_DISABLED` was added in 8.0.3.

- Error number: 3647; Symbol: `ER_WARN_BINLOG_PARTIAL_UPDATES_SUGGESTS_PARTIAL_IMAGES`; SQLSTATE: HY000

Message: When %s, the option binlog\_row\_value\_options=%s will be used only for the after-image. Full values will be written in the before-image, so the saving in disk space due to binlog\_row\_value\_options is limited to less than 50%%.

[ER\\_WARN\\_BINLOG\\_PARTIAL\\_UPDATES\\_SUGGESTS\\_PARTIAL\\_IMAGES](#) was added in 8.0.3.

- Error number: 3648; Symbol: [ER\\_COULD\\_NOT\\_APPLY\\_JSON\\_DIFF](#); SQLSTATE: HY000

Message: Could not apply JSON diff in table %.\*s, column %s.

[ER\\_COULD\\_NOT\\_APPLY\\_JSON\\_DIFF](#) was added in 8.0.3.

- Error number: 3649; Symbol: [ER\\_CORRUPTED\\_JSON\\_DIFF](#); SQLSTATE: HY000

Message: Corrupted JSON diff for table %.\*s, column %s.

[ER\\_CORRUPTED\\_JSON\\_DIFF](#) was added in 8.0.3.

- Error number: 3650; Symbol: [ER\\_RESOURCE\\_GROUP\\_EXISTS](#); SQLSTATE: HY000

Message: Resource Group '%s' exists

[ER\\_RESOURCE\\_GROUP\\_EXISTS](#) was added in 8.0.3.

- Error number: 3651; Symbol: [ER\\_RESOURCE\\_GROUP\\_NOT\\_EXISTS](#); SQLSTATE: HY000

Message: Resource Group '%s' does not exist.

[ER\\_RESOURCE\\_GROUP\\_NOT\\_EXISTS](#) was added in 8.0.3.

- Error number: 3652; Symbol: [ER\\_INVALID\\_VCPU\\_ID](#); SQLSTATE: HY000

Message: Invalid cpu id %u

[ER\\_INVALID\\_VCPU\\_ID](#) was added in 8.0.3.

- Error number: 3653; Symbol: [ER\\_INVALID\\_VCPU\\_RANGE](#); SQLSTATE: HY000

Message: Invalid VCPU range %u-%u

[ER\\_INVALID\\_VCPU\\_RANGE](#) was added in 8.0.3.

- Error number: 3654; Symbol: [ER\\_INVALID\\_THREAD\\_PRIORITY](#); SQLSTATE: HY000

Message: Invalid thread priority value %d for %s resource group %s. Allowed range is [%d, %d].

[ER\\_INVALID\\_THREAD\\_PRIORITY](#) was added in 8.0.3.

- Error number: 3655; Symbol: [ER\\_DISALLOWED\\_OPERATION](#); SQLSTATE: HY000

Message: %s operation is disallowed on %s

[ER\\_DISALLOWED\\_OPERATION](#) was added in 8.0.3.

- Error number: 3656; Symbol: [ER\\_RESOURCE\\_GROUP\\_BUSY](#); SQLSTATE: HY000

Message: Resource group %s is busy.

[ER\\_RESOURCE\\_GROUP\\_BUSY](#) was added in 8.0.3.

- Error number: 3657; Symbol: [ER\\_RESOURCE\\_GROUP\\_DISABLED](#); SQLSTATE: HY000

Message: Resource group %s is disabled.

[ER\\_RESOURCE\\_GROUP\\_DISABLED](#) was added in 8.0.3.

- Error number: [3658](#); Symbol: [ER\\_FEATURE\\_UNSUPPORTED](#); SQLSTATE: [HY000](#)

Message: Feature %s is unsupported (%s).

[ER\\_FEATURE\\_UNSUPPORTED](#) was added in 8.0.3.

- Error number: [3659](#); Symbol: [ER\\_ATTRIBUTE\\_IGNORED](#); SQLSTATE: [HY000](#)

Message: Attribute %s is ignored (%s).

[ER\\_ATTRIBUTE\\_IGNORED](#) was added in 8.0.3.

- Error number: [3660](#); Symbol: [ER\\_INVALID\\_THREAD\\_ID](#); SQLSTATE: [HY000](#)

Message: Invalid thread id (%llu).

[ER\\_INVALID\\_THREAD\\_ID](#) was added in 8.0.3.

- Error number: [3661](#); Symbol: [ER\\_RESOURCE\\_GROUP\\_BIND\\_FAILED](#); SQLSTATE: [HY000](#)

Message: Unable to bind resource group %s with thread id (%llu).(s).

[ER\\_RESOURCE\\_GROUP\\_BIND\\_FAILED](#) was added in 8.0.3.

- Error number: [3662](#); Symbol: [ER\\_INVALID\\_USE\\_OF\\_FORCE\\_OPTION](#); SQLSTATE: [HY000](#)

Message: Option FORCE invalid as DISABLE option is not specified.

[ER\\_INVALID\\_USE\\_OF\\_FORCE\\_OPTION](#) was added in 8.0.3.

- Error number: [3663](#); Symbol: [ER\\_GROUP\\_REPLICATION\\_COMMAND\\_FAILURE](#); SQLSTATE: [HY000](#)

Message: The %s command encountered a failure. %s

[ER\\_GROUP\\_REPLICATION\\_COMMAND\\_FAILURE](#) was added in 8.0.4.

- Error number: [3664](#); Symbol: [ER\\_SDI\\_OPERATION\\_FAILED](#); SQLSTATE: [HY000](#)

Message: Failed to %s SDI '%s.%s' in tablespace '%s'.

[ER\\_SDI\\_OPERATION\\_FAILED](#) was added in 8.0.3.

- Error number: [3665](#); Symbol: [ER\\_MISSING\\_JSON\\_TABLE\\_VALUE](#); SQLSTATE: [22035](#)

Message: Missing value for JSON\_TABLE column '%s'

[ER\\_MISSING\\_JSON\\_TABLE\\_VALUE](#) was added in 8.0.4.

- Error number: [3666](#); Symbol: [ER\\_WRONG\\_JSON\\_TABLE\\_VALUE](#); SQLSTATE: [2203F](#)

Message: Can't store an array or an object in the scalar JSON\_TABLE column '%s'

[ER\\_WRONG\\_JSON\\_TABLE\\_VALUE](#) was added in 8.0.4.

- Error number: [3667](#); Symbol: [ER\\_TF\\_MUST\\_HAVE\\_ALIAS](#); SQLSTATE: [42000](#)

Message: Every table function must have an alias

[ER\\_TF\\_MUST\\_HAVE\\_ALIAS](#) was added in 8.0.4.

- Error number: [3668](#); Symbol: [ER\\_TF\\_FORBIDDEN\\_JOIN\\_TYPE](#); SQLSTATE: [HY000](#)

Message: INNER or LEFT JOIN must be used for LATERAL references made by '%s'

[ER\\_TF\\_FORBIDDEN\\_JOIN\\_TYPE](#) was added in 8.0.4.

- Error number: [3669](#); Symbol: [ER\\_JT\\_VALUE\\_OUT\\_OF\\_RANGE](#); SQLSTATE: [22003](#)

Message: Value is out of range for JSON\_TABLE's column '%s'

[ER\\_JT\\_VALUE\\_OUT\\_OF\\_RANGE](#) was added in 8.0.4.

- Error number: [3670](#); Symbol: [ER\\_JT\\_MAX\\_NESTED\\_PATH](#); SQLSTATE: [42000](#)

Message: More than supported %u NESTED PATHs were found in JSON\_TABLE '%s'

[ER\\_JT\\_MAX\\_NESTED\\_PATH](#) was added in 8.0.4.

- Error number: [3671](#); Symbol: [ER\\_PASSWORD\\_EXPIRATION\\_NOT\\_SUPPORTED\\_BY\\_AUTH\\_METHOD](#); SQLSTATE: [HY000](#)

Message: The selected authentication method %.\*s does not support password expiration

[ER\\_PASSWORD\\_EXPIRATION\\_NOT\\_SUPPORTED\\_BY\\_AUTH\\_METHOD](#) was added in 8.0.4.

- Error number: [3672](#); Symbol: [ER\\_INVALID\\_GEOJSON CRS\\_NOT\\_TOP\\_LEVEL](#); SQLSTATE: [HY000](#)

Message: Invalid GeoJSON data provided to function %s: Member 'crs' must be specified in the top level object.

[ER\\_INVALID\\_GEOJSON CRS\\_NOT\\_TOP\\_LEVEL](#) was added in 8.0.4.

- Error number: [3673](#); Symbol: [ER\\_BAD\\_NULL\\_ERROR\\_NOT\\_IGNORED](#); SQLSTATE: [23000](#)

Message: Column '%s' cannot be null

[ER\\_BAD\\_NULL\\_ERROR\\_NOT\\_IGNORED](#) was added in 8.0.4.

- Error number: [3674](#); Symbol: [WARN\\_USELESS\\_SPATIAL\\_INDEX](#); SQLSTATE: [HY000](#)

Message: The spatial index on column '%s' will not be used by the query optimizer since the column does not have an SRID attribute. Consider adding an SRID attribute to the column.

[WARN\\_USELESS\\_SPATIAL\\_INDEX](#) was added in 8.0.4.

- Error number: [3675](#); Symbol: [ER\\_DISK\\_FULL\\_NOWAIT](#); SQLSTATE: [HY000](#)

Message: Create table/tablespace '%s' failed, as disk is full

[ER\\_DISK\\_FULL\\_NOWAIT](#) was added in 8.0.4.

- Error number: [3676](#); Symbol: [ER\\_PARSE\\_ERROR\\_IN\\_DIGEST\\_FN](#); SQLSTATE: [HY000](#)

Message: Could not parse argument to digest function: "%s".

[ER\\_PARSE\\_ERROR\\_IN\\_DIGEST\\_FN](#) was added in 8.0.4.

- Error number: [3677](#); Symbol: [ER\\_UNDISCLOSED\\_PARSE\\_ERROR\\_IN\\_DIGEST\\_FN](#); SQLSTATE: [HY000](#)

Message: Could not parse argument to digest function.

[ER\\_UNDISCLOSED\\_PARSE\\_ERROR\\_IN\\_DIGEST\\_FN](#) was added in 8.0.4.

- Error number: 3678; Symbol: [ER\\_SCHEMA\\_DIR\\_EXISTS](#); SQLSTATE: HY000

Message: Schema directory '%s' already exists. This must be resolved manually (e.g. by moving the schema directory to another location).

[ER\\_SCHEMA\\_DIR\\_EXISTS](#) was added in 8.0.4.

- Error number: 3679; Symbol: [ER\\_SCHEMA\\_DIR\\_MISSING](#); SQLSTATE: HY000

Message: Schema directory '%s' does not exist

[ER\\_SCHEMA\\_DIR\\_MISSING](#) was added in 8.0.4.

- Error number: 3680; Symbol: [ER\\_SCHEMA\\_DIR\\_CREATE\\_FAILED](#); SQLSTATE: HY000

Message: Failed to create schema directory '%s' (errno: %d - %s)

[ER\\_SCHEMA\\_DIR\\_CREATE\\_FAILED](#) was added in 8.0.4.

- Error number: 3681; Symbol: [ER\\_SCHEMA\\_DIR\\_UNKNOWN](#); SQLSTATE: HY000

Message: Schema '%s' does not exist, but schema directory '%s' was found. This must be resolved manually (e.g. by moving the schema directory to another location).

[ER\\_SCHEMA\\_DIR\\_UNKNOWN](#) was added in 8.0.4.

- Error number: 3682; Symbol: [ER\\_ONLY\\_IMPLEMENTED\\_FOR\\_SRID\\_0\\_AND\\_4326](#); SQLSTATE: 22S00

Message: Function %s is only defined for SRID 0 and SRID 4326.

[ER\\_ONLY\\_IMPLEMENTED\\_FOR\\_SRID\\_0\\_AND\\_4326](#) was added in 8.0.4.

- Error number: 3683; Symbol: [ER\\_BINLOG\\_EXPIRE\\_LOG\\_DAYS\\_AND\\_SECS\\_USED\\_TOGETHER](#); SQLSTATE: HY000

Message: The option expire\_logs\_days and binlog\_expire\_logs\_seconds cannot be used together. Please use binlog\_expire\_logs\_seconds to set the expire time (expire\_logs\_days is deprecated)

[ER\\_BINLOG\\_EXPIRE\\_LOG\\_DAYS\\_AND\\_SECS\\_USED\\_TOGETHER](#) was added in 8.0.11.

- Error number: 3684; Symbol: [ER\\_REGEX\\_STRING\\_NOT\\_TERMINATED](#); SQLSTATE: HY000

Message: An output string could not be zero-terminated because the length exceeds the buffer capacity.

[ER\\_REGEX\\_STRING\\_NOT\\_TERMINATED](#) was added in 8.0.4, removed after 8.0.4.

- Error number: 3684; Symbol: [ER\\_REGEX\\_BUFFER\\_OVERFLOW](#); SQLSTATE: HY000

Message: The result string is larger than the result buffer.

[ER\\_REGEX\\_BUFFER\\_OVERFLOW](#) was added in 8.0.4.

- Error number: 3685; Symbol: [ER\\_REGEX\\_ILLEGAL\\_ARGUMENT](#); SQLSTATE: HY000

Message: Illegal argument to a regular expression.

[ER\\_REGEX\\_ILLEGAL\\_ARGUMENT](#) was added in 8.0.4.

- Error number: 3686; Symbol: [ER\\_REGEX\\_INDEX\\_OUTOFBOUNDS\\_ERROR](#); SQLSTATE: HY000

Message: Index out of bounds in regular expression search.

[ER\\_REGEX\\_INDEX\\_OUTOFBOUNDS\\_ERROR](#) was added in 8.0.4.

- Error number: 3687; Symbol: [ER\\_REGEX\\_INTERNAL\\_ERROR](#); SQLSTATE: HY000

Message: Internal error in the regular expression library.

[ER\\_REGEX\\_INTERNAL\\_ERROR](#) was added in 8.0.4.

- Error number: 3688; Symbol: [ER\\_REGEX\\_RULE\\_SYNTAX](#); SQLSTATE: HY000

Message: Syntax error in regular expression on line %u, character %u.

[ER\\_REGEX\\_RULE\\_SYNTAX](#) was added in 8.0.4.

- Error number: 3689; Symbol: [ER\\_REGEX\\_BAD\\_ESCAPE\\_SEQUENCE](#); SQLSTATE: HY000

Message: Unrecognized escape sequence in regular expression.

[ER\\_REGEX\\_BAD\\_ESCAPE\\_SEQUENCE](#) was added in 8.0.4.

- Error number: 3690; Symbol: [ER\\_REGEX\\_UNIMPLEMENTED](#); SQLSTATE: HY000

Message: The regular expression contains a feature that is not implemented in this library version.

[ER\\_REGEX\\_UNIMPLEMENTED](#) was added in 8.0.4.

- Error number: 3691; Symbol: [ER\\_REGEX\\_MISMATCHED\\_PAREN](#); SQLSTATE: HY000

Message: Mismatched parenthesis in regular expression.

[ER\\_REGEX\\_MISMATCHED\\_PAREN](#) was added in 8.0.4.

- Error number: 3692; Symbol: [ER\\_REGEX\\_BAD\\_INTERVAL](#); SQLSTATE: HY000

Message: Incorrect description of a {min,max} interval.

[ER\\_REGEX\\_BAD\\_INTERVAL](#) was added in 8.0.4.

- Error number: 3693; Symbol: [ER\\_REGEX\\_MAX\\_LT\\_MIN](#); SQLSTATE: HY000

Message: The maximum is less than the minimum in a {min,max} interval.

[ER\\_REGEX\\_MAX\\_LT\\_MIN](#) was added in 8.0.4.

- Error number: 3694; Symbol: [ER\\_REGEX\\_INVALID\\_BACK\\_REF](#); SQLSTATE: HY000

Message: Invalid back-reference in regular expression.

[ER\\_REGEX\\_INVALID\\_BACK\\_REF](#) was added in 8.0.4.

- Error number: 3695; Symbol: [ER\\_REGEX\\_LOOK\\_BEHIND\\_LIMIT](#); SQLSTATE: HY000

Message: The look-behind assertion exceeds the limit in regular expression.

[ER\\_REGEX\\_LOOK\\_BEHIND\\_LIMIT](#) was added in 8.0.4.

- Error number: 3696; Symbol: [ER\\_REGEX\\_MISSING\\_CLOSE\\_BRACKET](#); SQLSTATE: HY000

Message: The regular expression contains an unclosed bracket expression.

[ER\\_REGEX\\_MISSING\\_CLOSE\\_BRACKET](#) was added in 8.0.4.

- Error number: 3697; Symbol: [ER\\_REGEX\\_INVALID\\_RANGE](#); SQLSTATE: HY000

Message: The regular expression contains an [x-y] character range where x comes after y.

[ER\\_REGEX\\_INVALID\\_RANGE](#) was added in 8.0.4.

- Error number: [3698](#); Symbol: [ER\\_REGEX\\_STACK\\_OVERFLOW](#); SQLSTATE: [HY000](#)

Message: Overflow in the regular expression backtrack stack.

[ER\\_REGEX\\_STACK\\_OVERFLOW](#) was added in 8.0.4.

- Error number: [3699](#); Symbol: [ER\\_REGEX\\_TIME\\_OUT](#); SQLSTATE: [HY000](#)

Message: Timeout exceeded in regular expression match.

[ER\\_REGEX\\_TIME\\_OUT](#) was added in 8.0.4.

- Error number: [3700](#); Symbol: [ER\\_REGEX\\_PATTERN\\_TOO\\_BIG](#); SQLSTATE: [HY000](#)

Message: The regular expression pattern exceeds limits on size or complexity.

[ER\\_REGEX\\_PATTERN\\_TOO\\_BIG](#) was added in 8.0.4.

- Error number: [3701](#); Symbol: [ER\\_CANT\\_SET\\_ERROR\\_LOG\\_SERVICE](#); SQLSTATE: [HY000](#)

Message: Value for %s got confusing at or around "%s". Syntax may be wrong, component may not be INSTALLED, or a component that does not support instances may be listed more than once.

[ER\\_CANT\\_SET\\_ERROR\\_LOG\\_SERVICE](#) was added in 8.0.4.

- Error number: [3702](#); Symbol: [ER\\_EMPTY\\_PIPELINE\\_FOR\\_ERROR\\_LOG\\_SERVICE](#); SQLSTATE: [HY000](#)

Message: Setting an empty %s pipeline disables error logging!

[ER\\_EMPTY\\_PIPELINE\\_FOR\\_ERROR\\_LOG\\_SERVICE](#) was added in 8.0.4.

- Error number: [3703](#); Symbol: [ER\\_COMPONENT\\_FILTER\\_DIAGNOSTICS](#); SQLSTATE: [HY000](#)

Message: filter %s: %s

[ER\\_COMPONENT\\_FILTER\\_DIAGNOSTICS](#) was added in 8.0.4.

- Error number: [3704](#); Symbol: [ER\\_INNODB\\_CANNOT\\_BE\\_IGNORED](#); SQLSTATE: [HY000](#)

Message: ignore-builtin-innodb is ignored and will be removed in future releases.

[ER\\_INNODB\\_CANNOT\\_BE\\_IGNORED](#) was added in 8.0.2, removed after 8.0.2.

- Error number: [3704](#); Symbol: [ER\\_NOT\\_IMPLEMENTED\\_FOR\\_CARTESIAN\\_SRS](#); SQLSTATE: [22S00](#)

Message: %s(%s) has not been implemented for Cartesian spatial reference systems.

[ER\\_NOT\\_IMPLEMENTED\\_FOR\\_CARTESIAN\\_SRS](#) was added in 8.0.4.

- Error number: [3705](#); Symbol: [ER\\_NOT\\_IMPLEMENTED\\_FOR\\_PROJECTED\\_SRS](#); SQLSTATE: [22S00](#)

Message: %s(%s) has not been implemented for projected spatial reference systems.

[ER\\_NOT\\_IMPLEMENTED\\_FOR\\_PROJECTED\\_SRS](#) was added in 8.0.4.

- Error number: [3706](#); Symbol: [ER\\_NONPOSITIVE\\_RADIUS](#); SQLSTATE: [22003](#)

Message: Invalid radius provided to function %s: Radius must be greater than zero.

[ER\\_NONPOSITIVE\\_RADIUS](#) was added in 8.0.4.

- Error number: [3707](#); Symbol: [ER\\_RESTART\\_SERVER\\_FAILED](#); SQLSTATE: [HY000](#)

Message: Restart server failed (%s).

[ER\\_RESTART\\_SERVER\\_FAILED](#) was added in 8.0.4.

- Error number: [3708](#); Symbol: [ER\\_SRS\\_MISSING\\_MANDATORY\\_ATTRIBUTE](#); SQLSTATE: [SR006](#)

Message: Missing mandatory attribute %s.

[ER\\_SRS\\_MISSING\\_MANDATORY\\_ATTRIBUTE](#) was added in 8.0.4.

- Error number: [3709](#); Symbol: [ER\\_SRS\\_MULTIPLE\\_ATTRIBUTE\\_DEFINITIONS](#); SQLSTATE: [SR006](#)

Message: Multiple definitions of attribute %s.

[ER\\_SRS\\_MULTIPLE\\_ATTRIBUTE\\_DEFINITIONS](#) was added in 8.0.4.

- Error number: [3710](#); Symbol: [ER\\_SRS\\_NAME\\_CANT\\_BE\\_EMPTY\\_OR\\_WHITESPACE](#); SQLSTATE: [SR006](#)

Message: The spatial reference system name can't be an empty string or start or end with whitespace.

[ER\\_SRS\\_NAME\\_CANT\\_BE\\_EMPTY\\_OR\\_WHITESPACE](#) was added in 8.0.4.

- Error number: [3711](#); Symbol: [ER\\_SRS\\_ORGANIZATION\\_CANT\\_BE\\_EMPTY\\_OR\\_WHITESPACE](#); SQLSTATE: [SR006](#)

Message: The organization name can't be an empty string or start or end with whitespace.

[ER\\_SRS\\_ORGANIZATION\\_CANT\\_BE\\_EMPTY\\_OR\\_WHITESPACE](#) was added in 8.0.4.

- Error number: [3712](#); Symbol: [ER\\_SRS\\_ID\\_ALREADY\\_EXISTS](#); SQLSTATE: [SR004](#)

Message: There is already a spatial reference system with SRID %u.

[ER\\_SRS\\_ID\\_ALREADY\\_EXISTS](#) was added in 8.0.4.

- Error number: [3713](#); Symbol: [ER\\_WARN\\_SRS\\_ID\\_ALREADY\\_EXISTS](#); SQLSTATE: [01S00](#)

Message: There is already a spatial reference system with SRID %u.

[ER\\_WARN\\_SRS\\_ID\\_ALREADY\\_EXISTS](#) was added in 8.0.4.

- Error number: [3714](#); Symbol: [ER\\_CANT\\_MODIFY\\_SRID\\_0](#); SQLSTATE: [SR000](#)

Message: SRID 0 is not modifiable.

[ER\\_CANT\\_MODIFY\\_SRID\\_0](#) was added in 8.0.4.

- Error number: [3715](#); Symbol: [ER\\_WARN\\_RESERVED\\_SRID\\_RANGE](#); SQLSTATE: [01S01](#)

Message: The SRID range [%u, %u] has been reserved for system use. SRSs in this range may be added, modified or removed without warning during upgrade.

[ER\\_WARN\\_RESERVED\\_SRID\\_RANGE](#) was added in 8.0.4.

- Error number: 3716; Symbol: [ER\\_CANT\\_MODIFY\\_SRS\\_USED\\_BY\\_COLUMN](#); SQLSTATE: SR005

Message: Can't modify SRID %u. There is at least one column depending on it.

[ER\\_CANT\\_MODIFY\\_SRS\\_USED\\_BY\\_COLUMN](#) was added in 8.0.4.

- Error number: 3717; Symbol: [ER\\_SRS\\_INVALID\\_CHARACTER\\_IN\\_ATTRIBUTE](#); SQLSTATE: SR006

Message: Invalid character in attribute %s.

[ER\\_SRS\\_INVALID\\_CHARACTER\\_IN\\_ATTRIBUTE](#) was added in 8.0.4.

- Error number: 3718; Symbol: [ER\\_SRS\\_ATTRIBUTE\\_STRING\\_TOO\\_LONG](#); SQLSTATE: SR006

Message: Attribute %s is too long. The maximum length is %u characters.

[ER\\_SRS\\_ATTRIBUTE\\_STRING\\_TOO\\_LONG](#) was added in 8.0.4.

- Error number: 3719; Symbol: [ER\\_DEPRECATED\\_UTF8\\_ALIAS](#); SQLSTATE: HY000

Message: 'utf8' is currently an alias for the character set UTF8MB3, but will be an alias for UTF8MB4 in a future release. Please consider using UTF8MB4 in order to be unambiguous.

[ER\\_DEPRECATED\\_UTF8\\_ALIAS](#) was added in 8.0.11.

- Error number: 3720; Symbol: [ER\\_DEPRECATED\\_NATIONAL](#); SQLSTATE: HY000

Message: NATIONAL/NCHAR/NVARCHAR implies the character set UTF8MB3, which will be replaced by UTF8MB4 in a future release. Please consider using CHAR(x) CHARACTER SET UTF8MB4 in order to be unambiguous.

[ER\\_DEPRECATED\\_NATIONAL](#) was added in 8.0.11.

- Error number: 3721; Symbol: [ER\\_INVALID\\_DEFAULT\\_UTF8MB4\\_COLLATION](#); SQLSTATE: HY000

Message: Invalid default collation %s: utf8mb4\_0900\_ai\_ci or utf8mb4\_general\_ci expected

[ER\\_INVALID\\_DEFAULT\\_UTF8MB4\\_COLLATION](#) was added in 8.0.11.

- Error number: 3722; Symbol: [ER\\_UNABLE\\_TO\\_COLLECT\\_LOG\\_STATUS](#); SQLSTATE: HY000

Message: Unable to collect information for column '%s': %s.

[ER\\_UNABLE\\_TO\\_COLLECT\\_LOG\\_STATUS](#) was added in 8.0.11.

- Error number: 3723; Symbol: [ER\\_RESERVED\\_TABLESPACE\\_NAME](#); SQLSTATE: HY000

Message: The table '%s' may not be created in the reserved tablespace '%s'.

[ER\\_RESERVED\\_TABLESPACE\\_NAME](#) was added in 8.0.11.

- Error number: 3724; Symbol: [ER\\_UNABLE\\_TO\\_SET\\_OPTION](#); SQLSTATE: HY000

Message: This option cannot be set %s.

[ER\\_UNABLE\\_TO\\_SET\\_OPTION](#) was added in 8.0.11.

- Error number: 3725; Symbol: [ER\\_SLAVE\\_POSSIBLY\\_DIVERGED\\_AFTER\\_DDL](#); SQLSTATE: HY000

Message: A commit for an atomic DDL statement was unsuccessful on the master and the slave. The slave supports atomic DDL statements but the master does not, so the action taken by the slave and master might differ. Check that their states have not diverged before proceeding.

[ER\\_SLAVE\\_POSSIBLY\\_DIVERGED\\_AFTER\\_DDL](#) was added in 8.0.11.

- Error number: [3726](#); Symbol: [ER\\_SRS\\_NOT\\_GEOGRAPHIC](#); SQLSTATE: [22S00](#)

Message: Function %s is only defined for geographic spatial reference systems, but one of its arguments is in SRID %u, which is not geographic.

[ER\\_SRS\\_NOT\\_GEOGRAPHIC](#) was added in 8.0.12.

- Error number: [3727](#); Symbol: [ER\\_POLYGON\\_TOO\\_LARGE](#); SQLSTATE: [22023](#)

Message: Function %s encountered a polygon that was too large. Polygons must cover less than half the planet.

[ER\\_POLYGON\\_TOO\\_LARGE](#) was added in 8.0.12.

- Error number: [3728](#); Symbol: [ER\\_SPATIAL\\_UNIQUE\\_INDEX](#); SQLSTATE: [HY000](#)

Message: Spatial indexes can't be primary or unique indexes.

[ER\\_SPATIAL\\_UNIQUE\\_INDEX](#) was added in 8.0.12.

- Error number: [3729](#); Symbol: [ER\\_INDEX\\_TYPE\\_NOT\\_SUPPORTED\\_FOR\\_SPATIAL\\_INDEX](#); SQLSTATE: [HY000](#)

Message: The index type %s is not supported for spatial indexes.

[ER\\_INDEX\\_TYPE\\_NOT\\_SUPPORTED\\_FOR\\_SPATIAL\\_INDEX](#) was added in 8.0.12.

- Error number: [3730](#); Symbol: [ER\\_FK\\_CANNOT\\_DROP\\_PARENT](#); SQLSTATE: [HY000](#)

Message: Cannot drop table '%s' referenced by a foreign key constraint '%s' on table '%s'.

[ER\\_FK\\_CANNOT\\_DROP\\_PARENT](#) was added in 8.0.12.

- Error number: [3731](#); Symbol: [ER\\_GEOMETRY\\_PARAM\\_LONGITUDE\\_OUT\\_OF\\_RANGE](#); SQLSTATE: [22S02](#)

Message: A parameter of function %s contains a geometry with longitude %f, which is out of range. It must be within (%f, %f].

[ER\\_GEOMETRY\\_PARAM\\_LONGITUDE\\_OUT\\_OF\\_RANGE](#) was added in 8.0.12.

- Error number: [3732](#); Symbol: [ER\\_GEOMETRY\\_PARAM\\_LATITUDE\\_OUT\\_OF\\_RANGE](#); SQLSTATE: [22S03](#)

Message: A parameter of function %s contains a geometry with latitude %f, which is out of range. It must be within [%f, %f].

[ER\\_GEOMETRY\\_PARAM\\_LATITUDE\\_OUT\\_OF\\_RANGE](#) was added in 8.0.12.

- Error number: [3733](#); Symbol: [ER\\_FK\\_CANNOT\\_USE\\_VIRTUAL\\_COLUMN](#); SQLSTATE: [HY000](#)

Message: Foreign key '%s' uses virtual column '%s' which is not supported.

[ER\\_FK\\_CANNOT\\_USE\\_VIRTUAL\\_COLUMN](#) was added in 8.0.12.

- Error number: [3734](#); Symbol: [ER\\_FK\\_NO\\_COLUMN\\_PARENT](#); SQLSTATE: [HY000](#)

Message: Failed to add the foreign key constraint. Missing column '%s' for constraint '%s' in the referenced table '%s'

[ER\\_FK\\_NO\\_COLUMN\\_PARENT](#) was added in 8.0.12.

- Error number: [3735](#); Symbol: [ER\\_CANT\\_SET\\_ERROR\\_SUPPRESSION\\_LIST](#); SQLSTATE: [HY000](#)

Message: %s: Could not add suppression rule for code "%s". Rule-set may be full, or code may not correspond to an error-log message.

[ER\\_CANT\\_SET\\_ERROR\\_SUPPRESSION\\_LIST](#) was added in 8.0.13.

- Error number: [3736](#); Symbol: [ER\\_SRS\\_GEOGCS\\_INVALID\\_AXES](#); SQLSTATE: [SR002](#)

Message: The spatial reference system definition for SRID %u specifies invalid geographic axes '%s' and '%s'. One axis must be NORTH or SOUTH and the other must be EAST or WEST.

[ER\\_SRS\\_GEOGCS\\_INVALID\\_AXES](#) was added in 8.0.13.

- Error number: [3737](#); Symbol: [ER\\_SRS\\_INVALID\\_SEMI\\_MAJOR\\_AXIS](#); SQLSTATE: [SR002](#)

Message: The length of the semi-major axis must be a positive number.

[ER\\_SRS\\_INVALID\\_SEMI\\_MAJOR\\_AXIS](#) was added in 8.0.13.

- Error number: [3738](#); Symbol: [ER\\_SRS\\_INVALID\\_INVERSE\\_FLATTENING](#); SQLSTATE: [SR002](#)

Message: The inverse flattening must be larger than 1.0, or 0.0 if the ellipsoid is a sphere.

[ER\\_SRS\\_INVALID\\_INVERSE\\_FLATTENING](#) was added in 8.0.13.

- Error number: [3739](#); Symbol: [ER\\_SRS\\_INVALID\\_ANGULAR\\_UNIT](#); SQLSTATE: [SR002](#)

Message: The angular unit conversion factor must be a positive number.

[ER\\_SRS\\_INVALID\\_ANGULAR\\_UNIT](#) was added in 8.0.13.

- Error number: [3740](#); Symbol: [ER\\_SRS\\_INVALID\\_PRIME\\_MERIDIAN](#); SQLSTATE: [SR002](#)

Message: The prime meridian must be within (-180, 180] degrees, specified in the SRS angular unit.

[ER\\_SRS\\_INVALID\\_PRIME\\_MERIDIAN](#) was added in 8.0.13.

- Error number: [3741](#); Symbol: [ER\\_TRANSFORM\\_SOURCE\\_SRS\\_NOT\\_SUPPORTED](#); SQLSTATE: [22S00](#)

Message: Transformation from SRID %u is not supported.

[ER\\_TRANSFORM\\_SOURCE\\_SRS\\_NOT\\_SUPPORTED](#) was added in 8.0.13.

- Error number: [3742](#); Symbol: [ER\\_TRANSFORM\\_TARGET\\_SRS\\_NOT\\_SUPPORTED](#); SQLSTATE: [22S00](#)

Message: Transformation to SRID %u is not supported.

[ER\\_TRANSFORM\\_TARGET\\_SRS\\_NOT\\_SUPPORTED](#) was added in 8.0.13.

- Error number: [3743](#); Symbol: [ER\\_TRANSFORM\\_SOURCE\\_SRS\\_MISSING\\_TOWGS84](#); SQLSTATE: [22S00](#)

Message: Transformation from SRID %u is not supported. The spatial reference system has no TOWGS84 clause.

[ER\\_TRANSFORM\\_SOURCE\\_SRS\\_MISSING\\_TOWGS84](#) was added in 8.0.13.

- Error number: 3744; Symbol: [ER\\_TRANSFORM\\_TARGET\\_SRS\\_MISSING\\_TOWGS84](#); SQLSTATE: 22S00

Message: Transformation to SRID %u is not supported. The spatial reference system has no TOWGS84 clause.

[ER\\_TRANSFORM\\_TARGET\\_SRS\\_MISSING\\_TOWGS84](#) was added in 8.0.13.

- Error number: 3745; Symbol: [ER\\_TEMP\\_TABLE\\_PREVENTS\\_SWITCH\\_SESSION\\_BINLOG\\_FORMAT](#); SQLSTATE: HY000

Message: Changing @@session.binlog\_format is disallowed when the session has open temporary table(s). You could wait until these temporary table(s) are dropped and try again.

[ER\\_TEMP\\_TABLE\\_PREVENTS\\_SWITCH\\_SESSION\\_BINLOG\\_FORMAT](#) was added in 8.0.13.

- Error number: 3746; Symbol: [ER\\_TEMP\\_TABLE\\_PREVENTS\\_SWITCH\\_GLOBAL\\_BINLOG\\_FORMAT](#); SQLSTATE: HY000

Message: Changing @@global.binlog\_format or @@persist.binlog\_format is disallowed when any replication channel has open temporary table(s). You could wait until Slave\_open\_temp\_tables = 0 and try again

[ER\\_TEMP\\_TABLE\\_PREVENTS\\_SWITCH\\_GLOBAL\\_BINLOG\\_FORMAT](#) was added in 8.0.13.

- Error number: 3747; Symbol: [ER\\_RUNNING\\_APPLIER\\_PREVENTS\\_SWITCH\\_GLOBAL\\_BINLOG\\_FORMAT](#); SQLSTATE: HY000

Message: Changing @@global.binlog\_format or @@persist.binlog\_format is disallowed when any replication channel applier thread is running. You could execute STOP SLAVE SQL\_THREAD and try again.

[ER\\_RUNNING\\_APPLIER\\_PREVENTS\\_SWITCH\\_GLOBAL\\_BINLOG\\_FORMAT](#) was added in 8.0.13.

- Error number: 3748; Symbol: [ER\\_CLIENT\\_GTID\\_UNSAFE\\_CREATE\\_DROP\\_TEMP\\_TABLE\\_IN\\_TRX\\_IN\\_SBR](#); SQLSTATE: HY000

Message: Statement violates GTID consistency: CREATE TEMPORARY TABLE and DROP TEMPORARY TABLE are not allowed inside a transaction or inside a procedure in a transactional context when @@session.binlog\_format=STATEMENT.

[ER\\_CLIENT\\_GTID\\_UNSAFE\\_CREATE\\_DROP\\_TEMP\\_TABLE\\_IN\\_TRX\\_IN\\_SBR](#) was added in 8.0.13.

- Error number: 3749; Symbol: [ER\\_XA\\_CANT\\_CREATE\\_MDL\\_BACKUP](#); SQLSTATE: HY000

Message: XA: Failed to take MDL Lock backup of PREPARED XA transaction during client disconnect.

[ER\\_XA\\_CANT\\_CREATE\\_MDL\\_BACKUP](#) was added in 8.0.13.

- Error number: 3750; Symbol: [ER\\_TABLE\\_WITHOUT\\_PK](#); SQLSTATE: HY000

Message: Unable to create or change a table without a primary key, when the system variable 'sql\_require\_primary\_key' is set. Add a primary key to the table or unset this variable to avoid this message. Note that tables without a primary key can cause performance problems in row-based replication, so please consult your DBA before changing this setting.

[ER\\_TABLE\\_WITHOUT\\_PK](#) was added in 8.0.13.

- Error number: 3751; Symbol: `WARN_DATA_TRUNCATED_FUNCTIONAL_INDEX`; SQLSTATE: 01000

Message: Data truncated for functional index '%s' at row %ld

`WARN_DATA_TRUNCATED_FUNCTIONAL_INDEX` was added in 8.0.13.

- Error number: 3752; Symbol: `ER_WARN_DATA_OUT_OF_RANGE_FUNCTIONAL_INDEX`; SQLSTATE: 22003

Message: Value is out of range for functional index '%s' at row %ld

`ER_WARN_DATA_OUT_OF_RANGE_FUNCTIONAL_INDEX` was added in 8.0.13.

- Error number: 3753; Symbol: `ER_FUNCTIONAL_INDEX_ON_JSON_OR_GEOMETRY_FUNCTION`; SQLSTATE: 42000

Message: Cannot create a functional index on a function that returns a JSON or GEOMETRY value.

`ER_FUNCTIONAL_INDEX_ON_JSON_OR_GEOMETRY_FUNCTION` was added in 8.0.13.

- Error number: 3754; Symbol: `ER_FUNCTIONAL_INDEX_REF_AUTO_INCREMENT`; SQLSTATE: HY000

Message: Functional index '%s' cannot refer to an auto-increment column.

`ER_FUNCTIONAL_INDEX_REF_AUTO_INCREMENT` was added in 8.0.13.

- Error number: 3755; Symbol: `ER_CANNOT_DROP_COLUMN_FUNCTIONAL_INDEX`; SQLSTATE: HY000

Message: Cannot drop column '%s' because it is used by a functional index. In order to drop the column, you must remove the functional index.

`ER_CANNOT_DROP_COLUMN_FUNCTIONAL_INDEX` was added in 8.0.13.

- Error number: 3756; Symbol: `ER_FUNCTIONAL_INDEX_PRIMARY_KEY`; SQLSTATE: HY000

Message: The primary key cannot be a functional index

`ER_FUNCTIONAL_INDEX_PRIMARY_KEY` was added in 8.0.13.

- Error number: 3757; Symbol: `ER_FUNCTIONAL_INDEX_ON_LOB`; SQLSTATE: HY000

Message: Cannot create a functional index on an expression that returns a BLOB or TEXT. Please consider using CAST.

`ER_FUNCTIONAL_INDEX_ON_LOB` was added in 8.0.13.

- Error number: 3758; Symbol: `ER_FUNCTIONAL_INDEX_FUNCTION_IS_NOT_ALLOWED`; SQLSTATE: HY000

Message: Expression of functional index '%s' contains a disallowed function.

`ER_FUNCTIONAL_INDEX_FUNCTION_IS_NOT_ALLOWED` was added in 8.0.13.

- Error number: 3759; Symbol: `ER_FULLTEXT_FUNCTIONAL_INDEX`; SQLSTATE: HY000

Message: Fulltext functional index is not supported.

`ER_FULLTEXT_FUNCTIONAL_INDEX` was added in 8.0.13.

- Error number: 3760; Symbol: `ER_SPATIAL_FUNCTIONAL_INDEX`; SQLSTATE: HY000

Message: Spatial functional index is not supported.

[ER\\_SPATIAL\\_FUNCTIONAL\\_INDEX](#) was added in 8.0.13.

- Error number: [3761](#); Symbol: [ER\\_WRONG\\_KEY\\_COLUMN\\_FUNCTIONAL\\_INDEX](#); SQLSTATE: [HY000](#)

Message: The used storage engine cannot index the expression '%s'.

[ER\\_WRONG\\_KEY\\_COLUMN\\_FUNCTIONAL\\_INDEX](#) was added in 8.0.13.

- Error number: [3762](#); Symbol: [ER\\_FUNCTIONAL\\_INDEX\\_ON\\_FIELD](#); SQLSTATE: [HY000](#)

Message: Functional index on a column is not supported. Consider using a regular index instead.

[ER\\_FUNCTIONAL\\_INDEX\\_ON\\_FIELD](#) was added in 8.0.13.

- Error number: [3763](#); Symbol: [ER\\_GENERATED\\_COLUMN\\_NAMED\\_FUNCTION\\_IS\\_NOT\\_ALLOWED](#); SQLSTATE: [HY000](#)

Message: Expression of generated column '%s' contains a disallowed function: %s.

[ER\\_GENERATED\\_COLUMN\\_NAMED\\_FUNCTION\\_IS\\_NOT\\_ALLOWED](#) was added in 8.0.13.

- Error number: [3764](#); Symbol: [ER\\_GENERATED\\_COLUMN\\_ROW\\_VALUE](#); SQLSTATE: [HY000](#)

Message: Expression of generated column '%s' cannot refer to a row value.

[ER\\_GENERATED\\_COLUMN\\_ROW\\_VALUE](#) was added in 8.0.13.

- Error number: [3765](#); Symbol: [ER\\_GENERATED\\_COLUMN\\_VARIABLES](#); SQLSTATE: [HY000](#)

Message: Expression of generated column '%s' cannot refer user or system variables.

[ER\\_GENERATED\\_COLUMN\\_VARIABLES](#) was added in 8.0.13.

- Error number: [3766](#); Symbol: [ER\\_DEPENDENT\\_BY\\_DEFAULT\\_GENERATED\\_VALUE](#); SQLSTATE: [HY000](#)

Message: Column '%s' of table '%s' has a default value expression dependency and cannot be dropped.

[ER\\_DEPENDENT\\_BY\\_DEFAULT\\_GENERATED\\_VALUE](#) was added in 8.0.13.

- Error number: [3767](#); Symbol: [ER\\_DEFAULT\\_VAL\\_GENERATED\\_NON\\_PRIOR](#); SQLSTATE: [HY000](#)

Message: Default value expression of column '%s' cannot refer to a column defined after it if that column is a generated column or has an expression as default value.

[ER\\_DEFAULT\\_VAL\\_GENERATED\\_NON\\_PRIOR](#) was added in 8.0.13.

- Error number: [3768](#); Symbol: [ER\\_DEFAULT\\_VAL\\_GENERATED\\_REF\\_AUTO\\_INC](#); SQLSTATE: [HY000](#)

Message: Default value expression of column '%s' cannot refer to an auto-increment column.

[ER\\_DEFAULT\\_VAL\\_GENERATED\\_REF\\_AUTO\\_INC](#) was added in 8.0.13.

- Error number: [3769](#); Symbol: [ER\\_DEFAULT\\_VAL\\_GENERATED\\_FUNCTION\\_IS\\_NOT\\_ALLOWED](#); SQLSTATE: [HY000](#)

Message: Default value expression of column '%s' contains a disallowed function.

[ER\\_DEFAULT\\_VAL\\_GENERATED\\_FUNCTION\\_IS\\_NOT\\_ALLOWED](#) was added in 8.0.13.

- Error number: [3770](#); Symbol: [ER\\_DEFAULT\\_VAL\\_GENERATED\\_NAMED\\_FUNCTION\\_IS\\_NOT\\_ALLOWED](#); SQLSTATE: [HY000](#)

Message: Default value expression of column '%s' contains a disallowed function: %s.

[ER\\_DEFAULT\\_VAL\\_GENERATED\\_NAMED\\_FUNCTION\\_IS\\_NOT\\_ALLOWED](#) was added in 8.0.13.

- Error number: [3771](#); Symbol: [ER\\_DEFAULT\\_VAL\\_GENERATED\\_ROW\\_VALUE](#); SQLSTATE: [HY000](#)

Message: Default value expression of column '%s' cannot refer to a row value.

[ER\\_DEFAULT\\_VAL\\_GENERATED\\_ROW\\_VALUE](#) was added in 8.0.13.

- Error number: [3772](#); Symbol: [ER\\_DEFAULT\\_VAL\\_GENERATED\\_VARIABLES](#); SQLSTATE: [HY000](#)

Message: Default value expression of column '%s' cannot refer user or system variables.

[ER\\_DEFAULT\\_VAL\\_GENERATED\\_VARIABLES](#) was added in 8.0.13.

- Error number: [3773](#); Symbol: [ER\\_DEFAULT\\_AS\\_VAL\\_GENERATED](#); SQLSTATE: [HY000](#)

Message: DEFAULT function cannot be used with default value expressions

[ER\\_DEFAULT\\_AS\\_VAL\\_GENERATED](#) was added in 8.0.13.

- Error number: [3774](#); Symbol: [ER\\_UNSUPPORTED\\_ACTION\\_ON\\_DEFAULT\\_VAL\\_GENERATED](#); SQLSTATE: [HY000](#)

Message: '%s' is not supported for default value expressions.

[ER\\_UNSUPPORTED\\_ACTION\\_ON\\_DEFAULT\\_VAL\\_GENERATED](#) was added in 8.0.13.

- Error number: [3775](#); Symbol: [ER\\_GTID\\_UNSAFE\\_ALTER\\_ADD\\_COL\\_WITH\\_DEFAULT\\_EXPRESSION](#); SQLSTATE: [HY000](#)

Message: Statement violates GTID consistency: ALTER TABLE ... ADD COLUMN .. with expression as DEFAULT.

[ER\\_GTID\\_UNSAFE\\_ALTER\\_ADD\\_COL\\_WITH\\_DEFAULT\\_EXPRESSION](#) was added in 8.0.13.

- Error number: [3776](#); Symbol: [ER\\_FK\\_CANNOT\\_CHANGE\\_ENGINE](#); SQLSTATE: [HY000](#)

Message: Cannot change table's storage engine because the table participates in a foreign key constraint.

[ER\\_FK\\_CANNOT\\_CHANGE\\_ENGINE](#) was added in 8.0.13.

- Error number: [3777](#); Symbol: [ER\\_WARN\\_DEPRECATED\\_USER\\_SET\\_EXPR](#); SQLSTATE: [HY000](#)

Message: Setting user variables within expressions is deprecated and will be removed in a future release. Consider alternatives: 'SET variable=expression, ...', or 'SELECT expression(s) INTO variables(s)'.

[ER\\_WARN\\_DEPRECATED\\_USER\\_SET\\_EXPR](#) was added in 8.0.13.

- Error number: [3778](#); Symbol: [ER\\_WARN\\_DEPRECATED\\_UTF8MB3\\_COLLATION](#); SQLSTATE: [HY000](#)

Message: '%s' is a collation of the deprecated character set UTF8MB3. Please consider using UTF8MB4 with an appropriate collation instead.

[ER\\_WARN\\_DEPRECATED\\_UTF8MB3\\_COLLATION](#) was added in 8.0.13.

- Error number: [3779](#); Symbol: [ER\\_WARN\\_DEPRECATED\\_NESTED\\_COMMENT\\_SYNTAX](#); SQLSTATE: [HY000](#)

Message: Nested comment syntax is deprecated and will be removed in a future release.

[ER\\_WARN\\_DEPRECATED\\_NESTED\\_COMMENT\\_SYNTAX](#) was added in 8.0.13.

- Error number: [3780](#); Symbol: [ER\\_FK\\_INCOMPATIBLE\\_COLUMNS](#); SQLSTATE: [HY000](#)

Message: Referencing column '%s' and referenced column '%s' in foreign key constraint '%s' are incompatible.

[ER\\_FK\\_INCOMPATIBLE\\_COLUMNS](#) was added in 8.0.14.

- Error number: [3781](#); Symbol: [ER\\_GR\\_HOLD\\_WAIT\\_TIMEOUT](#); SQLSTATE: [HY000](#)

Message: Timeout exceeded for held statement while new Group Replication primary member is applying backlog.

[ER\\_GR\\_HOLD\\_WAIT\\_TIMEOUT](#) was added in 8.0.14.

- Error number: [3782](#); Symbol: [ER\\_GR\\_HOLD\\_KILLED](#); SQLSTATE: [HY000](#)

Message: Held statement aborted because Group Replication plugin got shut down or thread was killed while new primary member was applying backlog.

[ER\\_GR\\_HOLD\\_KILLED](#) was added in 8.0.14.

- Error number: [3783](#); Symbol: [ER\\_GR\\_HOLD\\_MEMBER\\_STATUS\\_ERROR](#); SQLSTATE: [HY000](#)

Message: Held statement was aborted due to member being in error state, while backlog is being applied during Group Replication primary election.

[ER\\_GR\\_HOLD\\_MEMBER\\_STATUS\\_ERROR](#) was added in 8.0.14.

- Error number: [3784](#); Symbol: [ER\\_RPL\\_ENCRYPTION\\_FAILED\\_TO\\_FETCH\\_KEY](#); SQLSTATE: [HY000](#)

Message: Failed to fetch key from keyring, please check if keyring plugin is loaded.

[ER\\_RPL\\_ENCRYPTION\\_FAILED\\_TO\\_FETCH\\_KEY](#) was added in 8.0.14.

- Error number: [3785](#); Symbol: [ER\\_RPL\\_ENCRYPTION\\_KEY\\_NOT\\_FOUND](#); SQLSTATE: [HY000](#)

Message: Can't find key from keyring, please check in the server log if a keyring plugin is loaded and initialized successfully.

[ER\\_RPL\\_ENCRYPTION\\_KEY\\_NOT\\_FOUND](#) was added in 8.0.14.

- Error number: [3786](#); Symbol: [ER\\_RPL\\_ENCRYPTION\\_KEYRING\\_INVALID\\_KEY](#); SQLSTATE: [HY000](#)

Message: Fetched an invalid key from keyring.

[ER\\_RPL\\_ENCRYPTION\\_KEYRING\\_INVALID\\_KEY](#) was added in 8.0.14.

- Error number: [3787](#); Symbol: [ER\\_RPL\\_ENCRYPTION\\_HEADER\\_ERROR](#); SQLSTATE: [HY000](#)

Message: Error reading a replication log encryption header: %s.

[ER\\_RPL\\_ENCRYPTION\\_HEADER\\_ERROR](#) was added in 8.0.14.

[ER\\_CANT\\_INIT\\_TC\\_LOG](#) was added in 8.0.2.

- Error number: [MY-010042](#); Symbol: [ER\\_EVENT\\_CANT\\_INIT\\_QUEUE](#); SQLSTATE: [HY000](#)

Message: Event Scheduler: Can't initialize the execution queue

[ER\\_EVENT\\_CANT\\_INIT\\_QUEUE](#) was added in 8.0.2.

- Error number: [MY-010043](#); Symbol: [ER\\_EVENT\\_PURGING\\_QUEUE](#); SQLSTATE: [HY000](#)

Message: Event Scheduler: Purging the queue. %u events

[ER\\_EVENT\\_PURGING\\_QUEUE](#) was added in 8.0.2.

- Error number: [MY-010044](#); Symbol: [ER\\_EVENT\\_LAST\\_EXECUTION](#); SQLSTATE: [HY000](#)

Message: Event Scheduler: Last execution of %s.%s. %s

[ER\\_EVENT\\_LAST\\_EXECUTION](#) was added in 8.0.2.

- Error number: [MY-010045](#); Symbol: [ER\\_EVENT\\_MESSAGE\\_STACK](#); SQLSTATE: [HY000](#)

Message: %\*s

[ER\\_EVENT\\_MESSAGE\\_STACK](#) was added in 8.0.2.

- Error number: [MY-010046](#); Symbol: [ER\\_EVENT\\_EXECUTION\\_FAILED](#); SQLSTATE: [HY000](#)

Message: Event Scheduler: [%s].[%s.%s] event execution failed.

[ER\\_EVENT\\_EXECUTION\\_FAILED](#) was added in 8.0.2.

- Error number: [MY-010047](#); Symbol: [ER\\_CANT\\_INIT\\_SCHEDULER\\_THREAD](#); SQLSTATE: [HY000](#)

Message: Event Scheduler: Cannot initialize the scheduler thread

[ER\\_CANT\\_INIT\\_SCHEDULER\\_THREAD](#) was added in 8.0.2.

- Error number: [MY-010048](#); Symbol: [ER\\_SCHEDULER\\_STOPPED](#); SQLSTATE: [HY000](#)

Message: Event Scheduler: Stopped

[ER\\_SCHEDULER\\_STOPPED](#) was added in 8.0.2.

- Error number: [MY-010049](#); Symbol: [ER\\_CANT\\_CREATE\\_SCHEDULER\\_THREAD](#); SQLSTATE: [HY000](#)

Message: Event scheduler: Failed to start scheduler, Can not create thread for event scheduler (errno=%d)

[ER\\_CANT\\_CREATE\\_SCHEDULER\\_THREAD](#) was added in 8.0.2.

- Error number: [MY-010050](#); Symbol: [ER\\_SCHEDULER\\_WAITING](#); SQLSTATE: [HY000](#)

Message: Event Scheduler: Waiting for the scheduler thread to reply

[ER\\_SCHEDULER\\_WAITING](#) was added in 8.0.2.

- Error number: [MY-010051](#); Symbol: [ER\\_SCHEDULER\\_STARTED](#); SQLSTATE: [HY000](#)

Message: Event Scheduler: scheduler thread started with id %u

[ER\\_SCHEDULER\\_STARTED](#) was added in 8.0.2.

- Error number: [MY-010052](#); Symbol: [ER\\_SCHEDULER\\_STOPPING\\_FAILED\\_TO\\_GET\\_EVENT](#); SQLSTATE: [HY000](#)

Message: Event Scheduler: Serious error during getting next event to execute. Stopping

[ER\\_SCHEDULER\\_STOPPING\\_FAILED\\_TO\\_GET\\_EVENT](#) was added in 8.0.2.

- Error number: [MY-010053](#); Symbol: [ER\\_SCHEDULER\\_STOPPING\\_FAILED\\_TO\\_CREATE\\_WORKER](#); SQLSTATE: [HY000](#)

Message: Event\_scheduler::execute\_top: Can not create event worker thread (errno=%d). Stopping event scheduler

[ER\\_SCHEDULER\\_STOPPING\\_FAILED\\_TO\\_CREATE\\_WORKER](#) was added in 8.0.2.

- Error number: [MY-010054](#); Symbol: [ER\\_SCHEDULER\\_KILLING](#); SQLSTATE: [HY000](#)

Message: Event Scheduler: Killing the scheduler thread, thread id %u

[ER\\_SCHEDULER\\_KILLING](#) was added in 8.0.2.

- Error number: [MY-010055](#); Symbol: [ER\\_UNABLE\\_TO\\_RESOLVE\\_IP](#); SQLSTATE: [HY000](#)

Message: IP address '%s' could not be resolved: %s

[ER\\_UNABLE\\_TO\\_RESOLVE\\_IP](#) was added in 8.0.2.

- Error number: [MY-010056](#); Symbol: [ER\\_UNABLE\\_TO\\_RESOLVE\\_HOSTNAME](#); SQLSTATE: [HY000](#)

Message: Host name '%s' could not be resolved: %s

[ER\\_UNABLE\\_TO\\_RESOLVE\\_HOSTNAME](#) was added in 8.0.2.

- Error number: [MY-010057](#); Symbol: [ER\\_HOSTNAME\\_RESEMBLES\\_IPV4](#); SQLSTATE: [HY000](#)

Message: IP address '%s' has been resolved to the host name '%s', which resembles IPv4-address itself.

[ER\\_HOSTNAME\\_RESEMBLES\\_IPV4](#) was added in 8.0.2.

- Error number: [MY-010058](#); Symbol: [ER\\_HOSTNAME\\_DOESNT\\_RESOLVE\\_TO](#); SQLSTATE: [HY000](#)  
Message: Hostname '%s' does not resolve to '%s'.  
[ER\\_HOSTNAME\\_DOESNT\\_RESOLVE\\_TO](#) was added in 8.0.2.
- Error number: [MY-010059](#); Symbol: [ER\\_ADDRESSES\\_FOR\\_HOSTNAME\\_HEADER](#); SQLSTATE: [HY000](#)  
Message: Hostname '%s' has the following IP addresses:  
[ER\\_ADDRESSES\\_FOR\\_HOSTNAME\\_HEADER](#) was added in 8.0.2.
- Error number: [MY-010060](#); Symbol: [ER\\_ADDRESSES\\_FOR\\_HOSTNAME\\_LIST\\_ITEM](#); SQLSTATE: [HY000](#)  
Message: - %s  
[ER\\_ADDRESSES\\_FOR\\_HOSTNAME\\_LIST\\_ITEM](#) was added in 8.0.2.
- Error number: [MY-010061](#); Symbol: [ER\\_TRG\\_WITHOUT\\_DEFINER](#); SQLSTATE: [HY000](#)  
Message: Definer clause is missing in Trigger of Table %s. Rebuild Trigger to fix definer.  
[ER\\_TRG\\_WITHOUT\\_DEFINER](#) was added in 8.0.2.
- Error number: [MY-010062](#); Symbol: [ER\\_TRG\\_NO\\_CLIENT\\_CHARSET](#); SQLSTATE: [HY000](#)  
Message: Client character set is missing for trigger of table %s. Using default character set.  
[ER\\_TRG\\_NO\\_CLIENT\\_CHARSET](#) was added in 8.0.2.
- Error number: [MY-010063](#); Symbol: [ER\\_PARSING\\_VIEW](#); SQLSTATE: [HY000](#)  
Message: Error in parsing view %s.%s  
[ER\\_PARSING\\_VIEW](#) was added in 8.0.2.
- Error number: [MY-010064](#); Symbol: [ER\\_COMPONENTS\\_INFRASTRUCTURE\\_BOOTSTRAP](#); SQLSTATE: [HY000](#)  
Message: Failed to bootstrap components infrastructure.  
[ER\\_COMPONENTS\\_INFRASTRUCTURE\\_BOOTSTRAP](#) was added in 8.0.2.
- Error number: [MY-010065](#); Symbol: [ER\\_COMPONENTS\\_INFRASTRUCTURE\\_SHUTDOWN](#); SQLSTATE: [HY000](#)  
Message: Failed to shutdown components infrastructure.  
[ER\\_COMPONENTS\\_INFRASTRUCTURE\\_SHUTDOWN](#) was added in 8.0.2.
- Error number: [MY-010066](#); Symbol: [ER\\_COMPONENTS\\_PERSIST\\_LOADER\\_BOOTSTRAP](#); SQLSTATE: [HY000](#)  
Message: Failed to bootstrap persistent components loader.  
[ER\\_COMPONENTS\\_PERSIST\\_LOADER\\_BOOTSTRAP](#) was added in 8.0.2.
- Error number: [MY-010067](#); Symbol: [ER\\_DEPART\\_WITH\\_GRACE](#); SQLSTATE: [HY000](#)  
Message: Giving %d client threads a chance to die gracefully  
[ER\\_DEPART\\_WITH\\_GRACE](#) was added in 8.0.2.

- Error number: [MY-010068](#); Symbol: [ER\\_CA\\_SELF\\_SIGNED](#); SQLSTATE: [HY000](#)  
Message: CA certificate %s is self signed.  
[ER\\_CA\\_SELF\\_SIGNED](#) was added in 8.0.2.
- Error number: [MY-010069](#); Symbol: [ER\\_SSL\\_LIBRARY\\_ERROR](#); SQLSTATE: [HY000](#)  
Message: Failed to set up SSL because of the following SSL library error: %s  
[ER\\_SSL\\_LIBRARY\\_ERROR](#) was added in 8.0.2.
- Error number: [MY-010070](#); Symbol: [ER\\_NO\\_THD\\_NO\\_UUID](#); SQLSTATE: [HY000](#)  
Message: Failed to generate a server UUID because it is failed to allocate the THD.  
[ER\\_NO\\_THD\\_NO\\_UUID](#) was added in 8.0.2.
- Error number: [MY-010071](#); Symbol: [ER\\_UUID\\_SALT](#); SQLSTATE: [HY000](#)  
Message: Salting uuid generator variables, current\_pid: %lu, server\_start\_time: %lu, bytes\_sent: %llu,  
[ER\\_UUID\\_SALT](#) was added in 8.0.2.
- Error number: [MY-010072](#); Symbol: [ER\\_UUID\\_IS](#); SQLSTATE: [HY000](#)  
Message: Generated uuid: '%s', server\_start\_time: %lu, bytes\_sent: %llu  
[ER\\_UUID\\_IS](#) was added in 8.0.2.
- Error number: [MY-010073](#); Symbol: [ER\\_UUID\\_INVALID](#); SQLSTATE: [HY000](#)  
Message: The server\_uuid stored in auto.cnf file is not a valid UUID.  
[ER\\_UUID\\_INVALID](#) was added in 8.0.2.
- Error number: [MY-010074](#); Symbol: [ER\\_UUID\\_SCRUB](#); SQLSTATE: [HY000](#)  
Message: Garbage characters found at the end of the server\_uuid value in auto.cnf file. It should be of length '%d' (UUID\_LENGTH). Clear it and restart the server.  
[ER\\_UUID\\_SCRUB](#) was added in 8.0.2.
- Error number: [MY-010075](#); Symbol: [ER\\_CREATING\\_NEW\\_UUID](#); SQLSTATE: [HY000](#)  
Message: No existing UUID has been found, so we assume that this is the first time that this server has been started. Generating a new UUID: %s.  
[ER\\_CREATING\\_NEW\\_UUID](#) was added in 8.0.2.
- Error number: [MY-010076](#); Symbol: [ER\\_CANT\\_CREATE\\_UUID](#); SQLSTATE: [HY000](#)  
Message: Initialization of the server's UUID failed because it could not be read from the auto.cnf file. If this is a new server, the initialization failed because it was not possible to generate a new UUID.  
[ER\\_CANT\\_CREATE\\_UUID](#) was added in 8.0.2.
- Error number: [MY-010077](#); Symbol: [ER\\_UNKNOWN\\_UNSUPPORTED\\_STORAGE\\_ENGINE](#); SQLSTATE: [HY000](#)  
Message: Unknown/unsupported storage engine: %s  
[ER\\_UNKNOWN\\_UNSUPPORTED\\_STORAGE\\_ENGINE](#) was added in 8.0.2.

- Error number: [MY-010078](#); Symbol: [ER\\_SECURE\\_AUTH\\_VALUE\\_UNSUPPORTED](#); SQLSTATE: [HY000](#)  
Message: Unsupported value 0 for secure-auth  
[ER\\_SECURE\\_AUTH\\_VALUE\\_UNSUPPORTED](#) was added in 8.0.2.
- Error number: [MY-010079](#); Symbol: [ER\\_INVALID\\_INSTRUMENT](#); SQLSTATE: [HY000](#)  
Message: Invalid instrument name or value for performance\_schema\_instrument '%s'  
[ER\\_INVALID\\_INSTRUMENT](#) was added in 8.0.2.
- Error number: [MY-010080](#); Symbol: [ER\\_INNOODB\\_MANDATORY](#); SQLSTATE: [HY000](#)  
Message: The use of InnoDB is mandatory since MySQL 5.7. The former options like '--innodb=0/1/OFF/ON' or '--skip-innodb' are ignored.  
[ER\\_INNOODB\\_MANDATORY](#) was added in 8.0.2.
- Error number: [MY-010082](#); Symbol: [ER\\_OLD\\_PASSWORDS\\_NO\\_MIDDLE\\_GROUND](#); SQLSTATE: [HY000](#)  
Message: Invalid old\_passwords mode: 1. Valid values are 2 and 0  
[ER\\_OLD\\_PASSWORDS\\_NO\\_MIDDLE\\_GROUND](#) was added in 8.0.2, removed after 8.0.14.
- Error number: [MY-010083](#); Symbol: [ER\\_VERBOSE\\_REQUIRES\\_HELP](#); SQLSTATE: [HY000](#)  
Message: --verbose is for use with --help; did you mean --log-error-verbosity?  
[ER\\_VERBOSE\\_REQUIRES\\_HELP](#) was added in 8.0.2.
- Error number: [MY-010084](#); Symbol: [ER\\_POINTLESS\\_WITHOUT\\_SLOWLOG](#); SQLSTATE: [HY000](#)  
Message: options --log-slow-admin-statements, --log-queries-not-using-indexes and --log-slow-slave-statements have no effect if --slow-query-log is not set  
[ER\\_POINTLESS\\_WITHOUT\\_SLOWLOG](#) was added in 8.0.2.
- Error number: [MY-010085](#); Symbol: [ER\\_WASTEFUL\\_NET\\_BUFFER\\_SIZE](#); SQLSTATE: [HY000](#)  
Message: net\_buffer\_length (%lu) is set to be larger than max\_allowed\_packet (%lu). Please rectify.  
[ER\\_WASTEFUL\\_NET\\_BUFFER\\_SIZE](#) was added in 8.0.2.
- Error number: [MY-010086](#); Symbol: [ER\\_DEPRECATED\\_TIMESTAMP\\_IMPLICIT\\_DEFAULTS](#); SQLSTATE: [HY000](#)  
Message: TIMESTAMP with implicit DEFAULT value is deprecated. Please use --explicit\_defaults\_for\_timestamp server option (see documentation for more details).  
[ER\\_DEPRECATED\\_TIMESTAMP\\_IMPLICIT\\_DEFAULTS](#) was added in 8.0.2.
- Error number: [MY-010087](#); Symbol: [ER\\_FT\\_BOOL\\_SYNTAX\\_INVALID](#); SQLSTATE: [HY000](#)  
Message: Invalid ft-boolean-syntax string: %s  
[ER\\_FT\\_BOOL\\_SYNTAX\\_INVALID](#) was added in 8.0.2.

Message: Can't create test file %s

[ER\\_CANT\\_CREATE\\_TEST\\_FILE](#) was added in 8.0.2.

- Error number: [MY-010092](#); Symbol: [ER\\_CANT\\_CREATE\\_PID\\_FILE](#); SQLSTATE: [HY000](#)

Message: Can't start server: can't create PID file: %s

[ER\\_CANT\\_CREATE\\_PID\\_FILE](#) was added in 8.0.2.

- Error number: [MY-010093](#); Symbol: [ER\\_CANT\\_REMOVE\\_PID\\_FILE](#); SQLSTATE: [HY000](#)

Message: Unable to delete pid file: %s

[ER\\_CANT\\_REMOVE\\_PID\\_FILE](#) was added in 8.0.2.

- Error number: [MY-010094](#); Symbol: [ER\\_CANT\\_CREATE\\_SHUTDOWN\\_THREAD](#); SQLSTATE: [HY000](#)

Message: Can't create thread to handle shutdown requests (errno= %d)

[ER\\_CANT\\_CREATE\\_SHUTDOWN\\_THREAD](#) was added in 8.0.2.

- Error number: [MY-010095](#); Symbol: [ER\\_SEC\\_FILE\\_PRIV\\_CANT\\_ACCESS\\_DIR](#); SQLSTATE: [HY000](#)

Message: Failed to access directory for --secure-file-priv. Please make sure that directory exists and is accessible by MySQL Server. Supplied value : %s

[ER\\_SEC\\_FILE\\_PRIV\\_CANT\\_ACCESS\\_DIR](#) was added in 8.0.2.

- Error number: [MY-010096](#); Symbol: [ER\\_SEC\\_FILE\\_PRIV\\_IGNORED](#); SQLSTATE: [HY000](#)

Message: Ignoring --secure-file-priv value as server is running with --initialize(-insecure).

[ER\\_SEC\\_FILE\\_PRIV\\_IGNORED](#) was added in 8.0.2.

- Error number: [MY-010097](#); Symbol: [ER\\_SEC\\_FILE\\_PRIV\\_EMPTY](#); SQLSTATE: [HY000](#)

Message: Insecure configuration for --secure-file-priv: Current value does not restrict location of generated files. Consider setting it to a valid, non-empty path.

[ER\\_SEC\\_FILE\\_PRIV\\_EMPTY](#) was added in 8.0.2.

- Error number: [MY-010098](#); Symbol: [ER\\_SEC\\_FILE\\_PRIV\\_NULL](#); SQLSTATE: [HY000](#)

Message: --secure-file-priv is set to NULL. Operations related to importing and exporting data are disabled

`ER_SEC_FILE_PRIV_NULL` was added in 8.0.2.

- Error number: `MY-010099`; Symbol: `ER_SEC_FILE_PRIV_DIRECTORY_INSECURE`; SQLSTATE: `HY000`

Message: Insecure configuration for --secure-file-priv: %s is accessible through --secure-file-priv. Consider choosing a different directory.

`ER_SEC_FILE_PRIV_DIRECTORY_INSECURE` was added in 8.0.2.

- Error number: `MY-010100`; Symbol: `ER_SEC_FILE_PRIV_CANT_STAT`; SQLSTATE: `HY000`

Message: Failed to get stat for directory pointed out by --secure-file-priv

`ER_SEC_FILE_PRIV_CANT_STAT` was added in 8.0.2.

- Error number: `MY-010101`; Symbol: `ER_SEC_FILE_PRIV_DIRECTORY_PERMISSIONS`; SQLSTATE: `HY000`

Message: Insecure configuration for --secure-file-priv: Location is accessible to all OS users. Consider choosing a different directory.

`ER_SEC_FILE_PRIV_DIRECTORY_PERMISSIONS` was added in 8.0.2.

- Error number: `MY-010102`; Symbol: `ER_SEC_FILE_PRIV_ARGUMENT_TOO_LONG`; SQLSTATE: `HY000`

Message: Value for --secure-file-priv is longer than maximum limit of %d

`ER_SEC_FILE_PRIV_ARGUMENT_TOO_LONG` was added in 8.0.2.

- Error number: `MY-010103`; Symbol: `ER_CANT_CREATE_NAMED_PIPES_THREAD`; SQLSTATE: `HY000`

Message: Can't create thread to handle named pipes (errno= %d)

`ER_CANT_CREATE_NAMED_PIPES_THREAD` was added in 8.0.2.

- Error number: `MY-010104`; Symbol: `ER_CANT_CREATE_TCPIP_THREAD`; SQLSTATE: `HY000`

Message: Can't create thread to handle TCP/IP (errno= %d)

`ER_CANT_CREATE_TCPIP_THREAD` was added in 8.0.2.

- Error number: `MY-010105`; Symbol: `ER_CANT_CREATE_SHM_THREAD`; SQLSTATE: `HY000`

Message: Can't create thread to handle shared memory (errno= %d)

`ER_CANT_CREATE_SHM_THREAD` was added in 8.0.2.

- Error number: `MY-010106`; Symbol: `ER_CANT_CREATE_INTERRUPT_THREAD`; SQLSTATE: `HY000`

Message: Can't create interrupt-thread (error %d, errno: %d)

`ER_CANT_CREATE_INTERRUPT_THREAD` was added in 8.0.2.

- Error number: `MY-010107`; Symbol: `ER_WRITABLE_CONFIG_REMOVED`; SQLSTATE: `HY000`

Message: World-writable config file '%s' has been removed.

`ER_WRITABLE_CONFIG_REMOVED` was added in 8.0.2.

- Error number: [MY-010108](#); Symbol: [ER\\_CORE\\_VALUES](#); SQLSTATE: [HY000](#)

Message: setrlimit could not change the size of core files to 'infinity'; We may not be able to generate a core file on signals

[ER\\_CORE\\_VALUES](#) was added in 8.0.2.

- Error number: [MY-010109](#); Symbol: [ER\\_WRONG\\_DATETIME\\_SPEC](#); SQLSTATE: [HY000](#)

Message: Wrong date/time format specifier: %s

[ER\\_WRONG\\_DATETIME\\_SPEC](#) was added in 8.0.2.

- Error number: [MY-010110](#); Symbol: [ER\\_RPL\\_BINLOG\\_FILTERS\\_OOM](#); SQLSTATE: [HY000](#)

Message: Could not allocate replication and binlog filters: %s

[ER\\_RPL\\_BINLOG\\_FILTERS\\_OOM](#) was added in 8.0.2.

- Error number: [MY-010111](#); Symbol: [ER\\_KEYCACHE\\_OOM](#); SQLSTATE: [HY000](#)

Message: Cannot allocate the keycache

[ER\\_KEYCACHE\\_OOM](#) was added in 8.0.2.

- Error number: [MY-010112](#); Symbol: [ER\\_CONFIRMING\\_THE\\_FUTURE](#); SQLSTATE: [HY000](#)

Message: Current time has got past year 2038. Validating current time with %d iterations before initiating the normal server shutdown process.

[ER\\_CONFIRMING\\_THE\\_FUTURE](#) was added in 8.0.2.

- Error number: [MY-010113](#); Symbol: [ER\\_BACK\\_IN\\_TIME](#); SQLSTATE: [HY000](#)

Message: Iteration %d: Obtained valid current time from system

[ER\\_BACK\\_IN\\_TIME](#) was added in 8.0.2.

Message: Could not write private key file: %s  
[ER\\_AUTH\\_CANT\\_WRITE\\_PRIVKEY](#) was added in 8.0.2.
- Error number: [MY-010302](#); Symbol: [ER\\_AUTH\\_CANT\\_WRITE\\_PUBKEY](#); SQLSTATE: [HY000](#)  
Message: Could not write public key file: %s  
[ER\\_AUTH\\_CANT\\_WRITE\\_PUBKEY](#) was added in 8.0.2.
- Error number: [MY-010303](#); Symbol: [ER\\_AUTH\\_SSL\\_CONF\\_PREVENTS\\_CERT\\_GENERATION](#); SQLSTATE: [HY000](#)  
Message: Skipping generation of SSL certificates as options related to SSL are specified.  
[ER\\_AUTH\\_SSL\\_CONF\\_PREVENTS\\_CERT\\_GENERATION](#) was added in 8.0.2.
- Error number: [MY-010304](#); Symbol: [ER\\_AUTH\\_USING\\_EXISTING\\_CERTS](#); SQLSTATE: [HY000](#)  
Message: Skipping generation of SSL certificates as certificate files are present in data directory.  
[ER\\_AUTH\\_USING\\_EXISTING\\_CERTS](#) was added in 8.0.2.
- Error number: [MY-010305](#); Symbol: [ER\\_AUTH\\_CERTS\\_SAVED\\_TO\\_DATADIR](#); SQLSTATE: [HY000](#)  
Message: Auto generated SSL certificates are placed in data directory.  
[ER\\_AUTH\\_CERTS\\_SAVED\\_TO\\_DATADIR](#) was added in 8.0.2.
- Error number: [MY-010306](#); Symbol: [ER\\_AUTH\\_CERT\\_GENERATION\\_DISABLED](#); SQLSTATE: [HY000](#)  
Message: Skipping generation of SSL certificates as --auto\_generate\_certs is set to OFF.  
[ER\\_AUTH\\_CERT\\_GENERATION\\_DISABLED](#) was added in 8.0.2.
- Error number: [MY-010307](#); Symbol: [ER\\_AUTH\\_RSA\\_CONF\\_PREVENTS\\_KEY\\_GENERATION](#); SQLSTATE: [HY000](#)

Message: Skipping generation of RSA key pair through %s as options related to RSA keys are specified.

[ER\\_AUTH\\_RSA\\_CONF\\_PREVENTS\\_KEY\\_GENERATION](#) was added in 8.0.2.

- Error number: [MY-010308](#); Symbol: [ER\\_AUTH\\_KEY\\_GENERATION\\_SKIPPED\\_PAIR\\_PRESENT](#); SQLSTATE: [HY000](#)

Message: Skipping generation of RSA key pair through %s as key files are present in data directory.

[ER\\_AUTH\\_KEY\\_GENERATION\\_SKIPPED\\_PAIR\\_PRESENT](#) was added in 8.0.2.

- Error number: [MY-010309](#); Symbol: [ER\\_AUTH\\_KEYS\\_SAVED\\_TO\\_DATADIR](#); SQLSTATE: [HY000](#)

Message: Auto generated RSA key files through %s are placed in data directory.

[ER\\_AUTH\\_KEYS\\_SAVED\\_TO\\_DATADIR](#) was added in 8.0.2.

- Error number: [MY-010310](#); Symbol: [ER\\_AUTH\\_KEY\\_GENERATION\\_DISABLED](#); SQLSTATE: [HY000](#)

Message: Skipping generation of RSA key pair as %s is set to OFF.

[ER\\_AUTH\\_KEY\\_GENERATION\\_DISABLED](#) was added in 8.0.2.

- Error number: [MY-010311](#); Symbol: [ER\\_AUTHCACHE\\_PROXIES\\_PRIV\\_SKIPPED\\_NEEDS\\_RESOLVE](#); SQLSTATE: [HY000](#)

Message: 'proxies\_priv' entry '%s@%s %s@%s' ignored in --skip-name-resolve mode.

[ER\\_AUTHCACHE\\_PROXIES\\_PRIV\\_SKIPPED\\_NEEDS\\_RESOLVE](#) was added in 8.0.2.

- Error number: [MY-010312](#); Symbol: [ER\\_AUTHCACHE\\_PLUGIN\\_MISSING](#); SQLSTATE: [HY000](#)

Message: The plugin '%.s' used to authenticate user '%s'@'%.s' is not loaded. Nobody can currently login using this account.

[ER\\_AUTHCACHE\\_PLUGIN\\_MISSING](#) was added in 8.0.2.

- Error number: [MY-010313](#); Symbol: [ER\\_AUTHCACHE\\_PLUGIN\\_CONFIG](#); SQLSTATE: [HY000](#)

Message: The plugin '%s' is used to authenticate user '%s'@'%.s', %s configured. Nobody can currently login using this account.

[ER\\_AUTHCACHE\\_PLUGIN\\_CONFIG](#) was added in 8.0.2.

- Error number: [MY-010314](#); Symbol: [ER\\_AUTHCACHE\\_ROLE\\_TABLES\\_DODGY](#); SQLSTATE: [HY000](#)

Message: Could not load mysql.role\_edges and mysql.default\_roles tables. ACL DDLs will not work unless mysql\_upgrade is executed.

[ER\\_AUTHCACHE\\_ROLE\\_TABLES\\_DODGY](#) was added in 8.0.2, removed after 8.0.4.

- Error number: [MY-010315](#); Symbol: [ER\\_AUTHCACHE\\_USER\\_SKIPPED\\_NEEDS\\_RESOLVE](#); SQLSTATE: [HY000](#)

Message: 'user' entry '%s@%s' ignored in --skip-name-resolve mode.

[ER\\_AUTHCACHE\\_USER\\_SKIPPED\\_NEEDS\\_RESOLVE](#) was added in 8.0.2.

- Error number: [MY-010316](#); Symbol: [ER\\_AUTHCACHE\\_USER\\_TABLE\\_DODGY](#); SQLSTATE: [HY000](#)

Message: Fatal error: mysql.user table is damaged. Please run mysql\_upgrade.

[ER\\_AUTHCACHE\\_USER\\_TABLE\\_DODGY](#) was added in 8.0.2.

- Error number: [MY-010317](#); Symbol: [ER\\_AUTHCACHE\\_USER\\_IGNORED\\_DEPRECATED\\_PASSWORD](#); SQLSTATE: [HY000](#)

Message: User entry '%s'@'%s' has a deprecated pre-4.1 password. The user will be ignored and no one can login with this user anymore.

[ER\\_AUTHCACHE\\_USER\\_IGNORED\\_DEPRECATED\\_PASSWORD](#) was added in 8.0.2.

- Error number: [MY-010318](#); Symbol: [ER\\_AUTHCACHE\\_USER\\_IGNORED\\_NEEDS\\_PLUGIN](#); SQLSTATE: [HY000](#)

Message: User entry '%s'@'%s' has an empty plugin value. The user will be ignored and no one can login with this user anymore.

[ER\\_AUTHCACHE\\_USER\\_IGNORED\\_NEEDS\\_PLUGIN](#) was added in 8.0.2.

- Error number: [MY-010319](#); Symbol: [ER\\_AUTHCACHE\\_USER\\_IGNORED\\_INVALID\\_PASSWORD](#); SQLSTATE: [HY000](#)

Message: Found invalid password for user: '%s@%s'; Ignoring user

[ER\\_AUTHCACHE\\_USER\\_IGNORED\\_INVALID\\_PASSWORD](#) was added in 8.0.2.

- Error number: [MY-010320](#); Symbol: [ER\\_AUTHCACHE\\_EXPIRED\\_PASSWORD\\_UNSUPPORTED](#); SQLSTATE: [HY000](#)

Message: 'user' entry '%s@%s' has the password ignore flag raised, but its authentication plugin doesn't support password expiration. The user id will be ignored.

[ER\\_AUTHCACHE\\_EXPIRED\\_PASSWORD\\_UNSUPPORTED](#) was added in 8.0.2.

- Error number: [MY-010321](#); Symbol: [ER\\_NO\\_SUPER\\_WITHOUT\\_USER\\_PLUGIN](#); SQLSTATE: [HY000](#)

Message: Some of the user accounts with SUPER privileges were disabled because of empty mysql.user.plugin value. If you are upgrading from MySQL 5.6 to MySQL 5.7 it means we were not able to substitute for empty plugin column. Probably because of pre 4.1 password hash. If your account is disabled you will need to: 1. Stop the server and restart it with --skip-grant-tables. 2. Run mysql\_upgrade. 3. Restart the server with the parameters you normally use. For complete instructions on how to upgrade MySQL to a new version please see the 'Upgrading MySQL' section from the MySQL manual

[ER\\_NO\\_SUPER\\_WITHOUT\\_USER\\_PLUGIN](#) was added in 8.0.2.

- Error number: [MY-010322](#); Symbol: [ER\\_AUTHCACHE\\_DB\\_IGNORED\\_EMPTY\\_NAME](#); SQLSTATE: [HY000](#)

Message: Found an entry in the 'db' table with empty database name; Skipped

[ER\\_AUTHCACHE\\_DB\\_IGNORED\\_EMPTY\\_NAME](#) was added in 8.0.2.

- Error number: [MY-010323](#); Symbol: [ER\\_AUTHCACHE\\_DB\\_SKIPPED\\_NEEDS\\_RESOLVE](#); SQLSTATE: [HY000](#)

Message: 'db' entry '%s %s@%s' ignored in --skip-name-resolve mode.

[ER\\_AUTHCACHE\\_DB\\_SKIPPED\\_NEEDS\\_RESOLVE](#) was added in 8.0.2.

- Error number: [MY-010324](#); Symbol: [ER\\_AUTHCACHE\\_DB\\_ENTRY\\_LOWERCASED\\_REVOKE\\_WILL\\_FAIL](#); SQLSTATE: [HY000](#)

Message: 'db' entry '%s %s@%s' had database in mixed case that has been forced to lowercase because lower\_case\_table\_names is set. It will not be possible to remove this privilege using REVOKE.

[ER\\_AUTHCACHE\\_DB\\_ENTRY\\_LOWERCASED\\_REVOKE\\_WILL\\_FAIL](#) was added in 8.0.2.

- Error number: [MY-010325](#); Symbol: [ER\\_AUTHCACHE\\_TABLE\\_PROXIES\\_PRIV\\_MISSING](#); SQLSTATE: [HY000](#)

Message: Missing system table mysql.proxies\_priv; please run mysql\_upgrade to create it

[ER\\_AUTHCACHE\\_TABLE\\_PROXIES\\_PRIV\\_MISSING](#) was added in 8.0.2.

- Error number: [MY-010326](#); Symbol: [ER\\_AUTHCACHE\\_CANT\\_OPEN\\_AND\\_LOCK\\_PRIVILEGE\\_TABLES](#); SQLSTATE: [HY000](#)

Message: Fatal error: Can't open and lock privilege tables: %s

[ER\\_AUTHCACHE\\_CANT\\_OPEN\\_AND\\_LOCK\\_PRIVILEGE\\_TABLES](#) was added in 8.0.2.

- Error number: [MY-010327](#); Symbol: [ER\\_AUTHCACHE\\_CANT\\_INIT\\_GRANT\\_SUBSYSTEM](#); SQLSTATE: [HY000](#)

Message: Fatal: can't initialize grant subsystem - '%s'

[ER\\_AUTHCACHE\\_CANT\\_INIT\\_GRANT\\_SUBSYSTEM](#) was added in 8.0.2.

[ER\\_BINLOG\\_CANT\\_OPEN\\_CRASHED\\_BINLOG](#) was added in 8.0.2.

- Error number: [MY-010857](#); Symbol: [ER\\_BINLOG\\_CANT\\_TRIM\\_CRASHED\\_BINLOG](#); SQLSTATE: [HY000](#)

Message: Failed to trim the crashed binlog file when master server is recovering it.

[ER\\_BINLOG\\_CANT\\_TRIM\\_CRASHED\\_BINLOG](#) was added in 8.0.2.

- Error number: [MY-010858](#); Symbol: [ER\\_BINLOG\\_CRASHED\\_BINLOG\\_TRIMMED](#); SQLSTATE: [HY000](#)

Message: Crashed binlog file %s size is %llu, but recovered up to %llu. Binlog trimmed to %llu bytes.

[ER\\_BINLOG\\_CRASHED\\_BINLOG\\_TRIMMED](#) was added in 8.0.2.

- Error number: [MY-010859](#); Symbol: [ER\\_BINLOG\\_CANT\\_CLEAR\\_IN\\_USE\\_FLAG\\_FOR\\_CRASHED\\_BINLOG](#); SQLSTATE: [HY000](#)

Message: Failed to clear LOG\_EVENT\_BINLOG\_IN\_USE\_F for the crashed binlog file when master server is recovering it.

[ER\\_BINLOG\\_CANT\\_CLEAR\\_IN\\_USE\\_FLAG\\_FOR\\_CRASHED\\_BINLOG](#) was added in 8.0.2.

- Error number: [MY-010860](#); Symbol: [ER\\_BINLOG\\_FAILED\\_TO\\_RUN\\_AFTER\\_SYNC\\_HOOK](#); SQLSTATE: [HY000](#)

Message: Failed to run 'after\_sync' hooks

[ER\\_BINLOG\\_FAILED\\_TO\\_RUN\\_AFTER\\_SYNC\\_HOOK](#) was added in 8.0.2.

- Error number: [MY-010861](#); Symbol: [ER\\_TURNING\\_LOGGING\\_OFF\\_FOR\\_THE\\_DURATION](#); SQLSTATE: [HY000](#)

Message: %s Hence turning logging off for the whole duration of the MySQL server process. To turn it on again: fix the cause, shutdown the MySQL server and restart it.

[ER\\_TURNING\\_LOGGING\\_OFF\\_FOR\\_THE\\_DURATION](#) was added in 8.0.2.

- Error number: [MY-010862](#); Symbol: [ER\\_BINLOG\\_FAILED\\_TO\\_RUN\\_AFTER\\_FLUSH\\_HOOK](#); SQLSTATE: [HY000](#)

Message: Failed to run 'after\_flush' hooks

[ER\\_BINLOG\\_FAILED\\_TO\\_RUN\\_AFTER\\_FLUSH\\_HOOK](#) was added in 8.0.2.

- Error number: [MY-010863](#); Symbol: [ER\\_BINLOG\\_CRASH\\_RECOVERY\\_FAILED](#); SQLSTATE: [HY000](#)

Message: Crash recovery failed. Either correct the problem (if it's, for example, out of memory error) and restart, or delete (or rename) binary log and start mysqld with --tc-heuristic-recover={commit|rollback}

[ER\\_BINLOG\\_CRASH\\_RECOVERY\\_FAILED](#) was added in 8.0.2.

- Error number: [MY-010864](#); Symbol: [ER\\_BINLOG\\_WARNING\\_SUPPRESSED](#); SQLSTATE: [HY000](#)

Message: The following warning was suppressed %d times during the last %d seconds in the error log

[ER\\_BINLOG\\_WARNING\\_SUPPRESSED](#) was added in 8.0.2.

- Error number: [MY-010865](#); Symbol: [ER\\_NDB\\_LOG\\_ENTRY](#); SQLSTATE: [HY000](#)

Message: NDB: %s

[ER\\_NDB\\_LOG\\_ENTRY](#) was added in 8.0.2.

- Error number: [MY-010866](#); Symbol: [ER\\_NDB\\_LOG\\_ENTRY\\_WITH\\_PREFIX](#); SQLSTATE: [HY000](#)

Message: NDB %s: %s

[ER\\_NDB\\_LOG\\_ENTRY\\_WITH\\_PREFIX](#) was added in 8.0.2.

- Error number: [MY-010867](#); Symbol: [ER\\_NDB\\_BINLOG\\_CANT\\_CREATE\\_PURGE\\_THD](#); SQLSTATE: [HY000](#)

Message: NDB: Unable to purge %s.%s File=%s (failed to setup thd)

[ER\\_NDB\\_BINLOG\\_CANT\\_CREATE\\_PURGE\\_THD](#) was added in 8.0.2, removed after 8.0.13.

- Error number: [MY-010868](#); Symbol: [ER\\_INNOBDB\\_UNKNOWN\\_COLLATION](#); SQLSTATE: [HY000](#)

Message: Unknown collation #%lu.

[ER\\_INNOBDB\\_UNKNOWN\\_COLLATION](#) was added in 8.0.2.

- Error number: [MY-010869](#); Symbol: [ER\\_INNOBDB\\_INVALID\\_LOG\\_GROUP\\_HOME\\_DIR](#); SQLSTATE: [HY000](#)

Message: syntax error in innodb\_log\_group\_home\_dir

[ER\\_INNOBDB\\_INVALID\\_LOG\\_GROUP\\_HOME\\_DIR](#) was added in 8.0.2.

- Error number: [MY-010870](#); Symbol: [ER\\_INNOBDB\\_INVALID\\_INNOBDB\\_UNDO\\_DIRECTORY](#); SQLSTATE: [HY000](#)

Message: syntax error in innodb\_undo\_directory

[ER\\_INNOBDB\\_INVALID\\_INNOBDB\\_UNDO\\_DIRECTORY](#) was added in 8.0.2.

- Error number: [MY-010871](#); Symbol: [ER\\_INNOBDB\\_ILLEGAL\\_COLON\\_IN\\_POOL](#); SQLSTATE: [HY000](#)

Message: InnoDB: innodb\_buffer\_pool\_filename cannot have colon (:) in the file name.

[ER\\_INNOBDB\\_ILLEGAL\\_COLON\\_IN\\_POOL](#) was added in 8.0.2.

- Error number: [MY-010872](#); Symbol: [ER\\_INNOBDB\\_INVALID\\_PAGE\\_SIZE](#); SQLSTATE: [HY000](#)

Message: InnoDB: Invalid page size=%lu.

[ER\\_INNOBDB\\_INVALID\\_PAGE\\_SIZE](#) was added in 8.0.2.

- Error number: [MY-010873](#); Symbol: [ER\\_INNOBDB\\_DIRTY\\_WATER\\_MARK\\_NOT\\_LOW](#); SQLSTATE: [HY000](#)

Message: InnoDB: innodb\_max\_dirty\_pages\_pct\_lwm cannot be set higher than innodb\_max\_dirty\_pages\_pct. Setting innodb\_max\_dirty\_pages\_pct\_lwm to %lf

[ER\\_INNODB\\_DIRTY\\_WATER\\_MARK\\_NOT\\_LOW](#) was added in 8.0.2.

- Error number: [MY-010874](#); Symbol: [ER\\_INNODB\\_IO\\_CAPACITY\\_EXCEEDS\\_MAX](#); SQLSTATE: [HY000](#)

Message: InnoDB: innodb\_io\_capacity cannot be set higher than innodb\_io\_capacity\_max. Setting innodb\_io\_capacity to %lu

[ER\\_INNODB\\_IO\\_CAPACITY\\_EXCEEDS\\_MAX](#) was added in 8.0.2.

- Error number: [MY-010875](#); Symbol: [ER\\_INNODB\\_FILES\\_SAME](#); SQLSTATE: [HY000](#)

Message: %s and %s file names seem to be the same.

[ER\\_INNODB\\_FILES\\_SAME](#) was added in 8.0.2.

- Error number: [MY-010876](#); Symbol: [ER\\_INNODB\\_UNREGISTERED\\_TRX\\_ACTIVE](#); SQLSTATE: [HY000](#)

Message: Transaction not registered for MySQL 2PC, but transaction is active

[ER\\_INNODB\\_UNREGISTERED\\_TRX\\_ACTIVE](#) was added in 8.0.2.

- Error number: [MY-010877](#); Symbol: [ER\\_INNODB\\_CLOSING\\_CONNECTION\\_ROLLS\\_BACK](#); SQLSTATE: [HY000](#)

Message: MySQL is closing a connection that has an active InnoDB transaction. %s row modifications will roll back.

[ER\\_INNODB\\_CLOSING\\_CONNECTION\\_ROLLS\\_BACK](#) was added in 8.0.2.

- Error number: [MY-010878](#); Symbol: [ER\\_INNODB\\_TRX\\_XLATION\\_TABLE\\_OOM](#); SQLSTATE: [HY000](#)

Message: InnoDB: fail to allocate memory for index translation table. Number of Index:%lu, array size:%lu

[ER\\_INNODB\\_TRX\\_XLATION\\_TABLE\\_OOM](#) was added in 8.0.2.

- Error number: [MY-010879](#); Symbol: [ER\\_INNODB\\_CANT\\_FIND\\_INDEX\\_IN\\_INNODB\\_DD](#); SQLSTATE: [HY000](#)

Message: Cannot find index %s in InnoDB index dictionary.

[ER\\_INNODB\\_CANT\\_FIND\\_INDEX\\_IN\\_INNODB\\_DD](#) was added in 8.0.2.

- Error number: [MY-010880](#); Symbol: [ER\\_INNODB\\_INDEX\\_COLUMN\\_INFO\\_UNLIKE\\_MYSQLS](#); SQLSTATE: [HY000](#)

Message: Found index %s whose column info does not match that of MySQL.

[ER\\_INNODB\\_INDEX\\_COLUMN\\_INFO\\_UNLIKE\\_MYSQLS](#) was added in 8.0.2.

- Error number: [MY-010881](#); Symbol: [ER\\_INNODB\\_CANT\\_OPEN\\_TABLE](#); SQLSTATE: [HY000](#)

Message: Failed to open table %s.

[ER\\_INNODB\\_CANT\\_OPEN\\_TABLE](#) was added in 8.0.2.

- Error number: [MY-010882](#); Symbol: [ER\\_INNODB\\_CANT\\_BUILD\\_INDEX\\_XLATION\\_TABLE\\_FOR](#); SQLSTATE: [HY000](#)

Message: Build InnoDB index translation table for Table %s failed

[ER\\_INNOODB\\_CANT\\_BUILD\\_INDEX\\_XLATION\\_TABLE\\_FOR](#) was added in 8.0.2.

- Error number: [MY-010883](#); Symbol: [ER\\_INNOODB\\_PK\\_NOT\\_IN\\_MYSQL](#); SQLSTATE: [HY000](#)

Message: Table %s has a primary key in InnoDB data dictionary, but not in MySQL!

[ER\\_INNOODB\\_PK\\_NOT\\_IN\\_MYSQL](#) was added in 8.0.2.

- Error number: [MY-010884](#); Symbol: [ER\\_INNOODB\\_PK\\_ONLY\\_IN\\_MYSQL](#); SQLSTATE: [HY000](#)

Message: Table %s has no primary key in InnoDB data dictionary, but has one in MySQL! If you created the table with a MySQL version < 3.23.54 and did not define a primary key, but defined a unique key with all non-NULL columns, then MySQL internally treats that key as the primary key. You can fix this error by dump + DROP + CREATE + reimport of the table.

[ER\\_INNOODB\\_PK\\_ONLY\\_IN\\_MYSQL](#) was added in 8.0.2.

- Error number: [MY-010885](#); Symbol: [ER\\_INNOODB\\_CLUSTERED\\_INDEX\\_PRIVATE](#); SQLSTATE: [HY000](#)

Message: Table %s key\_used\_on\_scan is %lu even though there is no primary key inside InnoDB.

[ER\\_INNOODB\\_CLUSTERED\\_INDEX\\_PRIVATE](#) was added in 8.0.2.

- Error number: [MY-010886](#); Symbol: [ER\\_INNOODB\\_PARTITION\\_TABLE\\_LOWERCASED](#); SQLSTATE: [HY000](#)

Message: Partition table %s opened after converting to lower case. The table may have been moved from a case in-sensitive file system. Please recreate table in the current file system

[ER\\_INNOODB\\_PARTITION\\_TABLE\\_LOWERCASED](#) was added in 8.0.2.

- Error number: [MY-010887](#); Symbol: [ER\\_ERRMSG\\_REPLACEMENT\\_DODGY](#); SQLSTATE: [HY000](#)

Message: Cannot replace error message (%s,%s,%s) "%s" with "%s"; wrong number or type of %% substitutions.

[ER\\_ERRMSG\\_REPLACEMENT\\_DODGY](#) was added in 8.0.2.

- Error number: [MY-010888](#); Symbol: [ER\\_ERRMSG\\_REPLACEMENTS\\_FAILED](#); SQLSTATE: [HY000](#)

Message: Table for error message replacements could not be found or read, or one or more replacements could not be applied.

[ER\\_ERRMSG\\_REPLACEMENTS\\_FAILED](#) was added in 8.0.2.

Message: Data dictionary upgrading from version '%u' to '%u'.

[ER\\_DD\\_UPGRADE](#) was added in 8.0.4.

- Error number: [MY-011091](#); Symbol: [ER\\_DD\\_UPGRADE\\_OFF](#); SQLSTATE: [HY000](#)

Message: Data dictionary upgrade prohibited by the command line option '--no\_dd\_upgrade'.

[ER\\_DD\\_UPGRADE\\_OFF](#) was added in 8.0.4.

- Error number: [MY-011092](#); Symbol: [ER\\_DD\\_UPGRADE\\_VERSION\\_NOT\\_SUPPORTED](#); SQLSTATE: [HY000](#)

Message: Upgrading the data dictionary from dictionary version '%u' is not supported.

[ER\\_DD\\_UPGRADE\\_VERSION\\_NOT\\_SUPPORTED](#) was added in 8.0.4.

- Error number: [MY-011093](#); Symbol: [ER\\_DD\\_UPGRADE\\_SCHEMA\\_UNAVAILABLE](#); SQLSTATE: [HY000](#)

Message: Upgrading the data dictionary failed, temporary schema name '%s' not available.

[ER\\_DD\\_UPGRADE\\_SCHEMA\\_UNAVAILABLE](#) was added in 8.0.4.

- Error number: [MY-011094](#); Symbol: [ER\\_DD\\_MINOR\\_DOWNGRADE](#); SQLSTATE: [HY000](#)

Message: Data dictionary minor downgrade from version '%u' to '%u'.

`ER_DD_MINOR_DOWNGRADE` was added in 8.0.4.

- Error number: `MY-011095`; Symbol: `ER_DD_MINOR_DOWNGRADE_VERSION_NOT_SUPPORTED`; SQLSTATE: `HY000`

Message: Minor downgrade of the Data dictionary from dictionary version '%u' is not supported.

`ER_DD_MINOR_DOWNGRADE_VERSION_NOT_SUPPORTED` was added in 8.0.4.

- Error number: `MY-011096`; Symbol: `ER_DD_NO_VERSION_FOUND`; SQLSTATE: `HY000`

Message: No data dictionary version number found.

`ER_DD_NO_VERSION_FOUND` was added in 8.0.4.

- Error number: `MY-011097`; Symbol: `ER_THREAD_POOL_NOT_SUPPORTED_ON_PLATFORM`; SQLSTATE: `HY000`

Message: Thread pool not supported, requires a minimum of %s.

`ER_THREAD_POOL_NOT_SUPPORTED_ON_PLATFORM` was added in 8.0.4.

- Error number: `MY-011098`; Symbol: `ER_THREAD_POOL_SIZE_TOO_LOW`; SQLSTATE: `HY000`

Message: thread\_pool\_size=0 means thread pool disabled, Allowed range of thread\_pool\_size is %d-%d.

`ER_THREAD_POOL_SIZE_TOO_LOW` was added in 8.0.4.

- Error number: `MY-011099`; Symbol: `ER_THREAD_POOL_SIZE_TOO_HIGH`; SQLSTATE: `HY000`

Message: thread\_pool\_size=%lu is too high, %d is maximum, thread pool is disabled. Allowed range of thread\_pool\_size is %d-%d.

`ER_THREAD_POOL_SIZE_TOO_HIGH` was added in 8.0.4.

- Error number: `MY-011100`; Symbol: `ER_THREAD_POOL_ALGORITHM_INVALID`; SQLSTATE: `HY000`

Message: thread\_pool\_algorithm can be set to 0 and 1, 0 indicates the default low concurrency algorithm, 1 means a high concurrency algorithm.

`ER_THREAD_POOL_ALGORITHM_INVALID` was added in 8.0.4.

- Error number: `MY-011101`; Symbol: `ER_THREAD_POOL_INVALID_STALL_LIMIT`; SQLSTATE: `HY000`

Message: thread\_pool\_stall\_limit can be %d at minimum and %d at maximum, smaller values would render the thread pool fairly useless and higher values could make it possible to have undetected deadlock issues in the MySQL Server.

`ER_THREAD_POOL_INVALID_STALL_LIMIT` was added in 8.0.4.

- Error number: `MY-011102`; Symbol: `ER_THREAD_POOL_INVALID_PRIO_KICKUP_TIMER`; SQLSTATE: `HY000`

Message: Invalid value of thread\_pool\_prio\_kickup\_timer specified. Value of thread\_pool\_prio\_kickup\_timer should be in range 0-4294967294.

`ER_THREAD_POOL_INVALID_PRIO_KICKUP_TIMER` was added in 8.0.4.

- Error number: [MY-011103](#); Symbol: [ER\\_THREAD\\_POOL\\_MAX\\_UNUSED\\_THREADS\\_INVALID](#); SQLSTATE: [HY000](#)

Message: thread\_pool\_max\_unused\_threads cannot be set higher than %d.

[ER\\_THREAD\\_POOL\\_MAX\\_UNUSED\\_THREADS\\_INVALID](#) was added in 8.0.4.

- Error number: [MY-011104](#); Symbol: [ER\\_THREAD\\_POOL\\_CON\\_HANDLER\\_INIT\\_FAILED](#); SQLSTATE: [HY000](#)

Message: Failed to instantiate the connection handler object.

[ER\\_THREAD\\_POOL\\_CON\\_HANDLER\\_INIT\\_FAILED](#) was added in 8.0.4.

- Error number: [MY-011105](#); Symbol: [ER\\_THREAD\\_POOL\\_INIT\\_FAILED](#); SQLSTATE: [HY000](#)

Message: Failed to initialize thread pool plugin.

[ER\\_THREAD\\_POOL\\_INIT\\_FAILED](#) was added in 8.0.4.

- Error number: [MY-011106](#); Symbol: [ER\\_THREAD\\_POOL\\_PLUGIN\\_STARTED](#); SQLSTATE: [HY000](#)

Message: Thread pool plugin started successfully with parameters: thread\_pool\_size = %lu, thread\_pool\_algorithm = %s, thread\_pool\_stall\_limit = %u, thread\_pool\_prio\_kickup\_timer = %u, thread\_pool\_max\_unused\_threads = %u, thread\_pool\_high\_priority\_connection = %d.

[ER\\_THREAD\\_POOL\\_PLUGIN\\_STARTED](#) was added in 8.0.4.

- Error number: [MY-011107](#); Symbol: [ER\\_THREAD\\_POOL\\_CANNOT\\_SET\\_THREAD\\_SPECIFIC\\_DATA](#); SQLSTATE: [HY000](#)

Message: Can't setup connection teardown thread-specific data.

[ER\\_THREAD\\_POOL\\_CANNOT\\_SET\\_THREAD\\_SPECIFIC\\_DATA](#) was added in 8.0.4.

- Error number: [MY-011108](#); Symbol: [ER\\_THREAD\\_POOL\\_FAILED\\_TO\\_CREATE\\_CONNECT\\_HANDLER\\_THD](#); SQLSTATE: [HY000](#)

Message: Creation of connect handler thread failed.

[ER\\_THREAD\\_POOL\\_FAILED\\_TO\\_CREATE\\_CONNECT\\_HANDLER\\_THD](#) was added in 8.0.4.

- Error number: [MY-011109](#); Symbol: [ER\\_THREAD\\_POOL\\_FAILED\\_TO\\_CREATE\\_THD\\_AND\\_AUTH\\_CONN](#); SQLSTATE: [HY000](#)

Message: Failed to create thd and authenticate connection.

[ER\\_THREAD\\_POOL\\_FAILED\\_TO\\_CREATE\\_THD\\_AND\\_AUTH\\_CONN](#) was added in 8.0.4.

- Error number: [MY-011110](#); Symbol: [ER\\_THREAD\\_POOL\\_FAILED\\_PROCESS\\_CONNECT\\_EVENT](#); SQLSTATE: [HY000](#)

Message: Failed to process connection event.

[ER\\_THREAD\\_POOL\\_FAILED\\_PROCESS\\_CONNECT\\_EVENT](#) was added in 8.0.4.

- Error number: [MY-011111](#); Symbol: [ER\\_THREAD\\_POOL\\_FAILED\\_TO\\_CREATE\\_POOL](#); SQLSTATE: [HY000](#)

Message: Can't create pool thread (error %d, errno: %d).

[ER\\_THREAD\\_POOL\\_FAILED\\_TO\\_CREATE\\_POOL](#) was added in 8.0.4.

- Error number: [MY-011112](#); Symbol: [ER\\_THREAD\\_POOL\\_RATE\\_LIMITED\\_ERROR\\_MSGS](#); SQLSTATE: [HY000](#)  
  
Message: %.\*s.  
  
[ER\\_THREAD\\_POOL\\_RATE\\_LIMITED\\_ERROR\\_MSGS](#) was added in 8.0.4.
- Error number: [MY-011113](#); Symbol: [ER\\_TRHEAD\\_POOL\\_LOW\\_LEVEL\\_INIT\\_FAILED](#); SQLSTATE: [HY000](#)  
  
Message: tp\_group\_low\_level\_init() failed.  
  
[ER\\_TRHEAD\\_POOL\\_LOW\\_LEVEL\\_INIT\\_FAILED](#) was added in 8.0.4.
- Error number: [MY-011114](#); Symbol: [ER\\_THREAD\\_POOL\\_LOW\\_LEVEL\\_REARM\\_FAILED](#); SQLSTATE: [HY000](#)  
  
Message: Rearm failed even after 30 seconds, can't continue without notify socket.  
  
[ER\\_THREAD\\_POOL\\_LOW\\_LEVEL\\_REARM\\_FAILED](#) was added in 8.0.4.
- Error number: [MY-011115](#); Symbol: [ER\\_THREAD\\_POOL\\_BUFFER\\_TOO\\_SMALL](#); SQLSTATE: [HY000](#)  
  
Message: %s: %s buffer is too small  
  
[ER\\_THREAD\\_POOL\\_BUFFER\\_TOO\\_SMALL](#) was added in 8.0.4.
- Error number: [MY-011116](#); Symbol: [ER\\_MECAB\\_NOT\\_SUPPORTED](#); SQLSTATE: [HY000](#)  
  
Message: Mecab v%s is not supported, the lowest version supported is v%s.  
  
[ER\\_MECAB\\_NOT\\_SUPPORTED](#) was added in 8.0.4.
- Error number: [MY-011117](#); Symbol: [ER\\_MECAB\\_NOT\\_VERIFIED](#); SQLSTATE: [HY000](#)  
  
Message: Mecab v%s is not verified, the highest version supported is v%s.  
  
[ER\\_MECAB\\_NOT\\_VERIFIED](#) was added in 8.0.4.
- Error number: [MY-011118](#); Symbol: [ER\\_MECAB\\_CREATING\\_MODEL](#); SQLSTATE: [HY000](#)  
  
Message: Mecab: Trying createModel(%s).  
  
[ER\\_MECAB\\_CREATING\\_MODEL](#) was added in 8.0.4.
- Error number: [MY-011119](#); Symbol: [ER\\_MECAB\\_FAILED\\_TO\\_CREATE\\_MODEL](#); SQLSTATE: [HY000](#)  
  
Message: Mecab: createModel() failed: %s.  
  
[ER\\_MECAB\\_FAILED\\_TO\\_CREATE\\_MODEL](#) was added in 8.0.4.
- Error number: [MY-011120](#); Symbol: [ER\\_MECAB\\_FAILED\\_TO\\_CREATE\\_TRIGGER](#); SQLSTATE: [HY000](#)  
  
Message: Mecab: createTagger() failed: %s.  
  
[ER\\_MECAB\\_FAILED\\_TO\\_CREATE\\_TRIGGER](#) was added in 8.0.4.
- Error number: [MY-011121](#); Symbol: [ER\\_MECAB\\_UNSUPPORTED\\_CHARSET](#); SQLSTATE: [HY000](#)  
  
Message: Mecab: Unsupported dictionary charset %s.

[ER\\_MECAB\\_UNSUPPORTED\\_CHARSET](#) was added in 8.0.4.

- Error number: [MY-011122](#); Symbol: [ER\\_MECAB\\_CHARSET\\_LOADED](#); SQLSTATE: [HY000](#)

Message: Mecab: Loaded dictionary charset is %s.

[ER\\_MECAB\\_CHARSET\\_LOADED](#) was added in 8.0.4.

- Error number: [MY-011123](#); Symbol: [ER\\_MECAB\\_PARSE\\_FAILED](#); SQLSTATE: [HY000](#)

Message: Mecab: parse() failed: %s.

[ER\\_MECAB\\_PARSE\\_FAILED](#) was added in 8.0.4.

- Error number: [MY-011124](#); Symbol: [ER\\_MECAB\\_OOM\\_WHILE\\_PARSING\\_TEXT](#); SQLSTATE: [HY000](#)

Message: Mecab: parse() failed: out of memory.

[ER\\_MECAB\\_OOM\\_WHILE\\_PARSING\\_TEXT](#) was added in 8.0.4.

- Error number: [MY-011125](#); Symbol: [ER\\_MECAB\\_CREATE\\_LATTICE\\_FAILED](#); SQLSTATE: [HY000](#)

Message: Mecab: createLattice() failed: %s.

[ER\\_MECAB\\_CREATE\\_LATTICE\\_FAILED](#) was added in 8.0.4.

- Error number: [MY-011126](#); Symbol: [ER\\_SEMISYNC\\_TRACE\\_ENTER\\_FUNC](#); SQLSTATE: [HY000](#)

Message: ---> %s enter.

[ER\\_SEMISYNC\\_TRACE\\_ENTER\\_FUNC](#) was added in 8.0.4.

- Error number: [MY-011127](#); Symbol: [ER\\_SEMISYNC\\_TRACE\\_EXIT\\_WITH\\_INT\\_EXIT\\_CODE](#); SQLSTATE: [HY000](#)

Message: <--- %s exit (%d).

[ER\\_SEMISYNC\\_TRACE\\_EXIT\\_WITH\\_INT\\_EXIT\\_CODE](#) was added in 8.0.4.

- Error number: [MY-011128](#); Symbol: [ER\\_SEMISYNC\\_TRACE\\_EXIT\\_WITH\\_BOOL\\_EXIT\\_CODE](#); SQLSTATE: [HY000](#)

Message: <--- %s exit (%s).

[ER\\_SEMISYNC\\_TRACE\\_EXIT\\_WITH\\_BOOL\\_EXIT\\_CODE](#) was added in 8.0.4.

- Error number: [MY-011129](#); Symbol: [ER\\_SEMISYNC\\_TRACE\\_EXIT](#); SQLSTATE: [HY000](#)

Message: <--- %s exit.

[ER\\_SEMISYNC\\_TRACE\\_EXIT](#) was added in 8.0.4.

- Error number: [MY-011130](#); Symbol: [ER\\_SEMISYNC\\_RPL\\_INIT\\_FOR\\_TRX](#); SQLSTATE: [HY000](#)

Message: Semi-sync replication initialized for transactions.

[ER\\_SEMISYNC\\_RPL\\_INIT\\_FOR\\_TRX](#) was added in 8.0.4.

- Error number: [MY-011131](#); Symbol: [ER\\_SEMISYNC\\_FAILED\\_TO\\_ALLOCATE\\_TRX\\_NODE](#); SQLSTATE: [HY000](#)

Message: %s: transaction node allocation failed for: (%s, %lu).

`ER_SEMISYNC_FAILED_TO_ALLOCATE_TRX_NODE` was added in 8.0.4.

- Error number: `MY-011132`; Symbol: `ER_SEMISYNC_BINLOG_WRITE_OUT_OF_ORDER`; SQLSTATE: `HY000`

Message: %s: binlog write out-of-order, tail (%s, %lu), new node (%s, %lu).

`ER_SEMISYNC_BINLOG_WRITE_OUT_OF_ORDER` was added in 8.0.4.

- Error number: `MY-011133`; Symbol: `ER_SEMISYNC_INSERT_LOG_INFO_IN_ENTRY`; SQLSTATE: `HY000`

Message: %s: insert (%s, %lu) in entry(%u).

`ER_SEMISYNC_INSERT_LOG_INFO_IN_ENTRY` was added in 8.0.4.

- Error number: `MY-011134`; Symbol: `ER_SEMISYNC_PROBE_LOG_INFO_IN_ENTRY`; SQLSTATE: `HY000`

Message: %s: probe (%s, %lu) in entry(%u).

`ER_SEMISYNC_PROBE_LOG_INFO_IN_ENTRY` was added in 8.0.4.

- Error number: `MY-011135`; Symbol: `ER_SEMISYNC_CLEARED_ALL_ACTIVE_TRANSACTION_NODES`; SQLSTATE: `HY000`

Message: %s: cleared all nodes.

`ER_SEMISYNC_CLEARED_ALL_ACTIVE_TRANSACTION_NODES` was added in 8.0.4.

- Error number: `MY-011136`; Symbol: `ER_SEMISYNC_CLEARED_ACTIVE_TRANSACTION_TILL_POS`; SQLSTATE: `HY000`

Message: %s: cleared %d nodes back until pos (%s, %lu).

`ER_SEMISYNC_CLEARED_ACTIVE_TRANSACTION_TILL_POS` was added in 8.0.4.

- Error number: `MY-011137`; Symbol: `ER_SEMISYNC_REPLY_MAGIC_NO_ERROR`; SQLSTATE: `HY000`

Message: Read semi-sync reply magic number error.

`ER_SEMISYNC_REPLY_MAGIC_NO_ERROR` was added in 8.0.4.

- Error number: `MY-011138`; Symbol: `ER_SEMISYNC_REPLY_PKT_LENGTH_TOO_SMALL`; SQLSTATE: `HY000`

Message: Read semi-sync reply length error: packet is too small.

`ER_SEMISYNC_REPLY_PKT_LENGTH_TOO_SMALL` was added in 8.0.4.

- Error number: `MY-011139`; Symbol: `ER_SEMISYNC_REPLY_BINLOG_FILE_TOO_LARGE`; SQLSTATE: `HY000`

Message: Read semi-sync reply binlog file length too large.

`ER_SEMISYNC_REPLY_BINLOG_FILE_TOO_LARGE` was added in 8.0.4.

- Error number: `MY-011140`; Symbol: `ER_SEMISYNC_SERVER_REPLY`; SQLSTATE: `HY000`

Message: %s: Got reply(%s, %lu) from server %u.

`ER_SEMISYNC_SERVER_REPLY` was added in 8.0.4.

Message: Failed to open the %s filter tables

[ER\\_PLUGIN\\_COMMON\\_FAILED\\_TO\\_OPEN\\_FILTER\\_TABLES](#) was added in 8.0.4.

- Error number: [MY-011251](#); Symbol: [ER\\_PLUGIN\\_COMMON\\_FAILED\\_TO\\_OPEN\\_TABLE](#); SQLSTATE: [HY000](#)

Message: Failed to open '%s.%s' %s table

[ER\\_PLUGIN\\_COMMON\\_FAILED\\_TO\\_OPEN\\_TABLE](#) was added in 8.0.4.

- Error number: [MY-011252](#); Symbol: [ER\\_AUTH\\_LDAP\\_ERROR\\_LOGGER\\_ERROR\\_MSG](#); SQLSTATE: [HY000](#)

Message: %s

[ER\\_AUTH\\_LDAP\\_ERROR\\_LOGGER\\_ERROR\\_MSG](#) was added in 8.0.4.

- Error number: [MY-011253](#); Symbol: [ER\\_CONN\\_CONTROL\\_ERROR\\_MSG](#); SQLSTATE: [HY000](#)

Message: %s

[ER\\_CONN\\_CONTROL\\_ERROR\\_MSG](#) was added in 8.0.4.

- Error number: [MY-011254](#); Symbol: [ER\\_GRP\\_RPL\\_ERROR\\_MSG](#); SQLSTATE: [HY000](#)

Message: %s

[ER\\_GRP\\_RPL\\_ERROR\\_MSG](#) was added in 8.0.4.

- Error number: [MY-011255](#); Symbol: [ER\\_SHA\\_PWD\\_SALT\\_FOR\\_USER\\_CORRUPT](#); SQLSTATE: [HY000](#)

Message: Password salt for user '%s' is corrupt

[ER\\_SHA\\_PWD\\_SALT\\_FOR\\_USER\\_CORRUPT](#) was added in 8.0.4.

- Error number: [MY-011256](#); Symbol: [ER\\_SYS\\_VAR\\_COMPONENT\\_OOM](#); SQLSTATE: [HY000](#)

Message: Out of memory for component system variable '%s'.

[ER\\_SYS\\_VAR\\_COMPONENT\\_OOM](#) was added in 8.0.4.

- Error number: [MY-011257](#); Symbol: [ER\\_SYS\\_VAR\\_COMPONENT\\_VARIABLE\\_SET\\_READ\\_ONLY](#); SQLSTATE: [HY000](#)

Message: variable %s of component %s was forced to be read-only: string variable without update\_func and PLUGIN\_VAR\_MEMALLOC flag.

[ER\\_SYS\\_VAR\\_COMPONENT\\_VARIABLE\\_SET\\_READ\\_ONLY](#) was added in 8.0.4.

- Error number: [MY-011258](#); Symbol: [ER\\_SYS\\_VAR\\_COMPONENT\\_UNKNOWN\\_VARIABLE\\_TYPE](#); SQLSTATE: [HY000](#)

Message: Unknown variable type code 0x%x in component '%s'.

[ER\\_SYS\\_VAR\\_COMPONENT\\_UNKNOWN\\_VARIABLE\\_TYPE](#) was added in 8.0.4.

- Error number: [MY-011259](#); Symbol: [ER\\_SYS\\_VAR\\_COMPONENT\\_FAILED\\_TO\\_PARSE\\_VARIABLE\\_OPTIONS](#); SQLSTATE: [HY000](#)

Message: Parsing options for variable '%s' failed.

[ER\\_SYS\\_VAR\\_COMPONENT\\_FAILED\\_TO\\_PARSE\\_VARIABLE\\_OPTIONS](#) was added in 8.0.4.

- Error number: [MY-011260](#); Symbol: [ER\\_SYS\\_VAR\\_COMPONENT\\_FAILED\\_TO\\_MAKE\\_VARIABLE\\_PERSISTENT](#); SQLSTATE: [HY000](#)

Message: Setting persistent options for component variable '%s' failed.

[ER\\_SYS\\_VAR\\_COMPONENT\\_FAILED\\_TO\\_MAKE\\_VARIABLE\\_PERSISTENT](#) was added in 8.0.4.

- Error number: [MY-011261](#); Symbol: [ER\\_COMPONENT\\_FILTER\\_CONFUSED](#); SQLSTATE: [HY000](#)

Message: The log-filter component "%s" got confused at "%s" (state: %s) ...

[ER\\_COMPONENT\\_FILTER\\_CONFUSED](#) was added in 8.0.4.

- Error number: [MY-011262](#); Symbol: [ER\\_STOP\\_SLAVE\\_IO\\_THREAD\\_DISK\\_SPACE](#); SQLSTATE: [HY000](#)

Message: Waiting until I/O thread for channel '%s' finish writing to disk before stopping. Free some disk space or use 'KILL' to abort I/O thread operation. Notice that aborting the I/O thread while rotating the relay log might corrupt the relay logs, requiring a server restart to fix it.

[ER\\_STOP\\_SLAVE\\_IO\\_THREAD\\_DISK\\_SPACE](#) was added in 8.0.2.
- Error number: [MY-011263](#); Symbol: [ER\\_LOG\\_FILE\\_CANNOT\\_OPEN](#); SQLSTATE: [HY000](#)

Message: Could not use %s for logging (error %d - %s). Turning logging off for the server process. To turn it on again: fix the cause, then %s restart the MySQL server.

[ER\\_LOG\\_FILE\\_CANNOT\\_OPEN](#) was added in 8.0.2.
- Error number: [MY-011268](#); Symbol: [ER\\_PERSIST\\_OPTION\\_STATUS](#); SQLSTATE: [HY000](#)

Message: Configuring persisted options failed: "%s".

[ER\\_PERSIST\\_OPTION\\_STATUS](#) was added in 8.0.11.
- Error number: [MY-011269](#); Symbol: [ER\\_NOT\\_IMPLEMENTED\\_GET\\_TABLESPACE\\_STATISTICS](#); SQLSTATE: [HY000](#)

Message: The storage engine '%s' does not provide dynamic table statistics

[ER\\_NOT\\_IMPLEMENTED\\_GET\\_TABLESPACE\\_STATISTICS](#) was added in 8.0.11.
- Error number: [MY-011272](#); Symbol: [ER\\_SSL\\_FIPS\\_MODE\\_ERROR](#); SQLSTATE: [HY000](#)

Message: SSL fips mode error: %s

[ER\\_SSL\\_FIPS\\_MODE\\_ERROR](#) was added in 8.0.11.
- Error number: [MY-011273](#); Symbol: [ER\\_CONN\\_INIT\\_CONNECT\\_IGNORED](#); SQLSTATE: [HY000](#)

Message: init\_connect variable is ignored for user: %s host: %s due to expired password.

[ER\\_CONN\\_INIT\\_CONNECT\\_IGNORED](#) was added in 8.0.11.
- Error number: [MY-011274](#); Symbol: [ER\\_UNSUPPORTED\\_SQL\\_MODE](#); SQLSTATE: [HY000](#)

Message: sql\_mode=0x%08x is not supported

[ER\\_UNSUPPORTED\\_SQL\\_MODE](#) was added in 8.0.11.
- Error number: [MY-011275](#); Symbol: [ER\\_REWRITER\\_OOM](#); SQLSTATE: [HY000](#)

Message: Out of memory.

[ER\\_REWRITER\\_OOM](#) was added in 8.0.11.
- Error number: [MY-011276](#); Symbol: [ER\\_REWRITER\\_TABLE\\_MALFORMED\\_ERROR](#); SQLSTATE: [HY000](#)

Message: Wrong column count or names when loading rules.

[ER\\_REWRITER\\_TABLE\\_MALFORMED\\_ERROR](#) was added in 8.0.11.
- Error number: [MY-011277](#); Symbol: [ER\\_REWRITER\\_LOAD\\_FAILED](#); SQLSTATE: [HY000](#)

Message: Some rules failed to load.

`ER_REWRITER_LOAD_FAILED` was added in 8.0.11.

- Error number: `MY-011278`; Symbol: `ER_REWRITER_READ_FAILED`; SQLSTATE: `HY000`

Message: Got error from storage engine while refreshing rewrite rules.

`ER_REWRITER_READ_FAILED` was added in 8.0.11.

- Error number: `MY-011279`; Symbol: `ER_CONN_CONTROL_EVENT_COORDINATOR_INIT_FAILED`; SQLSTATE: `HY000`

Message: Failed to initialize Connection\_event\_coordinator

`ER_CONN_CONTROL_EVENT_COORDINATOR_INIT_FAILED` was added in 8.0.11.

- Error number: `MY-011280`; Symbol: `ER_CONN_CONTROL_STAT_CONN_DELAY_TRIGGERED_UPDATE_FAILED`; SQLSTATE: `HY000`

Message: Failed to update connection delay triggered stats

`ER_CONN_CONTROL_STAT_CONN_DELAY_TRIGGERED_UPDATE_FAILED` was added in 8.0.11.

- Error number: `MY-011281`; Symbol: `ER_CONN_CONTROL_STAT_CONN_DELAY_TRIGGERED_RESET_FAILED`; SQLSTATE: `HY000`

Message: Failed to reset connection delay triggered stats

`ER_CONN_CONTROL_STAT_CONN_DELAY_TRIGGERED_RESET_FAILED` was added in 8.0.11.

- Error number: `MY-011282`; Symbol: `ER_CONN_CONTROL_INVALID_CONN_DELAY_TYPE`; SQLSTATE: `HY000`

Message: Unexpected option type for connection delay.

`ER_CONN_CONTROL_INVALID_CONN_DELAY_TYPE` was added in 8.0.11.

- Error number: `MY-011283`; Symbol: `ER_CONN_CONTROL_DELAY_ACTION_INIT_FAILED`; SQLSTATE: `HY000`

Message: Failed to initialize Connection\_delay\_action

`ER_CONN_CONTROL_DELAY_ACTION_INIT_FAILED` was added in 8.0.11.

- Error number: `MY-011284`; Symbol: `ER_CONN_CONTROL_FAILED_TO_SET_CONN_DELAY`; SQLSTATE: `HY000`

Message: Could not set %s delay for connection delay.

`ER_CONN_CONTROL_FAILED_TO_SET_CONN_DELAY` was added in 8.0.11.

- Error number: `MY-011285`; Symbol: `ER_CONN_CONTROL_FAILED_TO_UPDATE_CONN_DELAY_HASH`; SQLSTATE: `HY000`

Message: Failed to update connection delay hash for account : %s

`ER_CONN_CONTROL_FAILED_TO_UPDATE_CONN_DELAY_HASH` was added in 8.0.11.

- Error number: `MY-011286`; Symbol: `ER_XPLUGIN_FORCE_STOP_CLIENT`; SQLSTATE: `HY000`

Message: %s: Force stopping client because exception occurred: %s

`ER_XPLUGIN_FORCE_STOP_CLIENT` was added in 8.0.11.

- Error number: [MY-011287](#); Symbol: [ER\\_XPLUGIN\\_MAX\\_AUTH\\_ATTEMPTS\\_REACHED](#); SQLSTATE: [HY000](#)

Message: %s.%u: Maximum number of authentication attempts reached, login failed.

[ER\\_XPLUGIN\\_MAX\\_AUTH\\_ATTEMPTS\\_REACHED](#) was added in 8.0.11.

- Error number: [MY-011288](#); Symbol: [ER\\_XPLUGIN\\_BUFFER\\_PAGE\\_ALLOC\\_FAILED](#); SQLSTATE: [HY000](#)

Message: Error allocating Buffer\_page: %s

[ER\\_XPLUGIN\\_BUFFER\\_PAGE\\_ALLOC\\_FAILED](#) was added in 8.0.11.

- Error number: [MY-011289](#); Symbol: [ER\\_XPLUGIN\\_DETECTED\\_HANGING\\_CLIENTS](#); SQLSTATE: [HY000](#)

Message: Detected %u hanging client(s)

[ER\\_XPLUGIN\\_DETECTED\\_HANGING\\_CLIENTS](#) was added in 8.0.11.

- Error number: [MY-011290](#); Symbol: [ER\\_XPLUGIN\\_FAILED\\_TO\\_ACCEPT\\_CLIENT](#); SQLSTATE: [HY000](#)

Message: Error accepting client

[ER\\_XPLUGIN\\_FAILED\\_TO\\_ACCEPT\\_CLIENT](#) was added in 8.0.11.

- Error number: [MY-011291](#); Symbol: [ER\\_XPLUGIN\\_FAILED\\_TO\\_SCHEDULE\\_CLIENT](#); SQLSTATE: [HY000](#)

Message: Internal error scheduling client for execution

[ER\\_XPLUGIN\\_FAILED\\_TO\\_SCHEDULE\\_CLIENT](#) was added in 8.0.11.

- Error number: [MY-011292](#); Symbol: [ER\\_XPLUGIN\\_FAILED\\_TO\\_PREPARE\\_IO\\_INTERFACES](#); SQLSTATE: [HY000](#)

Message: Preparation of I/O interfaces failed, X Protocol won't be accessible

[ER\\_XPLUGIN\\_FAILED\\_TO\\_PREPARE\\_IO\\_INTERFACES](#) was added in 8.0.11.

- Error number: [MY-011293](#); Symbol: [ER\\_XPLUGIN\\_SRV\\_SESSION\\_INIT\\_THREAD\\_FAILED](#); SQLSTATE: [HY000](#)

Message: srv\_session\_init\_thread returned error

[ER\\_XPLUGIN\\_SRV\\_SESSION\\_INIT\\_THREAD\\_FAILED](#) was added in 8.0.11.

- Error number: [MY-011294](#); Symbol: [ER\\_XPLUGIN\\_UNABLE\\_TO\\_USE\\_USER\\_SESSION\\_ACCOUNT](#); SQLSTATE: [HY000](#)

Message: Unable to use user mysql.session account when connecting the server for internal plugin requests.

[ER\\_XPLUGIN\\_UNABLE\\_TO\\_USE\\_USER\\_SESSION\\_ACCOUNT](#) was added in 8.0.11.

- Error number: [MY-011295](#); Symbol: [ER\\_XPLUGIN\\_REFERENCE\\_TO\\_USER\\_ACCOUNT\\_DOC\\_SECTION](#); SQLSTATE: [HY000](#)

Message: For more information, please see the X Plugin User Account section in the MySQL documentation

`ER_XPLUGIN_REFERENCE_TO_USER_ACCOUNT_DOC_SECTION` was added in 8.0.11.

- Error number: `MY-011296`; Symbol: `ER_XPLUGIN_UNEXPECTED_EXCEPTION_DISPATCHING_CMD`; SQLSTATE: `HY000`  
Message: %s: Unexpected exception dispatching command: %s  
`ER_XPLUGIN_UNEXPECTED_EXCEPTION_DISPATCHING_CMD` was added in 8.0.11.
- Error number: `MY-011297`; Symbol: `ER_XPLUGIN_EXCEPTION_IN_TASK_SCHEDULER`; SQLSTATE: `HY000`  
Message: Exception in post: %s  
`ER_XPLUGIN_EXCEPTION_IN_TASK_SCHEDULER` was added in 8.0.11.
- Error number: `MY-011298`; Symbol: `ER_XPLUGIN_TASK_SCHEDULING_FAILED`; SQLSTATE: `HY000`  
Message: Internal error scheduling task  
`ER_XPLUGIN_TASK_SCHEDULING_FAILED` was added in 8.0.11.
- Error number: `MY-011299`; Symbol: `ER_XPLUGIN_EXCEPTION_IN_EVENT_LOOP`; SQLSTATE: `HY000`  
Message: Exception in event loop: "%s": %s  
`ER_XPLUGIN_EXCEPTION_IN_EVENT_LOOP` was added in 8.0.11.
- Error number: `MY-011300`; Symbol: `ER_XPLUGIN_LISTENER_SETUP_FAILED`; SQLSTATE: `HY000`  
Message: Setup of %s failed, %s  
`ER_XPLUGIN_LISTENER_SETUP_FAILED` was added in 8.0.11.
- Error number: `MY-011301`; Symbol: `ER_XPLUING_NET_STARTUP_FAILED`; SQLSTATE: `HY000`  
Message: %s  
`ER_XPLUING_NET_STARTUP_FAILED` was added in 8.0.11.
- Error number: `MY-011302`; Symbol: `ER_XPLUGIN_FAILED_AT_SSL_CONF`; SQLSTATE: `HY000`  
Message: Failed at SSL configuration: "%s"  
`ER_XPLUGIN_FAILED_AT_SSL_CONF` was added in 8.0.11.
- Error number: `MY-011303`; Symbol: `ER_XPLUGIN_CLIENT_SSL_HANDSHAKE_FAILED`; SQLSTATE: `HY000`  
Message: Error during SSL handshake for client connection (%i)  
`ER_XPLUGIN_CLIENT_SSL_HANDSHAKE_FAILED` was added in 8.0.11, removed after 8.0.12.
- Error number: `MY-011304`; Symbol: `ER_XPLUGIN_SSL_HANDSHAKE_WITH_SERVER_FAILED`; SQLSTATE: `HY000`  
Message: %s: Error during SSL handshake  
`ER_XPLUGIN_SSL_HANDSHAKE_WITH_SERVER_FAILED` was added in 8.0.11, removed after 8.0.12.

- Error number: [MY-011305](#); Symbol: [ER\\_XPLUGIN\\_FAILED\\_TO\\_CREATE\\_SESSION\\_FOR\\_CONN](#); SQLSTATE: [HY000](#)  
Message: %s: Error creating session for connection from %s  
[ER\\_XPLUGIN\\_FAILED\\_TO\\_CREATE\\_SESSION\\_FOR\\_CONN](#) was added in 8.0.11.
- Error number: [MY-011306](#); Symbol: [ER\\_XPLUGIN\\_FAILED\\_TO\\_INITIALIZE\\_SESSION](#); SQLSTATE: [HY000](#)  
Message: %s: Error initializing session for connection: %s  
[ER\\_XPLUGIN\\_FAILED\\_TO\\_INITIALIZE\\_SESSION](#) was added in 8.0.11.

[ER\\_KEYRING\\_AWS\\_FAILED\\_TO\\_SET\\_CMK\\_ID](#) was added in 8.0.11.
- Error number: [MY-011416](#); Symbol: [ER\\_KEYRING\\_AWS\\_FAILED\\_TO\\_SET\\_REGION](#); SQLSTATE: [HY000](#)

Message: keyring\_aws\_region cannot be set to the new value as AWS KMS seems to not understand the region provided. Please check that region provided is correct.

[ER\\_KEYRING\\_AWS\\_FAILED\\_TO\\_SET\\_REGION](#) was added in 8.0.11.
- Error number: [MY-011417](#); Symbol: [ER\\_KEYRING\\_AWS\\_FAILED\\_TO\\_OPEN\\_CONF\\_FILE](#); SQLSTATE: [HY000](#)

Message: Could not open keyring\_aws configuration file: %s. OS returned this error: %s

[ER\\_KEYRING\\_AWS\\_FAILED\\_TO\\_OPEN\\_CONF\\_FILE](#) was added in 8.0.11.
- Error number: [MY-011418](#); Symbol: [ER\\_KEYRING\\_AWS\\_FAILED\\_TO\\_ACCESS\\_KEY\\_ID\\_FROM\\_CONF\\_FILE](#); SQLSTATE: [HY000](#)

Message: Could not read AWS access key id from keyring\_aws configuration file: %s. OS returned this error: %s

[ER\\_KEYRING\\_AWS\\_FAILED\\_TO\\_ACCESS\\_KEY\\_ID\\_FROM\\_CONF\\_FILE](#) was added in 8.0.11.
- Error number: [MY-011419](#); Symbol: [ER\\_KEYRING\\_AWS\\_FAILED\\_TO\\_ACCESS\\_KEY\\_FROM\\_CONF\\_FILE](#); SQLSTATE: [HY000](#)

Message: Could not read AWS access key from keyring\_aws configuration file: %s. OS returned this error: %s

[ER\\_KEYRING\\_AWS\\_FAILED\\_TO\\_ACCESS\\_KEY\\_FROM\\_CONF\\_FILE](#) was added in 8.0.11.
- Error number: [MY-011420](#); Symbol: [ER\\_KEYRING\\_AWS\\_INVALID\\_CONF\\_FILE\\_PATH](#); SQLSTATE: [HY000](#)

Message: Path to keyring aws configuration file cannot be empty

[ER\\_KEYRING\\_AWS\\_INVALID\\_CONF\\_FILE\\_PATH](#) was added in 8.0.11.

- Error number: [MY-011421](#); Symbol: [ER\\_KEYRING\\_AWS\\_INVALID\\_DATA\\_FILE\\_PATH](#); SQLSTATE: [HY000](#)

Message: Path to keyring\_aws storage file cannot be empty.

[ER\\_KEYRING\\_AWS\\_INVALID\\_DATA\\_FILE\\_PATH](#) was added in 8.0.11.

- Error number: [MY-011422](#); Symbol: [ER\\_KEYRING\\_AWS\\_FAILED\\_TO\\_ACCESS\\_OR\\_CREATE\\_KEYRING\\_DIR](#); SQLSTATE: [HY000](#)

Message: Unable to create/access keyring directory.

[ER\\_KEYRING\\_AWS\\_FAILED\\_TO\\_ACCESS\\_OR\\_CREATE\\_KEYRING\\_DIR](#) was added in 8.0.11.

- Error number: [MY-011423](#); Symbol: [ER\\_KEYRING\\_AWS\\_FAILED\\_TO\\_ACCESS\\_OR\\_CREATE\\_KEYRING\\_DATA\\_FILE](#); SQLSTATE: [HY000](#)

Message: Unable to create/access keyring\_aws storage file. Please check if keyring\_aws\_data\_file points to location where keyring file can be created/accessed. Please also make sure that MySQL server's user has high enough privileges to access this location.

[ER\\_KEYRING\\_AWS\\_FAILED\\_TO\\_ACCESS\\_OR\\_CREATE\\_KEYRING\\_DATA\\_FILE](#) was added in 8.0.11.

- Error number: [MY-011424](#); Symbol: [ER\\_KEYRING\\_AWS\\_FAILED\\_TO\\_INIT\\_DUE\\_TO\\_INTERNAL\\_ERROR](#); SQLSTATE: [HY000](#)

Message: keyring\_aws initialization failed due to internal error when initializing synchronization primitive - %s. OS returned this error: %s:

[ER\\_KEYRING\\_AWS\\_FAILED\\_TO\\_INIT\\_DUE\\_TO\\_INTERNAL\\_ERROR](#) was added in 8.0.11.

- Error number: [MY-011425](#); Symbol: [ER\\_KEYRING\\_AWS\\_FAILED\\_TO\\_ACCESS\\_DATA\\_FILE](#); SQLSTATE: [HY000](#)

Message: Could not access keyring\_aws storage file in the path provided. Please check if the keyring\_aws directory can be accessed by MySQL Server

[ER\\_KEYRING\\_AWS\\_FAILED\\_TO\\_ACCESS\\_DATA\\_FILE](#) was added in 8.0.11.

- Error number: [MY-011426](#); Symbol: [ER\\_KEYRING\\_AWS\\_CMK\\_ID\\_NOT\\_SET](#); SQLSTATE: [HY000](#)

Message: keyring\_aws\_cmk\_id has to be set

[ER\\_KEYRING\\_AWS\\_CMK\\_ID\\_NOT\\_SET](#) was added in 8.0.11.

- Error number: [MY-011427](#); Symbol: [ER\\_KEYRING\\_AWS\\_FAILED\\_TO\\_GET\\_KMS\\_CREDENTIAL\\_FROM\\_CONF\\_FILE](#); SQLSTATE: [HY000](#)

Message: Could not get AWS KMS credentials from the configuration file

[ER\\_KEYRING\\_AWS\\_FAILED\\_TO\\_GET\\_KMS\\_CREDENTIAL\\_FROM\\_CONF\\_FILE](#) was added in 8.0.11.

- Error number: [MY-011428](#); Symbol: [ER\\_KEYRING\\_AWS\\_INIT\\_FAILURE](#); SQLSTATE: [HY000](#)

Message: keyring\_aws initialization failure.

[ER\\_KEYRING\\_AWS\\_INIT\\_FAILURE](#) was added in 8.0.11.

- Error number: [MY-011429](#); Symbol: [ER\\_KEYRING\\_AWS\\_FAILED\\_TO\\_INIT\\_DUE\\_TO\\_PLUGIN\\_INTERNAL\\_ERROR](#); SQLSTATE: [HY000](#)

Message: keyring\_aws initialization failure due to internal exception inside the plugin

[ER\\_KEYRING\\_AWS\\_FAILED\\_TO\\_INIT\\_DUE\\_TO\\_PLUGIN\\_INTERNAL\\_ERROR](#) was added in 8.0.11.

- Error number: [MY-011430](#); Symbol: [ER\\_KEYRING\\_AWS\\_INVALID\\_KEY\\_LENGTH\\_FOR\\_CIPHER](#); SQLSTATE: [HY000](#)

Message: Invalid key length for given block cipher

[ER\\_KEYRING\\_AWS\\_INVALID\\_KEY\\_LENGTH\\_FOR\\_CIPHER](#) was added in 8.0.11.

- Error number: [MY-011431](#); Symbol: [ER\\_KEYRING\\_AWS\\_FAILED\\_TO\\_GENERATE\\_KEY\\_DUE\\_TO\\_INTERNAL\\_ERROR](#); SQLSTATE: [HY000](#)

Message: Failed to generate a key due to internal exception inside keyring\_file plugin

[ER\\_KEYRING\\_AWS\\_FAILED\\_TO\\_GENERATE\\_KEY\\_DUE\\_TO\\_INTERNAL\\_ERROR](#) was added in 8.0.11.

- Error number: [MY-011432](#); Symbol: [ER\\_KEYRING\\_AWS\\_INCORRECT\\_FILE](#); SQLSTATE: [HY000](#)

Message: Incorrect Keyring file

[ER\\_KEYRING\\_AWS\\_INCORRECT\\_FILE](#) was added in 8.0.11.

- Error number: [MY-011433](#); Symbol: [ER\\_KEYRING\\_AWS\\_FOUND\\_MALFORMED\\_BACKUP\\_FILE](#); SQLSTATE: [HY000](#)

Message: Found malformed keyring backup file - removing it

[ER\\_KEYRING\\_AWS\\_FOUND\\_MALFORMED\\_BACKUP\\_FILE](#) was added in 8.0.11.

- Error number: [MY-011434](#); Symbol: [ER\\_KEYRING\\_AWS\\_FAILED\\_TO\\_RESTORE\\_FROM\\_BACKUP\\_FILE](#); SQLSTATE: [HY000](#)

Message: Error while restoring keyring from backup file cannot overwrite keyring with backup

[ER\\_KEYRING\\_AWS\\_FAILED\\_TO\\_RESTORE\\_FROM\\_BACKUP\\_FILE](#) was added in 8.0.11.

- Error number: [MY-011435](#); Symbol: [ER\\_KEYRING\\_AWS\\_FAILED\\_TO\\_FLUSH\\_KEYRING\\_TO\\_FILE](#); SQLSTATE: [HY000](#)

Message: Error while flushing in-memory keyring into keyring file

[ER\\_KEYRING\\_AWS\\_FAILED\\_TO\\_FLUSH\\_KEYRING\\_TO\\_FILE](#) was added in 8.0.11.

- Error number: [MY-011436](#); Symbol: [ER\\_KEYRING\\_AWS\\_INCORRECT\\_REGION](#); SQLSTATE: [HY000](#)

Message: Wrong region

[ER\\_KEYRING\\_AWS\\_INCORRECT\\_REGION](#) was added in 8.0.11.

- Error number: [MY-011437](#); Symbol: [ER\\_KEYRING\\_AWS\\_FAILED\\_TO\\_CONNECT\\_KMS](#); SQLSTATE: [HY000](#)

Message: Could not connect to AWS KMS with the credentials provided. Please make sure they are correct. AWS KMS returned this error: %s

[ER\\_KEYRING\\_AWS\\_FAILED\\_TO\\_CONNECT\\_KMS](#) was added in 8.0.11.

- Error number: [MY-011438](#); Symbol: [ER\\_KEYRING\\_AWS\\_FAILED\\_TO\\_GENERATE\\_NEW\\_KEY](#); SQLSTATE: [HY000](#)  
Message: Could not generate a new key. AWS KMS returned this error: %s  
[ER\\_KEYRING\\_AWS\\_FAILED\\_TO\\_GENERATE\\_NEW\\_KEY](#) was added in 8.0.11.
- Error number: [MY-011439](#); Symbol: [ER\\_KEYRING\\_AWS\\_FAILED\\_TO\\_ENCRYPT\\_KEY](#); SQLSTATE: [HY000](#)  
Message: Could not encrypt key. AWS KMS returned this error: %s  
[ER\\_KEYRING\\_AWS\\_FAILED\\_TO\\_ENCRYPT\\_KEY](#) was added in 8.0.11.
- Error number: [MY-011440](#); Symbol: [ER\\_KEYRING\\_AWS\\_FAILED\\_TO\\_RE\\_ENCRYPT\\_KEY](#); SQLSTATE: [HY000](#)  
Message: Could not re-encrypt key. AWS KMS returned this error: %s  
[ER\\_KEYRING\\_AWS\\_FAILED\\_TO\\_RE\\_ENCRYPT\\_KEY](#) was added in 8.0.11.
- Error number: [MY-011441](#); Symbol: [ER\\_KEYRING\\_AWS\\_FAILED\\_TO\\_DECRYPT\\_KEY](#); SQLSTATE: [HY000](#)  
Message: Could not decrypt key. AWS KMS returned this error: %s  
[ER\\_KEYRING\\_AWS\\_FAILED\\_TO\\_DECRYPT\\_KEY](#) was added in 8.0.11.
- Error number: [MY-011442](#); Symbol: [ER\\_KEYRING\\_AWS\\_FAILED\\_TO\\_ROTATE\\_CMK](#); SQLSTATE: [HY000](#)  
Message: Could not rotate the CMK. AWS KMS returned this error: %s  
[ER\\_KEYRING\\_AWS\\_FAILED\\_TO\\_ROTATE\\_CMK](#) was added in 8.0.11.
- Error number: [MY-011443](#); Symbol: [ER\\_GRP\\_RPL\\_GTID\\_ALREADY\\_USED](#); SQLSTATE: [HY000](#)  
Message: The requested GTID '%s:%ld' was already used, the transaction will rollback.  
[ER\\_GRP\\_RPL\\_GTID\\_ALREADY\\_USED](#) was added in 8.0.11.
- Error number: [MY-011444](#); Symbol: [ER\\_GRP\\_RPL\\_APPLIER\\_THD\\_KILLED](#); SQLSTATE: [HY000](#)  
Message: The group replication applier thread was killed.  
[ER\\_GRP\\_RPL\\_APPLIER\\_THD\\_KILLED](#) was added in 8.0.11.
- Error number: [MY-011445](#); Symbol: [ER\\_GRP\\_RPL\\_EVENT\\_HANDLING\\_ERROR](#); SQLSTATE: [HY000](#)  
Message: Error at event handling! Got error: %d.  
[ER\\_GRP\\_RPL\\_EVENT\\_HANDLING\\_ERROR](#) was added in 8.0.11.
- Error number: [MY-011446](#); Symbol: [ER\\_GRP\\_RPL\\_ERROR\\_GTID\\_EXECUTION\\_INFO](#); SQLSTATE: [HY000](#)  
Message: Error when extracting group GTID execution information, some recovery operations may face future issues.  
[ER\\_GRP\\_RPL\\_ERROR\\_GTID\\_EXECUTION\\_INFO](#) was added in 8.0.11.
- Error number: [MY-011447](#); Symbol: [ER\\_GRP\\_RPL\\_CERTIFICATE\\_SIZE\\_ERROR](#); SQLSTATE: [HY000](#)

Message: An error occurred when trying to reduce the Certification information size for transmission.

[ER\\_GRP\\_RPL\\_CERTIFICATE\\_SIZE\\_ERROR](#) was added in 8.0.11.

- Error number: [MY-011448](#); Symbol: [ER\\_GRP\\_RPL\\_CREATE\\_APPLIER\\_CACHE\\_ERROR](#); SQLSTATE: [HY000](#)

Message: Failed to create group replication pipeline applier cache!

[ER\\_GRP\\_RPL\\_CREATE\\_APPLIER\\_CACHE\\_ERROR](#) was added in 8.0.11.

- Error number: [MY-011449](#); Symbol: [ER\\_GRP\\_RPL\\_UNBLOCK\\_WAITING\\_THD](#); SQLSTATE: [HY000](#)

Message: Unblocking the group replication thread waiting for applier to start, as the start group replication was killed.

[ER\\_GRP\\_RPL\\_UNBLOCK\\_WAITING\\_THD](#) was added in 8.0.11.

- Error number: [MY-011450](#); Symbol: [ER\\_GRP\\_RPL\\_APPLIER\\_PIPELINE\\_NOT\\_DISPOSED](#); SQLSTATE: [HY000](#)

Message: The group replication applier pipeline was not properly disposed. Check the error log for further info.

[ER\\_GRP\\_RPL\\_APPLIER\\_PIPELINE\\_NOT\\_DISPOSED](#) was added in 8.0.11.

- Error number: [MY-011451](#); Symbol: [ER\\_GRP\\_RPL\\_APPLIER\\_THD\\_EXECUTION\\_ABORTED](#); SQLSTATE: [HY000](#)

Message: The applier thread execution was aborted. Unable to process more transactions, this member will now leave the group.

[ER\\_GRP\\_RPL\\_APPLIER\\_THD\\_EXECUTION\\_ABORTED](#) was added in 8.0.11.

- Error number: [MY-011452](#); Symbol: [ER\\_GRP\\_RPL\\_APPLIER\\_EXECUTION\\_FATAL\\_ERROR](#); SQLSTATE: [HY000](#)

Message: Fatal error during execution on the Applier process of Group Replication. The server will now leave the group.

[ER\\_GRP\\_RPL\\_APPLIER\\_EXECUTION\\_FATAL\\_ERROR](#) was added in 8.0.11.

- Error number: [MY-011453](#); Symbol: [ER\\_GRP\\_RPL\\_ERROR\\_STOPPING\\_CHANNELS](#); SQLSTATE: [HY000](#)

Message: Error stopping all replication channels while server was leaving the group. %s

[ER\\_GRP\\_RPL\\_ERROR\\_STOPPING\\_CHANNELS](#) was added in 8.0.11.

- Error number: [MY-011454](#); Symbol: [ER\\_GRP\\_RPL\\_ERROR\\_SENDING\\_SINGLE\\_PRIMARY\\_MSSG](#); SQLSTATE: [HY000](#)

Message: Error sending single primary message informing that primary did apply relay logs.

[ER\\_GRP\\_RPL\\_ERROR\\_SENDING\\_SINGLE\\_PRIMARY\\_MSSG](#) was added in 8.0.11.

- Error number: [MY-011455](#); Symbol: [ER\\_GRP\\_RPL\\_UPDATE\\_TRANS\\_SNAPSHOT\\_VER\\_ERROR](#); SQLSTATE: [HY000](#)

Message: Error updating transaction snapshot version after transaction being positively certified.

[ER\\_GRP\\_RPL\\_UPDATE\\_TRANS\\_SNAPSHOT\\_VER\\_ERROR](#) was added in 8.0.11.

- Error number: [MY-011456](#); Symbol: [ER\\_GRP\\_RPL\\_SIDNO\\_FETCH\\_ERROR](#); SQLSTATE: [HY000](#)  
Message: Error fetching transaction sidno after transaction being positively certified.  
[ER\\_GRP\\_RPL\\_SIDNO\\_FETCH\\_ERROR](#) was added in 8.0.11.
- Error number: [MY-011457](#); Symbol: [ER\\_GRP\\_RPL\\_BROADCAST\\_COMMIT\\_TRANS\\_MSSG\\_FAILED](#); SQLSTATE: [HY000](#)  
Message: Broadcast of committed transactions message failed.  
[ER\\_GRP\\_RPL\\_BROADCAST\\_COMMIT\\_TRANS\\_MSSG\\_FAILED](#) was added in 8.0.11.
- Error number: [MY-011458](#); Symbol: [ER\\_GRP\\_RPL\\_GROUP\\_NAME\\_PARSE\\_ERROR](#); SQLSTATE: [HY000](#)  
Message: Unable to parse the group name during the Certification module initialization.  
[ER\\_GRP\\_RPL\\_GROUP\\_NAME\\_PARSE\\_ERROR](#) was added in 8.0.11.
- Error number: [MY-011459](#); Symbol: [ER\\_GRP\\_RPL\\_ADD\\_GRP\\_SID\\_TO\\_GRP\\_GTID\\_SID\\_MAP\\_ERROR](#); SQLSTATE: [HY000](#)  
Message: Unable to add the group\_sid in the group\_gtid\_sid\_map during the Certification module initialization.  
[ER\\_GRP\\_RPL\\_ADD\\_GRP\\_SID\\_TO\\_GRP\\_GTID\\_SID\\_MAP\\_ERROR](#) was added in 8.0.11.
- Error number: [MY-011460](#); Symbol: [ER\\_GRP\\_RPL\\_UPDATE\\_GRP\\_GTID\\_EXECUTED\\_ERROR](#); SQLSTATE: [HY000](#)  
Message: Error updating group\_gtid\_executed GTID set during the Certification module initialization.  
[ER\\_GRP\\_RPL\\_UPDATE\\_GRP\\_GTID\\_EXECUTED\\_ERROR](#) was added in 8.0.11.
- Error number: [MY-011461](#); Symbol: [ER\\_GRP\\_RPL\\_DONOR\\_TRANS\\_INFO\\_ERROR](#); SQLSTATE: [HY000](#)  
Message: Unable to handle the donor's transaction information when initializing the conflict detection component. Possible out of memory error.  
[ER\\_GRP\\_RPL\\_DONOR\\_TRANS\\_INFO\\_ERROR](#) was added in 8.0.11.
- Error number: [MY-011462](#); Symbol: [ER\\_GRP\\_RPL\\_SERVER\\_CONN\\_ERROR](#); SQLSTATE: [HY000](#)  
Message: Error when establishing a server connection during the Certification module initialization.  
[ER\\_GRP\\_RPL\\_SERVER\\_CONN\\_ERROR](#) was added in 8.0.11.
- Error number: [MY-011463](#); Symbol: [ER\\_GRP\\_RPL\\_ERROR\\_FETCHING\\_GTID\\_EXECUTED\\_SET](#); SQLSTATE: [HY000](#)  
Message: Error when extracting this member GTID executed set. Certification module can't be properly initialized.  
[ER\\_GRP\\_RPL\\_ERROR\\_FETCHING\\_GTID\\_EXECUTED\\_SET](#) was added in 8.0.11.
- Error number: [MY-011464](#); Symbol: [ER\\_GRP\\_RPL\\_ADD\\_GTID\\_TO\\_GRP\\_GTID\\_EXECUTED\\_ERROR](#); SQLSTATE: [HY000](#)  
Message: Error while adding the server GTID EXECUTED set to the group\_gtid\_execute during the Certification module initialization.

[ER\\_GRP\\_RPL\\_ADD\\_GTID\\_TO\\_GRP GTID\\_EXECUTED\\_ERROR](#) was added in 8.0.11.

- Error number: [MY-011465](#); Symbol: [ER\\_GRP\\_RPL\\_ERROR\\_FETCHING\\_GTID\\_SET](#); SQLSTATE: [HY000](#)

Message: Error when extracting this member retrieved set for its applier. Certification module can't be properly initialized.

[ER\\_GRP\\_RPL\\_ERROR\\_FETCHING\\_GTID\\_SET](#) was added in 8.0.11.

- Error number: [MY-011466](#); Symbol: [ER\\_GRP\\_RPL\\_ADD\\_RETRIEVED\\_SET\\_TO\\_GRP\\_GTID\\_EXECUTED\\_ERROR](#); SQLSTATE: [HY000](#)

Message: Error while adding the member retrieved set to the group\_gtid\_executed during the Certification module initialization.

[ER\\_GRP\\_RPL\\_ADD\\_RETRIEVED\\_SET\\_TO\\_GRP\\_GTID\\_EXECUTED\\_ERROR](#) was added in 8.0.11.

- Error number: [MY-011467](#); Symbol: [ER\\_GRP\\_RPL\\_CERTIFICATION\\_INITIALIZATION\\_FAILURE](#); SQLSTATE: [HY000](#)

Message: Error during Certification module initialization.

[ER\\_GRP\\_RPL\\_CERTIFICATION\\_INITIALIZATION\\_FAILURE](#) was added in 8.0.11.

- Error number: [MY-011468](#); Symbol: [ER\\_GRP\\_RPL\\_UPDATE\\_LAST\\_CONFLICT\\_FREE\\_TRANS\\_ERROR](#); SQLSTATE: [HY000](#)

Message: Unable to update last conflict free transaction, this transaction will not be tracked on performance\_schema.replication\_group\_member\_stats.last\_conflict\_free\_transaction.

[ER\\_GRP\\_RPL\\_UPDATE\\_LAST\\_CONFLICT\\_FREE\\_TRANS\\_ERROR](#) was added in 8.0.11.

- Error number: [MY-011469](#); Symbol: [ER\\_GRP\\_RPL\\_UPDATE\\_TRANS\\_SNAPSHOT\\_REF\\_VER\\_ERROR](#); SQLSTATE: [HY000](#)

Message: Error updating transaction snapshot version reference for internal storage.

[ER\\_GRP\\_RPL\\_UPDATE\\_TRANS\\_SNAPSHOT\\_REF\\_VER\\_ERROR](#) was added in 8.0.11.

- Error number: [MY-011470](#); Symbol: [ER\\_GRP\\_RPL\\_FETCH\\_TRANS\\_SIDNO\\_ERROR](#); SQLSTATE: [HY000](#)

Message: Error fetching transaction sidno while adding to the group\_gtid\_executed set.

[ER\\_GRP\\_RPL\\_FETCH\\_TRANS\\_SIDNO\\_ERROR](#) was added in 8.0.11.

- Error number: [MY-011471](#); Symbol: [ER\\_GRP\\_RPL\\_ERROR\\_VERIFYING\\_SIDNO](#); SQLSTATE: [HY000](#)

Message: Error while ensuring the sidno be present in the group\_gtid\_executed.

[ER\\_GRP\\_RPL\\_ERROR\\_VERIFYING\\_SIDNO](#) was added in 8.0.11.

- Error number: [MY-011472](#); Symbol: [ER\\_GRP\\_RPL\\_CANT\\_GENERATE\\_GTID](#); SQLSTATE: [HY000](#)

Message: Impossible to generate Global Transaction Identifier: the integer component reached the maximal value. Restart the group with a new group\_replication\_group\_name.

[ER\\_GRP\\_RPL\\_CANT\\_GENERATE\\_GTID](#) was added in 8.0.11.

- Error number: [MY-011473](#); Symbol: [ER\\_GRP\\_RPL\\_INVALID\\_GTID\\_SET](#); SQLSTATE: [HY000](#)

Message: Invalid stable transactions set.

[ER\\_GRP\\_RPL\\_INVALID\\_GTID\\_SET](#) was added in 8.0.11.

- Error number: [MY-011474](#); Symbol: [ER\\_GRP\\_RPL\\_UPDATE\\_GTID\\_SET\\_ERROR](#); SQLSTATE: [HY000](#)

Message: Error updating stable transactions set.

[ER\\_GRP\\_RPL\\_UPDATE\\_GTID\\_SET\\_ERROR](#) was added in 8.0.11.

- Error number: [MY-011475](#); Symbol: [ER\\_GRP\\_RPL\\_RECEIVED\\_SET\\_MISSING\\_GTIDS](#); SQLSTATE: [HY000](#)

Message: There was an error when filling the missing GTIDs on the applier channel received set. Despite not critical, on the long run this may cause performance issues.

[ER\\_GRP\\_RPL\\_RECEIVED\\_SET\\_MISSING\\_GTIDS](#) was added in 8.0.11.

- Error number: [MY-011476](#); Symbol: [ER\\_GRP\\_RPL\\_SKIP\\_COMPUTATION\\_TRANS\\_COMMITTED](#); SQLSTATE: [HY000](#)

Message: Skipping the computation of the Transactions\_committed\_all\_members field as an older instance of this computation is still ongoing.

[ER\\_GRP\\_RPL\\_SKIP\\_COMPUTATION\\_TRANS\\_COMMITTED](#) was added in 8.0.11.

- Error number: [MY-011477](#); Symbol: [ER\\_GRP\\_RPL\\_NULL\\_PACKET](#); SQLSTATE: [HY000](#)

Message: Null packet on certifier's queue.

[ER\\_GRP\\_RPL\\_NULL\\_PACKET](#) was added in 8.0.11.

- Error number: [MY-011478](#); Symbol: [ER\\_GRP\\_RPL\\_CANT\\_READ\\_GTID](#); SQLSTATE: [HY000](#)

Message: Error reading GTIDs from the message.

[ER\\_GRP\\_RPL\\_CANT\\_READ\\_GTID](#) was added in 8.0.11.

- Error number: [MY-011479](#); Symbol: [ER\\_GRP\\_RPL\\_PROCESS\\_GTID\\_SET\\_ERROR](#); SQLSTATE: [HY000](#)

Message: Error processing stable transactions set.

[ER\\_GRP\\_RPL\\_PROCESS\\_GTID\\_SET\\_ERROR](#) was added in 8.0.11.

- Error number: [MY-011480](#); Symbol: [ER\\_GRP\\_RPL\\_PROCESS\\_INTERSECTION\\_GTID\\_SET\\_ERROR](#); SQLSTATE: [HY000](#)

Message: Error processing intersection of stable transactions set.

[ER\\_GRP\\_RPL\\_PROCESS\\_INTERSECTION\\_GTID\\_SET\\_ERROR](#) was added in 8.0.11.

- Error number: [MY-011481](#); Symbol: [ER\\_GRP\\_RPL\\_SET\\_STABLE\\_TRANS\\_ERROR](#); SQLSTATE: [HY000](#)

Message: Error setting stable transactions set.

[ER\\_GRP\\_RPL\\_SET\\_STABLE\\_TRANS\\_ERROR](#) was added in 8.0.11.

- Error number: [MY-011482](#); Symbol: [ER\\_GRP\\_RPL\\_CANT\\_READ\\_GRP\\_GTID\\_EXTRACTED](#); SQLSTATE: [HY000](#)

Message: Error reading group\_gtid\_extracted from the View\_change\_log\_event.

[ER\\_GRP\\_RPL\\_CANT\\_READ\\_GRP\\_GTID\\_EXTRACTED](#) was added in 8.0.11.

- Error number: [MY-011483](#); Symbol: [ER\\_GRP\\_RPL\\_CANT\\_READ\\_WRITE\\_SET\\_ITEM](#); SQLSTATE: [HY000](#)

Message: Error reading the write set item '%s' from the View\_change\_log\_event.

[ER\\_GRP\\_RPL\\_CANT\\_READ\\_WRITE\\_SET\\_ITEM](#) was added in 8.0.11.

- Error number: [MY-011484](#); Symbol: [ER\\_GRP\\_RPL\\_INIT\\_CERTIFICATION\\_INFO\\_FAILURE](#); SQLSTATE: [HY000](#)

Message: Error during certification\_info initialization.

[ER\\_GRP\\_RPL\\_INIT\\_CERTIFICATION\\_INFO\\_FAILURE](#) was added in 8.0.11.

- Error number: [MY-011485](#); Symbol: [ER\\_GRP\\_RPL\\_CONFLICT\\_DETECTION\\_DISABLED](#); SQLSTATE: [HY000](#)

Message: Primary had applied all relay logs, disabled conflict detection.

[ER\\_GRP\\_RPL\\_CONFLICT\\_DETECTION\\_DISABLED](#) was added in 8.0.11.

- Error number: [MY-011486](#); Symbol: [ER\\_GRP\\_RPL\\_MSG\\_DISCARDED](#); SQLSTATE: [HY000](#)

Message: Message received while the plugin is not ready, message discarded.

[ER\\_GRP\\_RPL\\_MSG\\_DISCARDED](#) was added in 8.0.11.

- Error number: [MY-011487](#); Symbol: [ER\\_GRP\\_RPL\\_MISSING\\_GRP\\_RPL\\_APPLIER](#); SQLSTATE: [HY000](#)

Message: Message received without a proper group replication applier.

[ER\\_GRP\\_RPL\\_MISSING\\_GRP\\_RPL\\_APPLIER](#) was added in 8.0.11.

- Error number: [MY-011488](#); Symbol: [ER\\_GRP\\_RPL\\_CERTIFIER\\_MSSG\\_PROCESS\\_ERROR](#); SQLSTATE: [HY000](#)

Message: Error processing message in Certifier.

[ER\\_GRP\\_RPL\\_CERTIFIER\\_MSSG\\_PROCESS\\_ERROR](#) was added in 8.0.11.

- Error number: [MY-011489](#); Symbol: [ER\\_GRP\\_RPL\\_SRV\\_NOT\\_ONLINE](#); SQLSTATE: [HY000](#)

Message: This server was not declared online since it is on status %s.

[ER\\_GRP\\_RPL\\_SRV\\_NOT\\_ONLINE](#) was added in 8.0.11.

- Error number: [MY-011490](#); Symbol: [ER\\_GRP\\_RPL\\_SRV\\_ONLINE](#); SQLSTATE: [HY000](#)

Message: This server was declared online within the replication group.

[ER\\_GRP\\_RPL\\_SRV\\_ONLINE](#) was added in 8.0.11.

- Error number: [MY-011491](#); Symbol: [ER\\_GRP\\_RPL\\_DISABLE\\_SRV\\_READ\\_MODE\\_RESTRICTED](#); SQLSTATE: [HY000](#)

Message: When declaring the plugin online it was not possible to disable the server read mode settings. Try to disable it manually.

[ER\\_GRP\\_RPL\\_DISABLE\\_SRV\\_READ\\_MODE\\_RESTRICTED](#) was added in 8.0.11.

- Error number: [MY-011492](#); Symbol: [ER\\_GRP\\_RPL\\_MEM\\_ONLINE](#); SQLSTATE: [HY000](#)

Message: The member with address %s:%u was declared online within the replication group.

[ER\\_GRP\\_RPL\\_MEM\\_ONLINE](#) was added in 8.0.11.

- Error number: [MY-011493](#); Symbol: [ER\\_GRP\\_RPL\\_MEM\\_UNREACHABLE](#); SQLSTATE: [HY000](#)

Message: Member with address %s:%u has become unreachable.

[ER\\_GRP\\_RPL\\_MEM\\_UNREACHABLE](#) was added in 8.0.11.

- Error number: [MY-011494](#); Symbol: [ER\\_GRP\\_RPL\\_MEM\\_REACHABLE](#); SQLSTATE: [HY000](#)

Message: Member with address %s:%u is reachable again.

[ER\\_GRP\\_RPL\\_MEM\\_REACHABLE](#) was added in 8.0.11.

- Error number: [MY-011495](#); Symbol: [ER\\_GRP\\_RPL\\_SRV\\_BLOCKED](#); SQLSTATE: [HY000](#)

Message: This server is not able to reach a majority of members in the group. This server will now block all updates. The server will remain blocked until contact with the majority is restored. It is possible to use `group_replication_force_members` to force a new group membership.

[ER\\_GRP\\_RPL\\_SRV\\_BLOCKED](#) was added in 8.0.11.

- Error number: [MY-011496](#); Symbol: [ER\\_GRP\\_RPL\\_SRV\\_BLOCKED\\_FOR\\_SECS](#); SQLSTATE: [HY000](#)

Message: This server is not able to reach a majority of members in the group. This server will now block all updates. The server will remain blocked for the next %lu seconds. Unless contact with the majority is restored, after this time the member will error out and leave the group. It is possible to use `group_replication_force_members` to force a new group membership.

[ER\\_GRP\\_RPL\\_SRV\\_BLOCKED\\_FOR\\_SECS](#) was added in 8.0.11.

- Error number: [MY-011497](#); Symbol: [ER\\_GRP\\_RPL\\_CHANGE\\_GRP\\_MEM\\_NOT\\_PROCESSED](#); SQLSTATE: [HY000](#)

Message: A group membership change was received but the plugin is already leaving due to the configured timeout on `group_replication_unreachable_majority_timeout` option.

[ER\\_GRP\\_RPL\\_CHANGE\\_GRP\\_MEM\\_NOT\\_PROCESSED](#) was added in 8.0.11.

- Error number: [MY-011498](#); Symbol: [ER\\_GRP\\_RPL\\_MEMBER\\_CONTACT\\_RESTORED](#); SQLSTATE: [HY000](#)

Message: The member has resumed contact with a majority of the members in the group. Regular operation is restored and transactions are unblocked.

[ER\\_GRP\\_RPL\\_MEMBER\\_CONTACT\\_RESTORED](#) was added in 8.0.11.

- Error number: [MY-011499](#); Symbol: [ER\\_GRP\\_RPL\\_MEMBER\\_REMOVED](#); SQLSTATE: [HY000](#)

Message: Members removed from the group: %s

[ER\\_GRP\\_RPL\\_MEMBER\\_REMOVED](#) was added in 8.0.11.

- Error number: [MY-011500](#); Symbol: [ER\\_GRP\\_RPL\\_PRIMARY\\_MEMBER\\_LEFT\\_GRP](#); SQLSTATE: [HY000](#)

Message: Primary server with address %s left the group. Electing new Primary.

[ER\\_GRP\\_RPL\\_PRIMARY\\_MEMBER\\_LEFT\\_GRP](#) was added in 8.0.11.

- Error number: [MY-011501](#); Symbol: [ER\\_GRP\\_RPL\\_MEMBER\\_ADDED](#); SQLSTATE: [HY000](#)

Message: Members joined the group: %s

[ER\\_GRP\\_RPL\\_MEMBER\\_ADDED](#) was added in 8.0.11.

- Error number: [MY-011502](#); Symbol: [ER\\_GRP\\_RPL\\_MEMBER\\_EXIT\\_PLUGIN\\_ERROR](#); SQLSTATE: [HY000](#)

Message: There was a previous plugin error while the member joined the group. The member will now exit the group.

[ER\\_GRP\\_RPL\\_MEMBER\\_EXIT\\_PLUGIN\\_ERROR](#) was added in 8.0.11.

- Error number: [MY-011503](#); Symbol: [ER\\_GRP\\_RPL\\_MEMBER\\_CHANGE](#); SQLSTATE: [HY000](#)

Message: Group membership changed to %s on view %s.

[ER\\_GRP\\_RPL\\_MEMBER\\_CHANGE](#) was added in 8.0.11.

- Error number: [MY-011504](#); Symbol: [ER\\_GRP\\_RPL\\_MEMBER\\_LEFT\\_GRP](#); SQLSTATE: [HY000](#)

Message: Group membership changed: This member has left the group.

[ER\\_GRP\\_RPL\\_MEMBER\\_LEFT\\_GRP](#) was added in 8.0.11.

- Error number: [MY-011505](#); Symbol: [ER\\_GRP\\_RPL\\_MEMBER\\_EXPELLED](#); SQLSTATE: [HY000](#)

Message: Member was expelled from the group due to network failures, changing member status to ERROR.

[ER\\_GRP\\_RPL\\_MEMBER\\_EXPELLED](#) was added in 8.0.11.

- Error number: [MY-011506](#); Symbol: [ER\\_GRP\\_RPL\\_SESSION\\_OPEN\\_FAILED](#); SQLSTATE: [HY000](#)

Message: Unable to open session to (re)set read only mode. Skipping.

[ER\\_GRP\\_RPL\\_SESSION\\_OPEN\\_FAILED](#) was added in 8.0.11.

- Error number: [MY-011507](#); Symbol: [ER\\_GRP\\_RPL\\_NEW\\_PRIMARY\\_ELECTED](#); SQLSTATE: [HY000](#)

Message: A new primary with address %s:%u was elected. %s

[ER\\_GRP\\_RPL\\_NEW\\_PRIMARY\\_ELECTED](#) was added in 8.0.11.

- Error number: [MY-011508](#); Symbol: [ER\\_GRP\\_RPL\\_DISABLE\\_READ\\_ONLY\\_FAILED](#); SQLSTATE: [HY000](#)

Message: Unable to disable super read only flag. Try to disable it manually

[ER\\_GRP\\_RPL\\_DISABLE\\_READ\\_ONLY\\_FAILED](#) was added in 8.0.11.

- Error number: [MY-011509](#); Symbol: [ER\\_GRP\\_RPL\\_ENABLE\\_READ\\_ONLY\\_FAILED](#); SQLSTATE: [HY000](#)

Message: Unable to set super read only flag. Try to set it manually.

[ER\\_GRP\\_RPL\\_ENABLE\\_READ\\_ONLY\\_FAILED](#) was added in 8.0.11.

- Error number: [MY-011510](#); Symbol: [ER\\_GRP\\_RPL\\_SRV\\_PRIMARY\\_MEM](#); SQLSTATE: [HY000](#)  
Message: This server is working as primary member.  
[ER\\_GRP\\_RPL\\_SRV\\_PRIMARY\\_MEM](#) was added in 8.0.11.
- Error number: [MY-011511](#); Symbol: [ER\\_GRP\\_RPL\\_SRV\\_SECONDARY\\_MEM](#); SQLSTATE: [HY000](#)  
Message: This server is working as secondary member with primary member address %s:%u.  
[ER\\_GRP\\_RPL\\_SRV\\_SECONDARY\\_MEM](#) was added in 8.0.11.
- Error number: [MY-011512](#); Symbol: [ER\\_GRP\\_RPL\\_NO\\_SUITABLE\\_PRIMARY\\_MEM](#); SQLSTATE: [HY000](#)  
Message: Unable to set any member as primary. No suitable candidate.  
[ER\\_GRP\\_RPL\\_NO\\_SUITABLE\\_PRIMARY\\_MEM](#) was added in 8.0.11.
- Error number: [MY-011513](#); Symbol: [ER\\_GRP\\_RPL\\_SUPER\\_READ\\_ONLY\\_ACTIVATE\\_ERROR](#); SQLSTATE: [HY000](#)  
Message: Error when activating super\_read\_only mode on start. The member will now exit the group.  
[ER\\_GRP\\_RPL\\_SUPER\\_READ\\_ONLY\\_ACTIVATE\\_ERROR](#) was added in 8.0.11.
- Error number: [MY-011514](#); Symbol: [ER\\_GRP\\_RPL\\_EXCEEDS\\_AUTO\\_INC\\_VALUE](#); SQLSTATE: [HY000](#)  
Message: Group contains %lu members which is greater than group\_replication\_auto\_increment\_increment value of %lu. This can lead to an higher rate of transactional aborts.  
[ER\\_GRP\\_RPL\\_EXCEEDS\\_AUTO\\_INC\\_VALUE](#) was added in 8.0.11.
- Error number: [MY-011515](#); Symbol: [ER\\_GRP\\_RPL\\_DATA\\_NOT\\_PROVIDED\\_BY\\_MEM](#); SQLSTATE: [HY000](#)  
Message: Member with address '%s:%u' didn't provide any data during the last group change. Group information can be outdated and lead to errors on recovery.  
[ER\\_GRP\\_RPL\\_DATA\\_NOT\\_PROVIDED\\_BY\\_MEM](#) was added in 8.0.11.
- Error number: [MY-011516](#); Symbol: [ER\\_GRP\\_RPL\\_MEMBER\\_ALREADY\\_EXISTS](#); SQLSTATE: [HY000](#)  
Message: There is already a member with server\_uuid %s. The member will now exit the group.  
[ER\\_GRP\\_RPL\\_MEMBER\\_ALREADY\\_EXISTS](#) was added in 8.0.11.
- Error number: [MY-011517](#); Symbol: [ER\\_GRP\\_RPL\\_GRP\\_CHANGE\\_INFO\\_EXTRACT\\_ERROR](#); SQLSTATE: [HY000](#)  
Message: Error when extracting information for group change. Operations and checks made to group joiners may be incomplete.  
[ER\\_GRP\\_RPL\\_GRP\\_CHANGE\\_INFO\\_EXTRACT\\_ERROR](#) was added in 8.0.11.
- Error number: [MY-011518](#); Symbol: [ER\\_GRP\\_RPL\\_GTID\\_EXECUTED\\_EXTRACT\\_ERROR](#); SQLSTATE: [HY000](#)

Message: Error when extracting this member GTID executed set. Operations and checks made to group joiners may be incomplete.

[ER\\_GRP\\_RPL\\_GTID\\_EXECUTED\\_EXTRACT\\_ERROR](#) was added in 8.0.11.

- Error number: [MY-011519](#); Symbol: [ER\\_GRP\\_RPL\\_GTID\\_SET\\_EXTRACT\\_ERROR](#); SQLSTATE: [HY000](#)

Message: Error when extracting this member retrieved set for its applier. Operations and checks made to group joiners may be incomplete.

[ER\\_GRP\\_RPL\\_GTID\\_SET\\_EXTRACT\\_ERROR](#) was added in 8.0.11.

- Error number: [MY-011520](#); Symbol: [ER\\_GRP\\_RPL\\_START\\_FAILED](#); SQLSTATE: [HY000](#)

Message: The START GROUP\_REPLICATION command failed since the group already has 9 members.

[ER\\_GRP\\_RPL\\_START\\_FAILED](#) was added in 8.0.11.

- Error number: [MY-011521](#); Symbol: [ER\\_GRP\\_RPL\\_MEMBER\\_VER\\_INCOMPATIBLE](#); SQLSTATE: [HY000](#)

Message: Member version is incompatible with the group.

[ER\\_GRP\\_RPL\\_MEMBER\\_VER\\_INCOMPATIBLE](#) was added in 8.0.11.

- Error number: [MY-011522](#); Symbol: [ER\\_GRP\\_RPL\\_TRANS\\_NOT\\_PRESENT\\_IN\\_GRP](#); SQLSTATE: [HY000](#)

Message: The member contains transactions not present in the group. The member will now exit the group.

[ER\\_GRP\\_RPL\\_TRANS\\_NOT\\_PRESENT\\_IN\\_GRP](#) was added in 8.0.11.

- Error number: [MY-011523](#); Symbol: [ER\\_GRP\\_RPL\\_TRANS\\_GREATER\\_THAN\\_GRP](#); SQLSTATE: [HY000](#)

Message: It was not possible to assess if the member has more transactions than the group. The member will now exit the group.

[ER\\_GRP\\_RPL\\_TRANS\\_GREATER\\_THAN\\_GRP](#) was added in 8.0.11.

- Error number: [MY-011524](#); Symbol: [ER\\_GRP\\_RPL\\_MEMBER\\_VERSION\\_LOWER\\_THAN\\_GRP](#); SQLSTATE: [HY000](#)

Message: Member version is lower than some group member, but since option 'group\_replication\_allow\_local\_lower\_version\_join' is enabled, member will be allowed to join.

[ER\\_GRP\\_RPL\\_MEMBER\\_VERSION\\_LOWER\\_THAN\\_GRP](#) was added in 8.0.11.

- Error number: [MY-011525](#); Symbol: [ER\\_GRP\\_RPL\\_LOCAL\\_GTID\\_SETS\\_PROCESS\\_ERROR](#); SQLSTATE: [HY000](#)

Message: Error processing local GTID sets when comparing this member transactions against the group.

[ER\\_GRP\\_RPL\\_LOCAL\\_GTID\\_SETS\\_PROCESS\\_ERROR](#) was added in 8.0.11.

- Error number: [MY-011526](#); Symbol: [ER\\_GRP\\_RPL\\_MEMBER\\_TRANS\\_GREATER\\_THAN\\_GRP](#); SQLSTATE: [HY000](#)

Message: This member has more executed transactions than those present in the group. Local transactions: %s > Group transactions: %s

[ER\\_GRP\\_RPL\\_MEMBER\\_TRANS\\_GREATER\\_THAN\\_GRP](#) was added in 8.0.11.

- Error number: [MY-011527](#); Symbol: [ER\\_GRP\\_RPL\\_BLOCK\\_SIZE\\_DIFF\\_FROM\\_GRP](#); SQLSTATE: [HY000](#)

Message: The member is configured with a `group_replication_gtid_assignment_block_size` option value '%llu' different from the group '%llu'. The member will now exit the group.

[ER\\_GRP\\_RPL\\_BLOCK\\_SIZE\\_DIFF\\_FROM\\_GRP](#) was added in 8.0.11.

- Error number: [MY-011528](#); Symbol: [ER\\_GRP\\_RPL\\_TRANS\\_WRITE\\_SET\\_EXTRACT\\_DIFF\\_FROM\\_GRP](#); SQLSTATE: [HY000](#)

Message: The member is configured with a transaction-write-set-extraction option value '%s' different from the group '%s'. The member will now exit the group.

[ER\\_GRP\\_RPL\\_TRANS\\_WRITE\\_SET\\_EXTRACT\\_DIFF\\_FROM\\_GRP](#) was added in 8.0.11.

- Error number: [MY-011529](#); Symbol: [ER\\_GRP\\_RPL\\_MEMBER\\_CFG\\_INCOMPATIBLE\\_WITH\\_GRP\\_CFG](#); SQLSTATE: [HY000](#)

Message: The member configuration is not compatible with the group configuration. Variables such as `single_primary_mode` or `enforce_update_everywhere_checks` must have the same value on every server in the group. (member configuration option: [%s], group configuration option: [%s]).

[ER\\_GRP\\_RPL\\_MEMBER\\_CFG\\_INCOMPATIBLE\\_WITH\\_GRP\\_CFG](#) was added in 8.0.11.

- Error number: [MY-011530](#); Symbol: [ER\\_GRP\\_RPL\\_MEMBER\\_STOP\\_RPL\\_CHANNELS\\_ERROR](#); SQLSTATE: [HY000](#)

Message: Error stopping all replication channels while server was leaving the group. %s

[ER\\_GRP\\_RPL\\_MEMBER\\_STOP\\_RPL\\_CHANNELS\\_ERROR](#) was added in 8.0.11.

- Error number: [MY-011531](#); Symbol: [ER\\_GRP\\_RPL\\_PURGE\\_APPLIER\\_LOGS](#); SQLSTATE: [HY000](#)

Message: Detected previous RESET MASTER invocation or an issue exists in the group replication applier relay log. Purging existing applier logs.

[ER\\_GRP\\_RPL\\_PURGE\\_APPLIER\\_LOGS](#) was added in 8.0.11.

- Error number: [MY-011532](#); Symbol: [ER\\_GRP\\_RPL\\_RESET\\_APPLIER\\_MODULE\\_LOGS\\_ERROR](#); SQLSTATE: [HY000](#)

Message: Unknown error occurred while resetting applier's module logs.

[ER\\_GRP\\_RPL\\_RESET\\_APPLIER\\_MODULE\\_LOGS\\_ERROR](#) was added in 8.0.11.

- Error number: [MY-011533](#); Symbol: [ER\\_GRP\\_RPL\\_APPLIER\\_THD\\_SETUP\\_ERROR](#); SQLSTATE: [HY000](#)

Message: Failed to setup the group replication applier thread.

[ER\\_GRP\\_RPL\\_APPLIER\\_THD\\_SETUP\\_ERROR](#) was added in 8.0.11.

- Error number: [MY-011534](#); Symbol: [ER\\_GRP\\_RPL\\_APPLIER\\_THD\\_START\\_ERROR](#); SQLSTATE: [HY000](#)

Message: Error while starting the group replication applier thread

[ER\\_GRP\\_RPL\\_APPLIER\\_THD\\_START\\_ERROR](#) was added in 8.0.11.

- Error number: [MY-011535](#); Symbol: [ER\\_GRP\\_RPL\\_APPLIER\\_THD\\_STOP\\_ERROR](#); SQLSTATE: [HY000](#)

Message: Failed to stop the group replication applier thread.

[ER\\_GRP\\_RPL\\_APPLIER\\_THD\\_STOP\\_ERROR](#) was added in 8.0.11.

- Error number: [MY-011536](#); Symbol: [ER\\_GRP\\_RPL\\_FETCH\\_TRANS\\_DATA\\_FAILED](#); SQLSTATE: [HY000](#)

Message: Failed to fetch transaction data containing required transaction info for applier

[ER\\_GRP\\_RPL\\_FETCH\\_TRANS\\_DATA\\_FAILED](#) was added in 8.0.11.

- Error number: [MY-011537](#); Symbol: [ER\\_GRP\\_RPL\\_SLAVE\\_IO\\_THD\\_PRIMARY\\_UNKNOWN](#); SQLSTATE: [HY000](#)

Message: Can't start slave IO THREAD of channel '%s' when group replication is running with single-primary mode and the primary member is not known.

[ER\\_GRP\\_RPL\\_SLAVE\\_IO\\_THD\\_PRIMARY\\_UNKNOWN](#) was added in 8.0.11.

- Error number: [MY-011538](#); Symbol: [ER\\_GRP\\_RPL\\_SLAVE\\_IO\\_THD\\_ON\\_SECONDARY\\_MEMBER](#); SQLSTATE: [HY000](#)

Message: Can't start slave IO THREAD of channel '%s' when group replication is running with single-primary mode on a secondary member.

[ER\\_GRP\\_RPL\\_SLAVE\\_IO\\_THD\\_ON\\_SECONDARY\\_MEMBER](#) was added in 8.0.11.

- Error number: [MY-011539](#); Symbol: [ER\\_GRP\\_RPL\\_SLAVE\\_SQL\\_THD\\_PRIMARY\\_UNKNOWN](#); SQLSTATE: [HY000](#)

Message: Can't start slave SQL THREAD of channel '%s' when group replication is running with single-primary mode and the primary member is not known.

[ER\\_GRP\\_RPL\\_SLAVE\\_SQL\\_THD\\_PRIMARY\\_UNKNOWN](#) was added in 8.0.11.

- Error number: [MY-011540](#); Symbol: [ER\\_GRP\\_RPL\\_SLAVE\\_SQL\\_THD\\_ON\\_SECONDARY\\_MEMBER](#); SQLSTATE: [HY000](#)

Message: Can't start slave SQL THREAD of channel '%s' when group replication is running with single-primary mode on a secondary member.

[ER\\_GRP\\_RPL\\_SLAVE\\_SQL\\_THD\\_ON\\_SECONDARY\\_MEMBER](#) was added in 8.0.11.

- Error number: [MY-011541](#); Symbol: [ER\\_GRP\\_RPL\\_NEEDS\\_INNO\\_DB\\_TABLE](#); SQLSTATE: [HY000](#)

Message: Table %s does not use the InnoDB storage engine. This is not compatible with Group Replication.

[ER\\_GRP\\_RPL\\_NEEDS\\_INNO\\_DB\\_TABLE](#) was added in 8.0.11.

- Error number: [MY-011542](#); Symbol: [ER\\_GRP\\_RPL\\_PRIMARY\\_KEY\\_NOT\\_DEFINED](#); SQLSTATE: [HY000](#)

Message: Table %s does not have any PRIMARY KEY. This is not compatible with Group Replication.

[ER\\_GRP\\_RPL\\_PRIMARY\\_KEY\\_NOT\\_DEFINED](#) was added in 8.0.11.

- Error number: [MY-011543](#); Symbol: [ER\\_GRP\\_RPL\\_FK\\_WITH\\_CASCADE\\_UNSUPPORTED](#); SQLSTATE: [HY000](#)  
  
Message: Table %s has a foreign key with 'CASCADE' clause. This is not compatible with Group Replication.  
  
[ER\\_GRP\\_RPL\\_FK\\_WITH\\_CASCADE\\_UNSUPPORTED](#) was added in 8.0.11.
- Error number: [MY-011544](#); Symbol: [ER\\_GRP\\_RPL\\_AUTO\\_INC\\_RESET](#); SQLSTATE: [HY000](#)  
  
Message: auto\_increment\_increment is reset to %lu  
  
[ER\\_GRP\\_RPL\\_AUTO\\_INC\\_RESET](#) was added in 8.0.11.
- Error number: [MY-011545](#); Symbol: [ER\\_GRP\\_RPL\\_AUTO\\_INC\\_OFFSET\\_RESET](#); SQLSTATE: [HY000](#)  
  
Message: auto\_increment\_offset is reset to %lu  
  
[ER\\_GRP\\_RPL\\_AUTO\\_INC\\_OFFSET\\_RESET](#) was added in 8.0.11.
- Error number: [MY-011546](#); Symbol: [ER\\_GRP\\_RPL\\_AUTO\\_INC\\_SET](#); SQLSTATE: [HY000](#)  
  
Message: auto\_increment\_increment is set to %lu  
  
[ER\\_GRP\\_RPL\\_AUTO\\_INC\\_SET](#) was added in 8.0.11.
- Error number: [MY-011547](#); Symbol: [ER\\_GRP\\_RPL\\_AUTO\\_INC\\_OFFSET\\_SET](#); SQLSTATE: [HY000](#)  
  
Message: auto\_increment\_offset is set to %lu  
  
[ER\\_GRP\\_RPL\\_AUTO\\_INC\\_OFFSET\\_SET](#) was added in 8.0.11.
- Error number: [MY-011548](#); Symbol: [ER\\_GRP\\_RPL\\_FETCH\\_TRANS\\_CONTEXT\\_FAILED](#); SQLSTATE: [HY000](#)  
  
Message: Failed to fetch transaction context containing required transaction info for certification  
  
[ER\\_GRP\\_RPL\\_FETCH\\_TRANS\\_CONTEXT\\_FAILED](#) was added in 8.0.11.

Message: Failed to notify certification outcome

[ER\\_GRP\\_RPL\\_NOTIFY\\_CERTIFICATION\\_OUTCOME\\_FAILED](#) was added in 8.0.11.

- Error number: [MY-011557](#); Symbol: [ER\\_GRP\\_RPL\\_ADD\\_GTID\\_INFO\\_WITH\\_REMOTE\\_GTID\\_FAILED](#); SQLSTATE: [HY000](#)

Message: Unable to add gtid information to the group\_gtid\_executed set when gtid was provided for remote transactions

[ER\\_GRP\\_RPL\\_ADD\\_GTID\\_INFO\\_WITH\\_REMOTE\\_GTID\\_FAILED](#) was added in 8.0.11.

- Error number: [MY-011558](#); Symbol: [ER\\_GRP\\_RPL\\_ADD\\_GTID\\_INFO\\_WITHOUT\\_REMOTE\\_GTID\\_FAILED](#); SQLSTATE: [HY000](#)

Message: Unable to add gtid information to the group\_gtid\_executed set when gtid was not provided for remote transactions

[ER\\_GRP\\_RPL\\_ADD\\_GTID\\_INFO\\_WITHOUT\\_REMOTE\\_GTID\\_FAILED](#) was added in 8.0.11.

- Error number: [MY-011559](#); Symbol: [ER\\_GRP\\_RPL\\_FETCH\\_VIEW\\_CHANGE\\_LOG\\_EVENT\\_FAILED](#); SQLSTATE: [HY000](#)

Message: Failed to fetch View\_change\_log\_event containing required info for certification

[ER\\_GRP\\_RPL\\_FETCH\\_VIEW\\_CHANGE\\_LOG\\_EVENT\\_FAILED](#) was added in 8.0.11.

- Error number: [MY-011560](#); Symbol: [ER\\_GRP\\_RPL\\_CONTACT\\_WITH\\_SRV\\_FAILED](#); SQLSTATE: [HY000](#)

Message: Error when contacting the server to ensure the proper logging of a group change in the binlog

[ER\\_GRP\\_RPL\\_CONTACT\\_WITH\\_SRV\\_FAILED](#) was added in 8.0.11.

- Error number: [MY-011561](#); Symbol: [ER\\_GRP\\_RPL\\_SRV\\_WAIT\\_TIME\\_OUT](#); SQLSTATE: [HY000](#)

Message: Timeout when waiting for the server to execute local transactions in order assure the group change proper logging

[ER\\_GRP\\_RPL\\_SRV\\_WAIT\\_TIME\\_OUT](#) was added in 8.0.11.

- Error number: [MY-011562](#); Symbol: [ER\\_GRP\\_RPL\\_FETCH\\_LOG\\_EVENT\\_FAILED](#); SQLSTATE: [HY000](#)

Message: Failed to fetch Log\_event containing required server info for applier

[ER\\_GRP\\_RPL\\_FETCH\\_LOG\\_EVENT\\_FAILED](#) was added in 8.0.11.

- Error number: [MY-011563](#); Symbol: [ER\\_GRP\\_RPL\\_START\\_GRP\\_RPL\\_FAILED](#); SQLSTATE: [HY000](#)

Message: Unable to start Group Replication. Replication applier infrastructure is not initialized since the server was started with --initialize or --initialize-insecure.

[ER\\_GRP\\_RPL\\_START\\_GRP\\_RPL\\_FAILED](#) was added in 8.0.11.

- Error number: [MY-011564](#); Symbol: [ER\\_GRP\\_RPL\\_CONN\\_INTERNAL\\_PLUGIN\\_FAIL](#); SQLSTATE: [HY000](#)

Message: Failed to establish an internal server connection to execute plugin operations

[ER\\_GRP\\_RPL\\_CONN\\_INTERNAL\\_PLUGIN\\_FAIL](#) was added in 8.0.11.

- Error number: [MY-011565](#); Symbol: [ER\\_GRP\\_RPL\\_SUPER\\_READ\\_ON](#); SQLSTATE: [HY000](#)

Message: Setting super\_read\_only=ON.

[ER\\_GRP\\_RPL\\_SUPER\\_READ\\_ON](#) was added in 8.0.11.

- Error number: [MY-011566](#); Symbol: [ER\\_GRP\\_RPL\\_SUPER\\_READ\\_OFF](#); SQLSTATE: [HY000](#)

Message: Setting super\_read\_only=OFF.

[ER\\_GRP\\_RPL\\_SUPER\\_READ\\_OFF](#) was added in 8.0.11.

- Error number: [MY-011567](#); Symbol: [ER\\_GRP\\_RPL\\_KILLED\\_SESSION\\_ID](#); SQLSTATE: [HY000](#)

Message: killed session id: %d status: %d

[ER\\_GRP\\_RPL\\_KILLED\\_SESSION\\_ID](#) was added in 8.0.11.

- Error number: [MY-011568](#); Symbol: [ER\\_GRP\\_RPL\\_KILLED\\_FAILED\\_ID](#); SQLSTATE: [HY000](#)

Message: killed failed id: %d failed: %d

[ER\\_GRP\\_RPL\\_KILLED\\_FAILED\\_ID](#) was added in 8.0.11.

- Error number: [MY-011569](#); Symbol: [ER\\_GRP\\_RPL\\_INTERNAL\\_QUERY](#); SQLSTATE: [HY000](#)

Message: Internal query: %s result in error. Error number: %ld

[ER\\_GRP\\_RPL\\_INTERNAL\\_QUERY](#) was added in 8.0.11.

- Error number: [MY-011570](#); Symbol: [ER\\_GRP\\_RPL\\_COPY\\_FROM\\_EMPTY\\_STRING](#); SQLSTATE: [HY000](#)

Message: Error copying from empty string

[ER\\_GRP\\_RPL\\_COPY\\_FROM\\_EMPTY\\_STRING](#) was added in 8.0.11.

- Error number: [MY-011571](#); Symbol: [ER\\_GRP\\_RPL\\_QUERY\\_FAIL](#); SQLSTATE: [HY000](#)

Message: Query execution resulted in failure. errno: %d

[ER\\_GRP\\_RPL\\_QUERY\\_FAIL](#) was added in 8.0.11.

- Error number: [MY-011572](#); Symbol: [ER\\_GRP\\_RPL\\_CREATE\\_SESSION\\_UNABLE](#); SQLSTATE: [HY000](#)

Message: Unable to create a session for executing the queries on the server

[ER\\_GRP\\_RPL\\_CREATE\\_SESSION\\_UNABLE](#) was added in 8.0.11.

- Error number: [MY-011573](#); Symbol: [ER\\_GRP\\_RPL\\_MEMBER\\_NOT\\_FOUND](#); SQLSTATE: [HY000](#)

Message: The member with address %s:%u has unexpectedly disappeared, killing the current group replication recovery connection

[ER\\_GRP\\_RPL\\_MEMBER\\_NOT\\_FOUND](#) was added in 8.0.11.

- Error number: [MY-011574](#); Symbol: [ER\\_GRP\\_RPL\\_MAXIMUM\\_CONNECTION\\_RETRIES\\_REACHED](#); SQLSTATE: [HY000](#)

Message: Maximum number of retries when trying to connect to a donor reached. Aborting group replication recovery.

[ER\\_GRP\\_RPL\\_MAXIMUM\\_CONNECTION\\_RETRIES\\_REACHED](#) was added in 8.0.11.

- Error number: [MY-011575](#); Symbol: [ER\\_GRP\\_RPL\\_ALL\\_DONORS\\_LEFT\\_ABORT\\_RECOVERY](#); SQLSTATE: [HY000](#)

Message: All donors left. Aborting group replication recovery.

[ER\\_GRP\\_RPL\\_ALL\\_DONORS\\_LEFT\\_ABORT\\_RECOVERY](#) was added in 8.0.11.

- Error number: [MY-011576](#); Symbol: [ER\\_GRP\\_RPL\\_ESTABLISH\\_RECOVERY\\_WITH\\_DONOR](#); SQLSTATE: [HY000](#)

Message: Establishing group recovery connection with a possible donor. Attempt %d/%d

[ER\\_GRP\\_RPL\\_ESTABLISH\\_RECOVERY\\_WITH\\_DONOR](#) was added in 8.0.11.

- Error number: [MY-011577](#); Symbol: [ER\\_GRP\\_RPL\\_ESTABLISH\\_RECOVERY\\_WITH\\_ANOTHER\\_DONOR](#); SQLSTATE: [HY000](#)

Message: Retrying group recovery connection with another donor. Attempt %d/%d

[ER\\_GRP\\_RPL\\_ESTABLISH\\_RECOVERY\\_WITH\\_ANOTHER\\_DONOR](#) was added in 8.0.11.

- Error number: [MY-011578](#); Symbol: [ER\\_GRP\\_RPL\\_NO\\_VALID\\_DONOR](#); SQLSTATE: [HY000](#)

Message: No valid donors exist in the group, retrying

[ER\\_GRP\\_RPL\\_NO\\_VALID\\_DONOR](#) was added in 8.0.11.

- Error number: [MY-011579](#); Symbol: [ER\\_GRP\\_RPL\\_CONFIG\\_RECOVERY](#); SQLSTATE: [HY000](#)

Message: Error when configuring the group recovery connection to the donor.

[ER\\_GRP\\_RPL\\_CONFIG\\_RECOVERY](#) was added in 8.0.11.

- Error number: [MY-011580](#); Symbol: [ER\\_GRP\\_RPL\\_ESTABLISHING\\_CONN\\_GRP\\_REC\\_DONOR](#); SQLSTATE: [HY000](#)

Message: Establishing connection to a group replication recovery donor %s at %s port: %d.

[ER\\_GRP\\_RPL\\_ESTABLISHING\\_CONN\\_GRP\\_REC\\_DONOR](#) was added in 8.0.11.

- Error number: [MY-011581](#); Symbol: [ER\\_GRP\\_RPL\\_CREATE\\_GRP\\_RPL\\_REC\\_CHANNEL](#); SQLSTATE: [HY000](#)

Message: Error while creating the group replication recovery channel with donor %s at %s port: %d.

[ER\\_GRP\\_RPL\\_CREATE\\_GRP\\_RPL\\_REC\\_CHANNEL](#) was added in 8.0.11.

- Error number: [MY-011582](#); Symbol: [ER\\_GRP\\_RPL\\_DONOR\\_SERVER\\_CONN](#); SQLSTATE: [HY000](#)

Message: There was an error when connecting to the donor server. Please check that group\_replication\_recovery channel credentials and all MEMBER\_HOST column values of performance\_schema.replication\_group\_members table are correct and DNS resolvable.

[ER\\_GRP\\_RPL\\_DONOR\\_SERVER\\_CONN](#) was added in 8.0.11.

- Error number: [MY-011583](#); Symbol: [ER\\_GRP\\_RPL\\_CHECK\\_STATUS\\_TABLE](#); SQLSTATE: [HY000](#)

Message: For details please check performance\_schema.replication\_connection\_status table and error log messages of Slave I/O for channel group\_replication\_recovery.

[ER\\_GRP\\_RPL\\_CHECK\\_STATUS\\_TABLE](#) was added in 8.0.11.

- Error number: [MY-011584](#); Symbol: [ER\\_GRP\\_RPL\\_STARTING\\_GRP\\_REC](#); SQLSTATE: [HY000](#)

Message: Error while starting the group replication recovery receiver/applier threads

[ER\\_GRP\\_RPL\\_STARTING\\_GRP\\_REC](#) was added in 8.0.11.

- Error number: [MY-011585](#); Symbol: [ER\\_GRP\\_RPL\\_DONOR\\_CONN\\_TERMINATION](#); SQLSTATE: [HY000](#)

Message: Terminating existing group replication donor connection and purging the corresponding logs.

[ER\\_GRP\\_RPL\\_DONOR\\_CONN\\_TERMINATION](#) was added in 8.0.11.

- Error number: [MY-011586](#); Symbol: [ER\\_GRP\\_RPL\\_STOPPING\\_GRP\\_REC](#); SQLSTATE: [HY000](#)

Message: Error when stopping the group replication recovery's donor connection

[ER\\_GRP\\_RPL\\_STOPPING\\_GRP\\_REC](#) was added in 8.0.11.

- Error number: [MY-011587](#); Symbol: [ER\\_GRP\\_RPL\\_PURGE\\_REC](#); SQLSTATE: [HY000](#)

Message: Error when purging the group replication recovery's relay logs

[ER\\_GRP\\_RPL\\_PURGE\\_REC](#) was added in 8.0.11.

- Error number: [MY-011588](#); Symbol: [ER\\_GRP\\_RPL\\_UNABLE\\_TO\\_KILL\\_CONN\\_REC\\_DONOR\\_APPLIER](#); SQLSTATE: [HY000](#)

Message: Unable to kill the current group replication recovery donor connection after an applier error. Recovery will shutdown.

`ER_GRP_RPL_UNABLE_TO_KILL_CONN_REC_DONOR_APPLIER` was added in 8.0.11.

- Error number: `MY-011589`; Symbol: `ER_GRP_RPL_UNABLE_TO_KILL_CONN_REC_DONOR_FAILOVER`; SQLSTATE: `HY000`

Message: Unable to kill the current group replication recovery donor connection during failover. Recovery will shutdown.

`ER_GRP_RPL_UNABLE_TO_KILL_CONN_REC_DONOR_FAILOVER` was added in 8.0.11.

- Error number: `MY-011590`; Symbol: `ER_GRP_RPL_FAILED_TO_NOTIFY_GRP_MEMBERSHIP_EVENT`; SQLSTATE: `HY000`

Message: Unexpected error when notifying an internal component named %s regarding a group membership event.

`ER_GRP_RPL_FAILED_TO_NOTIFY_GRP_MEMBERSHIP_EVENT` was added in 8.0.11.

- Error number: `MY-011591`; Symbol: `ER_GRP_RPL_FAILED_TO_BROADCAST_GRP_MEMBERSHIP_NOTIFICATION`; SQLSTATE: `HY000`

Message: An undefined error was found while broadcasting an internal group membership notification! This is likely to happen if your components or plugins are not properly loaded or are malfunctioning!

`ER_GRP_RPL_FAILED_TO_BROADCAST_GRP_MEMBERSHIP_NOTIFICATION` was added in 8.0.11.

- Error number: `MY-011592`; Symbol: `ER_GRP_RPL_FAILED_TO_BROADCAST_MEMBER_STATUS_NOTIFICATION`; SQLSTATE: `HY000`

Message: An undefined error was found while broadcasting an internal group member status notification! This is likely to happen if your components or plugins are not properly loaded or are malfunctioning!

`ER_GRP_RPL_FAILED_TO_BROADCAST_MEMBER_STATUS_NOTIFICATION` was added in 8.0.11.

- Error number: `MY-011593`; Symbol: `ER_GRP_RPL_OOM_FAILED_TO_GENERATE_IDENTIFICATION_HASH`; SQLSTATE: `HY000`

Message: No memory to generate write identification hash

`ER_GRP_RPL_OOM_FAILED_TO_GENERATE_IDENTIFICATION_HASH` was added in 8.0.11.

- Error number: `MY-011594`; Symbol: `ER_GRP_RPL_WRITE_IDENT_HASH_BASE64_ENCODING_FAILED`; SQLSTATE: `HY000`

Message: Base 64 encoding of the write identification hash failed

`ER_GRP_RPL_WRITE_IDENT_HASH_BASE64_ENCODING_FAILED` was added in 8.0.11.

- Error number: `MY-011595`; Symbol: `ER_GRP_RPL_INVALID_BINLOG_FORMAT`; SQLSTATE: `HY000`

Message: Binlog format should be ROW for Group Replication

`ER_GRP_RPL_INVALID_BINLOG_FORMAT` was added in 8.0.11.

- Error number: `MY-011596`; Symbol: `ER_GRP_RPL_BINLOG_CHECKSUM_SET`; SQLSTATE: `HY000`

Message: binlog\_checksum should be NONE for Group Replication

`ER_GRP_RPL_BINLOG_CHECKSUM_SET` was added in 8.0.11.

- Error number: [MY-011597](#); Symbol: [ER\\_GRP\\_RPL\\_TRANS\\_WRITE\\_SET\\_EXTRACTION\\_NOT\\_SET](#); SQLSTATE: [HY000](#)  
  
Message: A transaction\_write\_set\_extraction algorithm should be selected when running Group Replication  
  
[ER\\_GRP\\_RPL\\_TRANS\\_WRITE\\_SET\\_EXTRACTION\\_NOT\\_SET](#) was added in 8.0.11.
- Error number: [MY-011598](#); Symbol: [ER\\_GRP\\_RPL\\_UNSUPPORTED\\_TRANS\\_ISOLATION](#); SQLSTATE: [HY000](#)  
  
Message: Transaction isolation level (tx\_isolation) is set to `SERIALIZABLE`, which is not compatible with Group Replication  
  
[ER\\_GRP\\_RPL\\_UNSUPPORTED\\_TRANS\\_ISOLATION](#) was added in 8.0.11.
- Error number: [MY-011599](#); Symbol: [ER\\_GRP\\_RPL\\_CANNOT\\_EXECUTE\\_TRANS\\_WHILE\\_STOPPING](#); SQLSTATE: [HY000](#)  
  
Message: Transaction cannot be executed while Group Replication is stopping.  
  
[ER\\_GRP\\_RPL\\_CANNOT\\_EXECUTE\\_TRANS\\_WHILE\\_STOPPING](#) was added in 8.0.11.
- Error number: [MY-011600](#); Symbol: [ER\\_GRP\\_RPL\\_CANNOT\\_EXECUTE\\_TRANS\\_WHILE\\_RECOVERING](#); SQLSTATE: [HY000](#)  
  
Message: Transaction cannot be executed while Group Replication is recovering. Try again when the server is `ONLINE`.  
  
[ER\\_GRP\\_RPL\\_CANNOT\\_EXECUTE\\_TRANS\\_WHILE\\_RECOVERING](#) was added in 8.0.11.
- Error number: [MY-011601](#); Symbol: [ER\\_GRP\\_RPL\\_CANNOT\\_EXECUTE\\_TRANS\\_IN\\_ERROR\\_STATE](#); SQLSTATE: [HY000](#)  
  
Message: Transaction cannot be executed while Group Replication is on `ERROR` state. Check for errors and restart the plugin  
  
[ER\\_GRP\\_RPL\\_CANNOT\\_EXECUTE\\_TRANS\\_IN\\_ERROR\\_STATE](#) was added in 8.0.11.
- Error number: [MY-011602](#); Symbol: [ER\\_GRP\\_RPL\\_CANNOT\\_EXECUTE\\_TRANS\\_IN\\_OFFLINE\\_MODE](#); SQLSTATE: [HY000](#)  
  
Message: Transaction cannot be executed while Group Replication is `OFFLINE`. Check for errors and restart the plugin  
  
[ER\\_GRP\\_RPL\\_CANNOT\\_EXECUTE\\_TRANS\\_IN\\_OFFLINE\\_MODE](#) was added in 8.0.11.
- Error number: [MY-011603](#); Symbol: [ER\\_GRP\\_RPL\\_MULTIPLE\\_CACHE\\_TYPE\\_NOT\\_SUPPORTED\\_FOR\\_SESSION](#); SQLSTATE: [HY000](#)  
  
Message: We can only use one cache type at a time on session %u  
  
[ER\\_GRP\\_RPL\\_MULTIPLE\\_CACHE\\_TYPE\\_NOT\\_SUPPORTED\\_FOR\\_SESSION](#) was added in 8.0.11.
- Error number: [MY-011604](#); Symbol: [ER\\_GRP\\_RPL\\_FAILED\\_TO\\_REINIT\\_BINLOG\\_CACHE\\_FOR\\_READ](#); SQLSTATE: [HY000](#)  
  
Message: Failed to reinit binlog cache log for read on session %u  
  
[ER\\_GRP\\_RPL\\_FAILED\\_TO\\_REINIT\\_BINLOG\\_CACHE\\_FOR\\_READ](#) was added in 8.0.11.
- Error number: [MY-011605](#); Symbol: [ER\\_GRP\\_RPL\\_FAILED\\_TO\\_CREATE\\_TRANS\\_CONTEXT](#); SQLSTATE: [HY000](#)

Message: Failed to create the context of the current transaction on session %u

[ER\\_GRP\\_RPL\\_FAILED\\_TO\\_CREATE\\_TRANS\\_CONTEXT](#) was added in 8.0.11.

- Error number: [MY-011606](#); Symbol: [ER\\_GRP\\_RPL\\_FAILED\\_TO\\_EXTRACT\\_TRANS\\_WRITE\\_SET](#); SQLSTATE: [HY000](#)

Message: Failed to extract the set of items written during the execution of the current transaction on session %u

[ER\\_GRP\\_RPL\\_FAILED\\_TO\\_EXTRACT\\_TRANS\\_WRITE\\_SET](#) was added in 8.0.11.

- Error number: [MY-011607](#); Symbol: [ER\\_GRP\\_RPL\\_FAILED\\_TO\\_GATHER\\_TRANS\\_WRITE\\_SET](#); SQLSTATE: [HY000](#)

Message: Failed to gather the set of items written during the execution of the current transaction on session %u

[ER\\_GRP\\_RPL\\_FAILED\\_TO\\_GATHER\\_TRANS\\_WRITE\\_SET](#) was added in 8.0.11.

- Error number: [MY-011608](#); Symbol: [ER\\_GRP\\_RPL\\_TRANS\\_SIZE\\_EXCEEDS\\_LIMIT](#); SQLSTATE: [HY000](#)

Message: Error on session %u. Transaction of size %llu exceeds specified limit %lu. To increase the limit please adjust `group_replication_transaction_size_limit` option.

[ER\\_GRP\\_RPL\\_TRANS\\_SIZE\\_EXCEEDS\\_LIMIT](#) was added in 8.0.11.

- Error number: [MY-011609](#); Symbol: [ER\\_GRP\\_RPL\\_REINIT\\_OF\\_INTERNAL\\_CACHE\\_FOR\\_READ\\_FAILED](#); SQLSTATE: [HY000](#)

Message: Error while re-initializing an internal cache, for read operations, on session %u

[ER\\_GRP\\_RPL\\_REINIT\\_OF\\_INTERNAL\\_CACHE\\_FOR\\_READ\\_FAILED](#) was added in 8.0.11, removed after 8.0.12.

- Error number: [MY-011610](#); Symbol: [ER\\_GRP\\_RPL\\_APPENDING\\_DATA\\_TO\\_INTERNAL\\_CACHE\\_FAILED](#); SQLSTATE: [HY000](#)

Message: Error while appending data to an internal cache on session %u

[ER\\_GRP\\_RPL\\_APPENDING\\_DATA\\_TO\\_INTERNAL\\_CACHE\\_FAILED](#) was added in 8.0.11, removed after 8.0.12.

- Error number: [MY-011611](#); Symbol: [ER\\_GRP\\_RPL\\_WRITE\\_TO\\_BINLOG\\_CACHE\\_FAILED](#); SQLSTATE: [HY000](#)

Message: Error while writing binary log cache on session %u

[ER\\_GRP\\_RPL\\_WRITE\\_TO\\_BINLOG\\_CACHE\\_FAILED](#) was added in 8.0.11, removed after 8.0.12.

- Error number: [MY-011611](#); Symbol: [ER\\_GRP\\_RPL\\_WRITE\\_TO\\_TRANSACTION\\_MESSAGE\\_FAILED](#); SQLSTATE: [HY000](#)

Message: Error while writing to transaction message on session %u

[ER\\_GRP\\_RPL\\_WRITE\\_TO\\_TRANSACTION\\_MESSAGE\\_FAILED](#) was added in 8.0.13.

- Error number: [MY-011612](#); Symbol: [ER\\_GRP\\_RPL\\_FAILED\\_TO\\_REGISTER\\_TRANS\\_OUTCOME\\_NOTIFICATION](#); SQLSTATE: [HY000](#)

Message: Unable to register for getting notifications regarding the outcome of the transaction on session %u

`ER_GRP_RPL_FAILED_TO_REGISTER_TRANS_OUTCOME_NOTIFICATION` was added in 8.0.11.

- Error number: `MY-011613`; Symbol: `ER_GRP_RPL_MSG_TOO_LONG_BROADCASTING_TRANS_FAILED`; SQLSTATE: `HY000`

Message: Error broadcasting transaction to the group on session %u. Message is too big.

`ER_GRP_RPL_MSG_TOO_LONG_BROADCASTING_TRANS_FAILED` was added in 8.0.11.

- Error number: `MY-011614`; Symbol: `ER_GRP_RPL_BROADCASTING_TRANS_TO_GRP_FAILED`; SQLSTATE: `HY000`

Message: Error while broadcasting the transaction to the group on session %u

`ER_GRP_RPL_BROADCASTING_TRANS_TO_GRP_FAILED` was added in 8.0.11.

- Error number: `MY-011615`; Symbol: `ER_GRP_RPL_ERROR_WHILE_WAITING_FOR_CONFLICT_DETECTION`; SQLSTATE: `HY000`

Message: Error while waiting for conflict detection procedure to finish on session %u

`ER_GRP_RPL_ERROR_WHILE_WAITING_FOR_CONFLICT_DETECTION` was added in 8.0.11.

- Error number: `MY-011616`; Symbol: `ER_GRP_RPL_REINIT_OF_INTERNAL_CACHE_FOR_WRITE_FAILED`; SQLSTATE: `HY000`

Message: Error while re-initializing an internal cache, for write operations, on session %u

`ER_GRP_RPL_REINIT_OF_INTERNAL_CACHE_FOR_WRITE_FAILED` was added in 8.0.11, removed after 8.0.12.

- Error number: `MY-011617`; Symbol: `ER_GRP_RPL_FAILED_TO_CREATE_COMMIT_CACHE`; SQLSTATE: `HY000`

Message: Failed to create group replication commit cache on session %u

`ER_GRP_RPL_FAILED_TO_CREATE_COMMIT_CACHE` was added in 8.0.11, removed after 8.0.12.

- Error number: `MY-011618`; Symbol: `ER_GRP_RPL_REINIT_OF_COMMIT_CACHE_FOR_WRITE_FAILED`; SQLSTATE: `HY000`

Message: Failed to reinit group replication commit cache for write on session %u

`ER_GRP_RPL_REINIT_OF_COMMIT_CACHE_FOR_WRITE_FAILED` was added in 8.0.11, removed after 8.0.12.

- Error number: `MY-011619`; Symbol: `ER_GRP_RPL_PREV_REC_SESSION_RUNNING`; SQLSTATE: `HY000`

Message: A previous recovery session is still running. Please stop the group replication plugin and wait for it to stop

`ER_GRP_RPL_PREV_REC_SESSION_RUNNING` was added in 8.0.11.

- Error number: `MY-011620`; Symbol: `ER_GRP_RPL_FATAL_REC_PROCESS`; SQLSTATE: `HY000`

Message: Fatal error during the recovery process of Group Replication. The server will leave the group.

[ER\\_GRP\\_RPL\\_FATAL\\_REC\\_PROCESS](#) was added in 8.0.11.

- Error number: [MY-011621](#); Symbol: [ER\\_GRP\\_RPL\\_WHILE\\_STOPPING\\_REP\\_CHANNEL](#); SQLSTATE: [HY000](#)

Message: Error stopping all replication channels while server was leaving the group. %s

[ER\\_GRP\\_RPL\\_WHILE\\_STOPPING\\_REP\\_CHANNEL](#) was added in 8.0.11.

- Error number: [MY-011622](#); Symbol: [ER\\_GRP\\_RPL\\_UNABLE\\_TO\\_EVALUATE\\_APPLIER\\_STATUS](#); SQLSTATE: [HY000](#)

Message: Unable to evaluate the group replication applier execution status. Group replication recovery will shutdown to avoid data corruption.

[ER\\_GRP\\_RPL\\_UNABLE\\_TO\\_EVALUATE\\_APPLIER\\_STATUS](#) was added in 8.0.11.

- Error number: [MY-011623](#); Symbol: [ER\\_GRP\\_RPL\\_ONLY\\_ONE\\_SERVER\\_ALIVE](#); SQLSTATE: [HY000](#)

Message: Only one server alive. Declaring this server as online within the replication group

[ER\\_GRP\\_RPL\\_ONLY\\_ONE\\_SERVER\\_ALIVE](#) was added in 8.0.11.

- Error number: [MY-011624](#); Symbol: [ER\\_GRP\\_RPL\\_CERTIFICATION\\_REC\\_PROCESS](#); SQLSTATE: [HY000](#)

Message: Error when processing certification information in the recovery process

[ER\\_GRP\\_RPL\\_CERTIFICATION\\_REC\\_PROCESS](#) was added in 8.0.11.

- Error number: [MY-011625](#); Symbol: [ER\\_GRP\\_RPL\\_UNABLE\\_TO\\_ENSURE\\_EXECUTION\\_REC](#); SQLSTATE: [HY000](#)

Message: Unable to ensure the execution of group transactions received during recovery.

[ER\\_GRP\\_RPL\\_UNABLE\\_TO\\_ENSURE\\_EXECUTION\\_REC](#) was added in 8.0.11.

- Error number: [MY-011626](#); Symbol: [ER\\_GRP\\_RPL\\_WHILE\\_SENDING\\_MSG\\_REC](#); SQLSTATE: [HY000](#)

Message: Error while sending message for group replication recovery

[ER\\_GRP\\_RPL\\_WHILE\\_SENDING\\_MSG\\_REC](#) was added in 8.0.11.

- Error number: [MY-011627](#); Symbol: [ER\\_GRP\\_RPL\\_READ\\_UNABLE\\_FOR\\_SUPER\\_READ\\_ONLY](#); SQLSTATE: [HY000](#)

Message: Unable to read the server value for the super\_read\_only variable.

[ER\\_GRP\\_RPL\\_READ\\_UNABLE\\_FOR\\_SUPER\\_READ\\_ONLY](#) was added in 8.0.11.

- Error number: [MY-011628](#); Symbol: [ER\\_GRP\\_RPL\\_READ\\_UNABLE\\_FOR\\_READ\\_ONLY\\_SUPER\\_READ\\_ONLY](#); SQLSTATE: [HY000](#)

Message: Unable to read the server values for the read\_only and super\_read\_only variables.

[ER\\_GRP\\_RPL\\_READ\\_UNABLE\\_FOR\\_READ\\_ONLY\\_SUPER\\_READ\\_ONLY](#) was added in 8.0.11.

- Error number: [MY-011629](#); Symbol: [ER\\_GRP\\_RPL\\_UNABLE\\_TO\\_RESET\\_SERVER\\_READ\\_MODE](#); SQLSTATE: [HY000](#)

Message: Unable to reset the server read mode settings. Try to reset them manually.

[ER\\_GRP\\_RPL\\_UNABLE\\_TO\\_RESET\\_SERVER\\_READ\\_MODE](#) was added in 8.0.11.

- Error number: [MY-011630](#); Symbol: [ER\\_GRP\\_RPL\\_UNABLE\\_TO\\_CERTIFY\\_PLUGIN\\_TRANS](#); SQLSTATE: [HY000](#)

Message: Due to a plugin error, some transactions were unable to be certified and will now rollback.

[ER\\_GRP\\_RPL\\_UNABLE\\_TO\\_CERTIFY\\_PLUGIN\\_TRANS](#) was added in 8.0.11.

- Error number: [MY-011631](#); Symbol: [ER\\_GRP\\_RPL\\_UNBLOCK\\_CERTIFIED\\_TRANS](#); SQLSTATE: [HY000](#)

Message: Error when trying to unblock non certified or consistent transactions. Check for consistency errors when restarting the service

[ER\\_GRP\\_RPL\\_UNBLOCK\\_CERTIFIED\\_TRANS](#) was added in 8.0.11.

- Error number: [MY-011632](#); Symbol: [ER\\_GRP\\_RPL\\_SERVER\\_WORKING\\_AS\\_SECONDARY](#); SQLSTATE: [HY000](#)

Message: This server is working as secondary member with primary member address %s:%u.

[ER\\_GRP\\_RPL\\_SERVER\\_WORKING\\_AS\\_SECONDARY](#) was added in 8.0.11.

- Error number: [MY-011633](#); Symbol: [ER\\_GRP\\_RPL\\_FAILED\\_TO\\_START\\_WITH\\_INVALID\\_SERVER\\_ID](#); SQLSTATE: [HY000](#)

Message: Unable to start Group Replication. Replication applier infrastructure is not initialized since the server was started with server\_id=0. Please, restart the server with server\_id larger than 0.

[ER\\_GRP\\_RPL\\_FAILED\\_TO\\_START\\_WITH\\_INVALID\\_SERVER\\_ID](#) was added in 8.0.11.

- Error number: [MY-011634](#); Symbol: [ER\\_GRP\\_RPL\\_FORCE\\_MEMBERS\\_MUST\\_BE\\_EMPTY](#); SQLSTATE: [HY000](#)

Message: group\_replication\_force\_members must be empty on group start. Current value: '%s'

[ER\\_GRP\\_RPL\\_FORCE\\_MEMBERS\\_MUST\\_BE\\_EMPTY](#) was added in 8.0.11.

- Error number: [MY-011635](#); Symbol: [ER\\_GRP\\_RPL\\_PLUGIN\\_STRUCT\\_INIT\\_NOT\\_POSSIBLE\\_ON\\_SERVER\\_START](#); SQLSTATE: [HY000](#)

Message: It was not possible to guarantee the initialization of plugin structures on server start

[ER\\_GRP\\_RPL\\_PLUGIN\\_STRUCT\\_INIT\\_NOT\\_POSSIBLE\\_ON\\_SERVER\\_START](#) was added in 8.0.11.

- Error number: [MY-011636](#); Symbol: [ER\\_GRP\\_RPL\\_FAILED\\_TO\\_ENABLE\\_SUPER\\_READ\\_ONLY\\_MODE](#); SQLSTATE: [HY000](#)

Message: Could not enable the server read only mode and guarantee a safe recovery execution

[ER\\_GRP\\_RPL\\_FAILED\\_TO\\_ENABLE\\_SUPER\\_READ\\_ONLY\\_MODE](#) was added in 8.0.11.

- Error number: [MY-011637](#); Symbol: [ER\\_GRP\\_RPL\\_FAILED\\_TO\\_INIT\\_COMMUNICATION\\_ENGINE](#); SQLSTATE: [HY000](#)

Message: Error on group communication engine initialization

[ER\\_GRP\\_RPL\\_FAILED\\_TO\\_INIT\\_COMMUNICATION\\_ENGINE](#) was added in 8.0.11.

- Error number: [MY-011638](#); Symbol: [ER\\_GRP\\_RPL\\_FAILED\\_TO\\_START\\_ON\\_SECONDARY\\_WITH\\_ASYNC\\_CHANNELS](#); SQLSTATE: [HY000](#)

Message: Can't start group replication on secondary member with single-primary mode while asynchronous replication channels are running.

[ER\\_GRP\\_RPL\\_FAILED\\_TO\\_START\\_ON\\_SECONDARY\\_WITH\\_ASYNC\\_CHANNELS](#) was added in 8.0.11.
- Error number: [MY-011639](#); Symbol: [ER\\_GRP\\_RPL\\_FAILED\\_TO\\_START\\_COMMUNICATION\\_ENGINE](#); SQLSTATE: [HY000](#)

Message: Error on group communication engine start

[ER\\_GRP\\_RPL\\_FAILED\\_TO\\_START\\_COMMUNICATION\\_ENGINE](#) was added in 8.0.11.
- Error number: [MY-011640](#); Symbol: [ER\\_GRP\\_RPL\\_TIMEOUT\\_ON\\_VIEW\\_AFTER\\_JOINING\\_GRP](#); SQLSTATE: [HY000](#)

Message: Timeout on wait for view after joining group

[ER\\_GRP\\_RPL\\_TIMEOUT\\_ON\\_VIEW\\_AFTER\\_JOINING\\_GRP](#) was added in 8.0.11.
- Error number: [MY-011641](#); Symbol: [ER\\_GRP\\_RPL\\_FAILED\\_TO\\_CALL\\_GRP\\_COMMUNICATION\\_INTERFACE](#); SQLSTATE: [HY000](#)

Message: Error calling group communication interfaces

[ER\\_GRP\\_RPL\\_FAILED\\_TO\\_CALL\\_GRP\\_COMMUNICATION\\_INTERFACE](#) was added in 8.0.11.
- Error number: [MY-011642](#); Symbol: [ER\\_GRP\\_RPL\\_MEMBER\\_SERVER\\_UUID\\_IS\\_INCOMPATIBLE\\_WITH\\_GRP](#); SQLSTATE: [HY000](#)

Message: Member server\_uuid is incompatible with the group. Server\_uuid %s matches group\_name %s.

[ER\\_GRP\\_RPL\\_MEMBER\\_SERVER\\_UUID\\_IS\\_INCOMPATIBLE\\_WITH\\_GRP](#) was added in 8.0.11.
- Error number: [MY-011643](#); Symbol: [ER\\_GRP\\_RPL\\_MEMBER\\_CONF\\_INFO](#); SQLSTATE: [HY000](#)

Message: Member configuration: member\_id: %lu; member\_uuid: "%s"; single-primary mode: "%s"; group\_replication\_auto\_increment\_increment: %lu;

[ER\\_GRP\\_RPL\\_MEMBER\\_CONF\\_INFO](#) was added in 8.0.11.
- Error number: [MY-011644](#); Symbol: [ER\\_GRP\\_RPL\\_FAILED\\_TO\\_CONFIRM\\_IF\\_SERVER\\_LEFT\\_GRP](#); SQLSTATE: [HY000](#)

Message: Unable to confirm whether the server has left the group or not. Check performance\_schema.replication\_group\_members to check group membership information.

[ER\\_GRP\\_RPL\\_FAILED\\_TO\\_CONFIRM\\_IF\\_SERVER\\_LEFT\\_GRP](#) was added in 8.0.11.
- Error number: [MY-011645](#); Symbol: [ER\\_GRP\\_RPL\\_SERVER\\_IS\\_ALREADY\\_LEAVING](#); SQLSTATE: [HY000](#)

Message: Skipping leave operation: concurrent attempt to leave the group is on-going.

[ER\\_GRP\\_RPL\\_SERVER\\_IS\\_ALREADY\\_LEAVING](#) was added in 8.0.11.
- Error number: [MY-011646](#); Symbol: [ER\\_GRP\\_RPL\\_SERVER\\_ALREADY\\_LEFT](#); SQLSTATE: [HY000](#)

Message: Skipping leave operation: member already left the group.

[ER\\_GRP\\_RPL\\_SERVER\\_ALREADY\\_LEFT](#) was added in 8.0.11.

- Error number: [MY-011647](#); Symbol: [ER\\_GRP\\_RPL\\_WAITING\\_FOR\\_VIEW\\_UPDATE](#); SQLSTATE: [HY000](#)

Message: Going to wait for view modification

[ER\\_GRP\\_RPL\\_WAITING\\_FOR\\_VIEW\\_UPDATE](#) was added in 8.0.11.

- Error number: [MY-011648](#); Symbol: [ER\\_GRP\\_RPL\\_TIMEOUT\\_RECEIVING\\_VIEW\\_CHANGE\\_ON\\_SHUTDOWN](#); SQLSTATE: [HY000](#)

Message: While leaving the group due to a stop, shutdown or failure there was a timeout receiving a view change. This can lead to a possible inconsistent state. Check the log for more details

[ER\\_GRP\\_RPL\\_TIMEOUT\\_RECEIVING\\_VIEW\\_CHANGE\\_ON\\_SHUTDOWN](#) was added in 8.0.11.

- Error number: [MY-011649](#); Symbol: [ER\\_GRP\\_RPL\\_REQUESTING\\_NON\\_MEMBER\\_SERVER\\_TO\\_LEAVE](#); SQLSTATE: [HY000](#)

Message: Requesting to leave the group despite of not being a member

[ER\\_GRP\\_RPL\\_REQUESTING\\_NON\\_MEMBER\\_SERVER\\_TO\\_LEAVE](#) was added in 8.0.11.

- Error number: [MY-011650](#); Symbol: [ER\\_GRP\\_RPL\\_IS\\_STOPPING](#); SQLSTATE: [HY000](#)

Message: Plugin 'group\_replication' is stopping.

[ER\\_GRP\\_RPL\\_IS\\_STOPPING](#) was added in 8.0.11.

- Error number: [MY-011651](#); Symbol: [ER\\_GRP\\_RPL\\_IS\\_STOPPED](#); SQLSTATE: [HY000](#)

Message: Plugin 'group\_replication' has been stopped.

[ER\\_GRP\\_RPL\\_IS\\_STOPPED](#) was added in 8.0.11.

- Error number: [MY-011652](#); Symbol: [ER\\_GRP\\_RPL\\_FAILED\\_TO\\_ENABLE\\_READ\\_ONLY\\_MODE\\_ON\\_SHUTDOWN](#); SQLSTATE: [HY000](#)

Message: On plugin shutdown it was not possible to enable the server read only mode. Local transactions will be accepted and committed.

[ER\\_GRP\\_RPL\\_FAILED\\_TO\\_ENABLE\\_READ\\_ONLY\\_MODE\\_ON\\_SHUTDOWN](#) was added in 8.0.11.

- Error number: [MY-011653](#); Symbol: [ER\\_GRP\\_RPL\\_RECOVERY\\_MODULE\\_TERMINATION\\_TIMED\\_OUT\\_ON\\_SHUTDOWN](#); SQLSTATE: [HY000](#)

Message: On shutdown there was a timeout on the Group Replication recovery module termination. Check the log for more details

[ER\\_GRP\\_RPL\\_RECOVERY\\_MODULE\\_TERMINATION\\_TIMED\\_OUT\\_ON\\_SHUTDOWN](#) was added in 8.0.11.

- Error number: [MY-011654](#); Symbol: [ER\\_GRP\\_RPL\\_APPLIER\\_TERMINATION\\_TIMED\\_OUT\\_ON\\_SHUTDOWN](#); SQLSTATE: [HY000](#)

Message: On shutdown there was a timeout on the Group Replication applier termination.

[ER\\_GRP\\_RPL\\_APPLIER\\_TERMINATION\\_TIMED\\_OUT\\_ON\\_SHUTDOWN](#) was added in 8.0.11.

- Error number: [MY-011655](#); Symbol: [ER\\_GRP\\_RPL\\_FAILED\\_TO\\_SHUTDOWN\\_REGISTRY\\_MODULE](#); SQLSTATE: [HY000](#)

Message: Unexpected failure while shutting down registry module!

[ER\\_GRP\\_RPL\\_FAILED\\_TO\\_SHUTDOWN\\_REGISTRY\\_MODULE](#) was added in 8.0.11.

- Error number: [MY-011656](#); Symbol: [ER\\_GRP\\_RPL\\_FAILED\\_TO\\_INIT\\_HANDLER](#); SQLSTATE: [HY000](#)

Message: Failure during Group Replication handler initialization

[ER\\_GRP\\_RPL\\_FAILED\\_TO\\_INIT\\_HANDLER](#) was added in 8.0.11.

- Error number: [MY-011657](#); Symbol: [ER\\_GRP\\_RPL\\_FAILED\\_TO\\_REGISTER\\_SERVER\\_STATE\\_OBSERVER](#); SQLSTATE: [HY000](#)

Message: Failure when registering the server state observers

[ER\\_GRP\\_RPL\\_FAILED\\_TO\\_REGISTER\\_SERVER\\_STATE\\_OBSERVER](#) was added in 8.0.11.

- Error number: [MY-011658](#); Symbol: [ER\\_GRP\\_RPL\\_FAILED\\_TO\\_REGISTER\\_TRANS\\_STATE\\_OBSERVER](#); SQLSTATE: [HY000](#)

Message: Failure when registering the transactions state observers

[ER\\_GRP\\_RPL\\_FAILED\\_TO\\_REGISTER\\_TRANS\\_STATE\\_OBSERVER](#) was added in 8.0.11.

- Error number: [MY-011659](#); Symbol: [ER\\_GRP\\_RPL\\_FAILED\\_TO\\_REGISTER\\_BINLOG\\_STATE\\_OBSERVER](#); SQLSTATE: [HY000](#)

Message: Failure when registering the binlog state observers

[ER\\_GRP\\_RPL\\_FAILED\\_TO\\_REGISTER\\_BINLOG\\_STATE\\_OBSERVER](#) was added in 8.0.11.

- Error number: [MY-011660](#); Symbol: [ER\\_GRP\\_RPL\\_FAILED\\_TO\\_START\\_ON\\_BOOT](#); SQLSTATE: [HY000](#)

Message: Unable to start Group Replication on boot

[ER\\_GRP\\_RPL\\_FAILED\\_TO\\_START\\_ON\\_BOOT](#) was added in 8.0.11.

- Error number: [MY-011661](#); Symbol: [ER\\_GRP\\_RPL\\_FAILED\\_TO\\_STOP\\_ON\\_PLUGIN\\_UNINSTALL](#); SQLSTATE: [HY000](#)

Message: Failure when stopping Group Replication on plugin uninstall

[ER\\_GRP\\_RPL\\_FAILED\\_TO\\_STOP\\_ON\\_PLUGIN\\_UNINSTALL](#) was added in 8.0.11.

- Error number: [MY-011662](#); Symbol: [ER\\_GRP\\_RPL\\_FAILED\\_TO\\_UNREGISTER\\_SERVER\\_STATE\\_OBSERVER](#); SQLSTATE: [HY000](#)

Message: Failure when unregistering the server state observers

[ER\\_GRP\\_RPL\\_FAILED\\_TO\\_UNREGISTER\\_SERVER\\_STATE\\_OBSERVER](#) was added in 8.0.11.

[ER\\_IB\\_MSG\\_1132](#) was added in 8.0.11.

- Error number: [MY-012958](#); Symbol: [ER\\_IB\\_MSG\\_1133](#); SQLSTATE: [HY000](#)

Message: Small buffer pool size (%lluM), the `flst_validate()` debug function can cause a deadlock if the buffer pool fills up.

[ER\\_IB\\_MSG\\_1133](#) was added in 8.0.11.

- Error number: [MY-012959](#); Symbol: [ER\\_IB\\_MSG\\_1134](#); SQLSTATE: [HY000](#)

Message: Could not open or create the system tablespace. If you tried to add new data files to the system tablespace, and it failed here, you should now edit `innodb_data_file_path` in `my.cnf` back to what it was, and remove the new `ibdata` files InnoDB created in this failed attempt. InnoDB only wrote those files full of zeros, but did not yet use them in any way. But be careful: do not remove old data files which contain your precious data!

[ER\\_IB\\_MSG\\_1134](#) was added in 8.0.11.

- Error number: [MY-012960](#); Symbol: [ER\\_IB\\_MSG\\_1135](#); SQLSTATE: [HY000](#)

Message: Cannot create log files because data files are corrupt or the database was not shut down cleanly after creating the data files.

[ER\\_IB\\_MSG\\_1135](#) was added in 8.0.11.

- Error number: [MY-012961](#); Symbol: [ER\\_IB\\_MSG\\_1136](#); SQLSTATE: [HY000](#)

Message: Only one log file found

[ER\\_IB\\_MSG\\_1136](#) was added in 8.0.11.

- Error number: [MY-012962](#); Symbol: [ER\\_IB\\_MSG\\_1137](#); SQLSTATE: [HY000](#)

Message: Log file %s size %llu is not a multiple of innodb\_page\_size

[ER\\_IB\\_MSG\\_1137](#) was added in 8.0.11.

- Error number: [MY-012963](#); Symbol: [ER\\_IB\\_MSG\\_1138](#); SQLSTATE: [HY000](#)

Message: Log file %s is of different size %llu bytes than other log files %llu bytes!

[ER\\_IB\\_MSG\\_1138](#) was added in 8.0.11.

- Error number: [MY-012964](#); Symbol: [ER\\_IB\\_MSG\\_1139](#); SQLSTATE: [HY000](#)

Message: Use --innodb-directories to find the tablespace files. If that fails then use --innodb-force-recovery=1 to ignore this and to permanently lose all changes to the missing tablespace(s)

[ER\\_IB\\_MSG\\_1139](#) was added in 8.0.11.

- Error number: [MY-012965](#); Symbol: [ER\\_IB\\_MSG\\_1140](#); SQLSTATE: [HY000](#)

Message: The log file may have been corrupt and it is possible that the log scan or parsing did not proceed far enough in recovery. Please run CHECK TABLE on your InnoDB tables to check that they are ok! It may be safest to recover your InnoDB database from a backup!

[ER\\_IB\\_MSG\\_1140](#) was added in 8.0.11.

- Error number: [MY-012966](#); Symbol: [ER\\_IB\\_MSG\\_1141](#); SQLSTATE: [HY000](#)

Message: Cannot resize log files in read-only mode.

[ER\\_IB\\_MSG\\_1141](#) was added in 8.0.11.

- Error number: [MY-012967](#); Symbol: [ER\\_IB\\_MSG\\_1142](#); SQLSTATE: [HY000](#)

- Error number: [MY-013095](#); Symbol: [ER\\_IB\\_MSG\\_1270](#); SQLSTATE: [HY000](#)  
Message: %s  
[ER\\_IB\\_MSG\\_1270](#) was added in 8.0.11.
- Error number: [MY-013096](#); Symbol: [ER\\_RPL\\_SLAVE\\_SQL\\_THREAD\\_STOP\\_CMD\\_EXEC\\_TIMEOUT](#); SQLSTATE: [HY000](#)  
Message: STOP SLAVE command execution is incomplete: Slave SQL thread got the stop signal, thread is busy, SQL thread will stop once the current task is complete.  
[ER\\_RPL\\_SLAVE\\_SQL\\_THREAD\\_STOP\\_CMD\\_EXEC\\_TIMEOUT](#) was added in 8.0.11.
- Error number: [MY-013097](#); Symbol: [ER\\_RPL\\_SLAVE\\_IO\\_THREAD\\_STOP\\_CMD\\_EXEC\\_TIMEOUT](#); SQLSTATE: [HY000](#)  
Message: STOP SLAVE command execution is incomplete: Slave IO thread got the stop signal, thread is busy, IO thread will stop once the current task is complete.  
[ER\\_RPL\\_SLAVE\\_IO\\_THREAD\\_STOP\\_CMD\\_EXEC\\_TIMEOUT](#) was added in 8.0.11.
- Error number: [MY-013098](#); Symbol: [ER\\_RPL\\_GTID\\_UNSAFE\\_STMT\\_ON\\_NON\\_TRANS\\_TABLE](#); SQLSTATE: [HY000](#)  
Message: Statement violates GTID consistency: Updates to non-transactional tables can only be done in either autocommitted statements or single-statement transactions, and never in the same statement as updates to transactional tables.

[ER\\_RPL\\_GTID\\_UNSAFE\\_STMT\\_ON\\_NON\\_TRANS\\_TABLE](#) was added in 8.0.11.

- Error number: [MY-013099](#); Symbol: [ER\\_RPL\\_GTID\\_UNSAFE\\_STMT\\_CREATE\\_SELECT](#); SQLSTATE: [HY000](#)

Message: Statement violates GTID consistency: CREATE TABLE ... SELECT.

[ER\\_RPL\\_GTID\\_UNSAFE\\_STMT\\_CREATE\\_SELECT](#) was added in 8.0.11.

- Error number: [MY-013100](#); Symbol: [ER\\_RPL\\_GTID\\_UNSAFE\\_STMT\\_ON\\_TEMPORARY\\_TABLE](#); SQLSTATE: [HY000](#)

Message: Statement violates GTID consistency: CREATE TEMPORARY TABLE and DROP TEMPORARY TABLE can only be executed outside transactional context. These statements are also not allowed in a function or trigger because functions and triggers are also considered to be multi-statement transactions.

[ER\\_RPL\\_GTID\\_UNSAFE\\_STMT\\_ON\\_TEMPORARY\\_TABLE](#) was added in 8.0.11, removed after 8.0.12.

- Error number: [MY-013101](#); Symbol: [ER\\_BINLOG\\_ROW\\_VALUE\\_OPTION\\_IGNORED](#); SQLSTATE: [HY000](#)

Message: When %s, the option binlog\_row\_value\_options=%s will be ignored and updates will be written in full format to binary log.

[ER\\_BINLOG\\_ROW\\_VALUE\\_OPTION\\_IGNORED](#) was added in 8.0.11.

- Error number: [MY-013102](#); Symbol: [ER\\_BINLOG\\_USE\\_V1\\_ROW\\_EVENTS\\_IGNORED](#); SQLSTATE: [HY000](#)

Message: When %s, the option log\_bin\_use\_v1\_row\_events=1 will be ignored and row events will be written in new format to binary log.

[ER\\_BINLOG\\_USE\\_V1\\_ROW\\_EVENTS\\_IGNORED](#) was added in 8.0.11.

- Error number: [MY-013103](#); Symbol: [ER\\_BINLOG\\_ROW\\_VALUE\\_OPTION\\_USED\\_ONLY\\_FOR\\_AFTER\\_IMAGES](#); SQLSTATE: [HY000](#)

Message: When %s, the option binlog\_row\_value\_options=%s will be used only for the after-image. Full values will be written in the before-image, so the saving in disk space due to binlog\_row\_value\_options is limited to less than 50%%.

[ER\\_BINLOG\\_ROW\\_VALUE\\_OPTION\\_USED\\_ONLY\\_FOR\\_AFTER\\_IMAGES](#) was added in 8.0.11.

Message: Error in DLL Log cleanup during Post-DDL processing.

[ER\\_IB\\_MSG\\_DDL\\_LOG\\_FAIL\\_POST\\_DDL](#) was added in 8.0.15.

- Error number: [MY-013404](#); Symbol: [ER\\_SERVER\\_BINLOG\\_UNSAFE\\_SYSTEM\\_FUNCTION](#); SQLSTATE: [HY000](#)

Message: '%s' statement is unsafe because it uses a system function that may return a different value on the slave.

[ER\\_SERVER\\_BINLOG\\_UNSAFE\\_SYSTEM\\_FUNCTION](#) was added in 8.0.15.

- Error number: [MY-013405](#); Symbol: [ER\\_SERVER\\_UPGRADE\\_HELP\\_TABLE\\_STATUS](#); SQLSTATE: [HY000](#)

Message: Upgrade of help tables %s.

[ER\\_SERVER\\_UPGRADE\\_HELP\\_TABLE\\_STATUS](#) was added in 8.0.15.

## B.4 Client Error Message Reference

Client error messages originate from within the MySQL client library. Here is an example client error message, as displayed by the `mysql` client:

```
shell> mysql -h no-such-host
ERROR 2005 (HY000): Unknown MySQL server host 'no-such-host' (0)
```

Each client error message includes an error code, SQLSTATE value, and message string, as described in [Section B.1, “Error Message Sources and Components”](#). These components are available as described in [Section B.2, “Error Information Interfaces”](#). For client errors, the SQLSTATE value is always 'HY000' (general error), so it is not meaningful for distinguishing one client error from another.

The client library also makes available to host client programs any errors that originate on the server side and are received by the client from the server. For a list of server-side errors, see [Section B.3, “Server Error Message Reference”](#).

In addition to the errors in the following list, the client library can also produce error messages that have error codes in the range from 1 to 999. See [Section B.5, “Global Error Message Reference”](#)

- Error number: 2000; Symbol: `CR_UNKNOWN_ERROR`;  
Message: Unknown MySQL error
- Error number: 2001; Symbol: `CR_SOCKET_CREATE_ERROR`;  
Message: Can't create UNIX socket (%d)
- Error number: 2002; Symbol: `CR_CONNECTION_ERROR`;  
Message: Can't connect to local MySQL server through socket '%s' (%d)
- Error number: 2003; Symbol: `CR_CONN_HOST_ERROR`;  
Message: Can't connect to MySQL server on '%s' (%d)
- Error number: 2004; Symbol: `CR_IPSOCK_ERROR`;  
Message: Can't create TCP/IP socket (%d)
- Error number: 2005; Symbol: `CR_UNKNOWN_HOST`;  
Message: Unknown MySQL server host '%s' (%d)
- Error number: 2006; Symbol: `CR_SERVER_GONE_ERROR`;  
Message: MySQL server has gone away
- Error number: 2007; Symbol: `CR_VERSION_ERROR`;  
Message: Protocol mismatch; server version = %d, client version = %d
- Error number: 2008; Symbol: `CR_OUT_OF_MEMORY`;  
Message: MySQL client ran out of memory
- Error number: 2009; Symbol: `CR_WRONG_HOST_INFO`;  
Message: Wrong host info
- Error number: 2010; Symbol: `CR_LOCALHOST_CONNECTION`;  
Message: Localhost via UNIX socket

- Error number: [2011](#); Symbol: [CR\\_TCP\\_CONNECTION](#);  
Message: %s via TCP/IP
- Error number: [2012](#); Symbol: [CR\\_SERVER\\_HANDSHAKE\\_ERR](#);  
Message: Error in server handshake
- Error number: [2013](#); Symbol: [CR\\_SERVER\\_LOST](#);  
Message: Lost connection to MySQL server during query
- Error number: [2014](#); Symbol: [CR\\_COMMANDS\\_OUT\\_OF\\_SYNC](#);  
Message: Commands out of sync; you can't run this command now
- Error number: [2015](#); Symbol: [CR\\_NAMEDPIPE\\_CONNECTION](#);  
Message: Named pipe: %s
- Error number: [2016](#); Symbol: [CR\\_NAMEDPIPEWAIT\\_ERROR](#);  
Message: Can't wait for named pipe to host: %s pipe: %s (%lu)
- Error number: [2017](#); Symbol: [CR\\_NAMEDPIPEOPEN\\_ERROR](#);  
Message: Can't open named pipe to host: %s pipe: %s (%lu)
- Error number: [2018](#); Symbol: [CR\\_NAMEDPIPESETSTATE\\_ERROR](#);  
Message: Can't set state of named pipe to host: %s pipe: %s (%lu)
- Error number: [2019](#); Symbol: [CR\\_CANT\\_READ\\_CHARSET](#);  
Message: Can't initialize character set %s (path: %s)
- Error number: [2020](#); Symbol: [CR\\_NET\\_PACKET\\_TOO\\_LARGE](#);  
Message: Got packet bigger than 'max\_allowed\_packet' bytes
- Error number: [2021](#); Symbol: [CR\\_EMBEDDED\\_CONNECTION](#);  
Message: Embedded server
- Error number: [2022](#); Symbol: [CR\\_PROBE\\_SLAVE\\_STATUS](#);  
Message: Error on SHOW SLAVE STATUS:
- Error number: [2023](#); Symbol: [CR\\_PROBE\\_SLAVE\\_HOSTS](#);  
Message: Error on SHOW SLAVE HOSTS:
- Error number: [2024](#); Symbol: [CR\\_PROBE\\_SLAVE\\_CONNECT](#);  
Message: Error connecting to slave:
- Error number: [2025](#); Symbol: [CR\\_PROBE\\_MASTER\\_CONNECT](#);  
Message: Error connecting to master:
- Error number: [2026](#); Symbol: [CR\\_SSL\\_CONNECTION\\_ERROR](#);  
Message: SSL connection error: %s
- Error number: [2027](#); Symbol: [CR\\_MALFORMED\\_PACKET](#);

Message: Malformed packet

- Error number: 2028; Symbol: CR\_WRONG\_LICENSE;

Message: This client library is licensed only for use with MySQL servers having '%s' license

- Error number: 2029; Symbol: CR\_NULL\_POINTER;

Message: Invalid use of null pointer

- Error number: 2030; Symbol: CR\_NO\_PREPARE\_STMT;

Message: Statement not prepared

- Error number: 2031; Symbol: CR\_PARAMS\_NOT\_BOUND;

Message: No data supplied for parameters in prepared statement

- Error number: 2032; Symbol: CR\_DATA\_TRUNCATED;

Message: Data truncated

- Error number: 2033; Symbol: CR\_NO\_PARAMETERS\_EXISTS;

Message: No parameters exist in the statement

- Error number: 2034; Symbol: CR\_INVALID\_PARAMETER\_NO;

Message: Invalid parameter number

The column number for `mysql_stmt_fetch_column()` was invalid.

The parameter number for `mysql_stmt_send_long_data()` was invalid.

A key name was empty or the amount of connection attribute data for `mysql_options4()` exceeds the 64KB limit.

- Error number: 2035; Symbol: CR\_INVALID\_BUFFER\_USE;

Message: Can't send long data for non-string/non-binary data types (parameter: %d)

- Error number: 2036; Symbol: CR\_UNSUPPORTED\_PARAM\_TYPE;

Message: Using unsupported buffer type: %d (parameter: %d)

- Error number: 2037; Symbol: CR\_SHARED\_MEMORY\_CONNECTION;

Message: Shared memory: %s

- Error number: 2038; Symbol: CR\_SHARED\_MEMORY\_CONNECT\_REQUEST\_ERROR;

Message: Can't open shared memory; client could not create request event (%lu)

- Error number: 2039; Symbol: CR\_SHARED\_MEMORY\_CONNECT\_ANSWER\_ERROR;

Message: Can't open shared memory; no answer event received from server (%lu)

- Error number: 2040; Symbol: CR\_SHARED\_MEMORY\_CONNECT\_FILE\_MAP\_ERROR;

Message: Can't open shared memory; server could not allocate file mapping (%lu)

- Error number: 2041; Symbol: CR\_SHARED\_MEMORY\_CONNECT\_MAP\_ERROR;

Message: Can't open shared memory; server could not get pointer to file mapping (%lu)

- Error number: 2042; Symbol: CR\_SHARED\_MEMORY\_FILE\_MAP\_ERROR;  
Message: Can't open shared memory; client could not allocate file mapping (%lu)
- Error number: 2043; Symbol: CR\_SHARED\_MEMORY\_MAP\_ERROR;  
Message: Can't open shared memory; client could not get pointer to file mapping (%lu)
- Error number: 2044; Symbol: CR\_SHARED\_MEMORY\_EVENT\_ERROR;  
Message: Can't open shared memory; client could not create %s event (%lu)
- Error number: 2045; Symbol: CR\_SHARED\_MEMORY\_CONNECT\_ABANDONED\_ERROR;  
Message: Can't open shared memory; no answer from server (%lu)
- Error number: 2046; Symbol: CR\_SHARED\_MEMORY\_CONNECT\_SET\_ERROR;  
Message: Can't open shared memory; cannot send request event to server (%lu)
- Error number: 2047; Symbol: CR\_CONN\_UNKNOW\_PROTOCOL;  
Message: Wrong or unknown protocol
- Error number: 2048; Symbol: CR\_INVALID\_CONN\_HANDLE;  
Message: Invalid connection handle
- Error number: 2049; Symbol: CR\_UNUSED\_1;  
Message: Connection using old (pre-4.1.1) authentication protocol refused (client option 'secure\_auth' enabled)
- Error number: 2050; Symbol: CR\_FETCH\_CANCELED;  
Message: Row retrieval was canceled by mysql\_stmt\_close() call
- Error number: 2051; Symbol: CR\_NO\_DATA;  
Message: Attempt to read column without prior row fetch
- Error number: 2052; Symbol: CR\_NO\_STMT\_METADATA;  
Message: Prepared statement contains no metadata
- Error number: 2053; Symbol: CR\_NO\_RESULT\_SET;  
Message: Attempt to read a row while there is no result set associated with the statement
- Error number: 2054; Symbol: CR\_NOT\_IMPLEMENTED;  
Message: This feature is not implemented yet
- Error number: 2055; Symbol: CR\_SERVER\_LOST\_EXTENDED;  
Message: Lost connection to MySQL server at '%s', system error: %d
- Error number: 2056; Symbol: CR\_STMT\_CLOSED;  
Message: Statement closed indirectly because of a preceding %s() call
- Error number: 2057; Symbol: CR\_NEW\_STMT\_METADATA;  
Message: The number of columns in the result set differs from the number of bound buffers. You must reset the statement, rebind the result set columns, and execute the statement again

- Error number: [2058](#); Symbol: [CR\\_ALREADY\\_CONNECTED](#);  
Message: This handle is already connected. Use a separate handle for each connection.
- Error number: [2059](#); Symbol: [CR\\_AUTH\\_PLUGIN\\_CANNOT\\_LOAD](#);  
Message: Authentication plugin '%s' cannot be loaded: %s
- Error number: [2060](#); Symbol: [CR\\_DUPLICATE\\_CONNECTION\\_ATTR](#);  
Message: There is an attribute with the same name already  
A duplicate connection attribute name was specified for `mysql_options4()`.
- Error number: [2061](#); Symbol: [CR\\_AUTH\\_PLUGIN\\_ERR](#);  
Message: Authentication plugin '%s' reported error: %s
- Error number: [2062](#); Symbol: [CR\\_INSECURE\\_API\\_ERR](#);  
Message: Insecure API function call: '%s' Use instead: '%s'  
  
An insecure function call was detected. Modify the application to use the suggested alternative function instead.
- Error number: [2063](#); Symbol: [CR\\_FILE\\_NAME\\_TOO\\_LONG](#);  
Message: File name is too long  
  
[CR\\_FILE\\_NAME\\_TOO\\_LONG](#) was added in 8.0.1.
- Error number: [2064](#); Symbol: [CR\\_SSL\\_FIPS\\_MODE\\_ERR](#);  
Message: Set FIPS mode ON/STRICT failed  
  
[CR\\_SSL\\_FIPS\\_MODE\\_ERR](#) was added in 8.0.11.
- Error number: [2065](#); Symbol: [CR\\_COMPRESSION\\_NOT\\_SUPPORTED](#);  
Message: Compression protocol not supported with asynchronous protocol  
  
[CR\\_COMPRESSION\\_NOT\\_SUPPORTED](#) was added in 8.0.15.

## B.5 Global Error Message Reference

This section lists “global” error messages that are shared in the sense that they can be produced by the MySQL server or by MySQL client programs. These errors have error codes in the range from 1 to 999.

Each global error message includes an error code, SQLSTATE value, and message string, as described in [Section B.1, “Error Message Sources and Components”](#). These components are available as described in [Section B.2, “Error Information Interfaces”](#). For global errors, the SQLSTATE value is always `'HY000'` (general error), so it is not meaningful for distinguishing one client error from another.

If the server writes a message to the error log that has a global error code, it pads the error code with leading zeros to six digits and adds a prefix of `MY-` (example: `MY-000022`). The following list displays error codes in that format.

If a client returns a message with a global error code, it adds no zero-padding or prefix to the error code.

- Error number: [1](#); Symbol: [EE\\_CANTCREATEFILE](#);  
Message: Can't create/write to file '%s' (OS errno %d - %s)

- Error number: 2; Symbol: `EE_READ`;  
Message: Error reading file '%s' (OS errno %d - %s)
- Error number: 3; Symbol: `EE_WRITE`;  
Message: Error writing file '%s' (OS errno %d - %s)
- Error number: 4; Symbol: `EE_BADCLOSE`;  
Message: Error on close of '%s' (OS errno %d - %s)
- Error number: 5; Symbol: `EE_OUTOFMEMORY`;  
Message: Out of memory (Needed %u bytes)
- Error number: 6; Symbol: `EE_DELETE`;  
Message: Error on delete of '%s' (OS errno %d - %s)
- Error number: 7; Symbol: `EE_LINK`;  
Message: Error on rename of '%s' to '%s' (OS errno %d - %s)
- Error number: 9; Symbol: `EE_EOFERR`;  
Message: Unexpected EOF found when reading file '%s' (OS errno %d - %s)
- Error number: 10; Symbol: `EE_CANTLOCK`;  
Message: Can't lock file (OS errno %d - %s)
- Error number: 11; Symbol: `EE_CANTUNLOCK`;  
Message: Can't unlock file (OS errno %d - %s)
- Error number: 12; Symbol: `EE_DIR`;  
Message: Can't read dir of '%s' (OS errno %d - %s)
- Error number: 13; Symbol: `EE_STAT`;  
Message: Can't get stat of '%s' (OS errno %d - %s)
- Error number: 14; Symbol: `EE_CANT_CHSIZE`;  
Message: Can't change size of file (OS errno %d - %s)
- Error number: 15; Symbol: `EE_CANT_OPEN_STREAM`;  
Message: Can't open stream from handle (OS errno %d - %s)
- Error number: 16; Symbol: `EE_GETTWD`;  
Message: Can't get working directory (OS errno %d - %s)
- Error number: 17; Symbol: `EE_SETTWD`;  
Message: Can't change dir to '%s' (OS errno %d - %s)
- Error number: 18; Symbol: `EE_LINK_WARNING`;  
Message: Warning: '%s' had %d links
- Error number: 19; Symbol: `EE_OPEN_WARNING`;

Message: Warning: %d files and %d streams are left open

- Error number: 20; Symbol: `EE_DISK_FULL`;

Message: Disk is full writing '%s' (OS errno %d - %s). Waiting for someone to free space...

- Error number: 21; Symbol: `EE_CANT_MKDIR`;

Message: Can't create directory '%s' (OS errno %d - %s)

- Error number: 22; Symbol: `EE_UNKNOWN_CHARSET`;

Message: Character set '%s' is not a compiled character set and is not specified in the '%s' file

- Error number: 23; Symbol: `EE_OUT_OF_FILERESOURCES`;

Message: Out of resources when opening file '%s' (OS errno %d - %s)

- Error number: 24; Symbol: `EE_CANT_READLINK`;

Message: Can't read value for symlink '%s' (Error %d - %s)

- Error number: 25; Symbol: `EE_CANT_SYMLINK`;

Message: Can't create symlink '%s' pointing at '%s' (Error %d - %s)

- Error number: 26; Symbol: `EE_REALPATH`;

Message: Error on realpath() on '%s' (Error %d - %s)

- Error number: 27; Symbol: `EE_SYNC`;

Message: Can't sync file '%s' to disk (OS errno %d - %s)

- Error number: 28; Symbol: `EE_UNKNOWN_COLLATION`;

Message: Collation '%s' is not a compiled collation and is not specified in the '%s' file

- Error number: 29; Symbol: `EE_FILENOTFOUND`;

Message: File '%s' not found (OS errno %d - %s)

- Error number: 30; Symbol: `EE_FILE_NOT_CLOSED`;

Message: File '%s' (fileno: %d) was not closed

- Error number: 31; Symbol: `EE_CHANGE_OWNERSHIP`;

Message: Cannot change ownership of the file '%s' (OS errno %d - %s)

- Error number: 32; Symbol: `EE_CHANGE_PERMISSIONS`;

Message: Cannot change permissions of the file '%s' (OS errno %d - %s)

- Error number: 33; Symbol: `EE_CANT_SEEK`;

Message: Cannot seek in file '%s' (OS errno %d - %s)

- Error number: 34; Symbol: `EE_CAPACITY_EXCEEDED`;

Message: Memory capacity exceeded (capacity %llu bytes)

- Error number: 35; Symbol: `EE_DISK_FULL_WITH_RETRY_MSG`;

Message: Disk is full writing '%s' (OS errno %d - %s). Waiting for someone to free space... Retry in %d secs. Message reprinted in %d secs.

`EE_DISK_FULL_WITH_RETRY_MSG` was added in 8.0.13.

- Error number: 36; Symbol: `EE_FAILED_TO_CREATE_TIMER`;

Message: Failed to create timer (OS errno %d).

`EE_FAILED_TO_CREATE_TIMER` was added in 8.0.13.

- Error number: 37; Symbol: `EE_FAILED_TO_DELETE_TIMER`;

Message: Failed to delete timer (OS errno %d).

`EE_FAILED_TO_DELETE_TIMER` was added in 8.0.13.

- Error number: 38; Symbol: `EE_FAILED_TO_CREATE_TIMER_QUEUE`;

Message: Failed to create timer queue (OS errno %d).

`EE_FAILED_TO_CREATE_TIMER_QUEUE` was added in 8.0.13.

- Error number: 39; Symbol: `EE_FAILED_TO_START_TIMER_NOTIFY_THREAD`;

Message: Failed to start timer notify thread.

`EE_FAILED_TO_START_TIMER_NOTIFY_THREAD` was added in 8.0.13.

- Error number: 40; Symbol:

`EE_FAILED_TO_CREATE_TIMER_NOTIFY_THREAD_INTERRUPT_EVENT`;

Message: Failed to create event to interrupt timer notifier thread (OS errno %d).

`EE_FAILED_TO_CREATE_TIMER_NOTIFY_THREAD_INTERRUPT_EVENT` was added in 8.0.13.

- Error number: 41; Symbol: `EE_EXITING_TIMER_NOTIFY_THREAD`;

Message: Failed to register timer event with queue (OS errno %d), exiting timer notifier thread.

`EE_EXITING_TIMER_NOTIFY_THREAD` was added in 8.0.13.

- Error number: 42; Symbol: `EE_WIN_LIBRARY_LOAD_FAILED`;

Message: LoadLibrary("kernel32.dll") failed: GetLastError returns %lu.

`EE_WIN_LIBRARY_LOAD_FAILED` was added in 8.0.13.

- Error number: 43; Symbol: `EE_WIN_RUN_TIME_ERROR_CHECK`;

Message: %s.

`EE_WIN_RUN_TIME_ERROR_CHECK` was added in 8.0.13.

- Error number: 44; Symbol: `EE_FAILED_TO_DETERMINE_LARGE_PAGE_SIZE`;

Message: Failed to determine large page size.

`EE_FAILED_TO_DETERMINE_LARGE_PAGE_SIZE` was added in 8.0.13.

- Error number: 45; Symbol: `EE_FAILED_TO_KILL_ALL_THREADS`;

Message: Error in my\_thread\_global\_end(): %d thread(s) did not exit.

`EE_FAILED_TO_KILL_ALL_THREADS` was added in 8.0.13.

- Error number: 46; Symbol: `EE_FAILED_TO_CREATE_IO_COMPLETION_PORT`;

Message: Failed to create IO completion port (OS errno %d).

`EE_FAILED_TO_CREATE_IO_COMPLETION_PORT` was added in 8.0.13.

- Error number: 47; Symbol: `EE_FAILED_TO_OPEN_DEFAULTS_FILE`;

Message: Failed to open required defaults file: %s

`EE_FAILED_TO_OPEN_DEFAULTS_FILE` was added in 8.0.13.

- Error number: 48; Symbol: `EE_FAILED_TO_HANDLE_DEFAULTS_FILE`;

Message: Fatal error in defaults handling. Program aborted!

`EE_FAILED_TO_HANDLE_DEFAULTS_FILE` was added in 8.0.13.

- Error number: 49; Symbol: `EE_WRONG_DIRECTIVE_IN_CONFIG_FILE`;

Message: Wrong '!%s' directive in config file %s at line %d.

`EE_WRONG_DIRECTIVE_IN_CONFIG_FILE` was added in 8.0.13.

- Error number: 50; Symbol: `EE_SKIPPING_DIRECTIVE_DUE_TO_MAX_INCLUDE_RECURSION`;

Message: Skipping '%s' directive as maximum include recursion level was reached in file %s at line %d.

`EE_SKIPPING_DIRECTIVE_DUE_TO_MAX_INCLUDE_RECURSION` was added in 8.0.13.

- Error number: 51; Symbol: `EE_INCORRECT_GRP_DEFINITION_IN_CONFIG_FILE`;

Message: Wrong group definition in config file %s at line %d.

`EE_INCORRECT_GRP_DEFINITION_IN_CONFIG_FILE` was added in 8.0.13.

- Error number: 52; Symbol: `EE_OPTION_WITHOUT_GRP_IN_CONFIG_FILE`;

Message: Found option without preceding group in config file %s at line %d.

`EE_OPTION_WITHOUT_GRP_IN_CONFIG_FILE` was added in 8.0.13.

- Error number: 53; Symbol: `EE_CONFIG_FILE_PERMISSION_ERROR`;

Message: %s should be readable/writable only by current user.

`EE_CONFIG_FILE_PERMISSION_ERROR` was added in 8.0.13.

- Error number: 54; Symbol: `EE_IGNORE_WORLD_WRITABLE_CONFIG_FILE`;

Message: World-writable config file '%s' is ignored.

`EE_IGNORE_WORLD_WRITABLE_CONFIG_FILE` was added in 8.0.13.

- Error number: 55; Symbol: `EE_USING_DISABLED_OPTION`;

Message: %s: Option '%s' was used, but is disabled.

`EE_USING_DISABLED_OPTION` was added in 8.0.13.

- Error number: 56; Symbol: `EE_USING_DISABLED_SHORT_OPTION`;

Message: %s: Option '-%c' was used, but is disabled.

[EE\\_USING\\_DISABLED\\_SHORT\\_OPTION](#) was added in 8.0.13.

- Error number: [57](#); Symbol: [EE\\_USING\\_PASSWORD\\_ON\\_CLI\\_IS\\_INSECURE](#);

Message: Using a password on the command line interface can be insecure.

[EE\\_USING\\_PASSWORD\\_ON\\_CLI\\_IS\\_INSECURE](#) was added in 8.0.13.

- Error number: [58](#); Symbol: [EE\\_UNKNOWN\\_SUFFIX\\_FOR\\_VARIABLE](#);

Message: Unknown suffix '%c' used for variable '%s' (value '%s').

[EE\\_UNKNOWN\\_SUFFIX\\_FOR\\_VARIABLE](#) was added in 8.0.13.

- Error number: [59](#); Symbol: [EE\\_SSL\\_ERROR\\_FROM\\_FILE](#);

Message: SSL error: %s from '%s'.

[EE\\_SSL\\_ERROR\\_FROM\\_FILE](#) was added in 8.0.13.

- Error number: [60](#); Symbol: [EE\\_SSL\\_ERROR](#);

Message: SSL error: %s.

[EE\\_SSL\\_ERROR](#) was added in 8.0.13.

- Error number: [61](#); Symbol: [EE\\_NET\\_SEND\\_ERROR\\_IN\\_BOOTSTRAP](#);

Message: %d %s.

[EE\\_NET\\_SEND\\_ERROR\\_IN\\_BOOTSTRAP](#) was added in 8.0.13.

- Error number: [62](#); Symbol: [EE\\_PACKETS\\_OUT\\_OF\\_ORDER](#);

Message: Packets out of order (found %u, expected %u).

[EE\\_PACKETS\\_OUT\\_OF\\_ORDER](#) was added in 8.0.13.

- Error number: [63](#); Symbol: [EE\\_UNKNOWN\\_PROTOCOL\\_OPTION](#);

Message: Unknown option to protocol: %s.

[EE\\_UNKNOWN\\_PROTOCOL\\_OPTION](#) was added in 8.0.13.

- Error number: [64](#); Symbol: [EE\\_FAILED\\_TO\\_LOCATE\\_SERVER\\_PUBLIC\\_KEY](#);

Message: Failed to locate server public key '%s'.

[EE\\_FAILED\\_TO\\_LOCATE\\_SERVER\\_PUBLIC\\_KEY](#) was added in 8.0.13.

- Error number: [65](#); Symbol: [EE\\_PUBLIC\\_KEY\\_NOT\\_IN\\_PEM\\_FORMAT](#);

Message: Public key is not in Privacy Enhanced Mail format: '%s'.

[EE\\_PUBLIC\\_KEY\\_NOT\\_IN\\_PEM\\_FORMAT](#) was added in 8.0.13.

- Error number: [66](#); Symbol: [EE\\_DEBUG\\_INFO](#);

Message: %s.

[EE\\_DEBUG\\_INFO](#) was added in 8.0.13.

- Error number: 67; Symbol: `EE_UNKNOWN_VARIABLE`;  
Message: unknown variable '%s'.  
`EE_UNKNOWN_VARIABLE` was added in 8.0.13.
- Error number: 68; Symbol: `EE_UNKNOWN_OPTION`;  
Message: unknown option '--%s'.  
`EE_UNKNOWN_OPTION` was added in 8.0.13.
- Error number: 69; Symbol: `EE_UNKNOWN_SHORT_OPTION`;  
Message: %s: unknown option '-%c'.  
`EE_UNKNOWN_SHORT_OPTION` was added in 8.0.13.
- Error number: 70; Symbol: `EE_OPTION_WITHOUT_ARGUMENT`;  
Message: %s: option '--%s' cannot take an argument.  
`EE_OPTION_WITHOUT_ARGUMENT` was added in 8.0.13.
- Error number: 71; Symbol: `EE_OPTION_REQUIRES_ARGUMENT`;  
Message: %s: option '--%s' requires an argument.  
`EE_OPTION_REQUIRES_ARGUMENT` was added in 8.0.13.
- Error number: 72; Symbol: `EE_SHORT_OPTION_REQUIRES_ARGUMENT`;  
Message: %s: option '-%c' requires an argument.  
`EE_SHORT_OPTION_REQUIRES_ARGUMENT` was added in 8.0.13.
- Error number: 73; Symbol: `EE_OPTION_IGNORED_DUE_TO_INVALID_VALUE`;  
Message: %s: ignoring option '--%s' due to invalid value '%s'.  
`EE_OPTION_IGNORED_DUE_TO_INVALID_VALUE` was added in 8.0.13.
- Error number: 74; Symbol: `EE_OPTION_WITH_EMPTY_VALUE`;  
Message: %s: Empty value for '%s' specified.  
`EE_OPTION_WITH_EMPTY_VALUE` was added in 8.0.13.
- Error number: 75; Symbol: `EE_FAILED_TO_ASSIGN_MAX_VALUE_TO_OPTION`;  
Message: %s: Maximum value of '%s' cannot be set.  
`EE_FAILED_TO_ASSIGN_MAX_VALUE_TO_OPTION` was added in 8.0.13.
- Error number: 76; Symbol: `EE_INCORRECT_BOOLEAN_VALUE_FOR_OPTION`;  
Message: option '%s': boolean value '%s' was not recognized. Set to OFF.  
`EE_INCORRECT_BOOLEAN_VALUE_FOR_OPTION` was added in 8.0.13.
- Error number: 77; Symbol: `EE_FAILED_TO_SET_OPTION_VALUE`;  
Message: %s: Error while setting value '%s' to '%s'.  
`EE_FAILED_TO_SET_OPTION_VALUE` was added in 8.0.13.

- Error number: 78; Symbol: `EE_INCORRECT_INT_VALUE_FOR_OPTION`;  
Message: Incorrect integer value: '%s'.  
`EE_INCORRECT_INT_VALUE_FOR_OPTION` was added in 8.0.13.
- Error number: 79; Symbol: `EE_INCORRECT_UINT_VALUE_FOR_OPTION`;  
Message: Incorrect unsigned integer value: '%s'.  
`EE_INCORRECT_UINT_VALUE_FOR_OPTION` was added in 8.0.13.
- Error number: 80; Symbol: `EE_ADJUSTED_SIGNED_VALUE_FOR_OPTION`;  
Message: option '%s': signed value %s adjusted to %s.  
`EE_ADJUSTED_SIGNED_VALUE_FOR_OPTION` was added in 8.0.13.
- Error number: 81; Symbol: `EE_ADJUSTED_UNSIGNED_VALUE_FOR_OPTION`;  
Message: option '%s': unsigned value %s adjusted to %s.  
`EE_ADJUSTED_UNSIGNED_VALUE_FOR_OPTION` was added in 8.0.13.
- Error number: 82; Symbol: `EE_ADJUSTED_ULONGLONG_VALUE_FOR_OPTION`;  
Message: option '%s': value %s adjusted to %s.  
`EE_ADJUSTED_ULONGLONG_VALUE_FOR_OPTION` was added in 8.0.13.
- Error number: 83; Symbol: `EE_ADJUSTED_DOUBLE_VALUE_FOR_OPTION`;  
Message: option '%s': value %g adjusted to %g.  
`EE_ADJUSTED_DOUBLE_VALUE_FOR_OPTION` was added in 8.0.13.
- Error number: 84; Symbol: `EE_INVALID_DECIMAL_VALUE_FOR_OPTION`;  
Message: Invalid decimal value for option '%s'.  
`EE_INVALID_DECIMAL_VALUE_FOR_OPTION` was added in 8.0.13.
- Error number: 85; Symbol: `EE_COLLATION_PARSER_ERROR`;  
Message: %s.  
`EE_COLLATION_PARSER_ERROR` was added in 8.0.13.
- Error number: 86; Symbol: `EE_FAILED_TO_RESET_BEFORE_PRIMARY_IGNOREABLE_CHAR`;  
Message: Failed to reset before a primary ignorable character %s.  
`EE_FAILED_TO_RESET_BEFORE_PRIMARY_IGNOREABLE_CHAR` was added in 8.0.13.
- Error number: 87; Symbol: `EE_FAILED_TO_RESET_BEFORE_TERTIARY_IGNOREABLE_CHAR`;  
Message: Failed to reset before a tertiary ignorable character %s.  
`EE_FAILED_TO_RESET_BEFORE_TERTIARY_IGNOREABLE_CHAR` was added in 8.0.13.
- Error number: 88; Symbol: `EE_SHIFT_CHAR_OUT_OF_RANGE`;  
Message: Shift character out of range: %s.  
`EE_SHIFT_CHAR_OUT_OF_RANGE` was added in 8.0.13.

- Error number: 89; Symbol: `EE_RESET_CHAR_OUT_OF_RANGE`;  
Message: Reset character out of range: %s.  
`EE_RESET_CHAR_OUT_OF_RANGE` was added in 8.0.13.
- Error number: 90; Symbol: `EE_UNKNOWN_LDML_TAG`;  
Message: Unknown LDML tag: '%.\*s'.  
`EE_UNKNOWN_LDML_TAG` was added in 8.0.13.
- Error number: 91; Symbol: `EE_FAILED_TO_RESET_BEFORE_SECONDARY_IGNOREABLE_CHAR`;  
Message: Failed to reset before a secondary ignorable character %s.  
`EE_FAILED_TO_RESET_BEFORE_SECONDARY_IGNOREABLE_CHAR` was added in 8.0.15.

## B.6 Problems and Common Errors

This section lists some common problems and error messages that you may encounter. It describes how to determine the causes of the problems and what to do to solve them.

### B.6.1 How to Determine What Is Causing a Problem

When you run into a problem, the first thing you should do is to find out which program or piece of equipment is causing it:

- If you have one of the following symptoms, then it is probably a hardware problems (such as memory, motherboard, CPU, or hard disk) or kernel problem:
  - The keyboard does not work. This can normally be checked by pressing the Caps Lock key. If the Caps Lock light does not change, you have to replace your keyboard. (Before doing this, you should try to restart your computer and check all cables to the keyboard.)
  - The mouse pointer does not move.
  - The machine does not answer to a remote machine's pings.
  - Other programs that are not related to MySQL do not behave correctly.
  - Your system restarted unexpectedly. (A faulty user-level program should never be able to take down your system.)

In this case, you should start by checking all your cables and run some diagnostic tool to check your hardware! You should also check whether there are any patches, updates, or service packs for your operating system that could likely solve your problem. Check also that all your libraries (such as `glibc`) are up to date.

It is always good to use a machine with ECC memory to discover memory problems early.

- If your keyboard is locked up, you may be able to recover by logging in to your machine from another machine and executing `kbd_mode -a`.
- Please examine your system log file (`/var/log/messages` or similar) for reasons for your problem. If you think the problem is in MySQL, you should also examine MySQL's log files. See [Section 5.4, “MySQL Server Logs”](#).
- If you do not think you have hardware problems, you should try to find out which program is causing problems. Try using `top`, `ps`, Task Manager, or some similar program, to check which program is taking all CPU or is locking the machine.

- Use `top`, `df`, or a similar program to check whether you are out of memory, disk space, file descriptors, or some other critical resource.
- If the problem is some runaway process, you can always try to kill it. If it does not want to die, there is probably a bug in the operating system.

If after you have examined all other possibilities and you have concluded that the MySQL server or a MySQL client is causing the problem, it is time to create a bug report for our mailing list or our support team. In the bug report, try to give a very detailed description of how the system is behaving and what you think is happening. You should also state why you think that MySQL is causing the problem. Take into consideration all the situations in this chapter. State any problems exactly how they appear when you examine your system. Use the “copy and paste” method for any output and error messages from programs and log files.

Try to describe in detail which program is not working and all symptoms you see. We have in the past received many bug reports that state only “the system does not work.” This provides us with no information about what could be the problem.

If a program fails, it is always useful to know the following information:

- Has the program in question made a segmentation fault (did it dump core)?
- Is the program taking up all available CPU time? Check with `top`. Let the program run for a while, it may simply be evaluating something computationally intensive.
- If the `mysqld` server is causing problems, can you get any response from it with `mysqladmin -u root ping` or `mysqladmin -u root processlist`?
- What does a client program say when you try to connect to the MySQL server? (Try with `mysql`, for example.) Does the client jam? Do you get any output from the program?

When sending a bug report, you should follow the outline described in [Section 1.7, “How to Report Bugs or Problems”](#).

## B.6.2 Common Errors When Using MySQL Programs

This section lists some errors that users frequently encounter when running MySQL programs. Although the problems show up when you try to run client programs, the solutions to many of the problems involves changing the configuration of the MySQL server.

### B.6.2.1 Access denied

An `Access denied` error can have many causes. Often the problem is related to the MySQL accounts that the server permits client programs to use when connecting. See [Section 6.2, “The MySQL Access Privilege System”](#), and [Section 6.2.9, “Troubleshooting Problems Connecting to MySQL”](#).

### B.6.2.2 Can't connect to [local] MySQL server

A MySQL client on Unix can connect to the `mysqld` server in two different ways: By using a Unix socket file to connect through a file in the file system (default `/tmp/mysql.sock`), or by using TCP/IP, which connects through a port number. A Unix socket file connection is faster than TCP/IP, but can be used only when connecting to a server on the same computer. A Unix socket file is used if you do not specify a host name or if you specify the special host name `localhost`.

If the MySQL server is running on Windows, you can connect using TCP/IP. If the server is started with the `--enable-named-pipe` option, you can also connect with named pipes if you run the client on the host where the server is running. The name of the named pipe is `MySQL` by default. If you do not give a host name when connecting to `mysqld`, a MySQL client first tries to connect to the named

pipe. If that does not work, it connects to the TCP/IP port. You can force the use of named pipes on Windows by using `.` as the host name.

The error (2002) `Can't connect to ...` normally means that there is no MySQL server running on the system or that you are using an incorrect Unix socket file name or TCP/IP port number when trying to connect to the server. You should also check that the TCP/IP port you are using has not been blocked by a firewall or port blocking service.

The error (2003) `Can't connect to MySQL server on 'server' (10061)` indicates that the network connection has been refused. You should check that there is a MySQL server running, that it has network connections enabled, and that the network port you specified is the one configured on the server.

Start by checking whether there is a process named `mysqld` running on your server host. (Use `ps xa | grep mysqld` on Unix or the Task Manager on Windows.) If there is no such process, you should start the server. See [Section 2.10.2, "Starting the Server"](#).

If a `mysqld` process is running, you can check it by trying the following commands. The port number or Unix socket file name might be different in your setup. `host_ip` represents the IP address of the machine where the server is running.

```
shell> mysqladmin version
shell> mysqladmin variables
shell> mysqladmin -h `hostname` version variables
shell> mysqladmin -h `hostname` --port=3306 version
shell> mysqladmin -h host_ip version
shell> mysqladmin --protocol=SOCKET --socket=/tmp/mysql.sock version
```

Note the use of backticks rather than forward quotation marks with the `hostname` command; these cause the output of `hostname` (that is, the current host name) to be substituted into the `mysqladmin` command. If you have no `hostname` command or are running on Windows, you can manually type the host name of your machine (without backticks) following the `-h` option. You can also try `-h 127.0.0.1` to connect with TCP/IP to the local host.

Make sure that the server has not been configured to ignore network connections or (if you are attempting to connect remotely) that it has not been configured to listen only locally on its network interfaces. If the server was started with `--skip-networking`, it will not accept TCP/IP connections at all. If the server was started with `--bind-address=127.0.0.1`, it will listen for TCP/IP connections only locally on the loopback interface and will not accept remote connections.

Check to make sure that there is no firewall blocking access to MySQL. Your firewall may be configured on the basis of the application being executed, or the port number used by MySQL for communication (3306 by default). Under Linux or Unix, check your IP tables (or similar) configuration to ensure that the port has not been blocked. Under Windows, applications such as ZoneAlarm or Windows Firewall may need to be configured not to block the MySQL port.

Here are some reasons the `Can't connect to local MySQL server` error might occur:

- `mysqld` is not running on the local host. Check your operating system's process list to ensure the `mysqld` process is present.
- You're running a MySQL server on Windows with many TCP/IP connections to it. If you're experiencing that quite often your clients get that error, you can find a workaround here: [Connection to MySQL Server Failing on Windows](#).
- Someone has removed the Unix socket file that `mysqld` uses (`/tmp/mysql.sock` by default). For example, you might have a `cron` job that removes old files from the `/tmp` directory. You can always run `mysqladmin version` to check whether the Unix socket file that `mysqladmin` is trying to use really exists. The fix in this case is to change the `cron` job to not remove `mysql.sock` or to place the socket file somewhere else. See [Section B.6.3.6, "How to Protect or Change the MySQL Unix Socket File"](#).

- You have started the `mysqld` server with the `--socket=/path/to/socket` option, but forgotten to tell client programs the new name of the socket file. If you change the socket path name for the server, you must also notify the MySQL clients. You can do this by providing the same `--socket` option when you run client programs. You also need to ensure that clients have permission to access the `mysql.sock` file. To find out where the socket file is, you can do:

```
shell> netstat -ln | grep mysql
```

See [Section B.6.3.6, “How to Protect or Change the MySQL Unix Socket File”](#).

- You are using Linux and one server thread has died (dumped core). In this case, you must kill the other `mysqld` threads (for example, with `kill`) before you can restart the MySQL server. See [Section B.6.3.3, “What to Do If MySQL Keeps Crashing”](#).
- The server or client program might not have the proper access privileges for the directory that holds the Unix socket file or the socket file itself. In this case, you must either change the access privileges for the directory or socket file so that the server and clients can access them, or restart `mysqld` with a `--socket` option that specifies a socket file name in a directory where the server can create it and where client programs can access it.

If you get the error message `Can't connect to MySQL server on some_host`, you can try the following things to find out what the problem is:

- Check whether the server is running on that host by executing `telnet some_host 3306` and pressing the Enter key a couple of times. (3306 is the default MySQL port number. Change the value if your server is listening to a different port.) If there is a MySQL server running and listening to the port, you should get a response that includes the server's version number. If you get an error such as `telnet: Unable to connect to remote host: Connection refused`, then there is no server running on the given port.
- If the server is running on the local host, try using `mysqladmin -h localhost variables` to connect using the Unix socket file. Verify the TCP/IP port number that the server is configured to listen to (it is the value of the `port` variable.)
- If you are running under Linux and Security-Enhanced Linux (SELinux) is enabled, make sure you have disabled SELinux protection for the `mysqld` process.

## Connection to MySQL Server Failing on Windows

When you're running a MySQL server on Windows with many TCP/IP connections to it, and you're experiencing that quite often your clients get a `Can't connect to MySQL server` error, the reason might be that Windows does not allow for enough ephemeral (short-lived) ports to serve those connections.

The purpose of `TIME_WAIT` is to keep a connection accepting packets even after the connection has been closed. This is because Internet routing can cause a packet to take a slow route to its destination and it may arrive after both sides have agreed to close. If the port is in use for a new connection, that packet from the old connection could break the protocol or compromise personal information from the original connection. The `TIME_WAIT` delay prevents this by ensuring that the port cannot be reused until after some time has been permitted for those delayed packets to arrive.

It is safe to reduce `TIME_WAIT` greatly on LAN connections because there is little chance of packets arriving at very long delays, as they could through the Internet with its comparatively large distances and latencies.

Windows permits ephemeral (short-lived) TCP ports to the user. After any port is closed it will remain in a `TIME_WAIT` status for 120 seconds. The port will not be available again until this time expires. The default range of port numbers depends on the version of Windows, with a more limited number of ports in older versions:

- Windows through Server 2003: Ports in range 1025–5000

- Windows Vista, Server 2008, and newer: Ports in range 49152–65535

With a small stack of available TCP ports (5000) and a high number of TCP ports being open and closed over a short period of time along with the `TIME_WAIT` status you have a good chance for running out of ports. There are two ways to address this problem:

- Reduce the number of TCP ports consumed quickly by investigating connection pooling or persistent connections where possible
- Tune some settings in the Windows registry (see below)

#### Important

The following procedure involves modifying the Windows registry. Before you modify the registry, make sure to back it up and make sure that you understand how to restore it if a problem occurs. For information about how to back up, restore, and edit the registry, view the following article in the Microsoft Knowledge Base: <http://support.microsoft.com/kb/256986/EN-US/>.

1. Start Registry Editor (`Regedt32.exe`).
2. Locate the following key in the registry:

```
HKEY_LOCAL_MACHINE\SYSTEM\CurrentControlSet\Services\Tcpip\Parameters
```

3. On the `Edit` menu, click `Add Value`, and then add the following registry value:

```
Value Name: MaxUserPort
Data Type: REG_DWORD
Value: 65534
```

This sets the number of ephemeral ports available to any user. The valid range is between 5000 and 65534 (decimal). The default value is 0x1388 (5000 decimal).

4. On the `Edit` menu, click `Add Value`, and then add the following registry value:

```
Value Name: TcpTimedWaitDelay
Data Type: REG_DWORD
Value: 30
```

This sets the number of seconds to hold a TCP port connection in `TIME_WAIT` state before closing. The valid range is between 30 and 300 decimal, although you may wish to check with Microsoft for the latest permitted values. The default value is 0x78 (120 decimal).

5. Quit Registry Editor.
6. Reboot the machine.

Note: Undoing the above should be as simple as deleting the registry entries you've created.

### B.6.2.3 Lost connection to MySQL server

There are three likely causes for this error message.

Usually it indicates network connectivity trouble and you should check the condition of your network if this error occurs frequently. If the error message includes “during query,” this is probably the case you are experiencing.

Sometimes the “during query” form happens when millions of rows are being sent as part of one or more queries. If you know that this is happening, you should try increasing `net_read_timeout` from its default of 30 seconds to 60 seconds or longer, sufficient for the data transfer to complete.

More rarely, it can happen when the client is attempting the initial connection to the server. In this case, if your `connect_timeout` value is set to only a few seconds, you may be able to resolve the problem by increasing it to ten seconds, perhaps more if you have a very long distance or slow connection. You can determine whether you are experiencing this more uncommon cause by using `SHOW GLOBAL STATUS LIKE 'Aborted_connects'`. It will increase by one for each initial connection attempt that the server aborts. You may see “reading authorization packet” as part of the error message; if so, that also suggests that this is the solution that you need.

If the cause is none of those just described, you may be experiencing a problem with `BLOB` values that are larger than `max_allowed_packet`, which can cause this error with some clients. Sometime you may see an `ER_NET_PACKET_TOO_LARGE` error, and that confirms that you need to increase `max_allowed_packet`.

#### B.6.2.4 Password Fails When Entered Interactively

MySQL client programs prompt for a password when invoked with a `--password` or `-p` option that has no following password value:

```
shell> mysql -u user_name -p
Enter password:
```

On some systems, you may find that your password works when specified in an option file or on the command line, but not when you enter it interactively at the `Enter password:` prompt. This occurs when the library provided by the system to read passwords limits password values to a small number of characters (typically eight). That is a problem with the system library, not with MySQL. To work around it, change your MySQL password to a value that is eight or fewer characters long, or put your password in an option file.

#### B.6.2.5 Host 'host\_name' is blocked

If the following error occurs, it means that `mysqld` has received many connection requests from the given host that were interrupted in the middle:

```
Host 'host_name' is blocked because of many connection errors.
Unblock with 'mysqladmin flush-hosts'
```

The value of the `max_connect_errors` system variable determines how many successive interrupted connection requests are permitted. After `max_connect_errors` failed requests without a successful connection, `mysqld` assumes that something is wrong (for example, that someone is trying to break in), and blocks the host from further connections until you flush the host cache by executing a `FLUSH HOSTS` statement, a `TRUNCATE TABLE` statement that truncates the Performance Schema `host_cache` table, or a `mysqladmin flush-hosts` command.

To adjust the permitted number of successive connection errors, set `max_connect_errors` at server startup. For example, put these lines in the server `my.cnf` file:

```
[mysqld]
max_connect_errors=10000
```

The value can also be set at runtime:

```
SET GLOBAL max_connect_errors=10000;
```

If you get the `Host 'host_name' is blocked` error message for a given host, you should first verify that there is nothing wrong with TCP/IP connections from that host. If you are having network problems, it does no good to increase the value of `max_connect_errors`.

For more information about how the host cache works, see [Section 8.12.4.2, “DNS Lookup Optimization and the Host Cache”](#).

### B.6.2.6 Too many connections

If clients encounter `Too many connections` errors when attempting to connect to the `mysqld` server, all available connections are in use by other clients.

The permitted number of connections is controlled by the `max_connections` system variable. The default value is 151 to improve performance when MySQL is used with the Apache Web server. To support more connections, set `max_connections` to a larger value.

`mysqld` actually permits `max_connections + 1` client connections. The extra connection is reserved for use by accounts that have the `CONNECTION_ADMIN` or `SUPER` privilege. By granting the privilege to administrators and not to normal users (who should not need it), an administrator can connect to the server and use `SHOW PROCESSLIST` to diagnose problems even if the maximum number of unprivileged clients are connected. See [Section 13.7.6.29, “SHOW PROCESSLIST Syntax”](#).

The server also permits administrative connections on a dedicated interface. For more information about how the server handles client connections, see [Section 8.12.4.1, “How MySQL Handles Client Connections”](#).

### B.6.2.7 Out of memory

If you issue a query using the `mysql` client program and receive an error like the following one, it means that `mysql` does not have enough memory to store the entire query result:

```
mysql: Out of memory at line 42, 'malloc.c'
mysql: needed 8136 byte (8k), memory in use: 12481367 bytes (12189k)
ERROR 2008: MySQL client ran out of memory
```

To remedy the problem, first check whether your query is correct. Is it reasonable that it should return so many rows? If not, correct the query and try again. Otherwise, you can invoke `mysql` with the `--quick` option. This causes it to use the `mysql_use_result()` C API function to retrieve the result set, which places less of a load on the client (but more on the server).

### B.6.2.8 MySQL server has gone away

This section also covers the related `Lost connection to server during query` error.

The most common reason for the `MySQL server has gone away` error is that the server timed out and closed the connection. In this case, you normally get one of the following error codes (which one you get is operating system-dependent).

Error Code	Description
<code>CR_SERVER_GONE_ERROR</code>	The client couldn't send a question to the server.
<code>CR_SERVER_LOST</code>	The client didn't get an error when writing to the server, but it didn't get a full answer (or any answer) to the question.

By default, the server closes the connection after eight hours if nothing has happened. You can change the time limit by setting the `wait_timeout` variable when you start `mysqld`. See [Section 5.1.8, “Server System Variables”](#).

If you have a script, you just have to issue the query again for the client to do an automatic reconnection. This assumes that you have automatic reconnection in the client enabled (which is the default for the `mysql` command-line client).

Some other common reasons for the `MySQL server has gone away` error are:

- You (or the db administrator) has killed the running thread with a `KILL` statement or a `mysqladmin kill` command.
- You tried to run a query after closing the connection to the server. This indicates a logic error in the application that should be corrected.

- A client application running on a different host does not have the necessary privileges to connect to the MySQL server from that host.
- You got a timeout from the TCP/IP connection on the client side. This may happen if you have been using the commands: `mysql_options(..., MYSQL_OPT_READ_TIMEOUT,...)` or `mysql_options(..., MYSQL_OPT_WRITE_TIMEOUT,...)`. In this case increasing the timeout may help solve the problem.
- You have encountered a timeout on the server side and the automatic reconnection in the client is disabled (the `reconnect` flag in the `MYSQL` structure is equal to 0).
- You are using a Windows client and the server had dropped the connection (probably because `wait_timeout` expired) before the command was issued.

The problem on Windows is that in some cases MySQL does not get an error from the OS when writing to the TCP/IP connection to the server, but instead gets the error when trying to read the answer from the connection.

The solution to this is to either do a `mysql_ping()` on the connection if there has been a long time since the last query (this is what Connector/ODBC does) or set `wait_timeout` on the `mysqld` server so high that it in practice never times out.

- You can also get these errors if you send a query to the server that is incorrect or too large. If `mysqld` receives a packet that is too large or out of order, it assumes that something has gone wrong with the client and closes the connection. If you need big queries (for example, if you are working with big `BLOB` columns), you can increase the query limit by setting the server's `max_allowed_packet` variable, which has a default value of 64MB. You may also need to increase the maximum packet size on the client end. More information on setting the packet size is given in [Section B.6.2.9, "Packet Too Large"](#).

An `INSERT` or `REPLACE` statement that inserts a great many rows can also cause these sorts of errors. Either one of these statements sends a single request to the server irrespective of the number of rows to be inserted; thus, you can often avoid the error by reducing the number of rows sent per `INSERT` or `REPLACE`.

- It is also possible to see this error if host name lookups fail (for example, if the DNS server on which your server or network relies goes down). This is because MySQL is dependent on the host system for name resolution, but has no way of knowing whether it is working—from MySQL's point of view the problem is indistinguishable from any other network timeout.

You may also see the `MySQL server has gone away` error if MySQL is started with the `--skip-networking` option.

Another networking issue that can cause this error occurs if the MySQL port (default 3306) is blocked by your firewall, thus preventing any connections at all to the MySQL server.

- You can also encounter this error with applications that fork child processes, all of which try to use the same connection to the MySQL server. This can be avoided by using a separate connection for each child process.
- You have encountered a bug where the server died while executing the query.

You can check whether the MySQL server died and restarted by executing `mysqladmin version` and examining the server's uptime. If the client connection was broken because `mysqld` crashed and restarted, you should concentrate on finding the reason for the crash. Start by checking whether issuing the query again kills the server again. See [Section B.6.3.3, "What to Do If MySQL Keeps Crashing"](#).

You can get more information about the lost connections by starting `mysqld` with the `log_error_verbosity` system variable set to 3. This logs some of the disconnection messages in the `hostname.err` file. See [Section 5.4.2, "The Error Log"](#).

If you want to create a bug report regarding this problem, be sure that you include the following information:

- Indicate whether the MySQL server died. You can find information about this in the server error log. See [Section B.6.3.3, “What to Do If MySQL Keeps Crashing”](#).
- If a specific query kills `mysqld` and the tables involved were checked with `CHECK TABLE` before you ran the query, can you provide a reproducible test case? See [Section 29.5, “Debugging and Porting MySQL”](#).
- What is the value of the `wait_timeout` system variable in the MySQL server? (`mysqladmin variables` gives you the value of this variable.)
- Have you tried to run `mysqld` with the general query log enabled to determine whether the problem query appears in the log? (See [Section 5.4.3, “The General Query Log”](#).)

See also [Section B.6.2.10, “Communication Errors and Aborted Connections”](#), and [Section 1.7, “How to Report Bugs or Problems”](#).

### B.6.2.9 Packet Too Large

A communication packet is a single SQL statement sent to the MySQL server, a single row that is sent to the client, or a binary log event sent from a master replication server to a slave.

The largest possible packet that can be transmitted to or from a MySQL 8.0 server or client is 1GB.

When a MySQL client or the `mysqld` server receives a packet bigger than `max_allowed_packet` bytes, it issues an `ER_NET_PACKET_TOO_LARGE` error and closes the connection. With some clients, you may also get a `Lost connection to MySQL server during query` error if the communication packet is too large.

Both the client and the server have their own `max_allowed_packet` variable, so if you want to handle big packets, you must increase this variable both in the client and in the server.

If you are using the `mysql` client program, its default `max_allowed_packet` variable is 16MB. To set a larger value, start `mysql` like this:

```
shell> mysql --max_allowed_packet=32M
```

That sets the packet size to 32MB.

The server's default `max_allowed_packet` value is 64MB. You can increase this if the server needs to handle big queries (for example, if you are working with big `BLOB` columns). For example, to set the variable to 128MB, start the server like this:

```
shell> mysqld --max_allowed_packet=128M
```

You can also use an option file to set `max_allowed_packet`. For example, to set the size for the server to 128MB, add the following lines in an option file:

```
[mysqld]
max_allowed_packet=128M
```

It is safe to increase the value of this variable because the extra memory is allocated only when needed. For example, `mysqld` allocates more memory only when you issue a long query or when `mysqld` must return a large result row. The small default value of the variable is a precaution to catch incorrect packets between the client and server and also to ensure that you do not run out of memory by using large packets accidentally.

You can also get strange problems with large packets if you are using large `BLOB` values but have not given `mysqld` access to enough memory to handle the query. If you suspect this is the case, try adding `ulimit -d 256000` to the beginning of the `mysqld_safe` script and restarting `mysqld`.

### B.6.2.10 Communication Errors and Aborted Connections

If connection problems occur such as communication errors or aborted connections, use these sources of information to diagnose problems:

- The error log. See [Section 5.4.2, “The Error Log”](#).
- The general query log. See [Section 5.4.3, “The General Query Log”](#).
- The `Aborted_xxx` and `Connection_errors_xxx` status variables. See [Section 5.1.10, “Server Status Variables”](#).
- The host cache, which is accessible using the Performance Schema `host_cache` table. See [Section 8.12.4.2, “DNS Lookup Optimization and the Host Cache”](#), and [Section 26.12.17.1, “The host\\_cache Table”](#).

If the server has the `log_error_verbosity` system variable set to 3, you might find messages like this in your error log:

```
[Note] Aborted connection 854 to db: 'employees' user: 'josh'
```

If a client is unable even to connect, the server increments the `Aborted_connects` status variable. Unsuccessful connection attempts can occur for the following reasons:

- A client attempts to access a database but has no privileges for it.
- A client uses an incorrect password.
- A connection packet does not contain the right information.
- It takes more than `connect_timeout` seconds to obtain a connect packet. See [Section 5.1.8, “Server System Variables”](#).

If these kinds of things happen, it might indicate that someone is trying to break into your server! If the general query log is enabled, messages for these types of problems are logged to it.

If a client successfully connects but later disconnects improperly or is terminated, the server increments the `Aborted_clients` status variable, and logs an `Aborted connection` message to the error log. The cause can be any of the following:

- The client program did not call `mysql_close()` before exiting.
- The client had been sleeping more than `wait_timeout` or `interactive_timeout` seconds without issuing any requests to the server. See [Section 5.1.8, “Server System Variables”](#).
- The client program ended abruptly in the middle of a data transfer.

Other reasons for problems with aborted connections or aborted clients:

- The `max_allowed_packet` variable value is too small or queries require more memory than you have allocated for `mysqld`. See [Section B.6.2.9, “Packet Too Large”](#).
- Use of Ethernet protocol with Linux, both half and full duplex. Some Linux Ethernet drivers have this bug. You should test for this bug by transferring a huge file using FTP between the client and server machines. If a transfer goes in burst-pause-burst-pause mode, you are experiencing a Linux duplex syndrome. Switch the duplex mode for both your network card and hub/switch to either full duplex or to half duplex and test the results to determine the best setting.
- A problem with the thread library that causes interrupts on reads.

- Badly configured TCP/IP.
- Faulty Ethernets, hubs, switches, cables, and so forth. This can be diagnosed properly only by replacing hardware.

See also [Section B.6.2.8, “MySQL server has gone away”](#).

#### B.6.2.11 The table is full

If a table-full error occurs, it may be that the disk is full or that the table has reached its maximum size. The effective maximum table size for MySQL databases is usually determined by operating system constraints on file sizes, not by MySQL internal limits. See [Section C.10.3, “Limits on Table Size”](#).

#### B.6.2.12 Can't create/write to file

If you get an error of the following type for some queries, it means that MySQL cannot create a temporary file for the result set in the temporary directory:

```
Can't create/write to file '...\sqla3fe_0.ism'.
```

The preceding error is a typical message for Windows; the Unix message is similar.

One fix is to start `mysqld` with the `--tmpdir` option or to add the option to the `[mysqld]` section of your option file. For example, to specify a directory of `C:\temp`, use these lines:

```
[mysqld]  
tmpdir=C:/temp
```

The `C:\temp` directory must exist and have sufficient space for the MySQL server to write to. See [Section 4.2.7, “Using Option Files”](#).

Another cause of this error can be permissions issues. Make sure that the MySQL server can write to the `tmpdir` directory.

Check also the error code that you get with `pererror`. One reason the server cannot write to a table is that the file system is full:

```
shell> pererror 28  
OS error code 28: No space left on device
```

If you get an error of the following type during startup, it indicates that the file system or directory used for storing data files is write protected. Provided that the write error is to a test file, the error is not serious and can be safely ignored.

```
Can't create test file /usr/local/mysql/data/master.lower-test
```

#### B.6.2.13 Commands out of sync

If you get `Commands out of sync; you can't run this command now` in your client code, you are calling client functions in the wrong order.

This can happen, for example, if you are using `mysql_use_result()` and try to execute a new query before you have called `mysql_free_result()`. It can also happen if you try to execute two queries that return data without calling `mysql_use_result()` or `mysql_store_result()` in between.

#### B.6.2.14 Ignoring user

If you get the following error, it means that when `mysqld` was started or when it reloaded the grant tables, it found an account in the `user` table that had an invalid password.

```
Found wrong password for user 'some_user'@'some_host'; ignoring user
```

As a result, the account is simply ignored by the permission system. To fix this problem, assign a new, valid password to the account.

#### B.6.2.15 Table 'tbl\_name' doesn't exist

If you get either of the following errors, it usually means that no table exists in the default database with the given name:

```
Table 'tbl_name' doesn't exist
Can't find file: 'tbl_name' (errno: 2)
```

In some cases, it may be that the table does exist but that you are referring to it incorrectly:

- Because MySQL uses directories and files to store databases and tables, database and table names are case sensitive if they are located on a file system that has case-sensitive file names.
- Even for file systems that are not case-sensitive, such as on Windows, all references to a given table within a query must use the same lettercase.

You can check which tables are in the default database with `SHOW TABLES`. See [Section 13.7.6](#), “`SHOW Syntax`”.

#### B.6.2.16 Can't initialize character set

You might see an error like this if you have character set problems:

```
MySQL Connection Failed: Can't initialize character set charset_name
```

This error can have any of the following causes:

- The character set is a multibyte character set and you have no support for the character set in the client. In this case, you need to recompile the client by running `CMake` with the `-DDEFAULT_CHARSET=charset_name` option. See [Section 2.9.4](#), “MySQL Source-Configuration Options”.

All standard MySQL binaries are compiled with support for all multibyte character sets.

- The character set is a simple character set that is not compiled into `mysqld`, and the character set definition files are not in the place where the client expects to find them.

In this case, you need to use one of the following methods to solve the problem:

- Recompile the client with support for the character set. See [Section 2.9.4](#), “MySQL Source-Configuration Options”.
- Specify to the client the directory where the character set definition files are located. For many clients, you can do this with the `--character-sets-dir` option.
- Copy the character definition files to the path where the client expects them to be.

#### B.6.2.17 File Not Found and Similar Errors

If you get `ERROR 'file_name' not found (errno: 23)`, `Can't open file: file_name (errno: 24)`, or any other error with `errno 23` or `errno 24` from MySQL, it means that you have not allocated enough file descriptors for the MySQL server. You can use the `pererror` utility to get a description of what the error number means:

```
shell> pererror 23
OS error code 23: File table overflow
shell> pererror 24
OS error code 24: Too many open files
shell> pererror 11
```

```
OS error code 11: Resource temporarily unavailable
```

The problem here is that `mysqld` is trying to keep open too many files simultaneously. You can either tell `mysqld` not to open so many files at once or increase the number of file descriptors available to `mysqld`.

To tell `mysqld` to keep open fewer files at a time, you can make the table cache smaller by reducing the value of the `table_open_cache` system variable (the default value is 64). This may not entirely prevent running out of file descriptors because in some circumstances the server may attempt to extend the cache size temporarily, as described in [Section 8.4.3.1, “How MySQL Opens and Closes Tables”](#). Reducing the value of `max_connections` also reduces the number of open files (the default value is 100).

To change the number of file descriptors available to `mysqld`, you can use the `--open-files-limit` option to `mysqld_safe` or set the `open_files_limit` system variable. See [Section 5.1.8, “Server System Variables”](#). The easiest way to set these values is to add an option to your option file. See [Section 4.2.7, “Using Option Files”](#). If you have an old version of `mysqld` that does not support setting the open files limit, you can edit the `mysqld_safe` script. There is a commented-out line `ulimit -n 256` in the script. You can remove the `#` character to uncomment this line, and change the number `256` to set the number of file descriptors to be made available to `mysqld`.

`--open-files-limit` and `ulimit` can increase the number of file descriptors, but only up to the limit imposed by the operating system. There is also a “hard” limit that can be overridden only if you start `mysqld_safe` or `mysqld` as `root` (just remember that you also need to start the server with the `--user` option in this case so that it does not continue to run as `root` after it starts up). If you need to increase the operating system limit on the number of file descriptors available to each process, consult the documentation for your system.

#### Note

If you run the `tcsh` shell, `ulimit` does not work! `tcsh` also reports incorrect values when you ask for the current limits. In this case, you should start `mysqld_safe` using `sh`.

### B.6.2.18 Table-Corruption Issues

If you have started `mysqld` with `--myisam-recover-options`, MySQL automatically checks and tries to repair `MyISAM` tables if they are marked as 'not closed properly' or 'crashed'. If this happens, MySQL writes an entry in the `hostname.err` file `'Warning: Checking table ...'` which is followed by `Warning: Repairing table` if the table needs to be repaired. If you get a lot of these errors, without `mysqld` having died unexpectedly just before, then something is wrong and needs to be investigated further.

When the server detects `MyISAM` table corruption, it writes additional information to the error log, such as the name and line number of the source file, and the list of threads accessing the table. Example: `Got an error from thread_id=1, mi_dynrec.c:368`. This is useful information to include in bug reports.

See also [Section 5.1.7, “Server Command Options”](#), and [Section 29.5.1.7, “Making a Test Case If You Experience Table Corruption”](#).

## B.6.3 Administration-Related Issues

### B.6.3.1 Problems with File Permissions

If you have problems with file permissions, the `UMASK` or `UMASK_DIR` environment variable might be set incorrectly when `mysqld` starts. For example, MySQL might issue the following error message when you create a table:

```
ERROR: Can't find file: 'path/with/file_name' (Errcode: 13)
```

The default `UMASK` and `UMASK_DIR` values are `0640` and `0750`, respectively. MySQL assumes that the value for `UMASK` or `UMASK_DIR` is in octal if it starts with a zero. For example, setting `UMASK=0600` is equivalent to `UMASK=384` because `0600` octal is `384` decimal.

To change the default `UMASK` value, start `mysqld_safe` as follows:

```
shell> UMASK=384 # = 600 in octal
shell> export UMASK
shell> mysqld_safe &
```

By default, MySQL creates database directories with an access permission value of `0750`. To modify this behavior, set the `UMASK_DIR` variable. If you set its value, new directories are created with the combined `UMASK` and `UMASK_DIR` values. For example, to give group access to all new directories, start `mysqld_safe` as follows:

```
shell> UMASK_DIR=504 # = 770 in octal
shell> export UMASK_DIR
shell> mysqld_safe &
```

For additional details, see [Section 4.9, “MySQL Program Environment Variables”](#).

### B.6.3.2 How to Reset the Root Password

If you have never assigned a `root` password for MySQL, the server does not require a password at all for connecting as `root`. However, this is insecure. For instructions on assigning a password, see [Section 2.10.4, “Securing the Initial MySQL Account”](#).

If you know the `root` password and want to change it, see [Section 13.7.1.1, “ALTER USER Syntax”](#), and [Section 13.7.1.10, “SET PASSWORD Syntax”](#).

If you assigned a `root` password previously but have forgotten it, you can assign a new password. The following sections provide instructions for Windows and Unix and Unix-like systems, as well as generic instructions that apply to any system.

#### Resetting the Root Password: Windows Systems

On Windows, use the following procedure to reset the password for the MySQL `'root'@'localhost'` account. To change the password for a `root` account with a different host name part, modify the instructions to use that host name.

1. Log on to your system as Administrator.
2. Stop the MySQL server if it is running. For a server that is running as a Windows service, go to the Services manager: From the **Start** menu, select **Control Panel**, then **Administrative Tools**, then **Services**. Find the MySQL service in the list and stop it.

If your server is not running as a service, you may need to use the Task Manager to force it to stop.

3. Create a text file containing the password-assignment statement on a single line. Replace the password with the password that you want to use.

```
ALTER USER 'root'@'localhost' IDENTIFIED BY 'MyNewPass';
```

4. Save the file. This example assumes that you name the file `C:\mysql-init.txt`.
5. Open a console window to get to the command prompt: From the **Start** menu, select **Run**, then enter `cmd` as the command to be run.
6. Start the MySQL server with the special `--init-file` option (notice that the backslash in the option value is doubled):

```
C:\> cd "C:\Program Files\MySQL\MySQL Server 8.0\bin"
C:\> mysqld --init-file=C:\mysql-init.txt
```

If you installed MySQL to a different location, adjust the `cd` command accordingly.

The server executes the contents of the file named by the `--init-file` option at startup, changing the `'root'@'localhost'` account password.

To have server output to appear in the console window rather than in a log file, add the `--console` option to the `mysqld` command.

If you installed MySQL using the MySQL Installation Wizard, you may need to specify a `--defaults-file` option. For example:

```
C:\> mysqld
      --defaults-file="C:\\ProgramData\\MySQL\\MySQL Server 8.0\\my.ini"
      --init-file=C:\\mysql-init.txt
```

The appropriate `--defaults-file` setting can be found using the Services Manager: From the **Start** menu, select **Control Panel**, then **Administrative Tools**, then **Services**. Find the MySQL service in the list, right-click it, and choose the **Properties** option. The **Path to executable** field contains the `--defaults-file` setting.

7. After the server has started successfully, delete `C:\mysql-init.txt`.

You should now be able to connect to the MySQL server as `root` using the new password. Stop the MySQL server and restart it normally. If you run the server as a service, start it from the Windows Services window. If you start the server manually, use whatever command you normally use.

## Resetting the Root Password: Unix and Unix-Like Systems

On Unix, use the following procedure to reset the password for the MySQL `'root'@'localhost'` account. To change the password for a `root` account with a different host name part, modify the instructions to use that host name.

The instructions assume that you will start the MySQL server from the Unix login account that you normally use for running it. For example, if you run the server using the `mysql` login account, you should log in as `mysql` before using the instructions. Alternatively, you can log in as `root`, but in this case you *must* start `mysqld` with the `--user=mysql` option. If you start the server as `root` without using `--user=mysql`, the server may create `root`-owned files in the data directory, such as log files, and these may cause permission-related problems for future server startups. If that happens, you will need to either change the ownership of the files to `mysql` or remove them.

1. Log on to your system as the Unix user that the MySQL server runs as (for example, `mysql`).
2. Stop the MySQL server if it is running. Locate the `.pid` file that contains the server's process ID. The exact location and name of this file depend on your distribution, host name, and configuration. Common locations are `/var/lib/mysql/`, `/var/run/mysqld/`, and `/usr/local/mysql/data/`. Generally, the file name has an extension of `.pid` and begins with either `mysqld` or your system's host name.

Stop the MySQL server by sending a normal `kill` (not `kill -9`) to the `mysqld` process. Use the actual path name of the `.pid` file in the following command:

```
shell> kill `cat /mysql-data-directory/host_name.pid`
```

Use backticks (not forward quotation marks) with the `cat` command. These cause the output of `cat` to be substituted into the `kill` command.

3. Create a text file containing the password-assignment statement on a single line. Replace the password with the password that you want to use.

```
ALTER USER 'root'@'localhost' IDENTIFIED BY 'MyNewPass';
```

4. Save the file. This example assumes that you name the file `/home/me/mysql-init`. The file contains the password, so do not save it where it can be read by other users. If you are not logged in as `mysql` (the user the server runs as), make sure that the file has permissions that permit `mysql` to read it.
5. Start the MySQL server with the special `--init-file` option:

```
shell> mysqld --init-file=/home/me/mysql-init &
```

The server executes the contents of the file named by the `--init-file` option at startup, changing the `'root'@'localhost'` account password.

Other options may be necessary as well, depending on how you normally start your server. For example, `--defaults-file` may be needed before `--init-file`.

6. After the server has started successfully, delete `/home/me/mysql-init`.

You should now be able to connect to the MySQL server as `root` using the new password. Stop the server and restart it normally.

## Resetting the Root Password: Generic Instructions

The preceding sections provide password-resetting instructions specifically for Windows and Unix and Unix-like systems. Alternatively, on any platform, you can reset the password using the `mysql` client (but this approach is less secure):

1. Stop the MySQL server if necessary, then restart it with the `--skip-grant-tables` option. This enables anyone to connect without a password and with all privileges, and disables account-management statements such as `ALTER USER` and `SET PASSWORD`. Because this is insecure, if the server is started with the `--skip-grant-tables` option, it enables `--skip-networking` automatically to prevent remote connections.
2. Connect to the MySQL server using the `mysql` client; no password is necessary because the server was started with `--skip-grant-tables`:

```
shell> mysql
```

3. In the `mysql` client, tell the server to reload the grant tables so that account-management statements work:

```
mysql> FLUSH PRIVILEGES;
```

Then change the `'root'@'localhost'` account password. Replace the password with the password that you want to use. To change the password for a `root` account with a different host name part, modify the instructions to use that host name.

```
mysql> ALTER USER 'root'@'localhost' IDENTIFIED BY 'MyNewPass';
```

You should now be able to connect to the MySQL server as `root` using the new password. Stop the server and restart it normally (without the `--skip-grant-tables` and `--skip-networking` options).

### B.6.3.3 What to Do If MySQL Keeps Crashing

Each MySQL version is tested on many platforms before it is released. This does not mean that there are no bugs in MySQL, but if there are bugs, they should be very few and can be hard to find. If you

have a problem, it always helps if you try to find out exactly what crashes your system, because you have a much better chance of getting the problem fixed quickly.

First, you should try to find out whether the problem is that the `mysqld` server dies or whether your problem has to do with your client. You can check how long your `mysqld` server has been up by executing `mysqladmin version`. If `mysqld` has died and restarted, you may find the reason by looking in the server's error log. See [Section 5.4.2, "The Error Log"](#).

On some systems, you can find in the error log a stack trace of where `mysqld` died. Note that the variable values written in the error log may not always be 100% correct.

Many server crashes are caused by corrupted data files or index files. MySQL updates the files on disk with the `write()` system call after every SQL statement and before the client is notified about the result. (This is not true if you are running with `--delay-key-write`, in which case data files are written but not index files.) This means that data file contents are safe even if `mysqld` crashes, because the operating system ensures that the unflushed data is written to disk. You can force MySQL to flush everything to disk after every SQL statement by starting `mysqld` with the `--flush` option.

The preceding means that normally you should not get corrupted tables unless one of the following happens:

- The MySQL server or the server host was killed in the middle of an update.
- You have found a bug in `mysqld` that caused it to die in the middle of an update.
- Some external program is manipulating data files or index files at the same time as `mysqld` without locking the table properly.
- You are running many `mysqld` servers using the same data directory on a system that does not support good file system locks (normally handled by the `lockd` lock manager), or you are running multiple servers with external locking disabled.
- You have a crashed data file or index file that contains very corrupt data that confused `mysqld`.
- You have found a bug in the data storage code. This isn't likely, but it is at least possible. In this case, you can try to change the storage engine to another engine by using `ALTER TABLE` on a repaired copy of the table.

Because it is very difficult to know why something is crashing, first try to check whether things that work for others crash for you. Try the following things:

- Stop the `mysqld` server with `mysqladmin shutdown`, run `myisamchk --silent --force */*.MYI` from the data directory to check all MyISAM tables, and restart `mysqld`. This ensures that you are running from a clean state. See [Chapter 5, MySQL Server Administration](#).
- Start `mysqld` with the general query log enabled (see [Section 5.4.3, "The General Query Log"](#)). Then try to determine from the information written to the log whether some specific query kills the server. About 95% of all bugs are related to a particular query. Normally, this is one of the last queries in the log file just before the server restarts. See [Section 5.4.3, "The General Query Log"](#). If you can repeatedly kill MySQL with a specific query, even when you have checked all tables just before issuing it, then you have isolated the bug and should submit a bug report for it. See [Section 1.7, "How to Report Bugs or Problems"](#).
- Try to make a test case that we can use to repeat the problem. See [Section 29.5, "Debugging and Porting MySQL"](#).
- Try the `fork_big.pl` script. (It is located in the `tests` directory of source distributions.)
- Configuring MySQL for debugging makes it much easier to gather information about possible errors if something goes wrong. Reconfigure MySQL with the `-DWITH_DEBUG=1` option to `CMake` and then recompile. See [Section 29.5, "Debugging and Porting MySQL"](#).

- Make sure that you have applied the latest patches for your operating system.
- Use the `--skip-external-locking` option to `mysqld`. On some systems, the `lockd` lock manager does not work properly; the `--skip-external-locking` option tells `mysqld` not to use external locking. (This means that you cannot run two `mysqld` servers on the same data directory and that you must be careful if you use `myisamchk`. Nevertheless, it may be instructive to try the option as a test.)
- If `mysqld` appears to be running but not responding, try `mysqladmin -u root processlist`. Sometimes `mysqld` is not hung even though it seems unresponsive. The problem may be that all connections are in use, or there may be some internal lock problem. `mysqladmin -u root processlist` usually is able to make a connection even in these cases, and can provide useful information about the current number of connections and their status.
- Run the command `mysqladmin -i 5 status` or `mysqladmin -i 5 -r status` in a separate window to produce statistics while running other queries.
- Try the following:
  1. Start `mysqld` from `gdb` (or another debugger). See [Section 29.5, “Debugging and Porting MySQL”](#).
  2. Run your test scripts.
  3. Print the backtrace and the local variables at the three lowest levels. In `gdb`, you can do this with the following commands when `mysqld` has crashed inside `gdb`:

```
backtrace
info local
up
info local
up
info local
```

With `gdb`, you can also examine which threads exist with `info threads` and switch to a specific thread with `thread N`, where `N` is the thread ID.

- Try to simulate your application with a Perl script to force MySQL to crash or misbehave.
- Send a normal bug report. See [Section 1.7, “How to Report Bugs or Problems”](#). Be even more detailed than usual. Because MySQL works for many people, the crash might result from something that exists only on your computer (for example, an error that is related to your particular system libraries).
- If you have a problem with tables containing dynamic-length rows and you are using only `VARCHAR` columns (not `BLOB` or `TEXT` columns), you can try to change all `VARCHAR` to `CHAR` with `ALTER TABLE`. This forces MySQL to use fixed-size rows. Fixed-size rows take a little extra space, but are much more tolerant to corruption.

The current dynamic row code has been in use for several years with very few problems, but dynamic-length rows are by nature more prone to errors, so it may be a good idea to try this strategy to see whether it helps.

- Consider the possibility of hardware faults when diagnosing problems. Defective hardware can be the cause of data corruption. Pay particular attention to your memory and disk subsystems when troubleshooting hardware.

### B.6.3.4 How MySQL Handles a Full Disk

This section describes how MySQL responds to disk-full errors (such as “no space left on device”), and to quota-exceeded errors (such as “write failed” or “user block limit reached”).

This section is relevant for writes to `MyISAM` tables. It also applies for writes to binary log files and binary log index file, except that references to “row” and “record” should be understood to mean “event.”

When a disk-full condition occurs, MySQL does the following:

- It checks once every minute to see whether there is enough space to write the current row. If there is enough space, it continues as if nothing had happened.
- Every 10 minutes it writes an entry to the log file, warning about the disk-full condition.

To alleviate the problem, take the following actions:

- To continue, you only have to free enough disk space to insert all records.
- Alternatively, to abort the thread, use `mysqladmin kill`. The thread is aborted the next time it checks the disk (in one minute).
- Other threads might be waiting for the table that caused the disk-full condition. If you have several “locked” threads, killing the one thread that is waiting on the disk-full condition enables the other threads to continue.

Exceptions to the preceding behavior are when you use `REPAIR TABLE` or `OPTIMIZE TABLE` or when the indexes are created in a batch after `LOAD DATA` or after an `ALTER TABLE` statement. All of these statements may create large temporary files that, if left to themselves, would cause big problems for the rest of the system. If the disk becomes full while MySQL is doing any of these operations, it removes the big temporary files and mark the table as crashed. The exception is that for `ALTER TABLE`, the old table is left unchanged.

### B.6.3.5 Where MySQL Stores Temporary Files

On Unix, MySQL uses the value of the `TMPDIR` environment variable as the path name of the directory in which to store temporary files. If `TMPDIR` is not set, MySQL uses the system default, which is usually `/tmp`, `/var/tmp`, or `/usr/tmp`.

On Windows, MySQL checks in order the values of the `TMPDIR`, `TEMP`, and `TMP` environment variables. For the first one found to be set, MySQL uses it and does not check those remaining. If none of `TMPDIR`, `TEMP`, or `TMP` are set, MySQL uses the Windows system default, which is usually `C:\windows\temp\`.

If the file system containing your temporary file directory is too small, you can use the `mysqld --tmpdir` option to specify a directory in a file system where you have enough space. On replication slaves, you can use `--slave-load-tmpdir` to specify a separate directory for holding temporary files when replicating `LOAD DATA` statements.

The `--tmpdir` option can be set to a list of several paths that are used in round-robin fashion. Paths should be separated by colon characters (:) on Unix and semicolon characters (;) on Windows.

#### Note

To spread the load effectively, these paths should be located on different *physical* disks, not different partitions of the same disk.

If the MySQL server is acting as a replication slave, you should be sure to set `--slave-load-tmpdir` not to point to a directory that is on a memory-based file system or to a directory that is cleared when the server host restarts. A replication slave needs some of its temporary files to survive a machine restart so that it can replicate temporary tables or `LOAD DATA` operations. If files in the slave temporary file directory are lost when the server restarts, replication fails.

MySQL arranges that temporary files are removed if `mysqld` is terminated. On platforms that support it (such as Unix), this is done by unlinking the file after opening it. The disadvantage of this is that the name does not appear in directory listings and you do not see a big temporary file that fills up the file

system in which the temporary file directory is located. (In such cases, `ls -l +L` may be helpful in identifying large files associated with `mysqld`.)

When sorting (`ORDER BY` or `GROUP BY`), MySQL normally uses one or two temporary files. The maximum disk space required is determined by the following expression:

```
(length of what is sorted + sizeof(row pointer))
* number of matched rows
* 2
```

The row pointer size is usually four bytes, but may grow in the future for really big tables.

For some `SELECT` queries, MySQL also creates temporary SQL tables. These are not hidden and have names of the form `SQL_*`.

DDL operations that rebuild the table and are not performed online using the `ALGORITHM=INPLACE` technique create a temporary copy of the original table in the same directory as the original table.

Online DDL operations may use temporary log files for recording concurrent DML, temporary sort files when creating an index, and temporary intermediate tables files when rebuilding the table. For more information, see [Section 15.12.3, “Online DDL Space Requirements”](#).

InnoDB user-created temporary tables and on-disk internal temporary tables are created in a temporary tablespace file named `ibtmp1` in the MySQL data directory. For more information, see [Section 15.6.3.5, “Temporary Tablespaces”](#).

### B.6.3.6 How to Protect or Change the MySQL Unix Socket File

The default location for the Unix socket file that the server uses for communication with local clients is `/tmp/mysql.sock`. (For some distribution formats, the directory might be different, such as `/var/lib/mysql` for RPMs.)

On some versions of Unix, anyone can delete files in the `/tmp` directory or other similar directories used for temporary files. If the socket file is located in such a directory on your system, this might cause problems.

On most versions of Unix, you can protect your `/tmp` directory so that files can be deleted only by their owners or the superuser (`root`). To do this, set the `sticky` bit on the `/tmp` directory by logging in as `root` and using the following command:

```
shell> chmod +t /tmp
```

You can check whether the `sticky` bit is set by executing `ls -ld /tmp`. If the last permission character is `t`, the bit is set.

Another approach is to change the place where the server creates the Unix socket file. If you do this, you should also let client programs know the new location of the file. You can specify the file location in several ways:

- Specify the path in a global or local option file. For example, put the following lines in `/etc/my.cnf`:

```
[mysqld]
socket=/path/to/socket

[client]
socket=/path/to/socket
```

See [Section 4.2.7, “Using Option Files”](#).

- Specify a `--socket` option on the command line to `mysqld_safe` and when you run client programs.

- Set the `MYSQL_UNIX_PORT` environment variable to the path of the Unix socket file.
- Recompile MySQL from source to use a different default Unix socket file location. Define the path to the file with the `MYSQL_UNIX_ADDR` option when you run `CMake`. See [Section 2.9.4, “MySQL Source-Configuration Options”](#).

You can test whether the new socket location works by attempting to connect to the server with this command:

```
shell> mysqladmin --socket=/path/to/socket version
```

### B.6.3.7 Time Zone Problems

If you have a problem with `SELECT NOW()` returning values in UTC and not your local time, you have to tell the server your current time zone. The same applies if `UNIX_TIMESTAMP()` returns the wrong value. This should be done for the environment in which the server runs; for example, in `mysqld_safe` or `mysql.server`. See [Section 4.9, “MySQL Program Environment Variables”](#).

You can set the time zone for the server with the `--timezone=timezone_name` option to `mysqld_safe`. You can also set it by setting the `TZ` environment variable before you start `mysqld`.

The permissible values for `--timezone` or `TZ` are system dependent. Consult your operating system documentation to see what values are acceptable.

## B.6.4 Query-Related Issues

### B.6.4.1 Case Sensitivity in String Searches

For nonbinary strings (`CHAR`, `VARCHAR`, `TEXT`), string searches use the collation of the comparison operands. For binary strings (`BINARY`, `VARBINARY`, `BLOB`), comparisons use the numeric values of the bytes in the operands; this means that for alphabetic characters, comparisons will be case-sensitive.

A comparison between a nonbinary string and binary string is treated as a comparison of binary strings.

Simple comparison operations (`>=`, `>`, `=`, `<`, `<=`, sorting, and grouping) are based on each character’s “sort value.” Characters with the same sort value are treated as the same character. For example, if `e` and `é` have the same sort value in a given collation, they compare as equal.

The default character set and collation are `utf8mb4` and `utf8mb4_0900_ai_ci`, so nonbinary string comparisons are case insensitive by default. This means that if you search with `col_name LIKE 'a %'`, you get all column values that start with `A` or `a`. To make this search case-sensitive, make sure that one of the operands has a case-sensitive or binary collation. For example, if you are comparing a column and a string that both have the `utf8mb4` character set, you can use the `COLLATE` operator to cause either operand to have the `utf8mb4_0900_as_cs` or `utf8mb4_bin` collation:

```
col_name COLLATE utf8mb4_0900_as_cs LIKE 'a%'
col_name LIKE 'a%' COLLATE utf8mb4_0900_as_cs
col_name COLLATE utf8mb4_bin LIKE 'a%'
col_name LIKE 'a%' COLLATE utf8mb4_bin
```

If you want a column always to be treated in case-sensitive fashion, declare it with a case-sensitive or binary collation. See [Section 13.1.20, “CREATE TABLE Syntax”](#).

To cause a case-sensitive comparison of nonbinary strings to be case insensitive, use `COLLATE` to name a case-insensitive collation. The strings in the following example normally are case-sensitive, but `COLLATE` changes the comparison to be case insensitive:

```
mysql> SET NAMES 'utf8mb4';
mysql> SET @s1 = 'MySQL' COLLATE utf8mb4_bin,
        @s2 = 'mysql' COLLATE utf8mb4_bin;
mysql> SELECT @s1 = @s2;
```

```

+-----+
| @s1 = @s2 |
+-----+
|          0 |
+-----+
mysql> SELECT @s1 COLLATE utf8mb4_0900_ai_ci = @s2;
+-----+
| @s1 COLLATE utf8mb4_0900_ai_ci = @s2 |
+-----+
|                                     1 |
+-----+

```

A binary string is case-sensitive in comparisons. To compare the string as case insensitive, convert it to a nonbinary string and use `COLLATE` to name a case-insensitive collation:

```

mysql> SET @s = BINARY 'MySQL';
mysql> SELECT @s = 'mysql';
+-----+
| @s = 'mysql' |
+-----+
|          0 |
+-----+
mysql> SELECT CONVERT(@s USING utf8mb4) COLLATE utf8mb4_0900_ai_ci = 'mysql';
+-----+
| CONVERT(@s USING utf8mb4) COLLATE utf8mb4_0900_ai_ci = 'mysql' |
+-----+
|                                     1 |
+-----+

```

To determine whether a value will compare as a nonbinary or binary string, use the `COLLATION()` function. This example shows that `VERSION()` returns a string that has a case-insensitive collation, so comparisons are case insensitive:

```

mysql> SELECT COLLATION(VERSION());
+-----+
| COLLATION(VERSION()) |
+-----+
| utf8_general_ci      |
+-----+

```

For binary strings, the collation value is `binary`, so comparisons will be case sensitive. One context in which you will see `binary` is for compression functions, which return binary strings as a general rule: string:

```

mysql> SELECT COLLATION(COMPRESS('x'));
+-----+
| COLLATION(COMPRESS('x')) |
+-----+
| binary                   |
+-----+

```

To check the sort value of a string, the `WEIGHT_STRING()` may be helpful. See [Section 12.5, “String Functions”](#).

#### B.6.4.2 Problems Using DATE Columns

The format of a `DATE` value is `'YYYY-MM-DD'`. According to standard SQL, no other format is permitted. You should use this format in `UPDATE` expressions and in the `WHERE` clause of `SELECT` statements. For example:

```
SELECT * FROM t1 WHERE date >= '2003-05-05';
```

As a convenience, MySQL automatically converts a date to a number if the date is used in a numeric context and vice versa. MySQL also permits a “relaxed” string format when updating and in a `WHERE`

clause that compares a date to a [DATE](#), [DATETIME](#), or [TIMESTAMP](#) column. “Relaxed” format means that any punctuation character may be used as the separator between parts. For example, `'2004-08-15'` and `'2004#08#15'` are equivalent. MySQL can also convert a string containing no separators (such as `'20040815'`), provided it makes sense as a date.

When you compare a [DATE](#), [TIME](#), [DATETIME](#), or [TIMESTAMP](#) to a constant string with the `<`, `<=`, `=`, `>=`, `>`, or [BETWEEN](#) operators, MySQL normally converts the string to an internal long integer for faster comparison (and also for a bit more “relaxed” string checking). However, this conversion is subject to the following exceptions:

- When you compare two columns
- When you compare a [DATE](#), [TIME](#), [DATETIME](#), or [TIMESTAMP](#) column to an expression
- When you use any comparison method other than those just listed, such as [IN](#) or [STRCMP\(\)](#).

For those exceptions, the comparison is done by converting the objects to strings and performing a string comparison.

To be on the safe side, assume that strings are compared as strings and use the appropriate string functions if you want to compare a temporal value to a string.

The special “zero” date `'0000-00-00'` can be stored and retrieved as `'0000-00-00'`. When a `'0000-00-00'` date is used through Connector/ODBC, it is automatically converted to [NULL](#) because ODBC cannot handle that kind of date.

Because MySQL performs the conversions just described, the following statements work (assume that `idate` is a [DATE](#) column):

```
INSERT INTO t1 (idate) VALUES (19970505);
INSERT INTO t1 (idate) VALUES ('19970505');
INSERT INTO t1 (idate) VALUES ('97-05-05');
INSERT INTO t1 (idate) VALUES ('1997.05.05');
INSERT INTO t1 (idate) VALUES ('1997 05 05');
INSERT INTO t1 (idate) VALUES ('0000-00-00');

SELECT idate FROM t1 WHERE idate >= '1997-05-05';
SELECT idate FROM t1 WHERE idate >= 19970505;
SELECT MOD(idate,100) FROM t1 WHERE idate >= 19970505;
SELECT idate FROM t1 WHERE idate >= '19970505';
```

However, the following statement does not work:

```
SELECT idate FROM t1 WHERE STRCMP(idate,'20030505')=0;
```

[STRCMP\(\)](#) is a string function, so it converts `idate` to a string in `'YYYY-MM-DD'` format and performs a string comparison. It does not convert `'20030505'` to the date `'2003-05-05'` and perform a date comparison.

If you enable the [ALLOW\\_INVALID\\_DATES](#) SQL mode, MySQL permits you to store dates that are given only limited checking: MySQL requires only that the day is in the range from 1 to 31 and the month is in the range from 1 to 12. This makes MySQL very convenient for Web applications where you obtain year, month, and day in three different fields and you want to store exactly what the user inserted (without date validation).

MySQL permits you to store dates where the day or month and day are zero. This is convenient if you want to store a birthdate in a [DATE](#) column and you know only part of the date. To disallow zero month or day parts in dates, enable the [NO\\_ZERO\\_IN\\_DATE](#) mode.

MySQL permits you to store a “zero” value of `'0000-00-00'` as a “dummy date.” This is in some cases more convenient than using [NULL](#) values. If a date to be stored in a [DATE](#) column cannot be

converted to any reasonable value, MySQL stores '0000-00-00'. To disallow '0000-00-00', enable the `NO_ZERO_DATE` mode.

To have MySQL check all dates and accept only legal dates (unless overridden by `IGNORE`), set the `sql_mode` system variable to "`NO_ZERO_IN_DATE,NO_ZERO_DATE`".

### B.6.4.3 Problems with NULL Values

The concept of the `NULL` value is a common source of confusion for newcomers to SQL, who often think that `NULL` is the same thing as an empty string ''. This is not the case. For example, the following statements are completely different:

```
mysql> INSERT INTO my_table (phone) VALUES (NULL);
mysql> INSERT INTO my_table (phone) VALUES ('');
```

Both statements insert a value into the `phone` column, but the first inserts a `NULL` value and the second inserts an empty string. The meaning of the first can be regarded as “phone number is not known” and the meaning of the second can be regarded as “the person is known to have no phone, and thus no phone number.”

To help with `NULL` handling, you can use the `IS NULL` and `IS NOT NULL` operators and the `IFNULL()` function.

In SQL, the `NULL` value is never true in comparison to any other value, even `NULL`. An expression that contains `NULL` always produces a `NULL` value unless otherwise indicated in the documentation for the operators and functions involved in the expression. All columns in the following example return `NULL`:

```
mysql> SELECT NULL, 1+NULL, CONCAT('Invisible',NULL);
```

To search for column values that are `NULL`, you cannot use an `expr = NULL` test. The following statement returns no rows, because `expr = NULL` is never true for any expression:

```
mysql> SELECT * FROM my_table WHERE phone = NULL;
```

To look for `NULL` values, you must use the `IS NULL` test. The following statements show how to find the `NULL` phone number and the empty phone number:

```
mysql> SELECT * FROM my_table WHERE phone IS NULL;
mysql> SELECT * FROM my_table WHERE phone = '';
```

See [Section 3.3.4.6, “Working with NULL Values”](#), for additional information and examples.

You can add an index on a column that can have `NULL` values if you are using the `MyISAM`, `InnoDB`, or `MEMORY` storage engine. Otherwise, you must declare an indexed column `NOT NULL`, and you cannot insert `NULL` into the column.

When reading data with `LOAD DATA`, empty or missing columns are updated with ''. To load a `NULL` value into a column, use `\N` in the data file. The literal word `NULL` may also be used under some circumstances. See [Section 13.2.7, “LOAD DATA Syntax”](#).

When using `DISTINCT`, `GROUP BY`, or `ORDER BY`, all `NULL` values are regarded as equal.

When using `ORDER BY`, `NULL` values are presented first, or last if you specify `DESC` to sort in descending order.

Aggregate (summary) functions such as `COUNT()`, `MIN()`, and `SUM()` ignore `NULL` values. The exception to this is `COUNT(*)`, which counts rows and not individual column values. For example, the following statement produces two counts. The first is a count of the number of rows in the table, and the second is a count of the number of non-`NULL` values in the `age` column:

```
mysql> SELECT COUNT(*), COUNT(age) FROM person;
```

For some data types, MySQL handles `NULL` values specially. If you insert `NULL` into a `TIMESTAMP` column, the current date and time is inserted. If you insert `NULL` into an integer or floating-point column that has the `AUTO_INCREMENT` attribute, the next number in the sequence is inserted.

#### B.6.4.4 Problems with Column Aliases

An alias can be used in a query select list to give a column a different name. You can use the alias in `GROUP BY`, `ORDER BY`, or `HAVING` clauses to refer to the column:

```
SELECT SQRT(a*b) AS root FROM tbl_name
  GROUP BY root HAVING root > 0;
SELECT id, COUNT(*) AS cnt FROM tbl_name
  GROUP BY id HAVING cnt > 0;
SELECT id AS 'Customer identity' FROM tbl_name;
```

Standard SQL disallows references to column aliases in a `WHERE` clause. This restriction is imposed because when the `WHERE` clause is evaluated, the column value may not yet have been determined. For example, the following query is illegal:

```
SELECT id, COUNT(*) AS cnt FROM tbl_name
  WHERE cnt > 0 GROUP BY id;
```

The `WHERE` clause determines which rows should be included in the `GROUP BY` clause, but it refers to the alias of a column value that is not known until after the rows have been selected, and grouped by the `GROUP BY`.

In the select list of a query, a quoted column alias can be specified using identifier or string quoting characters:

```
SELECT 1 AS `one`, 2 AS 'two';
```

Elsewhere in the statement, quoted references to the alias must use identifier quoting or the reference is treated as a string literal. For example, this statement groups by the values in column `id`, referenced using the alias ``a``:

```
SELECT id AS 'a', COUNT(*) AS cnt FROM tbl_name
  GROUP BY `a`;
```

But this statement groups by the literal string `'a'` and will not work as expected:

```
SELECT id AS 'a', COUNT(*) AS cnt FROM tbl_name
  GROUP BY 'a';
```

#### B.6.4.5 Rollback Failure for Nontransactional Tables

If you receive the following message when trying to perform a `ROLLBACK`, it means that one or more of the tables you used in the transaction do not support transactions:

```
Warning: Some non-transactional changed tables couldn't be rolled back
```

These nontransactional tables are not affected by the `ROLLBACK` statement.

If you were not deliberately mixing transactional and nontransactional tables within the transaction, the most likely cause for this message is that a table you thought was transactional actually is not. This can happen if you try to create a table using a transactional storage engine that is not supported by

your `mysqld` server (or that was disabled with a startup option). If `mysqld` does not support a storage engine, it instead creates the table as a `MyISAM` table, which is nontransactional.

You can check the storage engine for a table by using either of these statements:

```
SHOW TABLE STATUS LIKE 'tbl_name';  
SHOW CREATE TABLE tbl_name;
```

See [Section 13.7.6.36, “SHOW TABLE STATUS Syntax”](#), and [Section 13.7.6.10, “SHOW CREATE TABLE Syntax”](#).

To check which storage engines your `mysqld` server supports, use this statement:

```
SHOW ENGINES;
```

See [Section 13.7.6.16, “SHOW ENGINES Syntax”](#) for full details.

#### B.6.4.6 Deleting Rows from Related Tables

If the total length of the `DELETE` statement for `related_table` is more than the default value of the `max_allowed_packet` system variable, you should split it into smaller parts and execute multiple `DELETE` statements. You probably get the fastest `DELETE` by specifying only 100 to 1,000 `related_column` values per statement if the `related_column` is indexed. If the `related_column` isn't indexed, the speed is independent of the number of arguments in the `IN` clause.

#### B.6.4.7 Solving Problems with No Matching Rows

If you have a complicated query that uses many tables but that returns no rows, you should use the following procedure to find out what is wrong:

1. Test the query with `EXPLAIN` to check whether you can find something that is obviously wrong. See [Section 13.8.2, “EXPLAIN Syntax”](#).
2. Select only those columns that are used in the `WHERE` clause.
3. Remove one table at a time from the query until it returns some rows. If the tables are large, it is a good idea to use `LIMIT 10` with the query.
4. Issue a `SELECT` for the column that should have matched a row against the table that was last removed from the query.
5. If you are comparing `FLOAT` or `DOUBLE` columns with numbers that have decimals, you cannot use equality (`=`) comparisons. This problem is common in most computer languages because not all floating-point values can be stored with exact precision. In some cases, changing the `FLOAT` to a `DOUBLE` fixes this. See [Section B.6.4.8, “Problems with Floating-Point Values”](#).
6. If you still cannot figure out what is wrong, create a minimal test that can be run with `mysql test < query.sql` that shows your problems. You can create a test file by dumping the tables with `mysqldump --quick db_name tbl_name_1 ... tbl_name_n > query.sql`. Open the file in an editor, remove some insert lines (if there are more than needed to demonstrate the problem), and add your `SELECT` statement at the end of the file.

Verify that the test file demonstrates the problem by executing these commands:

```
shell> mysqladmin create test2  
shell> mysql test2 < query.sql
```

Attach the test file to a bug report, which you can file using the instructions in [Section 1.7, “How to Report Bugs or Problems”](#).

### B.6.4.8 Problems with Floating-Point Values

Floating-point numbers sometimes cause confusion because they are approximate and not stored as exact values. A floating-point value as written in an SQL statement may not be the same as the value represented internally. Attempts to treat floating-point values as exact in comparisons may lead to problems. They are also subject to platform or implementation dependencies. The `FLOAT` and `DOUBLE` data types are subject to these issues. For `DECIMAL` columns, MySQL performs operations with a precision of 65 decimal digits, which should solve most common inaccuracy problems.

The following example uses `DOUBLE` to demonstrate how calculations that are done using floating-point operations are subject to floating-point error.

```
mysql> CREATE TABLE t1 (i INT, d1 DOUBLE, d2 DOUBLE);
mysql> INSERT INTO t1 VALUES (1, 101.40, 21.40), (1, -80.00, 0.00),
-> (2, 0.00, 0.00), (2, -13.20, 0.00), (2, 59.60, 46.40),
-> (2, 30.40, 30.40), (3, 37.00, 7.40), (3, -29.60, 0.00),
-> (4, 60.00, 15.40), (4, -10.60, 0.00), (4, -34.00, 0.00),
-> (5, 33.00, 0.00), (5, -25.80, 0.00), (5, 0.00, 7.20),
-> (6, 0.00, 0.00), (6, -51.40, 0.00);
```

```
mysql> SELECT i, SUM(d1) AS a, SUM(d2) AS b
-> FROM t1 GROUP BY i HAVING a <> b;
```

i	a	b
1	21.4	21.4
2	76.8	76.8
3	7.4	7.4
4	15.4	15.4
5	7.2	7.2
6	-51.4	0

The result is correct. Although the first five records look like they should not satisfy the comparison (the values of `a` and `b` do not appear to be different), they may do so because the difference between the numbers shows up around the tenth decimal or so, depending on factors such as computer architecture or the compiler version or optimization level. For example, different CPUs may evaluate floating-point numbers differently.

If columns `d1` and `d2` had been defined as `DECIMAL` rather than `DOUBLE`, the result of the `SELECT` query would have contained only one row—the last one shown above.

The correct way to do floating-point number comparison is to first decide on an acceptable tolerance for differences between the numbers and then do the comparison against the tolerance value. For example, if we agree that floating-point numbers should be regarded the same if they are same within a precision of one in ten thousand (0.0001), the comparison should be written to find differences larger than the tolerance value:

```
mysql> SELECT i, SUM(d1) AS a, SUM(d2) AS b FROM t1
-> GROUP BY i HAVING ABS(a - b) > 0.0001;
```

i	a	b
6	-51.4	0

1 row in set (0.00 sec)

Conversely, to get rows where the numbers are the same, the test should find differences within the tolerance value:

```
mysql> SELECT i, SUM(d1) AS a, SUM(d2) AS b FROM t1
-> GROUP BY i HAVING ABS(a - b) <= 0.0001;
```

```

+-----+-----+-----+
| i | a | b |
+-----+-----+-----+
| 1 | 21.4 | 21.4 |
| 2 | 76.8 | 76.8 |
| 3 | 7.4 | 7.4 |
| 4 | 15.4 | 15.4 |
| 5 | 7.2 | 7.2 |
+-----+-----+-----+
5 rows in set (0.03 sec)

```

Floating-point values are subject to platform or implementation dependencies. Suppose that you execute the following statements:

```

CREATE TABLE t1(c1 FLOAT(53,0), c2 FLOAT(53,0));
INSERT INTO t1 VALUES('1e+52', '-1e+52');
SELECT * FROM t1;

```

On some platforms, the `SELECT` statement returns `inf` and `-inf`. On others, it returns `0` and `-0`.

An implication of the preceding issues is that if you attempt to create a replication slave by dumping table contents with `mysqldump` on the master and reloading the dump file into the slave, tables containing floating-point columns might differ between the two hosts.

## B.6.5 Optimizer-Related Issues

MySQL uses a cost-based optimizer to determine the best way to resolve a query. In many cases, MySQL can calculate the best possible query plan, but sometimes MySQL does not have enough information about the data at hand and has to make “educated” guesses about the data.

For the cases when MySQL does not do the “right” thing, tools that you have available to help MySQL are:

- Use the `EXPLAIN` statement to get information about how MySQL processes a query. To use it, just add the keyword `EXPLAIN` to the front of your `SELECT` statement:

```
mysql> EXPLAIN SELECT * FROM t1, t2 WHERE t1.i = t2.i;
```

`EXPLAIN` is discussed in more detail in [Section 13.8.2, “EXPLAIN Syntax”](#).

- Use `ANALYZE TABLE tbl_name` to update the key distributions for the scanned table. See [Section 13.7.3.1, “ANALYZE TABLE Syntax”](#).
- Use `FORCE INDEX` for the scanned table to tell MySQL that table scans are very expensive compared to using the given index:

```
SELECT * FROM t1, t2 FORCE INDEX (index_for_column)
WHERE t1.col_name=t2.col_name;
```

`USE INDEX` and `IGNORE INDEX` may also be useful. See [Section 8.9.4, “Index Hints”](#).

- Global and table-level `STRAIGHT_JOIN`. See [Section 13.2.10, “SELECT Syntax”](#).
- You can tune global or thread-specific system variables. For example, start `mysqld` with the `--max-seeks-for-key=1000` option or use `SET max_seeks_for_key=1000` to tell the optimizer to assume that no key scan causes more than 1,000 key seeks. See [Section 5.1.8, “Server System Variables”](#).

## B.6.6 Table Definition-Related Issues

### B.6.6.1 Problems with ALTER TABLE

If you get a duplicate-key error when using `ALTER TABLE` to change the character set or collation of a character column, the cause is either that the new column collation maps two keys to the same value or that the table is corrupted. In the latter case, you should run `REPAIR TABLE` on the table. `REPAIR TABLE` works for `MyISAM`, `ARCHIVE`, and `CSV` tables.

If you use `ALTER TABLE` on a transactional table or if you are using Windows, `ALTER TABLE` unlocks the table if you had done a `LOCK TABLE` on it. This is done because `InnoDB` and these operating systems cannot drop a table that is in use.

### B.6.6.2 TEMPORARY Table Problems

Temporary tables created with `CREATE TEMPORARY TABLE` have the following limitations:

- `TEMPORARY` tables are supported only by the `InnoDB`, `MEMORY`, `MyISAM`, and `MERGE` storage engines.
- Temporary tables are not supported for NDB Cluster.
- The `SHOW TABLES` statement does not list `TEMPORARY` tables.
- To rename `TEMPORARY` tables, `RENAME TABLE` does not work. Use `ALTER TABLE` instead:

```
ALTER TABLE old_name RENAME new_name;
```

- You cannot refer to a `TEMPORARY` table more than once in the same query. For example, the following does not work:

```
SELECT * FROM temp_table JOIN temp_table AS t2;
```

The statement produces this error:

```
ERROR 1137: Can't reopen table: 'temp_table'
```

You can work around this issue if your query permits use of a common table expression (CTE) rather than a `TEMPORARY` table. For example, this fails with the `Can't reopen table` error:

```
CREATE TEMPORARY TABLE t SELECT 1 AS col_a, 2 AS col_b;
SELECT * FROM t AS t1 JOIN t AS t2;
```

To avoid the error, use a `WITH` clause that defines a CTE, rather than the `TEMPORARY` table:

```
WITH cte AS (SELECT 1 AS col_a, 2 AS col_b)
SELECT * FROM cte AS t1 JOIN cte AS t2;
```

- The `Can't reopen table` error also occurs if you refer to a temporary table multiple times in a stored function under different aliases, even if the references occur in different statements within the function. It may occur for temporary tables created outside stored functions and referred to across multiple calling and callee functions.
- If a `TEMPORARY` is created with the same name as an existing non-`TEMPORARY` table, the non-`TEMPORARY` table is hidden until the `TEMPORARY` table is dropped, even if the tables use different storage engines.
- There are known issues in using temporary tables with replication. See [Section 17.4.1.31, “Replication and Temporary Tables”](#), for more information.

## B.6.7 Known Issues in MySQL

This section lists known issues in recent versions of MySQL.

For information about platform-specific issues, see the installation and porting instructions in [Section 2.1, “General Installation Guidance”](#), and [Section 29.5, “Debugging and Porting MySQL”](#).

The following problems are known:

- Subquery optimization for `IN` is not as effective as for `=`.
- Even if you use `lower_case_table_names=2` (which enables MySQL to remember the case used for databases and table names), MySQL does not remember the case used for database names for the function `DATABASE()` or within the various logs (on case-insensitive systems).
- Dropping a `FOREIGN KEY` constraint does not work in replication because the constraint may have another name on the slave.
- `REPLACE` (and `LOAD DATA` with the `REPLACE` option) does not trigger `ON DELETE CASCADE`.
- `DISTINCT` with `ORDER BY` does not work inside `GROUP_CONCAT()` if you do not use all and only those columns that are in the `DISTINCT` list.
- When inserting a big integer value (between  $2^{63}$  and  $2^{64}-1$ ) into a decimal or string column, it is inserted as a negative value because the number is evaluated in a signed integer context.
- With statement-based binary logging, the master writes the executed queries to the binary log. This is a very fast, compact, and efficient logging method that works perfectly in most cases. However, it is possible for the data on the master and slave to become different if a query is designed in such a way that the data modification is nondeterministic (generally not a recommended practice, even outside of replication).

For example:

- `CREATE TABLE ... SELECT` or `INSERT ... SELECT` statements that insert zero or `NULL` values into an `AUTO_INCREMENT` column.
- `DELETE` if you are deleting rows from a table that has foreign keys with `ON DELETE CASCADE` properties.
- `REPLACE ... SELECT, INSERT IGNORE ... SELECT` if you have duplicate key values in the inserted data.

**If and only if the preceding queries have no `ORDER BY` clause guaranteeing a deterministic order.**

For example, for `INSERT ... SELECT` with no `ORDER BY`, the `SELECT` may return rows in a different order (which results in a row having different ranks, hence getting a different number in the `AUTO_INCREMENT` column), depending on the choices made by the optimizers on the master and slave.

A query is optimized differently on the master and slave only if:

- The table is stored using a different storage engine on the master than on the slave. (It is possible to use different storage engines on the master and slave. For example, you can use `InnoDB` on the master, but `MyISAM` on the slave if the slave has less available disk space.)
- MySQL buffer sizes (`key_buffer_size`, and so on) are different on the master and slave.
- The master and slave run different MySQL versions, and the optimizer code differs between these versions.

This problem may also affect database restoration using `mysqlbinlog|mysql`.

The easiest way to avoid this problem is to add an `ORDER BY` clause to the aforementioned nondeterministic queries to ensure that the rows are always stored or modified in the same order. Using row-based or mixed logging format also avoids the problem.

- Log file names are based on the server host name if you do not specify a file name with the startup option. To retain the same log file names if you change your host name to something else, you must explicitly use options such as `--log-bin=old_host_name-bin`. See [Section 5.1.7, “Server Command Options”](#). Alternatively, rename the old files to reflect your host name change. If these are binary logs, you must edit the binary log index file and fix the binary log file names there as well. (The same is true for the relay logs on a slave server.)
- `mysqlbinlog` does not delete temporary files left after a `LOAD DATA` statement. See [Section 4.6.8, “mysqlbinlog — Utility for Processing Binary Log Files”](#).
- `RENAME` does not work with `TEMPORARY` tables or tables used in a `MERGE` table.
- When using `SET CHARACTER SET`, you cannot use translated characters in database, table, and column names.
- You cannot use `_` or `%` with `ESCAPE` in `LIKE ... ESCAPE`.
- The server uses only the first `max_sort_length` bytes when comparing data values. This means that values cannot reliably be used in `GROUP BY`, `ORDER BY`, or `DISTINCT` if they differ only after the first `max_sort_length` bytes. To work around this, increase the variable value. The default value of `max_sort_length` is 1024 and can be changed at server startup time or at runtime.
- Numeric calculations are done with `BIGINT` or `DOUBLE` (both are normally 64 bits long). Which precision you get depends on the function. The general rule is that bit functions are performed with `BIGINT` precision, `IF()` and `ELT()` with `BIGINT` or `DOUBLE` precision, and the rest with `DOUBLE` precision. You should try to avoid using unsigned long long values if they resolve to be larger than 63 bits (9223372036854775807) for anything other than bit fields.
- You can have up to 255 `ENUM` and `SET` columns in one table.
- In `MIN()`, `MAX()`, and other aggregate functions, MySQL currently compares `ENUM` and `SET` columns by their string value rather than by the string's relative position in the set.
- In an `UPDATE` statement, columns are updated from left to right. If you refer to an updated column, you get the updated value instead of the original value. For example, the following statement increments `KEY` by 2, not 1:

```
mysql> UPDATE tbl_name SET KEY=KEY+1,KEY=KEY+1;
```

- You can refer to multiple temporary tables in the same query, but you cannot refer to any given temporary table more than once. For example, the following does not work:

```
mysql> SELECT * FROM temp_table, temp_table AS t2;  
ERROR 1137: Can't reopen table: 'temp_table'
```

- The optimizer may handle `DISTINCT` differently when you are using “hidden” columns in a join than when you are not. In a join, hidden columns are counted as part of the result (even if they are not shown), whereas in normal queries, hidden columns do not participate in the `DISTINCT` comparison.

An example of this is:

```
SELECT DISTINCT mp3id FROM band_downloads  
WHERE userid = 9 ORDER BY id DESC;
```

and

```
SELECT DISTINCT band_downloads.mp3id
FROM band_downloads,band_mp3
WHERE band_downloads.userid = 9
AND band_mp3.id = band_downloads.mp3id
ORDER BY band_downloads.id DESC;
```

In the second case, you may get two identical rows in the result set (because the values in the hidden `id` column may differ).

Note that this happens only for queries that do not have the `ORDER BY` columns in the result.

- If you execute a `PROCEDURE` on a query that returns an empty set, in some cases the `PROCEDURE` does not transform the columns.
- Creation of a table of type `MERGE` does not check whether the underlying tables are compatible types.
- If you use `ALTER TABLE` to add a `UNIQUE` index to a table used in a `MERGE` table and then add a normal index on the `MERGE` table, the key order is different for the tables if there was an old, non-`UNIQUE` key in the table. This is because `ALTER TABLE` puts `UNIQUE` indexes before normal indexes to be able to detect duplicate keys as early as possible.

The discussion here describes restrictions that apply to the use of MySQL features such as subqueries or views.

### C.1 Restrictions on Stored Programs

These restrictions apply to the features described in [Chapter 24, \*Stored Programs and Views\*](#).

Some of the restrictions noted here apply to all stored routines; that is, both to stored procedures and stored functions. There are also some [restrictions specific to stored functions](#) but not to stored procedures.

The restrictions for stored functions also apply to triggers. There are also some [restrictions specific to triggers](#).

The restrictions for stored procedures also apply to the `DO` clause of Event Scheduler event definitions. There are also some [restrictions specific to events](#).

### SQL Statements Not Permitted in Stored Routines

Stored routines cannot contain arbitrary SQL statements. The following statements are not permitted:

- The locking statements `LOCK TABLES` and `UNLOCK TABLES`.
- `ALTER VIEW`.
- `LOAD DATA` and `LOAD TABLE`.
- SQL prepared statements (`PREPARE`, `EXECUTE`, `DEALLOCATE PREPARE`) can be used in stored procedures, but not stored functions or triggers. Thus, stored functions and triggers cannot use dynamic SQL (where you construct statements as strings and then execute them).
- Generally, statements not permitted in SQL prepared statements are also not permitted in stored programs. For a list of statements supported as prepared statements, see [Section 13.5, “Prepared SQL Statement Syntax”](#). Exceptions are `SIGNAL`, `RESIGNAL`, and `GET DIAGNOSTICS`, which are not permissible as prepared statements but are permitted in stored programs.
- Because local variables are in scope only during stored program execution, references to them are not permitted in prepared statements created within a stored program. Prepared statement scope is the current session, not the stored program, so the statement could be executed after the

program ends, at which point the variables would no longer be in scope. For example, `SELECT ... INTO local_var` cannot be used as a prepared statement. This restriction also applies to stored procedure and function parameters. See [Section 13.5.1, “PREPARE Syntax”](#).

- Within all stored programs (stored procedures and functions, triggers, and events), the parser treats `BEGIN [WORK]` as the beginning of a `BEGIN ... END` block. To begin a transaction in this context, use `START TRANSACTION` instead.

## Restrictions for Stored Functions

The following additional statements or operations are not permitted within stored functions. They are permitted within stored procedures, except stored procedures that are invoked from within a stored function or trigger. For example, if you use `FLUSH` in a stored procedure, that stored procedure cannot be called from a stored function or trigger.

- Statements that perform explicit or implicit commit or rollback. Support for these statements is not required by the SQL standard, which states that each DBMS vendor may decide whether to permit them.
- Statements that return a result set. This includes `SELECT` statements that do not have an `INTO var_list` clause and other statements such as `SHOW`, `EXPLAIN`, and `CHECK TABLE`. A function can process a result set either with `SELECT ... INTO var_list` or by using a cursor and `FETCH` statements. See [Section 13.2.10.1, “SELECT ... INTO Syntax”](#), and [Section 13.6.6, “Cursors”](#).
- `FLUSH` statements.
- Stored functions cannot be used recursively.
- A stored function or trigger cannot modify a table that is already being used (for reading or writing) by the statement that invoked the function or trigger.
- If you refer to a temporary table multiple times in a stored function under different aliases, a `Can't reopen table: 'tbl_name'` error occurs, even if the references occur in different statements within the function.
- `HANDLER ... READ` statements that invoke stored functions can cause replication errors and are disallowed.

## Restrictions for Triggers

For triggers, the following additional restrictions apply:

- Triggers are not activated by foreign key actions.
- When using row-based replication, triggers on the slave are not activated by statements originating on the master. The triggers on the slave are activated when using statement-based replication. For more information, see [Section 17.4.1.36, “Replication and Triggers”](#).
- The `RETURN` statement is not permitted in triggers, which cannot return a value. To exit a trigger immediately, use the `LEAVE` statement.
- Triggers are not permitted on tables in the `mysql` database. Nor are they permitted on `INFORMATION_SCHEMA` or `performance_schema` tables. Those tables are actually views and triggers are not permitted on views.
- The trigger cache does not detect when metadata of the underlying objects has changed. If a trigger uses a table and the table has changed since the trigger was loaded into the cache, the trigger operates using the outdated metadata.

## Name Conflicts within Stored Routines

The same identifier might be used for a routine parameter, a local variable, and a table column. Also, the same local variable name can be used in nested blocks. For example:

```
CREATE PROCEDURE p (i INT)
BEGIN
  DECLARE i INT DEFAULT 0;
  SELECT i FROM t;
  BEGIN
    DECLARE i INT DEFAULT 1;
    SELECT i FROM t;
  END;
END;
```

In such cases, the identifier is ambiguous and the following precedence rules apply:

- A local variable takes precedence over a routine parameter or table column.
- A routine parameter takes precedence over a table column.
- A local variable in an inner block takes precedence over a local variable in an outer block.

The behavior that variables take precedence over table columns is nonstandard.

## Replication Considerations

Use of stored routines can cause replication problems. This issue is discussed further in [Section 24.7, “Binary Logging of Stored Programs”](#).

The `--replicate-wild-do-table=db_name.tbl_name` option applies to tables, views, and triggers. It does not apply to stored procedures and functions, or events. To filter statements operating on the latter objects, use one or more of the `--replicate-*-db` options.

## Debugging Considerations

There are no stored routine debugging facilities.

## Unsupported Syntax from the SQL:2003 Standard

The MySQL stored routine syntax is based on the SQL:2003 standard. The following items from that standard are not currently supported:

- `UNDO` handlers
- `FOR` loops

## Concurrency Considerations

To prevent problems of interaction between sessions, when a client issues a statement, the server uses a snapshot of routines and triggers available for execution of the statement. That is, the server calculates a list of procedures, functions, and triggers that may be used during execution of the statement, loads them, and then proceeds to execute the statement. While the statement executes, it does not see changes to routines performed by other sessions.

For maximum concurrency, stored functions should minimize their side-effects; in particular, updating a table within a stored function can reduce concurrent operations on that table. A stored function acquires table locks before executing, to avoid inconsistency in the binary log due to mismatch of the order in which statements execute and when they appear in the log. When statement-based binary logging is used, statements that invoke a function are recorded rather than the statements executed within the function. Consequently, stored functions that update the same underlying tables do not execute in parallel. In contrast, stored procedures do not acquire table-level locks. All statements executed within stored procedures are written to the binary log, even for statement-based binary logging. See [Section 24.7, “Binary Logging of Stored Programs”](#).

## Event Scheduler Restrictions

The following limitations are specific to the Event Scheduler:

- Event names are handled in case-insensitive fashion. For example, you cannot have two events in the same database with the names `anEvent` and `AnEvent`.
- An event may not be created, altered, or dropped from within a stored program, if the event name is specified by means of a variable. An event also may not create, alter, or drop stored routines or triggers.
- DDL statements on events are prohibited while a `LOCK TABLES` statement is in effect.
- Event timings using the intervals `YEAR`, `QUARTER`, `MONTH`, and `YEAR_MONTH` are resolved in months; those using any other interval are resolved in seconds. There is no way to cause events scheduled to occur at the same second to execute in a given order. In addition—due to rounding, the nature of threaded applications, and the fact that a nonzero length of time is required to create events and to signal their execution—events may be delayed by as much as 1 or 2 seconds. However, the time shown in the `INFORMATION_SCHEMA.EVENTS` table's `LAST_EXECUTED` column or the `mysql.event` table's `last_executed` column is always accurate to within one second of the actual event execution time. (See also Bug #16522.)
- Each execution of the statements contained in the body of an event takes place in a new connection; thus, these statements has no effect in a given user session on the server's statement counts such as `Com_select` and `Com_insert` that are displayed by `SHOW STATUS`. However, such counts are updated in the global scope. (Bug #16422)
- Events do not support times later than the end of the Unix Epoch; this is approximately the beginning of the year 2038. Such dates are specifically not permitted by the Event Scheduler. (Bug #16396)
- References to stored functions, user-defined functions, and tables in the `ON SCHEDULE` clauses of `CREATE EVENT` and `ALTER EVENT` statements are not supported. These sorts of references are not permitted. (See Bug #22830 for more information.)

**Stored routines and triggers in NDB Cluster.** Stored procedures, stored functions, and triggers are all supported by tables using the `NDB` storage engine; however, it is important to keep in mind that they do *not* propagate automatically between MySQL Servers acting as Cluster SQL nodes. This is because stored routine and trigger definitions are stored in tables in the `mysql` system database using `InnoDB` tables, which are not copied between Cluster nodes.

Any stored routine or trigger that interacts with MySQL Cluster tables must be re-created by running the appropriate `CREATE PROCEDURE`, `CREATE FUNCTION`, or `CREATE TRIGGER` statements on each MySQL Server that participates in the cluster where you wish to use the stored routine or trigger. Similarly, any changes to existing stored routines or triggers must be carried out explicitly on all Cluster SQL nodes, using the appropriate `ALTER` or `DROP` statements on each MySQL Server accessing the cluster.

### Warning

Do *not* attempt to work around the issue just described by converting any `mysql` database tables to use the `NDB` storage engine. *Altering the system tables in the `mysql` database is not supported* and is very likely to produce undesirable results.

## C.2 Restrictions on Condition Handling

`SIGNAL`, `RESIGNAL`, and `GET DIAGNOSTICS` are not permissible as prepared statements. For example, this statement is invalid:

```
PREPARE stmt1 FROM 'SIGNAL SQLSTATE "02000"';
```

`SQLSTATE` values in class '04' are not treated specially. They are handled the same as other exceptions.

In standard SQL, the first condition relates to the `SQLSTATE` value returned for the previous SQL statement. In MySQL, this is not guaranteed, so to get the main error, you cannot do this:

```
GET DIAGNOSTICS CONDITION 1 @errno = MYSQL_ERRNO;
```

Instead, do this:

```
GET DIAGNOSTICS @cno = NUMBER;
GET DIAGNOSTICS CONDITION @cno @errno = MYSQL_ERRNO;
```

## C.3 Restrictions on Server-Side Cursors

Server-side cursors are implemented in the C API using the `mysql_stmt_attr_set()` function. The same implementation is used for cursors in stored routines. A server-side cursor enables a result set to be generated on the server side, but not transferred to the client except for those rows that the client requests. For example, if a client executes a query but is only interested in the first row, the remaining rows are not transferred.

In MySQL, a server-side cursor is materialized into an internal temporary table. Initially, this is a `MEMORY` table, but is converted to a `MyISAM` table when its size exceeds the minimum value of the `max_heap_table_size` and `tmp_table_size` system variables. The same restrictions apply to internal temporary tables created to hold the result set for a cursor as for other uses of internal temporary tables. See [Section 8.4.4, “Internal Temporary Table Use in MySQL”](#). One limitation of the implementation is that for a large result set, retrieving its rows through a cursor might be slow.

Cursors are read only; you cannot use a cursor to update rows.

`UPDATE WHERE CURRENT OF` and `DELETE WHERE CURRENT OF` are not implemented, because updatable cursors are not supported.

Cursors are nonholdable (not held open after a commit).

Cursors are asensitive.

Cursors are nonscrollable.

Cursors are not named. The statement handler acts as the cursor ID.

You can have open only a single cursor per prepared statement. If you need several cursors, you must prepare several statements.

You cannot use a cursor for a statement that generates a result set if the statement is not supported in prepared mode. This includes statements such as `CHECK TABLE`, `HANDLER READ`, and `SHOW BINLOG EVENTS`.

## C.4 Restrictions on Subqueries

- In general, you cannot modify a table and select from the same table in a subquery. For example, this limitation applies to statements of the following forms:

```
DELETE FROM t WHERE ... (SELECT ... FROM t ...);
UPDATE t ... WHERE col = (SELECT ... FROM t ...);
{INSERT|REPLACE} INTO t (SELECT ... FROM t ...);
```

Exception: The preceding prohibition does not apply if for the modified table you are using a derived table and that derived table is materialized rather than merged into the outer query. (See [Section 8.2.2.4, “Optimizing Derived Tables, View References, and Common Table Expressions with Merging or Materialization”](#).) Example:

```
UPDATE t ... WHERE col = (SELECT * FROM (SELECT ... FROM t...) AS dt ...);
```

Here the result from the derived table is materialized as a temporary table, so the relevant rows in `t` have already been selected by the time the update to `t` takes place.

In general, you may be able to influence the optimizer to materialize a derived table by adding a `NO_MERGE` optimizer hint. See [Section 8.9.2, “Optimizer Hints”](#).

- Row comparison operations are only partially supported:
  - For `expr [NOT] IN subquery`, `expr` can be an *n*-tuple (specified using row constructor syntax) and the subquery can return rows of *n*-tuples. The permitted syntax is therefore more specifically expressed as `row_constructor [NOT] IN table_subquery`
  - For `expr op {ALL|ANY|SOME} subquery`, `expr` must be a scalar value and the subquery must be a column subquery; it cannot return multiple-column rows.

In other words, for a subquery that returns rows of *n*-tuples, this is supported:

```
(expr_1, ..., expr_n) [NOT] IN table_subquery
```

But this is not supported:

```
(expr_1, ..., expr_n) op {ALL|ANY|SOME} subquery
```

The reason for supporting row comparisons for `IN` but not for the others is that `IN` is implemented by rewriting it as a sequence of `=` comparisons and `AND` operations. This approach cannot be used for `ALL`, `ANY`, or `SOME`.

- Subqueries in the `FROM` clause cannot be correlated subqueries. They are materialized in whole (evaluated to produce a result set) during query execution, so they cannot be evaluated per row of the outer query. The optimizer delays materialization until the result is needed, which may permit materialization to be avoided. See [Section 8.2.2.4, “Optimizing Derived Tables, View References, and Common Table Expressions with Merging or Materialization”](#).
- MySQL does not support `LIMIT` in subqueries for certain subquery operators:

```
mysql> SELECT * FROM t1
      WHERE s1 IN (SELECT s2 FROM t2 ORDER BY s1 LIMIT 1);
ERROR 1235 (42000): This version of MySQL doesn't yet support
'LIMIT & IN/ALL/ANY/SOME subquery'
```

- MySQL permits a subquery to refer to a stored function that has data-modifying side effects such as inserting rows into a table. For example, if `f()` inserts rows, the following query can modify data:

```
SELECT ... WHERE x IN (SELECT f() ...);
```

This behavior is an extension to the SQL standard. In MySQL, it can produce nondeterministic results because `f()` might be executed a different number of times for different executions of a given query depending on how the optimizer chooses to handle it.

For statement-based or mixed-format replication, one implication of this indeterminism is that such a query can produce different results on the master and its slaves.

## C.5 Restrictions on Views

View processing is not optimized:

- It is not possible to create an index on a view.
- Indexes can be used for views processed using the merge algorithm. However, a view that is processed with the temptable algorithm is unable to take advantage of indexes on its underlying tables (although indexes can be used during generation of the temporary tables).

There is a general principle that you cannot modify a table and select from the same table in a subquery. See [Section C.4, “Restrictions on Subqueries”](#).

The same principle also applies if you select from a view that selects from the table, if the view selects from the table in a subquery and the view is evaluated using the merge algorithm. Example:

```
CREATE VIEW v1 AS
SELECT * FROM t2 WHERE EXISTS (SELECT 1 FROM t1 WHERE t1.a = t2.a);

UPDATE t1, v2 SET t1.a = 1 WHERE t1.b = v2.b;
```

If the view is evaluated using a temporary table, you *can* select from the table in the view subquery and still modify that table in the outer query. In this case the view will be stored in a temporary table and thus you are not really selecting from the table in a subquery and modifying it “at the same time.” (This is another reason you might wish to force MySQL to use the temptable algorithm by specifying `ALGORITHM = TEMPTABLE` in the view definition.)

You can use `DROP TABLE` or `ALTER TABLE` to drop or alter a table that is used in a view definition. No warning results from the `DROP` or `ALTER` operation, even though this invalidates the view. Instead, an error occurs later, when the view is used. `CHECK TABLE` can be used to check for views that have been invalidated by `DROP` or `ALTER` operations.

With regard to view updatability, the overall goal for views is that if any view is theoretically updatable, it should be updatable in practice. MySQL as quickly as possible. Many theoretically updatable views can be updated now, but limitations still exist. For details, see [Section 24.5.3, “Updatable and Insertable Views”](#).

There exists a shortcoming with the current implementation of views. If a user is granted the basic privileges necessary to create a view (the `CREATE VIEW` and `SELECT` privileges), that user will be unable to call `SHOW CREATE VIEW` on that object unless the user is also granted the `SHOW VIEW` privilege.

That shortcoming can lead to problems backing up a database with `mysqldump`, which may fail due to insufficient privileges. This problem is described in Bug #22062.

The workaround to the problem is for the administrator to manually grant the `SHOW VIEW` privilege to users who are granted `CREATE VIEW`, since MySQL doesn't grant it implicitly when views are created.

Views do not have indexes, so index hints do not apply. Use of index hints when selecting from a view is not permitted.

`SHOW CREATE VIEW` displays view definitions using an `AS alias_name` clause for each column. If a column is created from an expression, the default alias is the expression text, which can be quite long. Aliases for column names in `CREATE VIEW` statements are checked against the maximum column length of 64 characters (not the maximum alias length of 256 characters). As a result, views created from the output of `SHOW CREATE VIEW` fail if any column alias exceeds 64 characters. This can cause problems in the following circumstances for views with too-long aliases:

- View definitions fail to replicate to newer slaves that enforce the column-length restriction.
- Dump files created with `mysqldump` cannot be loaded into servers that enforce the column-length restriction.

A workaround for either problem is to modify each problematic view definition to use aliases that provide shorter column names. Then the view will replicate properly, and can be dumped and reloaded without causing an error. To modify the definition, drop and create the view again with `DROP VIEW` and `CREATE VIEW`, or replace the definition with `CREATE OR REPLACE VIEW`.

For problems that occur when reloading view definitions in dump files, another workaround is to edit the dump file to modify its `CREATE VIEW` statements. However, this does not change the original view definitions, which may cause problems for subsequent dump operations.

## C.6 Restrictions on XA Transactions

XA transaction support is limited to the `InnoDB` storage engine.

For “external XA,” a MySQL server acts as a Resource Manager and client programs act as Transaction Managers. For “Internal XA,” storage engines within a MySQL server act as RMs, and the server itself acts as a TM. Internal XA support is limited by the capabilities of individual storage engines. Internal XA is required for handling XA transactions that involve more than one storage engine. The implementation of internal XA requires that a storage engine support two-phase commit at the table handler level, and currently this is true only for `InnoDB`.

For `XA START`, the `JOIN` and `RESUME` clauses are not supported.

For `XA END`, the `SUSPEND [FOR MIGRATE]` clause is not supported.

The requirement that the `bqual` part of the `xid` value be different for each XA transaction within a global transaction is a limitation of the current MySQL XA implementation. It is not part of the XA specification.

An XA transaction is written to the binary log in two parts. When `XA PREPARE` is issued, the first part of the transaction up to `XA PREPARE` is written using an initial GTID. A `XA_prepare_log_event` is used to identify such transactions in the binary log. When `XA COMMIT` or `XA ROLLBACK` is issued, a second part of the transaction containing only the `XA COMMIT` or `XA ROLLBACK` statement is written using a second GTID. Note that the initial part of the transaction, identified by `XA_prepare_log_event`, is not necessarily followed by its `XA COMMIT` or `XA ROLLBACK`, which can cause interleaved binary logging of any two XA transactions. The two parts of the XA transaction can even appear in different binary log files. This means that an XA transaction in `PREPARED` state is now persistent until an explicit `XA COMMIT` or `XA ROLLBACK` statement is issued, ensuring that XA transactions are compatible with replication.

On a replication slave, immediately after the XA transaction is prepared, it is detached from the slave applier thread, and can be committed or rolled back by any thread on the slave. This means that the same XA transaction can appear in the `events_transactions_current` table with different states on different threads. The `events_transactions_current` table displays the current status of the most recent monitored transaction event on the thread, and does not update this status when the thread is idle. So the XA transaction can still be displayed in the `PREPARED` state for the original applier thread, after it has been processed by another thread. To positively identify XA transactions that are still in the `PREPARED` state and need to be recovered, use the `XA RECOVER` statement rather than the Performance Schema transaction tables.

The following restrictions exist for using XA transactions:

- XA transactions are not fully resilient to an unexpected halt with respect to the binary log. If there is an unexpected halt while the server is in the middle of executing an `XA PREPARE`, `XA COMMIT`, `XA ROLLBACK`, or `XA COMMIT ... ONE PHASE` statement, the server might not be able to recover to a correct state, leaving the server and the binary log in an inconsistent state. In this situation, the binary log might either contain extra XA transactions that are not applied, or miss XA transactions that are applied. Also, if GTIDs are enabled, after recovery `@@GLOBAL.GTID_EXECUTED` might not correctly describe the transactions that have been applied. Note that if an unexpected halt occurs before `XA PREPARE`, between `XA PREPARE` and `XA COMMIT` (or `XA ROLLBACK`), or after

`XA COMMIT` (or `XA ROLLBACK`), the server and binary log are correctly recovered and taken to a consistent state.

- The use of replication filters or binary log filters in combination with XA transactions is not supported. Filtering of tables could cause an XA transaction to be empty on a replication slave, and empty XA transactions are not supported. Also, with the settings `master_info_repository=TABLE` and `relay_log_info_repository=TABLE` on a replication slave, which became the defaults in MySQL 8.0, the internal state of the data engine transaction is changed following a filtered XA transaction, and can become inconsistent with the replication transaction context state.

The error `ER_XA_REPLICATION_FILTERS` is logged whenever an XA transaction is impacted by a replication filter, whether or not the transaction was empty as a result. If the transaction is not empty, the replication slave is able to continue running, but you should take steps to discontinue the use of replication filters with XA transactions in order to avoid potential issues. If the transaction is empty, the replication slave stops. In that event, the replication slave might be in an undetermined state in which the consistency of the replication process might be compromised. In particular, the `gtid_executed` set on a slave of the slave might be inconsistent with that on the master. To resolve this situation, isolate the master and stop all replication, then check GTID consistency across the replication topology. Undo the XA transaction that generated the error message, then restart replication.

- XA transactions are considered unsafe for statement-based replication. If two XA transactions committed in parallel on the master are being prepared on the slave in the inverse order, locking dependencies can occur that cannot be safely resolved, and it is possible for replication to fail with deadlock on the slave. This situation can occur for a single-threaded or multithreaded replication slave. When `binlog_format=STATEMENT` is set, a warning is issued for DML statements inside XA transactions. When `binlog_format=MIXED` or `binlog_format=ROW` is set, DML statements inside XA transactions are logged using row-based replication, and the potential issue is not present.

#### Note

Prior to MySQL 5.7.7, XA transactions were not compatible with replication at all. This was because an XA transaction that was in `PREPARED` state would be rolled back on clean server shutdown or client disconnect. Similarly, an XA transaction that was in `PREPARED` state would still exist in `PREPARED` state in case the server was shutdown abnormally and then started again, but the contents of the transaction could not be written to the binary log. In both of these situations the XA transaction could not be replicated correctly.

## C.7 Restrictions on Character Sets

- Identifiers are stored in `mysql` database tables (`user`, `db`, and so forth) using `utf8`, but identifiers can contain only characters in the Basic Multilingual Plane (BMP). Supplementary characters are not permitted in identifiers.
- The `ucs2`, `utf16`, `utf16le`, and `utf32` character sets have the following restrictions:
  - None of them can be used as the client character set. See [Impermissible Client Character Sets](#).
  - It is currently not possible to use `LOAD DATA` to load data files that use these character sets.
  - `FULLTEXT` indexes cannot be created on a column that uses any of these character sets. However, you can perform `IN BOOLEAN MODE` searches on the column without an index.
- The `REGEXP` and `RLIKE` operators work in byte-wise fashion, so they are not multibyte safe and may produce unexpected results with multibyte character sets. In addition, these operators compare characters by their byte values and accented characters may not compare as equal even if a given collation treats them as equal.

## C.8 Restrictions on Performance Schema

The Performance Schema avoids using mutexes to collect or produce data, so there are no guarantees of consistency and results can sometimes be incorrect. Event values in `performance_schema` tables are nondeterministic and nonrepeatable.

If you save event information in another table, you should not assume that the original events will still be available later. For example, if you select events from a `performance_schema` table into a temporary table, intending to join that table with the original table later, there might be no matches.

`mysqldump` and `BACKUP DATABASE` ignore tables in the `performance_schema` database.

Tables in the `performance_schema` database cannot be locked with `LOCK TABLES`, except the `setup_*` tables.

Tables in the `performance_schema` database cannot be indexed.

Tables in the `performance_schema` database are not replicated.

The types of timers might vary per platform. The `performance_timers` table shows which event timers are available. If the values in this table for a given timer name are `NULL`, that timer is not supported on your platform.

Instruments that apply to storage engines might not be implemented for all storage engines. Instrumentation of each third-party engine is the responsibility of the engine maintainer.

## C.9 Restrictions on Pluggable Authentication

The first part of this section describes general restrictions on the applicability of the pluggable authentication framework described at [Section 6.3.10, “Pluggable Authentication”](#). The second part describes how third-party connector developers can determine the extent to which a connector can take advantage of pluggable authentication capabilities and what steps to take to become more compliant.

The term “native authentication” used here refers to authentication against passwords stored in the `mysql.user` system table. This is the same authentication method provided by older MySQL servers, before pluggable authentication was implemented. “Windows native authentication” refers to authentication using the credentials of a user who has already logged in to Windows, as implemented by the Windows Native Authentication plugin (“Windows plugin” for short).

### General Pluggable Authentication Restrictions

- **Connector/C, Connector/C++:** Clients that use these connectors can connect to the server only through accounts that use native authentication.

Exception: A connector supports pluggable authentication if it was built to link to `libmysqlclient` dynamically (rather than statically) and it loads the current version of `libmysqlclient` if that version is installed, or if the connector is recompiled from source to link against the current `libmysqlclient`.

For information about writing connectors to handle information from the server about the default server-side authentication plugin, see [Authentication Plugin Connector-Writing Considerations](#).

- **Connector/NET:** Clients that use Connector/NET can connect to the server through accounts that use native authentication or Windows native authentication.
- **Connector/PHP:** Clients that use this connector can connect to the server only through accounts that use native authentication, when compiled using the MySQL native driver for PHP (`mysqlnd`).
- **Windows native authentication:** Connecting through an account that uses the Windows plugin requires Windows Domain setup. Without it, NTLM authentication is used and then only local connections are possible; that is, the client and server must run on the same computer.

- **Proxy users:** Proxy user support is available to the extent that clients can connect through accounts authenticated with plugins that implement proxy user capability (that is, plugins that can return a user name different from that of the connecting user). For example, the PAM and Windows plugins support proxy users. The `mysql_native_password` and `sha256_password` authentication plugins do not support proxy users by default, but can be configured to do so; see [Server Support for Proxy User Mapping](#).
- **Replication:** Replication slaves can employ not only master accounts using native authentication, but can also connect through master accounts that use nonnative authentication if the required client-side plugin is available. If the plugin is built into `libmysqlclient`, it is available by default. Otherwise, the plugin must be installed on the slave side in the directory named by the slave `plugin_dir` system variable.
- **FEDERATED tables:** A `FEDERATED` table can access the remote table only through accounts on the remote server that use native authentication.

## Pluggable Authentication and Third-Party Connectors

Third-party connector developers can use the following guidelines to determine readiness of a connector to take advantage of pluggable authentication capabilities and what steps to take to become more compliant:

- An existing connector to which no changes have been made uses native authentication and clients that use the connector can connect to the server only through accounts that use native authentication. *However, you should test the connector against a recent version of the server to verify that such connections still work without problem.*

Exception: A connector might work with pluggable authentication without any changes if it links to `libmysqlclient` dynamically (rather than statically) and it loads the current version of `libmysqlclient` if that version is installed.

- To take advantage of pluggable authentication capabilities, a connector that is `libmysqlclient`-based should be relinked against the current version of `libmysqlclient`. This enables the connector to support connections through accounts that require client-side plugins now built into `libmysqlclient` (such as the cleartext plugin needed for PAM authentication and the Windows plugin needed for Windows native authentication). Linking with a current `libmysqlclient` also enables the connector to access client-side plugins installed in the default MySQL plugin directory (typically the directory named by the default value of the local server's `plugin_dir` system variable).

If a connector links to `libmysqlclient` dynamically, it must be ensured that the newer version of `libmysqlclient` is installed on the client host and that the connector loads it at runtime.

- Another way for a connector to support a given authentication method is to implement it directly in the client/server protocol. Connector/NET uses this approach to provide support for Windows native authentication.
- If a connector should be able to load client-side plugins from a directory different from the default plugin directory, it must implement some means for client users to specify the directory. Possibilities for this include a command-line option or environment variable from which the connector can obtain the directory name. Standard MySQL client programs such as `mysql` and `mysqladmin` implement a `--plugin-dir` option. See also [Section 28.7.13, “C API Client Plugin Functions”](#).
- Proxy user support by a connector depends, as described earlier in this section, on whether the authentication methods that it supports permit proxy users.

## C.10 Limits in MySQL

This section lists current limits in MySQL 8.0.

## C.10.1 Limits on Joins

The maximum number of tables that can be referenced in a single join is 61. This includes a join handled by merging derived tables and views in the `FROM` clause into the outer query block (see [Section 8.2.2.4, “Optimizing Derived Tables, View References, and Common Table Expressions with Merging or Materialization”](#)). It also applies to the number of tables that can be referenced in the definition of a view.

## C.10.2 Limits on Number of Databases and Tables

MySQL has no limit on the number of databases. The underlying file system may have a limit on the number of directories.

MySQL has no limit on the number of tables. The underlying file system may have a limit on the number of files that represent tables. Individual storage engines may impose engine-specific constraints. [InnoDB](#) permits up to 4 billion tables.

## C.10.3 Limits on Table Size

The effective maximum table size for MySQL databases is usually determined by operating system constraints on file sizes, not by MySQL internal limits. For up-to-date information operating system file size limits, refer to the documentation specific to your operating system.

Windows users, please note that FAT and VFAT (FAT32) are *not* considered suitable for production use with MySQL. Use NTFS instead.

If you encounter a full-table error, there are several reasons why it might have occurred:

- The disk might be full.
- You are using [InnoDB](#) tables and have run out of room in an [InnoDB](#) tablespace file. The maximum tablespace size is also the maximum size for a table. For tablespace size limits, see [Section 15.6.1.6, “Limits on InnoDB Tables”](#).

Generally, partitioning of tables into multiple tablespace files is recommended for tables larger than 1TB in size.

- You have hit an operating system file size limit. For example, you are using [MyISAM](#) tables on an operating system that supports files only up to 2GB in size and you have hit this limit for the data file or index file.
- You are using a [MyISAM](#) table and the space required for the table exceeds what is permitted by the internal pointer size. [MyISAM](#) permits data and index files to grow up to 256TB by default, but this limit can be changed up to the maximum permissible size of 65,536TB ( $256^7 - 1$  bytes).

If you need a [MyISAM](#) table that is larger than the default limit and your operating system supports large files, the `CREATE TABLE` statement supports `AVG_ROW_LENGTH` and `MAX_ROWS` options. See [Section 13.1.20, “CREATE TABLE Syntax”](#). The server uses these options to determine how large a table to permit.

If the pointer size is too small for an existing table, you can change the options with `ALTER TABLE` to increase a table's maximum permissible size. See [Section 13.1.9, “ALTER TABLE Syntax”](#).

```
ALTER TABLE tbl_name MAX_ROWS=1000000000 AVG_ROW_LENGTH=nnn;
```

You have to specify `AVG_ROW_LENGTH` only for tables with `BLOB` or `TEXT` columns; in this case, MySQL can't optimize the space required based only on the number of rows.

To change the default size limit for [MyISAM](#) tables, set the `myisam_data_pointer_size`, which sets the number of bytes used for internal row pointers. The value is used to set the pointer size for

new tables if you do not specify the `MAX_ROWS` option. The value of `myisam_data_pointer_size` can be from 2 to 7. A value of 4 permits tables up to 4GB; a value of 6 permits tables up to 256TB.

You can check the maximum data and index sizes by using this statement:

```
SHOW TABLE STATUS FROM db_name LIKE 'tbl_name' ;
```

You also can use `myisamchk -dv /path/to/table-index-file`. See [Section 13.7.6, “SHOW Syntax”](#), or [Section 4.6.4, “myisamchk — MyISAM Table-Maintenance Utility”](#).

Other ways to work around file-size limits for `MyISAM` tables are as follows:

- If your large table is read only, you can use `myisampack` to compress it. `myisampack` usually compresses a table by at least 50%, so you can have, in effect, much bigger tables. `myisampack` also can merge multiple tables into a single table. See [Section 4.6.6, “myisampack — Generate Compressed, Read-Only MyISAM Tables”](#).
- MySQL includes a `MERGE` library that enables you to handle a collection of `MyISAM` tables that have identical structure as a single `MERGE` table. See [Section 16.7, “The MERGE Storage Engine”](#).
- You are using the `MEMORY (HEAP)` storage engine; in this case you need to increase the value of the `max_heap_table_size` system variable. See [Section 5.1.8, “Server System Variables”](#).

## C.10.4 Limits on Table Column Count and Row Size

### Column Count Limits

MySQL has hard limit of 4096 columns per table, but the effective maximum may be less for a given table. The exact column limit depends on several factors:

- The maximum row size for a table constrains the number (and possibly size) of columns because the total length of all columns cannot exceed this size. See [Row Size Limits](#).
- The storage requirements of individual columns constrain the number of columns that fit within a given maximum row size. Storage requirements for some data types depend on factors such as storage engine, storage format, and character set. See [Section 11.8, “Data Type Storage Requirements”](#).
- Storage engines may impose additional restrictions that limit table column count. For example, `InnoDB` has a limit of 1017 columns per table. See [Section 15.6.1.6, “Limits on InnoDB Tables”](#). For information about other storage engines, see [Chapter 16, Alternative Storage Engines](#).
- Functional key parts (see [Section 13.1.15, “CREATE INDEX Syntax”](#)) are implemented as hidden virtual generated stored columns, so each functional key part in a table index counts against the table total column limit.

### Row Size Limits

The maximum row size for a given table is determined by several factors:

- The internal representation of a MySQL table has a maximum row size limit of 65,535 bytes, even if the storage engine is capable of supporting larger rows. `BLOB` and `TEXT` columns only contribute 9 to 12 bytes toward the row size limit because their contents are stored separately from the rest of the row.
- The maximum row size for an `InnoDB` table, which applies to data stored locally within a database page, is slightly less than half a page for 4KB, 8KB, 16KB, and 32KB `innodb_page_size` settings. For example, the maximum row size is slightly less than 8KB for the default 16KB `InnoDB` page size. For 64KB pages, the maximum row size is slightly less than 16KB. See [Section 15.6.1.6, “Limits on InnoDB Tables”](#).

If a row containing [variable-length columns](#) exceeds the [InnoDB](#) maximum row size, [InnoDB](#) selects variable-length columns for external off-page storage until the row fits within the [InnoDB](#) row size limit. The amount of data stored locally for variable-length columns that are stored off-page differs by row format. For more information, see [Section 15.10, “InnoDB Row Formats”](#).

- Different storage formats use different amounts of page header and trailer data, which affects the amount of storage available for rows.
- For information about [InnoDB](#) row formats, see [Section 15.10, “InnoDB Row Formats”](#).
- For information about [MyISAM](#) storage formats, see [Section 16.2.3, “MyISAM Table Storage Formats”](#).

## Row Size Limit Examples

- The MySQL maximum row size limit of 65,535 bytes is demonstrated in the following [InnoDB](#) and [MyISAM](#) examples. The limit is enforced regardless of storage engine, even though the storage engine may be capable of supporting larger rows.

```
mysql> CREATE TABLE t (a VARCHAR(10000), b VARCHAR(10000),
    c VARCHAR(10000), d VARCHAR(10000), e VARCHAR(10000),
    f VARCHAR(10000), g VARCHAR(6000)) ENGINE=InnoDB CHARACTER SET latin1;
ERROR 1118 (42000): Row size too large. The maximum row size for the used
table type, not counting BLOBs, is 65535. This includes storage overhead,
check the manual. You have to change some columns to TEXT or BLOBs
```

```
mysql> CREATE TABLE t (a VARCHAR(10000), b VARCHAR(10000),
    c VARCHAR(10000), d VARCHAR(10000), e VARCHAR(10000),
    f VARCHAR(10000), g VARCHAR(6000)) ENGINE=MyISAM CHARACTER SET latin1;
ERROR 1118 (42000): Row size too large. The maximum row size for the used
table type, not counting BLOBs, is 65535. This includes storage overhead,
check the manual. You have to change some columns to TEXT or BLOBs
```

In the following [MyISAM](#) example, changing a column to [TEXT](#) avoids the 65,535-byte row size limit and permits the operation to succeed because [BLOB](#) and [TEXT](#) columns only contribute 9 to 12 bytes toward the row size.

```
mysql> CREATE TABLE t (a VARCHAR(10000), b VARCHAR(10000),
    c VARCHAR(10000), d VARCHAR(10000), e VARCHAR(10000),
    f VARCHAR(10000), g TEXT(6000)) ENGINE=MyISAM CHARACTER SET latin1;
Query OK, 0 rows affected (0.02 sec)
```

The operation succeeds for an [InnoDB](#) table because changing a column to [TEXT](#) avoids the MySQL 65,535-byte row size limit, and [InnoDB](#) off-page storage of variable-length columns avoids the [InnoDB](#) row size limit.

```
mysql> CREATE TABLE t (a VARCHAR(10000), b VARCHAR(10000),
    c VARCHAR(10000), d VARCHAR(10000), e VARCHAR(10000),
    f VARCHAR(10000), g TEXT(6000)) ENGINE=InnoDB CHARACTER SET latin1;
Query OK, 0 rows affected (0.02 sec)
```

- Storage for variable-length columns includes length bytes, which are counted toward the row size. For example, a [VARCHAR\(255\) CHARACTER SET utf8mb3](#) column takes two bytes to store the length of the value, so each value can take up to 767 bytes.

The statement to create table `t1` succeeds because the columns require 32,765 + 2 bytes and 32,766 + 2 bytes, which falls within the maximum row size of 65,535 bytes:

```
mysql> CREATE TABLE t1
    (c1 VARCHAR(32765) NOT NULL, c2 VARCHAR(32766) NOT NULL)
```

```
ENGINE = InnoDB CHARACTER SET latin1;
Query OK, 0 rows affected (0.02 sec)
```

The statement to create table `t2` fails because, although the column length is within the maximum length of 65,535 bytes, two additional bytes are required to record the length, which causes the row size to exceed 65,535 bytes:

```
mysql> CREATE TABLE t2
      (c1 VARCHAR(65535) NOT NULL)
      ENGINE = InnoDB CHARACTER SET latin1;
ERROR 1118 (42000): Row size too large. The maximum row size for the used
table type, not counting BLOBs, is 65535. This includes storage overhead,
check the manual. You have to change some columns to TEXT or BLOBs
```

Reducing the column length to 65,533 or less permits the statement to succeed.

```
mysql> CREATE TABLE t2
      (c1 VARCHAR(65533) NOT NULL)
      ENGINE = InnoDB CHARACTER SET latin1;
Query OK, 0 rows affected (0.01 sec)
```

- For `MyISAM` tables, `NULL` columns require additional space in the row to record whether their values are `NULL`. Each `NULL` column takes one bit extra, rounded up to the nearest byte.

The statement to create table `t3` fails because `MyISAM` requires space for `NULL` columns in addition to the space required for variable-length column length bytes, causing the row size to exceed 65,535 bytes:

```
mysql> CREATE TABLE t3
      (c1 VARCHAR(32765) NULL, c2 VARCHAR(32766) NULL)
      ENGINE = MyISAM CHARACTER SET latin1;
ERROR 1118 (42000): Row size too large. The maximum row size for the used
table type, not counting BLOBs, is 65535. This includes storage overhead,
check the manual. You have to change some columns to TEXT or BLOBs
```

For information about `InnoDB` `NULL` column storage, see [Section 15.10, “InnoDB Row Formats”](#).

- `InnoDB` restricts row size (for data stored locally within the database page) to slightly less than half a database page for 4KB, 8KB, 16KB, and 32KB `innodb_page_size` settings, and to slightly less than 16KB for 64KB pages.

The statement to create table `t4` fails because the defined columns exceed the row size limit for a 16KB `InnoDB` page.

```
mysql> CREATE TABLE t4 (
      c1 CHAR(255),c2 CHAR(255),c3 CHAR(255),
      c4 CHAR(255),c5 CHAR(255),c6 CHAR(255),
      c7 CHAR(255),c8 CHAR(255),c9 CHAR(255),
      c10 CHAR(255),c11 CHAR(255),c12 CHAR(255),
      c13 CHAR(255),c14 CHAR(255),c15 CHAR(255),
      c16 CHAR(255),c17 CHAR(255),c18 CHAR(255),
      c19 CHAR(255),c20 CHAR(255),c21 CHAR(255),
      c22 CHAR(255),c23 CHAR(255),c24 CHAR(255),
      c25 CHAR(255),c26 CHAR(255),c27 CHAR(255),
      c28 CHAR(255),c29 CHAR(255),c30 CHAR(255),
      c31 CHAR(255),c32 CHAR(255),c33 CHAR(255)
      ) ENGINE=InnoDB ROW_FORMAT=DYNAMIC DEFAULT CHARSET latin1;
ERROR 1118 (42000): Row size too large (> 8126). Changing some columns to TEXT or BLOB may help.
In current row format, BLOB prefix of 0 bytes is stored inline.
```

## C.10.5 Windows Platform Limitations

The following limitations apply to use of MySQL on the Windows platform:

- **Process memory**

On Windows 32-bit platforms, it is not possible by default to use more than 2GB of RAM within a single process, including MySQL. This is because the physical address limit on Windows 32-bit is 4GB and the default setting within Windows is to split the virtual address space between kernel (2GB) and user/applications (2GB).

Some versions of Windows have a boot time setting to enable larger applications by reducing the kernel application. Alternatively, to use more than 2GB, use a 64-bit version of Windows.

- **File system aliases**

When using `MyISAM` tables, you cannot use aliases within Windows link to the data files on another volume and then link back to the main MySQL `datadir` location.

This facility is often used to move the data and index files to a RAID or other fast solution.

- **Limited number of ports**

Windows systems have about 4,000 ports available for client connections, and after a connection on a port closes, it takes two to four minutes before the port can be reused. In situations where clients connect to and disconnect from the server at a high rate, it is possible for all available ports to be used up before closed ports become available again. If this happens, the MySQL server appears to be unresponsive even though it is running. Ports may be used by other applications running on the machine as well, in which case the number of ports available to MySQL is lower.

For more information about this problem, see <http://support.microsoft.com/default.aspx?scid=kb;en-us;196271>.

- **DATA DIRECTORY and INDEX DIRECTORY**

The `DATA DIRECTORY` option for `CREATE TABLE` is supported on Windows only for `InnoDB` tables, as described in [Section 15.6.3.6, “Creating a Tablespace Outside of the Data Directory”](#). For `MyISAM` and other storage engines, the `DATA DIRECTORY` and `INDEX DIRECTORY` options for `CREATE TABLE` are ignored on Windows and any other platforms with a nonfunctional `realpath()` call.

- **DROP DATABASE**

You cannot drop a database that is in use by another session.

- **Case-insensitive names**

File names are not case-sensitive on Windows, so MySQL database and table names are also not case-sensitive on Windows. The only restriction is that database and table names must be specified using the same case throughout a given statement. See [Section 9.2.2, “Identifier Case Sensitivity”](#).

- **Directory and file names**

On Windows, MySQL Server supports only directory and file names that are compatible with the current ANSI code pages. For example, the following Japanese directory name will not work in the Western locale (code page 1252):

```
datadir="C:/私たちのプロジェクトのデータ"
```

The same limitation applies to directory and file names referred to in SQL statements, such as the data file path name in `LOAD DATA`.

- **The \ path name separator character**

Path name components in Windows are separated by the `\` character, which is also the escape character in MySQL. If you are using `LOAD DATA` or `SELECT ... INTO OUTFILE`, use Unix-style file names with `/` characters:

```
mysql> LOAD DATA INFILE 'C:/tmp/skr.txt' INTO TABLE skr;  
mysql> SELECT * INTO OUTFILE 'C:/tmp/skr.txt' FROM skr;
```

Alternatively, you must double the `\` character:

```
mysql> LOAD DATA INFILE 'C:\\tmp\\skr.txt' INTO TABLE skr;  
mysql> SELECT * INTO OUTFILE 'C:\\tmp\\skr.txt' FROM skr;
```

- **Problems with pipes**

Pipes do not work reliably from the Windows command-line prompt. If the pipe includes the character `^Z / CHAR(24)`, Windows thinks that it has encountered end-of-file and aborts the program.

This is mainly a problem when you try to apply a binary log as follows:

```
C:\> mysqlbinlog binary_log_file | mysql --user=root
```

If you have a problem applying the log and suspect that it is because of a `^Z / CHAR(24)` character, you can use the following workaround:

```
C:\> mysqlbinlog binary_log_file --result-file=/tmp/bin.sql  
C:\> mysql --user=root --execute "source /tmp/bin.sql"
```

The latter command also can be used to reliably read any SQL file that may contain binary data.
